Our changing world is undergoing a continuous and complex evolution, a simultaneous movement driven by variables, from digitalization to geopolitical movements and profound cultural changes. Recent patterns appear to point to an increasing reliance on digital platforms and social media, and an increasing complexity of messages in public communications and diplomatic conversations. Changing cultural and political landscapes provide unique opportunities for nations to develop direct and immediate interactions with each other [16]. Another change we're seeing is the growing use of artificial intelligence in diplomatic messaging, which adds the potential for unprecedented efficiency in language applications in adapting to audiences with accuracy and subtlety [23]. After emerging from the post-war silence, linguistic diversity has gained importance in global forums, which we believe may change patterns of future discourse. This reflects a more inclusive and compassionate tone and spirit that we hope will be implemented in future soft power strategies.

But looking ahead, the soft power of language is poised for radical change. What makes language persist in exerting such an effective influence on the world suggests that it will only intensify its role as a powerful instrument of nation-states seeking to shape the cultural landscape [1]. The emergence of more immersive technologies—such as those offered by virtual reality—offers new forms of language-based soft power, with the potential to enable immersive cultural experiences in ways that have not been available to nations until now. The growing prevalence of multilingual

perspectives and voices suggests a new formulation of how nations adopt the voice of language in their arsenal of soft power [21].

From rapidly changing discursive practices to the way we communicate with each other, these new topographies have far-reaching consequences for the future of international relations and diplomacy. Countries that adopt innovative, sophisticated soft power language practices may be in an analytically privileged position to navigate the complexities of a globalized world and create deeper and more meaningful cultural connections as they establish diplomatic relationships [3, 7]. This post-millennial era of "hypertextuality", fueled by the increasing globalization of digitalization and the supercharged information age, also raises legitimate concerns about information security, fake news, and the potential for future state destabilization through the use of language and narratives in the cyberscape. Policymakers and diplomats must be skeptical of these threats and actively seek ethical and diplomatic solutions to make the most of the changing role of language in soft power and thus positively influence the future of international relations [10, 19].

The trends and implications identified above highlight the dynamic and changing conditions of language as a medium in the game of power. This shows that international relations must now involve anticipating, adapting and proactively responding to increasing changes at a rapid pace. As technology, culture and global dynamics continue to have a greater impact on our world than ever before, countries will need to learn more about using language as a soft power tool to ensure their impact is more sustainable. This means thinking strategically and adapting on behalf of nations to improve how they communicate their messages around the world [8, 9].

8 Conclusion

Global soft power influences international relations through the language that people use as a means of communication. Changing views on the special role of language in international relations can improve our understanding of how states pursue soft power strategies—in theory and in practice. From diplomatic theory and rhetoric studies to analysis of communication strategies and case studies of soft power around the world, research conducted over the past three years provides not only innovative theoretical ideas, but also practical implications for how companies and policymakers pursue national interests in the world. International arena.

The case studies of the Alliance Française and the Chinese Confucius Institutes also provide compelling examples of the dynamic impact that soft power initiatives that have language at their heart can have. Each highlights how international diplomacy works through, on behalf of, and using more than one language—whether through the use of French in educational and cultural programs, or the global promotion of Chinese language and culture around the world. Their wide-reaching effects

and sobering scope also demonstrate how it will be necessary to think harder—and more humbly—about the dangers, ethical complications and unintended consequences that invariably accompany the use of language as soft power. As countries continue to navigate this terrain, the need to think critically about the various dimensions of language strategy and their profound implications has never been stronger. This is necessary not only for policymakers, but also for international relations researchers. Given how the global diplomatic landscape is changing in new and challenging ways in the twenty-first century, perhaps a deeper understanding of the linguistic quagmire in international relations would be beneficial.

The Impact of Internal Marketing Dimensions on Hotel Service Quality: A Field Study on Five-Star Hotels

Iyad A. A. Khanfar and Adnan Owais

Abstract The main goal of chapter is to examine the impact of internal marketing dimensions (namely, selection, motivation, delegation of authority, and internal communication) on the quality of services provided by hotels. In order to achieve this objective, the researchers adopted an analytical and descriptive approach that is appropriate for the nature of the study. A questionnaire was developed as the primary instrument for data collection and was distributed to a sample of 450 employees working in 15 five-star hotels located in Amman. Out of the total questionnaires distributed, 411 valid responses were collected and subsequently analyzed using the statistical software SPSS. The study yielded several significant findings, indicating that all internal marketing dimensions (selection, motivation, delegation of authority, and internal communication) have a noteworthy impact on hotel service quality, with a significance level of ($\alpha \leq 0.05$). As a result, the study concludes that management in five-star hotels should place greater emphasis on implementing advanced strategies during the employee selection process, as well as motivating employees in a manner that fosters their loyalty towards the hotel.

Keywords Internal marketing · Hotel service quality · Five-star hotels · Amman · Jordan

1 Introduction

The notion of internal marketing, which has been the subject of recent scholarly investigation and organizational implementation, serves as a means for enhancing the caliber of products and services with the ultimate goal of attaining optimal performance. Organizations have recognized the necessity of introspection and, particularly, comprehending the viewpoints held by their workforce in relation to the organization itself. It is imperative for organizations to regard their employees as customers in order to secure triumph in the business realm.

Internal marketing, a contemporary marketing concept, has gained prominence in various sectors, emphasizing the significance of employees within companies and institutions. Its origins can be traced back to the 1950s, when quality managers in Japan were among the first to embrace this concept. At its core, internal marketing recognizes that the actions and efforts of employees within organizations constitute the internal product.

In the realm of five-star hotels, the significance of service quality cannot be overstated. As such, it becomes crucial for hotel management to equip their staff with the necessary knowledge and direction to effectively cater to the preferences and expectations of guests. It is imperative to provide continuous training and support to enhance skills of communication and foster a sense of contentment and fulfillment among employees in their respective roles. Consequently, hotels operating in this sector ought to devise marketing strategies that prioritize internal marketing aimed at employees, in conjunction with external marketing targeted at guests [4].

Internal marketing exercises an important role in prioritizing human resources by implementing efficient practices and policies. This transition from an external marketing perspective to internal marketing recognizes human resources as internal clients who possess their own needs and desires that require fulfillment. The objective is to establish unique and loyal relationships, guaranteeing mutual benefits for both parties involved. This is accomplished by generating value for individuals while simultaneously enabling the organization to acquire fresh talents and skills, strengthen its brand, and provide exceptional services [7].

1.1 Study Problem and Questions

The provision of high-quality hotel services in the hospitality industry, particularly in five-star hotels, relies heavily on the stability of human resources. As a result, there has been a significant emphasis on internal marketing, specifically in the hotel sector, with a focus on investing in human resources who directly interact with guests. This strategic focus is crucial in order to effectively compete in the highly competitive hospitality industry. Despite the growing number of five-star hotels in Amman that cater to both local and international customers, it is imperative to examine the impact of implementing the internal marketing concept on the quality of services

provided in Jordan as a whole, and in Amman specifically. This understanding is vital for improving the profitability of the hotel sector, considering the challenges and difficulties it faces. Furthermore, due to the competitive nature of the industry, customer expectations for service delivery have risen, prompting hotels to place greater emphasis on service quality in order to meet these demands. In fact, service quality is considered the most critical aspect of all hotel marketing activities.

Internal marketing is a key marketing strategy employed by five-star hotels in Amman, with the objective of meeting the needs of employees in order to deliver exceptional service to guests and ensure guest satisfaction. However, there are instances where these hotels may not fully grasp the significance of the internal marketing concept and its correlation with service quality, resulting in a significant challenge for these establishments. Inadequate attainment of the desired service quality level can have detrimental effects on the hotel's overall performance, particularly in terms of employee performance and service quality, ultimately leading to employee dissatisfaction. Hence, this study addresses the following primary question:

- What is the impact of internal marketing dimensions on the quality of services provided to guests in five-star hotels in Amman?

1.2 Study Objectives

The study intends to determine the impact of internal marketing dimensions on the quality of services in five-star hotels in Amman.

1.3 Study Hypotheses

Based on the above discussion, the following hypotheses have been formulated:

Main Hypothesis

- **H0**: "There is no statistically significant impact at the significance level ($\alpha \leq 0.05$) of internal marketing dimensions (selection, motivation, delegation of authority, internal communication) on the quality of services in five-star hotels in Amman."

Subsidiary Hypotheses

- **H01**: "There is no statistically significant impact at the significance level ($\alpha \leq 0.05$) of service provider selection on the quality of services provided in five-star hotels in Amman."
- **H02**: "There is no statistically significant impact at the significance level ($\alpha \leq 0.05$) of service provider motivation on the quality of services provided in five-star hotels in Amman."

- **H03**: "There is no statistically significant impact at the significance level ($\alpha \leq 0.05$) of service provider delegation of authority on the quality of services provided in five-star hotels in Amman."
- **H04**: "There is no statistically significant impact at the significance level ($\alpha \leq 0.05$) of service provider internal communication on the quality of services provided in five-star hotels in Amman."

2 Previous Studies

The results of a study conducted by Bennaamr and Almarshadi [6] yielded several notable conclusions, the most significant of which was the presence of a statistically significant impact of various factors, namely employment, training, rewards and incentives, and internal communication, on the quality of services offered by Saudi Telecom Company. Similarly, the results of a study conducted by Mahmoudi et al. [9] revealed a positive correlation between internal marketing strategies and the quality of services provided by hotels. The greater emphasis placed on internal aspects within the organization, along with a focus on employee satisfaction and efforts to meet their needs, directly contributes to higher levels of service quality and the ability to meet the expectations and requirements of external customers.

In a study conducted by Alawwal [3], it was discovered that internal marketing, in its different aspects, had a favorable effect on the job satisfaction and organizational loyalty of employees at Jawwal Company. The study also revealed the impact of job satisfaction on the employees' loyalty towards the organization. Moreover, the findings indicated that job satisfaction played a mediating role in the relationship between internal marketing and organizational loyalty among the employees. Additionally, the study observed positive associations between age, income, and organizational loyalty.

Based on the research conducted by Al Majali et al. [2], it was determined that the initial primary hypothesis was supported, signifying a noteworthy and statistically significant beneficial influence of the independent variables on the job satisfaction of employees within the banking industry. Furthermore, the second primary hypothesis was also validated, demonstrating a statistically significant positive correlation between employee job satisfaction and their overall performance.

The research conducted by Shayeb [11] revealed that internal marketing plays a crucial role in the success of an institution and is a fundamental prerequisite for effective external marketing. Moreover, the study revealed a positive correlation between internal marketing and the quality of health services. Internal marketing encompasses the development of policies and programs that target the organization's employees, also known as internal customers, with the aim of achieving high levels of satisfaction among them. However, the practical implementation of internal marketing in the institution under investigation does not prioritize the enhancement of healthcare service quality. Furthermore, the institution only partially embraces the concept of

internal marketing, focusing solely on certain aspects such as training and internal communications, while neglecting others.

According to the research conducted by Abu Awadah and Atallah [1], it was determined that the company places a higher level of significance on the internal marketing aspect of "employee recruitment method," with subsequent emphasis on training, dissemination of marketing information, administrative support, and incentive and reward systems, in that order.

3 Study Methodology

The research encompassed various objectives, namely: assessing the influence of internal marketing dimensions (service provider selection, motivation, delegation of authority, internal communications) on the quality of services offered by five-star hotels in Amman. These objectives were formulated based on a series of inquiries that constituted the framework of the study. In order to accomplish these objectives, the researchers employed the analytical descriptive approach, dividing the study into two distinct sections.

The initial section of the chapter encompassed the theoretical framework, wherein a comprehensive elucidation of internal marketing and its various dimensions, alongside hotel services, was provided. Furthermore, it entailed a review of prior research pertaining to the influence exercised by internal marketing dimensions on the quality of hotel services.

The subsequent phase of the research encompassed the analytical component, wherein an exhaustive examination of the study data was conducted. This entailed scrutinizing demographic variables, testing hypotheses, and computing the average scores derived from the responses obtained from the selected study participants. To facilitate this process, a meticulously crafted questionnaire was formulated and administered to the designated study sample, which consisted of employees affiliated with prestigious five-star hotels situated in Amman, Jordan. Subsequently, the data pertaining to the study sample was meticulously gathered and subjected to rigorous analysis.

3.1 Study Population

To ensure the congruity between the study's nature and variables, the study population comprised employees from five-star hotels in Amman, Jordan. The study encompassed a total of (450) employees, representing 15 five-star hotels in Amman.

3.2 Study Sample

Considering the prevailing conditions within the hotel industry due to COVID-19 pandemic, the researchers made the decision to select a study sample consisting of (450) employees employed in five-star hotels located in Amman. Subsequently, the questionnaires were distributed among the participants, and (411) of them were successfully collected, while (38) questionnaires were not returned. The collected questionnaires were then subjected to analysis using the statistical software SPSS, with the aim of examining the various dimensions of internal marketing and service quality:

- Standard deviation and arithmetic mean.
- Frequencies and percentages.
- Pearson correlation coefficient.
- Simple regression analysis.

The distribution of (450) questionnaires was conducted by the researchers utilizing a simple random sampling method, with meticulous attention paid to ensuring equitable representation across the hotels. This was achieved by allocating (30) questionnaires to each of the 15 five-star hotels in Amman.

3.3 Data Collection Methods

Primary Sources

The design of a questionnaire, specifically tailored to align with the study's objectives, research questions, and hypotheses, served as the primary method utilized by the researchers. This design drew upon existing literature and previous studies in order to ensure its effectiveness. Once the design was completed, it underwent a comprehensive evaluation and feedback process, involving multiple knowledgeable judges.

Secondary Sources

The study's theoretical framework is primarily built upon a collection of secondary sources, which encompassed Arabic and foreign resources, previous studies, and reputable scientific websites.

3.4 Study Instrument Reliability

Cronbach's Alpha coefficient test is utilized to evaluate the internal consistency of the questionnaire items, with a minimum expected value of 0.70. The Alpha values for the different dimensions of the study are presented in Table 1.

Table 1 Cronbach's Alpha values for study variables

Dimension	Number of items	Calculated Alpha value
Selection	4	0.709
Motivation	5	0.899
Delegation of authority	6	0.854
Internal communications	6	0.823
Quality of hotel services	5	0.886

3.5 Statistical Methods Used

Standard deviations and Arithmetic means were used to rank the items measuring each variable, thus determining the importance of each. The item scores were evaluated based on the following scale:

- Low: Arithmetic mean between (1—less than 2.34)
- Medium: Arithmetic mean between (2.34—less than 3.67)
- High: Arithmetic mean between (3.67—5).

The reliability values presented in Table 1 demonstrate that the study variables exhibit acceptable levels of reliability, making them suitable for the intended purposes of the research, as the minimum acceptable threshold for reliability is set at 70%.

4 Hypothesis Testing

4.1 Main Hypothesis

- H0: "There is no statistically significant effect at the significance level ($\alpha \leq 0.05$) of the dimensions of internal marketing (selection, motivation, delegation of authority, internal communications) on the quality of services in five-star hotels in Amman."

To examine the primary hypothesis, a simple regression analysis is employed. The hypothesis, H0, posits that there is no statistically significant impact, at a significance level ($\alpha \leq 0.05$), of the dimensions of internal marketing (selection, motivation, delegation of authority, internal communications) on the quality of services in five-star hotels situated in Amman. The findings reveal that the dimensions of internal marketing (selection, motivation, delegation of authority, internal communications) account for approximately 24% of the variability in service quality, as indicated by an R Square value of 0.2350.

To examine the sub-hypotheses, a multiple regression analysis is conducted in which the independent variables (selection, motivation, delegation of authority,

Table 2 Regression analysis of the impact of internal marketing on service quality in five-star hotels in Amman

Variables	R	R^2	T	F	B	Sig
Selection	0.494	0.244	4.54	31.611	0.210	0.000
Motivation	0.494	0.244	3.64	31.611	0.174	0.000
Delegation of authority	0.494	0.244	2.64	31.611	0.131	0.000
Internal communications	0.494	0.244	4.91	31.611	0.229	0.000

Table 3 Results of testing the main hypothesis

Variables	R	R^2	T	F	B	Sig
Internal marketing	0.486	0.236	11.061	122.352	0.689	0.000
Service quality						

internal communications) were included in the regression model, while service quality served as the dependent variable. The results proceed as follows Table 2:

Based on the findings presented in the table, it can be stated that the combined internal marketing dimensions account for approximately 24.4% of the variability observed in service quality. The obtained F value of 31.611 is highly significant at the 0.000 level, thus providing strong evidence supporting the validity of the regression model employed to test the sub-hypotheses (Table 3).

According to the variance table, the F value is 122.352, which has a significance level of 0.000, indicating that it is less than the predetermined threshold of 0.05. This implies that the model utilized in this study is valid for testing the research hypotheses. The regression coefficient is 0.486, and the T value is 11.061, with a significance level of 0.000, suggesting that there is a collective impact of the internal marketing dimensions on service quality. Consequently, the null hypothesis is rejected, and the alternative hypothesis is accepted, which states that there is a statistically significant influence, at a significance level of $\alpha \leq 0.05$, of the internal marketing dimensions (selection, motivation, delegation of authority, internal communications) on the quality of services in five-star hotels in Amman.

4.2 Testing Sub-hypotheses

Sub-Hypothesis 1

- H01: "There is no statistically significant impact at the significance level ($\alpha \leq 0.05$) between the selection of the service provider and the quality of services provided in five-star hotels in Amman."
- **Research Question 1:** Is there an impact of the service provider selection on the quality of services provided in five-star hotels in Amman? (Table 4)

Table 4 Results of testing sub-hypothesis 1

Variables	R	R^2	T	F	B	Sig
Selection	0.494	0.244	4.54	31.611	0.210	0.000
Service quality						

The statistical analysis presented in the table demonstrates that all dimensions of internal marketing, including selection, motivation, delegation of authority, and internal communications, have a significant influence on service quality. Specifically, the regression coefficient for the selection variable is 0.210, and the T value is 4.54, with a significance level of 0.000, indicating a statistically significant impact of selection on service quality. Consequently, the null sub-hypothesis 1 is rejected, and the alternative sub-hypothesis is accepted, which states that there is a statistically significant relationship ($\alpha \leq 0.05$) between the selection of service providers and the quality of services offered in five-star hotels in Amman.

4.3 Sub-hypothesis 2

- H02: "There is no statistically significant impact at the significance level ($\alpha \leq 0.05$) between the motivation of the service provider and the quality of services provided in five-star hotels in Amman." (Table 5).
- **Research Question 2:** Is there an impact of the service provider's motivation on the quality of services provided in five-star hotels in Amman?

Based on the data presented in the table, it can be concluded that motivation plays a crucial role in determining service quality. The regression coefficient of 0.174, along with a T value of 3.64 at a significance level of 0.000, demonstrates a statistically significant impact. Consequently, the null sub-hypothesis 2 is rejected, and the alternative sub-hypothesis is accepted, which states that there exists a statistically significant relationship ($\alpha \leq 0.05$) between the motivation of service providers and the quality of services offered in five-star hotels located in Amman.

Table 5 Results of testing sub-hypothesis 2

Variables	R	R^2	T	F	B	Sig
Motivation	0.494	0.244	3.64	31.611	0.174	0.000
Service quality						

4.4 Sub-hypothesis 3

- H03: "There is no statistically significant impact at the significance level ($\alpha \leq 0.05$) between the delegation of authority to the service provider and the quality of services provided in five-star hotels in Amman."
- **Research Question 3:** Is there an impact of the delegation of authority to the service provider on the quality of services provided in five-star hotels in Amman? (Table 6)

According to the data presented in the table, there is a notable and statistically significant effect of delegating authority on the quality of service. This is supported by a regression coefficient of 0.131 and a T value of 2.64, both of which are significant at a level of 0.000. As a result, we reject the null sub-hypothesis 3 and accept the alternative sub-hypothesis, which states that there is a statistically significant impact between delegating authority to service providers and the quality of services offered in five-star hotels in Amman, at a significance level of $\alpha \leq 0.05$.

Sub-Hypothesis 4

- H04: "There is no statistically significant impact at the significance level ($\alpha \leq 0.05$) between the internal communications of the service provider and the quality of services provided in five-star hotels in Amman."
- **Research Question 4:** Is there an impact of the internal communications with the service provider on the quality of services provided in five-star hotels in Amman? (Table 7)

Based on the data presented in the table, it can be concluded that there is a noteworthy and meaningful influence of internal communications on the quality of service. This conclusion is supported by the regression coefficient of 0.229 and the T value of 4.91, which are both statistically significant at a significance level of 0.000. As a result, the null sub-hypothesis 4 is rejected, and the alternative sub-hypothesis is accepted. This alternative sub-hypothesis asserts that there is indeed a statistically significant impact, at a significance level of $\alpha \leq 0.05$, between the

Table 6 Results of testing sub-hypothesis 3

Variables	R	R^2	T	F	B	Sig
Delegation of authority	0.494	0.244	2.64	31.611	0.131	0.000
Service quality						

Table 7 Results of testing sub-hypothesis 4

Variables	R	R^2	T	F	B	Sig

Service quality						

internal communications of the service provider and the quality of services provided in five-star hotels in Amman.

5 Discussion of Results

The quality of hotel services is significantly influenced by the process of employee selection, with a positive moderate correlation observed. This correlation accounts for approximately 24.4% of the variation in hotel service quality. It suggests that hotels place importance on selecting skilled and knowledgeable employees who can deliver exceptional service and effectively engage with guests, thereby enhancing the overall quality of hotel services. This finding stands in contrast to a previous study conducted by Asif [5], which focused on the initial phases of internal marketing in universities within the same geographical area. The study indicated a weak association between internal marketing and organizational commitment among university staff.

Hotels employ various motivational strategies to enhance the performance and job satisfaction of their employees, ultimately leading to the provision of high-quality service and guest satisfaction. Within the hotel setting, employees actively contribute to the implementation of internal marketing practices, which not only helps in minimizing errors but also fosters a strong desire for self-improvement and increased efficiency. Consequently, this cultivates a sense of loyalty towards the hotel. The importance of motivation as a variable in this context is moderately significant, with an average rating of 3.26. It is worth noting that a study conducted by Mataghin and Salwa [10] on industrial companies in Jordan revealed a partial implementation of internal marketing dimensions, lacking employee involvement in decision-making processes and fair salary and incentive systems.

In the pursuit of enhancing the quality of services provided to guests, hotels employ administrative organizational structures that aim to empower their employees in decision-making. This approach fosters a sense of teamwork and reduces psychological barriers associated with job roles. The delegation of authority within these structures is deemed moderately important, with an average rating of 3.52. Furthermore, there is a statistically significant and moderately positive relationship between delegation of authority and hotel service quality. This suggests that granting employees authority and involving them in decision-making processes contributes to the improvement of service quality. It also indicates that hotel managements are implementing various dimensions of internal marketing within the hotel environment.

The findings of this study are in accordance with the research conducted by Kozaric in [8]. It underscores the importance for managers to prioritize motivation in order to uphold employee performance and service quality. Moreover, it proposes alternative strategies to motivate employees, with a particular emphasis on the significance of financial incentives. Additionally, the study emphasizes the critical role of employee involvement in decision-making as a fundamental approach to achieve and enhance the concept of internal marketing within organizations. This, in turn, has a positive impact on customer satisfaction.

The ease of information dissemination among employees is a significant aspect of internal communication, as indicated by an average score of 3.43. This has a positive influence on the overall work atmosphere. In the context of five-star hotels in Amman, the implementation of internal marketing aligns with the findings of Abu Awadah and Atallah's [1] study on Jawwal Company. This study emphasizes the importance of various dimensions of internal marketing, such as employee selection, training, and dissemination of marketing information, administrative support, and incentive systems. It further highlights the impact of internal marketing policies on the quality of services provided. By improving and enhancing employees' skills and competencies, internal marketing programs contribute to the delivery of high-quality services to customers.

5.1 Recommendations

- The management of five-star hotels in Amman should appreciate the importance of the conclusions from the study regarding the implementation of the concept of internal marketing and its positive impact on the quality of hotel service, providing motivation to continue providing high-quality services.
- More emphasis should be placed on the dimension of employee motivation to increase their loyalty to the hotel.
- Staff selection standards and methods should be constantly updated and developed to ensure that hotels employ competent and qualified staff.
- Hotel management should work to improve and develop the quality of hotel services provided to guests, keeping in mind the competitive nature of the industry.
- Five-star hotels in Amman should adopt science-based programs and strategies to improve the quality of hotel services that aim to improve the application of internal marketing concepts in hotels to ensure guest satisfaction.

The Importance of Quality of Work Life (QWL) in Improving Job Performance Levels Among Employees in Government Institutions

Jiries Abu Ghannam and Khaled Alzeaideen

Abstract This study aimed to identify the level of quality of career in improving job performance levels, and the study was conducted on the employees of government institutions in the Bethlehem Governorate. The study followed the descriptive analytical approach to conduct the study and the questionnaire as a main tool for collecting information. The study was conducted on a random sample of (59) questionnaires, so that the sample items were distributed to the study population, employees of government institutions in a governorate in the Bethlehem Governorate. The study reached several results, the most important of which are: The results showed that the degree of physical work conditions was moderate, as the most common manifestations were the government institutions administration is keen on workers to follow prevention and safety measures during work, followed by government institutions to provide facilities for workers to complete their work such as (technological means, transportation, means of communication, etc. The results showed that the degree of balance between life and work was medium, as it was the most common manifestations. I find enough time after the end of the official working hours to carry out my personal and social duties, followed by government institutions providing facilities and training programs to support and develop employees.

1 Introduction

Human resources are the cornerstone of contemporary administrative thought, which has led most institutions and organizations to increase their focus on human resources. This focus includes providing essential aspects such as a healthy and safe work environment, supporting and involving employees in decision-making processes, and offering adequate social, economic, and health care. This aligns with the core concept of quality of work life (QWL), which emphasizes achieving harmony between the individual and their job, and considering the human aspects of work as a social, ethical, and moral responsibility of institutions to improve productivity and achieve societal satisfaction with their performance and services provided [4].

Implementing QWL in organizations is a major concern aimed at achieving sustainable human development for employees. This can only be accomplished by improving working conditions, whether in terms of health or material aspects, with the primary goal of enhancing employees' efficiency, which naturally leads to organizational development and achieving desired objectives [2, 22–34].

Human resources are a fundamental element in the organizational structure, influencing productivity through employee performance and job satisfaction. Job satisfaction reflects how well an individual meets job requirements, understands needs, and recognizes desires according to the standards set by human resource management [3, 5–14].

The human element is central to the production process. Institutions strive to provide a skilled workforce by ensuring their training and equipping them with various skills and techniques necessary for executing activities and programs to achieve goals and profits effectively. Continuous dynamic changes necessitate ongoing improvement to ensure sustainability and continuity [1, 15–21].

Problem Statement:

Palestinian governmental institutions may face significant challenges that require managers to continuously monitor employee performance. This necessitates measuring performance according to specific criteria. The complexity of performance in the public sector is heightened by the need to account for the services provided to the public in exchange for the use of public funds. Thus, the main research question is:

What is the importance of QWL in improving the performance levels of employees in government institutions in Bethlehem Governorate?

Importance of the Study:

The importance of this study arises from the following:

1 It addresses a recent variable in organizational behavior literature, namely QWL, which aligns with contemporary administrative developments.
2 The study's significance is also derived from its application to governmental institutions in Bethlehem Governorate, which face numerous challenges and work

pressures affecting their leadership and directly impacting their job performance, limiting their desire for innovation and professional creativity.
3 It aims to propose a set of mechanisms that could improve the performance levels of employees in government institutions in Bethlehem Governorate.

Objectives of the Study:

The primary objective of this study is:

- To identify the importance of QWL in improving performance levels of employees in government institutions in Bethlehem Governorate.

Secondary objectives include:

1 Identifying the level of performance evaluation in government institutions in Bethlehem Governorate.
2 Determining the degree of job satisfaction among employees in government institutions in Bethlehem Governorate.
3 Understanding the relationship between employees and their superiors in government institutions in Bethlehem Governorate.
4 Assessing the level of incentives in government institutions in Bethlehem Governorate.
5 Exploring the relationship between QWL and performance levels in government institutions in Bethlehem Governorate.
6 Identifying statistically significant differences at the level of significance ($\alpha \leq 0.05$) regarding the importance of QWL in improving performance levels of employees in government institutions in Bethlehem Governorate based on study variables (gender, educational qualification, years of experience, monthly income, job title).

Research Questions:

1 Do physical work conditions play a role in QWL?
2 Does the work-life balance contribute to QWL?
3 Do wages and rewards influence QWL?
4 Does the level of justice and equality affect QWL?
5 Does job security and stability impact QWL?
6 What is the level of job performance in government institutions in Bethlehem Governorate?

Hypotheses:

1 There are no statistically significant differences at the level of significance ($\alpha \leq 0.05$) in the importance of QWL in improving performance levels of employees in government institutions in Bethlehem Governorate attributed to gender.
2 There are no statistically significant differences at the level of significance ($\alpha \leq 0.05$) in the importance of QWL in improving performance levels of employees in government institutions in Bethlehem Governorate attributed to educational qualification.

3 There are no statistically significant differences at the level of significance ($\alpha \leq 0.05$) in the importance of QWL in improving performance levels of employees in government institutions in Bethlehem Governorate attributed to job title.
4 There are no statistically significant differences at the level of significance ($\alpha \leq 0.05$) in the importance of QWL in improving performance levels of employees in government institutions in Bethlehem Governorate attributed to monthly income.
5 There are no statistically significant differences at the level of significance ($\alpha \leq 0.05$) in the importance of QWL in improving performance levels of employees in government institutions in Bethlehem Governorate attributed to years of experience.

2 Methodology

The research team used the descriptive analytical method, which compares, interprets, and evaluates in hopes of reaching meaningful generalizations that increase the body of knowledge on the subject.

Study Population:

This study addresses the importance of QWL in improving performance levels of employees in government institutions in Bethlehem Governorate. Therefore, the study population consisted of employees in government institutions in Bethlehem Governorate.

Sample:

The study was conducted on a random sample consisting of 59 questionnaires distributed to employees in government institutions in Bethlehem Governorate.

Research Instrument:

A questionnaire was constructed to gather the respondents' views on the study topic.

Reliability of the Research Instrument:

The reliability of the research instrument was verified by examining the internal consistency of the questionnaire items using Cronbach's Alpha coefficient on the total study sample, which yielded a reliability value of 0.94, indicating a very high level of reliability.

3 Results

Research Question 1

What is the importance of quality of work life (QWL) in improving the performance levels of employees in government institutions in bethlehem governorate?

The importance of QWL in improving the performance levels of employees in government institutions in Bethlehem Governorate was found to be moderate. The mean score for this importance was 2.86, with a standard deviation of 0.53.

Research Question 2

What are the main aspects of physical work conditions?

The degree of physical work conditions was moderate, with a mean score of 3.42. The most common aspects were the adherence to safety and precautionary measures at work, with a mean score of 3.63, followed by the provision of facilities to help employees perform their tasks, such as technological means, transportation, and communication tools, with a mean score of 3.53.

Research Question 3

What are the main aspects of work-life balance?

The degree of work-life balance was moderate, with a mean score of 2.79. The most common aspects were having enough time after work hours to fulfill personal and social duties, with a mean score of 3.24, followed by the provision of training programs and support by government institutions to develop employees, with a mean score of 3.20.

Research Question 4

What are the main aspects of wages and rewards?

The degree of wages and rewards was moderate, with a mean score of 2.41. The most common aspect was the search for additional sources of income to increase income levels, with a mean score of 3.86, followed by the belief that government institutions have sufficient material and economic resources to meet their financial obligations towards employee salaries, with a mean score of 3.63. The least common aspect was satisfaction with annual salary increments, with a mean score of 1.76.

Research Question 5

What are the main aspects of justice and equality?

The degree of justice and equality was moderate, with a mean score of 2.36. The most common aspect was the feeling that managers strive to promote cooperation and friendliness among colleagues, with a mean score of 2.93, followed by efforts by senior management to enhance principles of brotherhood and cooperation among employees, with a mean score of 2.86. The least common aspect was setting wages based on performance, with a mean score of 1.81.

Research Question 6

What are the main aspects of job security and stability?

The degree of job security and stability was moderate, with a mean score of 2.86. The most common aspect was the feeling of job stability and security in the governmental job, with a mean score of 3.27, followed by working in an environment characterized by mutual trust and security among all parties, with a mean score of 3.25.

Research Question 7

What are the main aspects of job performance in government institutions in Bethlehem Governorate?

The level of job performance in government institutions in Bethlehem Governorate was moderate, with a mean score of 3.26. The most common aspect was the ability of employees to work and adapt to emergencies, with a mean score of 3.73, followed by the completion of transaction procedures within their specified time, with a mean score of 3.64.

Hypotheses Testing

Hypothesis 1

There are no statistically significant differences at the level $\alpha \leq 0.05$ in the importance of QWL in improving the performance levels of employees in government institutions in Bethlehem Governorate attributed to gender.

There were statistically significant differences at the level $\alpha \leq 0.05$ in the importance of QWL in improving performance levels of employees in government institutions in Bethlehem Governorate attributed to gender. The differences favored male employees, with a mean score of 3.01, compared to female employees, with a mean score of 2.69.

Hypothesis 2

There are no statistically significant differences at the level $\alpha \leq 0.05$ in the importance of QWL in improving the performance levels of employees in government institutions in Bethlehem Governorate attributed to job title.

There were no statistically significant differences at the level $\alpha \leq 0.05$ in the importance of QWL in improving performance levels of employees in government institutions in Bethlehem Governorate attributed to job title.

Hypothesis 3

There are no statistically significant differences at the level $\alpha \leq 0.05$ in the importance of QWL in improving the performance levels of employees in government institutions in Bethlehem Governorate attributed to educational qualification.

There were no statistically significant differences at the level $\alpha \leq 0.05$ in the importance of QWL in improving performance levels of employees in government institutions in Bethlehem Governorate attributed to educational qualification.

Hypothesis 4

There are no statistically significant differences at the level $\alpha \leq 0.05$ in the importance of QWL in improving the performance levels of employees in government institutions in Bethlehem Governorate attributed to monthly income in shekels.

There were no statistically significant differences at the level $\alpha \leq 0.05$ in the importance of QWL in improving performance levels of employees in government institutions in Bethlehem Governorate attributed to monthly income in shekels.

Hypothesis 5

There are no statistically significant differences at the level $\alpha \leq 0.05$ in the importance of QWL in improving the performance levels of employees in government institutions in Bethlehem Governorate attributed to years of experience.

There were no statistically significant differences at the level $\alpha \leq 0.05$ in the importance of QWL in improving performance levels of employees in government institutions in Bethlehem Governorate attributed to years of experience.

4 Conclusion

In conclusion, the study findings indicate that the government institutions demonstrate a moderate level of attention to employees' physical work conditions and work-life balance. The results show the administration places emphasis on promoting safety and preventative measures during the workday. Additionally, the institutions provide various facilities and resources to support employees in completing their job duties, such as technological tools, transportation, and communication means. Furthermore, the results suggest a reasonable level of balance between employees' work responsibilities and personal/social obligations, with adequate time allotted after official work hours. The institutions also offer training programs to help develop and support their workforce. Overall, the findings reveal the government organizations are making steady efforts to ensure reasonably favorable physical work environments and a suitable work-life equilibrium for their employees, though there may be room for further improvements in these areas. These workforce-oriented practices appear to be contributing positively to employee satisfaction and productivity.

5 Recommendations

Based on the above findings, the following key recommendations can be summarized:

1. **Improve Physical Work Conditions:** Enhance comfortable working conditions by providing necessary facilities and ensuring occupational safety and health elements are in place.
2. **Provide Training Programs:** Support and develop employees by offering training programs, while catering to employees' preferences and interests through cultural, awareness, and educational programs.
3. **Improve Living Conditions:** Ensure the timely and complete payment of salaries to improve employees' living conditions.
4. **Adjust Salaries to Living Costs:** Improve salary levels to keep up with the rising cost of living, ensuring employees' needs are adequately met.

5. **Offer Incentives:** Provide both financial and non-financial incentives for high-performing employees, ensuring fairness and equity across all administrative levels.
6. **Fair Promotions:** Implement promotions based on competence and professional performance, ensuring fairness and justice among all employees.
7. **Encourage Employee Participation:** Foster an environment where employees can express their opinions on decisions affecting their work, and promote the principle of participation in decision-making, particularly in matters of delegation and empowerment.

Skilled Migration from Arab Countries

Saqer Sulaiman and Ala Eddin Sadeq

Abstract Over the last decades, Arab countries have experienced significant emigration towards developed countries, the frequent emigration from Arab countries led to brain drain. Generally, skilled migration considers a controversial issue due to its impacts on economic and social issues in the origin countries. On the one hand, it depleted the Arab countries of their human capital, while on the other hand, it considers an expected outcome to the distortion in the Arab labor market. Remittances are the most positive impacts of skilled migration from Arab countries, however, the role of highly skilled migrants in the transfer of knowledge and best practices are still one of the disputed issues in the Arab countries. This paper reviews the magnitude of the skilled from Arab countries to developed countries, its drivers, and determinants and the way it effects on the development of the Arabic countries and the well-being of their people. The study concluded that despite some benefits of skilled migration such as remittances and decreases the unemployment rate among youth, the Arab countries are suffered as a result of brain drain. The losses are the highest in such vital sectors as education and health.

Keywords Skilled migration · Brain drain · Development · Remittances · Highly skilled migrants · Arab countries · Low-and middle-income countries

1 Introduction

Skilled migration or as it described in many discourses as “brain drain”. Is used widely to describe the out-migration of intellectual and highly skilled people who often have high levels of technical expertise. They emigrate from developing or less

economically-developed countries to countries which can be characterized by better professional, economic or geographical features. Skilled migration has been a topic of discussion for many years in many developing countries due to its high impacts on the economic and social condition in these countries. Many studies have been discussed it from different angles and perspectives. According to [9], "There were 247 articles on skilled migration written between 2005 and 2009 about twice as many as over the previous 15 years combined" (p. 2). Most of these articles focused on the impacts skilled migration on origin countries and destination countries. The seriousness and complexity of skilled migration calls for more focus on its impacts and repercussions.

At the same time, the UNESCO considers skilled migration backward technology transfer and defined brain drain as "an abnormal form of scientific exchange between countries, characterized by a one-way flow in favor of the most highly developed, countries" [13]. While Rapoport and Docquier [6] note in their entry in the New Palgrave Dictionary that it is most commonly used to denote the migration of engineers, physicians, scientists, and other very highly skilled professionals with university training. Typically, these movements are from developing to developed countries [9: 3].

Skilled migration has been a topic of discussion for many years in Arab societies and governments due to its high impacts on the economic and social condition in these countries. Hence, this study seeks to answer the following questions:

What are the magnitude and characteristics of skilled migration from the Arab world? What are the factors that contribute to skilled migration? What are the different impacts of skilled migration on the countries of origin? How can the governments counter the adverse effects of brain drain, and involve highly skilled migrants in development programs in their home country?

2 Magnitude and Characteristics of Skilled Migration from the Arab World

The mutual and interrelated relationship between migration and globalization remains a crucial context for understanding the phenomenon of brain drain as globalization drives migration and affects its directions and forms. Similarly, the international migration is a complex and multidimensional societal phenomenon. It stems not only from local and regional factors, but it is also the globalization tendency that fuels this phenomenon. Indeed, "globalization provides a new platform of cooperation. This platform enables individuals, groups, companies, and universities anywhere in the world to collaborate for the purposes of innovation, production, education, research, entertainment." [8: 204]. Furthermore, globalization has facilitated communications among people from different areas and opened up opportunity for them to agglomerate where it is already abundant in the most economically advanced countries.

Despite the fact that the skilled migration is a global phenomenon, its rate varies significantly across countries. Data shows that the threat of brain drain in countries with a small population is usually higher than in highly populated countries. "In average 7.3% of tertiary-educated people of the developing countries work in higher-income countries. This ratio varies from 5.4% (or below) in developing countries with populations of 40 million or more to 13% in sub-Saharan Africa and to 45% in small developing island nations" [9: 10].

In spite of the shortage of studies and data about skilled migration from the Arab world, some Arab organizations and researchers try to study this phenomenon by focusing on its various dimensions. Arab countries are suffering from the loss of their newly qualified medical doctors, engineers, and scientists each year, many of them moving to the United Kingdom, the United States, and Canada. According to the statistics of the League of Arab States and the Arab Labor Organization, the Arab world accounts for about 31% of the brain drain from developing countries, about 50% of doctors, 23% of engineers, and 15% of the scientists of the total Arab talent migrated to Europe and the United States and Canada [18]. For example, in "the United Kingdom the percentage of Arab doctors of the total physicians working there is 34%" [7]. Data show that the phenomenon of high skilled migration has increased dramatically in the last decade. For example, more than one-third of emigrants (35.7%) hold university and higher degrees [17: 109].

According to the regional report about the migration of the [15: 88, 90] "about 74% of Arab origin researchers are working in a scientific field such as physics, Biology, information technology…etc. at the French National Center for Scientific Research 70% of the directors of the departments of mathematics, physics and, technologies are Arab origins researchers." In a similar vein, the results of the Arab opinion index [2] indicated that "28% of the citizen of the Arab region want to emigrate, this shows that there is an increase of 6% for those wishing to emigrate from the 2020 survey" [2: 51].

3 Drivers of Skilled Migration from Arab Countries

Generally speaking, people often migrate in order to improve their standard of living. The decision to migrate is often aimed to achieve economic prosperity and social welfare. There two main approaches explained skilled migration. The first one is the individual approach through which skilled individuals are searching for their identity intellectually and professionally, secure a comfortable living and working conditions, ensure freedom of thought and the possibility of creativity, which unfortunately is not available in their home country. The second approach deals with skilled migration as an international phenomenon and extends deeply in economic systems. This approach focuses on the demand side and tries to find a correlation between the phenomenon of brain drain and the global market for highly qualified people. Reports of some regional and international organizations pointed out a relation between globalization and skilled migration. The regional report about the migration of the [15] reveals

that there is a competition to attract, and recruit highly skilled and qualified persons from certain parts of the world. The need for this kind of immigrants has grown over time as a result of globalization and open markets" [15: 35].

By using a lower cost foreign labor force, global companies can reduce the cost of their production and increase their competitive advantages and profits. However, migration decision may be affected by other factors than as well "They may be driven more by broader career concerns such as the quality of opportunities to conduct research, to work with best experts of their profession, and to learn from the best, as well as lifestyle and family reasons, than by how much more people could earn abroad" [3]. The factors that contribute to skilled migration from Arab countries and encourage emigrants to stay in the destination countries can be summarized into two main categories: internal pushing factors and external incentive factors.

3.1 Internal Pushing Factors

These factors include; economic factors, political factors, corruption and bribery, and Level of scientific research and lack of vacancies in some scientific and technological fields.

Economic factors. In general terms, the economic factors considered as the most important driving force behind the decision of migration especially among highly skilled people, for example in Africa, a Salary discrepancies and differences in working conditions between African and developed countries stimulate brain drain [12]. The unemployment rate is one of the most important indicators that reflect the economic situation in any country. Unemployment rate reflects the inability of societies in creating adequate new job opportunities to absorb the annual increase in the size of the new entrants to the labor market [10]. One should recognize that the labor market in most Arab countries were unable to absorb many of new graduated students and highly skilled people, which increases the rate of youth unemployment in the Arab world. The total unemployment rate in the Arab countries reached 10.9% in the year 2019–2020, while the unemployment rate among Arab youth increased to reach 27.4% for the same period. These percentages are pretty much higher than the unemployment rates at the global level, where the total unemployment rate is 5.6%, and among youth it is 15.4% [20: 153]. Table 1 shows the unemployment rate in some Arab Countries with a high rate of migration.

Table 1 shows an increase in the unemployment rate in the Arab countries which is very high compared to the global average. In general, these percentages maintained their rates or increased slightly, for example in Palestine, "the unemployment rate is 24.4% in 2022, 13.1% in West Bank and 45.3% in Gaza Strip" [21: 26]. In some Arab countries, the unemployment rates among educated people are higher than among less educated ones. For instance, in Jordan in 2011, unemployment among graduates was 16% against an official overall rate of 13% [21: 156]. Under these circumstances, migration became inevitably the best option for educated and highly skilled people.

Table 1 Unemployment rate in some Arab countries with a high rate of migration in 2019

Country	Unemployment rate	
	Total	Youth
Algeria	11.7	29.5
Lebanon	6.2	17.6
Tunisia	16.0	36.3
Jordan	14.7	35.0
Libya	18.6	50.5
Palestine	26.2	42.0
Egypt	10.8	31.1
Morocco	9.0	22.1
Iraq	12.8	25.1
Syria	8.4	20.9

Source [20]: Arab Human Development Report: Work and employment 2022. (Table 11), p. 153

The inevitable conclusion is that there is a positive correlation between the increase in unemployment rate and Arab skilled migration to developed countries.

Another important indicator that indicates the economic condition in a country is GDP per capita. The highest Arab countries in brain drain Egypt, Lebanon, Morocco, Iraq, Syria, and Tunisia show a lower GDP per capita [10]. Table 2 shows the gross domestic product and per capita GDP in some Arab countries.

In general, the assessment of the Arab public opinion of the economic situation in their countries was negative. According to the results of the [2] "the majority of respondents indicated that the economic conditions in their countries are bad or very bad"[2]: 36). In short, according to the opinion of the Arab citizens, the economic

Table 2 Gross domestic product and per capita GDP in some Arab countries in 2018

Country	Gross domestic product (million $)	Per capita GDP ($)
Algeria	172.780	3.980

Source [11] World Economic Outlook Database

conditions in the Arab countries have been heading towards the worst since 2012 until now, and they have remained so without fundamental changes.

Political factors. After the Arab Spring phenomenon appears in 2011, the political situation in most of the Arab countries characterized by instability and prevalence of violence. According to the Internal Displacement Monitoring Centre "by July 2015, those displaced by the Syrian conflict alone had reached 11.6 million. Of these, 7.6 million were internally displaced persons, while the rest were refugees outside their country of nationality" [21]. According to the [2], the Arab citizens' evaluation of the political condition in the Arab countries was less optimistic than in 2020, as the percentage of those who indicated that the political condition is bad or very bad was 49%, compared to 47% in the 2020 poll [2: 41]. This indicates that the Arab citizens think that the political situation is heading towards the worst in many Arab countries. At the same time, most of the Arab countries suffered from the absence of democracy, freedom, and right of expression. The immigrant's life significantly affected by the life patterns of the destination country, such as democracy, liberty…etc., and this makes it difficult for him to return and live under repressive regimes. Therefore, "Scientific progress, political stability, democratic environment, and freedom of expression are motivations for prospective migrants as well, in addition to higher incomes and freedom of professional practices" [1:13].

Generally speaking, Political factors play a much larger role as driving force of migration of skilled people especially in countries suffering from political disorder. Docquier & Rapoport [6: 7] argued that "Skilled emigration is highest (higher than 30%) in countries that suffered from civil war and political instability during the last decades (e.g., Haiti, Somalia, Ghana, Sierra Leone, and Lebanon) and is particularly strong in Central America and Sub-Saharan Africa".

The proliferation of corruption, bribery, and nepotism in most of the Arab countries. They negatively influence all areas of life and deplete the level of services such as education, healthcare, infrastructure etc. A study on relationship between emigration and corruption by Cooray and Schneider [4: 18] revealed that "If corruption in a country increases, the emigration rates of those with high levels of educational attainment also increase". Corruption might affect net migration through two channels: first, it might favour outflows by pushing highly skilled natives to migrate to other less corrupt countries; and second, it might hamper inflows by discouraging talented foreign workers from immigrating [19: 0.503]. While [5: 1274] examined the impacts of corruption on migration for a panel of 111 countries between 1985 and 2000. The empirical results indicate that corruption especially drives skilled migration. According to the Corruption Perception Index 2023, issued by Transparency International, on a scale from 0 to 100; where 0 refers to the highest level of corruption, the rates of all Arab countries were below 50, except for the United Arab Emirates, Qatar, and Saudi Arabia.

Level of scientific research and lack of vacancies in some scientific and technological fields may also be a problem. "Some scientists suffer from the absence of

Table 3 Perception of individual well-being in Arab countries compared to the very high human development group

certain discipline that conforms to their educational qualifications such as atomic science, rocket industries, and space" [13].

3.2 External Incentive Factors

Developed countries can provide better possibilities for work and scientific research. Therefore "one of the reasons of skilled migration is the availability of scientific research in the destination countries, either that related to the prevailing scientific research climate or physical capabilities such as laboratories, funding, research teamwork" [18].

Better individual well-being and social security services in developed countries than Arab countries. Table 3 shows the perception of individual well-being in Arab countries compared to the very high human development group.

Table 3 shows a decrease in individual well-being and social security indicators of the Arab countries compared to the very high human developed group which include OECD countries. In fact, there is a significant disparity in the percentage of statutory pension age population and Mandatory paid maternity leave days between Arab countries and OECD countries. At the same time, the average of Mandatory paid maternity leave days in the very high human developed group including OECD countries (114 days) which were much better than the average of Arab countries (73 days). The same is true for individual well-being it is better and more satisfied in a very high human developed group than Arab countries.

[1] Data is taken from two tables no 11 & 14 of the mentioned source.

4 The Impacts of Skilled Migration (Brain Drain)

Skilled migration from Arab countries is something that cannot be ignored. The Arab countries appear to suffer more from brain drain than other countries. "The expatriation rate among the highly educated is higher in the Middle East and North Africa (9.1%) than in Latin America (8.3%), East Asia and Pacific (7.7%), and Eastern Europe and Central Asia (4.1%)" [23: 22].

One of the most negative effects of skilled migration is the loss of scientific and productive power of Arab minds, at the time the Arab countries need such competencies in the fields of economy, education, health, planning, scientific research, and technology [18].

This becomes more of a threat when we take into account the fact that the investments of Arab countries in highly skilled migrants are lost as those people leave their countries and become assets in the destination countries. These losses become especially clear and influential when we trace the movement of skilled people working in the health and the higher education sectors. The number of workers in the health sector in (OECD) countries who were born outside the countries of residence increased to 1.7 million people including about 712 thousand nurses, and about 422 thousand doctors. At the same time the number of Arab-born highly skilled residents in (OECD) countries was more than one million. [15: 65].

Although high-skilled migration is a loss for the home country, there are several forms to involve them in the development process of their origin countries: remittances, experts, and academic visits which imply transfer of knowledge and experience, investments and so on. Generally, participation and involvement of migrants in development in their homeland become easier as a result of globalization and technological progress.

Remittances are one of the main benefits received by the origin countries as a result of the migration. Remittances inflows constitutes a significant aspect of the Arab Countries economies. According to UNDP report (2011) The Arab region considers one of the biggest receiving countries for remittances as a percentage of GDP. Where the ratio of remittances to the GDP was 2.2%, and in North African countries this percentage raised to 3–3.5%, which is considered one of the highest ratios in the world" [16: 34]. As for example, the Egyptian remittances in 2017 were $ 17.0 billion, and ranked 6th among the top remittance receiving countries in 2017. It represents about 6.4% of its GDP. Indeed, Egypt received remittances more than foreign direct investment (FDI) which represent 3.14% of its GPD [14: 10].

Despite the debate over the role of remittances to help the poor families, their macroeconomic impact seems clear. Remittances by highly-skilled migrants to their family or relatives can replenish the stock of human capital that may have been depleted in the home country by the brain drain. Some estimates confirmed that the increase in remittances by about 10% leads to an average reduction of poverty by about 3.5% [14: 29]. The largest proportion of these remittances to the Arab countries was used to meet the needs of immigrant families and improve their welfare. Sometimes they were invested or used for entrepreneurial purposes.

5 Conclusion

Skilled migration is an international phenomenon that affects mostly developing countries, including the Arab countries. However, it is equally important to mention that there is a high percentage of Arabs living abroad, and they have emigrated or been displaced as a result of political and economic conditions. These migrations included large segments of young people and scientific talents who left their homeland as a result of the lack of job opportunities, high unemployment rates and the deterioration of the political situation in the Arab countries.

Like any other human phenomenon, skilled migration has a negative and positive impact. The cost is very high when we compare it with the yields and benefits. Remittances are one of the main benefits for the Arab States, but unfortunately, most of these remittances were used for consumption, for family purposes and welfare. The redirection of remittances towards investment rather than consumption is likely to contribute to improving the condition of services and the labor market in the Arab countries, this will positively affect the welfare of the citizen.

Generally speaking, migration has become more complicated and diverse; therefore, it is not easy to control its characteristics and trends. Obviously, skilled migration is continuously increasing, which may jeopardize the future of the origin countries and the quality of services provided to the citizens, such as educational services and health care. Governments should manage this profile wisely in order to keep their highly skilled people and minimize the negative impacts of brain drain. Policies that can be carried out by the Arab countries, may include Strengthening the institutional structure and encourage scientific research through the allocation of adequate budgets for scientific research projects at universities and research centers. Encouraging circular migration and promote cooperation and networking between communities abroad and their home country is another important approach that may be adopted. Diaspora associations can play a crucial role in strengthening relations between immigrants themselves and between them and their homeland. Therefore, supporting these associations and establishing good relations with them is crucial in attracting highly skilled people and involving them in development at home. Political and administrative reforms may be a catalyst that may reduce the desire of young people, especially the highly skilled, to emigrate. At the same time, these reforms encourage highly skilled immigrants to return to their countries of origin.

The Presumptive Validity of Virtual Attorney Between Islamic Jurisprudence and Law

Somoud Z. A. Abualhwar, Suhail Al-Ahmad, and Omar Al-Makhzoumi

Abstract This research addresses one of the most important topics of the modern era, which is the technological advancements extending into various fields of work. The research specifically discusses the concept of the virtual lawyer, elucidating its definition, exploring its emergence, and subsequently discussing the validity of the activities performed by virtual lawyers. Furthermore, it delves into the application of virtual lawyer provisions in both Arab and European countries.

Keywords Virtual lawyer · Lawyer website · Virtual office · Human capital theory

1 Introduction

The observer of issues concerning technological advancements in the legal and judicial domain finds that they have recently encompassed all the requirements of legal and judicial work. Within this development is the inclusion of trial parties, notably the lawyer, leading to the emergence of the concept of the virtual lawyer prominently in recent years. This research aims to address this issue from a specific and defined perspective: the validity of the virtual lawyer under the title "The Validity of the Virtual Lawyer between Islamic Jurisprudence and Law".

Technological advancement and the rush towards it have become a hallmark of the modern era, and the field of judiciary and justice has not been isolated from this progress. One of the most discussed topics lately among judicial authorities and lawyers alike is the concept of electronic litigation. While this discussion was

prevalent and confined to research sites in many countries before, it became a global conversation after the occurrence of the COVID-19 pandemic. Therefore, I chose the title of the research because it discusses one of the parties to litigation, which is the lawyer [1–8].

It is well known that the lawyer is the advocate for citizens' rights, given the effort they exert. Hence, the perennial question arises: does the work of the virtual lawyer equate to that of a lawyer in physical courts? Moreover, what is the validity of the virtual lawyer in presenting evidence? These are the questions I will attempt to answer in this research.

The importance of this research is underscored by the following aspects:

1. Addressing a newly emerging topic of utmost significance.
2. Validity of evidence in this matter, given that the modern trend explicitly leans towards electronic virtual litigation.
3. Forming a comprehensive understanding of the practical reality of virtual litigation and the role and validity of virtual lawyer activities in countries implementing this system.

The reasons for choosing this research are as follows:

1. The novelty of the topic in its entirety, with a lack of specialized research available on the subject.
2. The seriousness of the topic, given that the modern trend explicitly relies on electronic virtual litigation.
3. Providing a comprehensive explanation of the concept of virtual litigation initially and elucidating the concept of the virtual lawyer.
4. Forming a general overview of the practical reality of virtual litigation and the role and validity of virtual lawyer activities in countries implementing this system.

The research attempts to address the following main question: What is the validity of the virtual lawyer in Islamic jurisprudence and law? This question branches out into several sub-questions, as follows:

1. What is meant by virtual litigation and the virtual lawyer?
2. What is the validity of the virtual lawyer in Islamic jurisprudence?

What is the validity of the virtual lawyer in law?

3. Which countries implement the system of virtual litigation?

The research aims to:

1. Clarify the concept of the virtual lawyer in both law and Islamic jurisprudence.
2. Form a clear understanding of the emergence of this term worldwide.
3. Elucidate the extent of validity of the virtual lawyer in both law and Islamic jurisprudence.
4. Explain the extent of application of the concept and identify the countries where it is implemented.

Research Methodology:

In order to achieve the desired goal of selecting the topic and outlining its theoretical framework, I will adopt a descriptive analytical approach in writing and formulating the research. This approach will be utilized in studying the legal and Sharia provisions related to the validity of virtual lawyers, bridging Islamic jurisprudence and law.

Previous Studies: There are no prior studies addressing the rulings of this research in terms of the validity of virtual lawyers.

2 The First Topic: Concept of Virtual Lawyer and the Origin of the Term Worldwide

The first requirement: The Concept of the Virtual Lawyer in Law and Islamic Jurisprudence.

Subsection One: The Concept of the Virtual Lawyer in Law.

It is worth mentioning that Palestinian law and the laws applied in Palestine generally do not encompass the concept of the virtual or digital lawyer. This is quite evident, as virtual lawyering is not practiced in Palestine, nor has it ever been discussed before the relevant authorities. Therefore, there is no Palestinian legal definition for the digital lawyer.

Among the terms apparent in the legal aspect is the definition provided by the Moroccan writer and thinker, Khamis Al-Fadili, who describes the electronic lawyer as one who provides consultation services via the internet and social networks, and interacts electronically with their clients without the need for face-to-face meetings. Additionally, they engage in legal procedures with the courts through electronic means, placing them within the realm of digital justice and making them essential actors in it. The mechanisms of the modern age have imposed this reality, leaving no room to swim against the tide [9].

As for European and Western legislation in countries where virtual lawyering is practiced, such as the United States, regulations have been introduced to govern specific aspects rather than comprehensive legislative regulation. These regulations typically come through the American Bar Association (ABA), which provides assistance tools for lawyers to submit applications and offer legal consultations without the necessity of physically visiting lawyers' offices or courts (Al-Fadili).

Subsection Two: The Concept of the Virtual Lawyer in Islamic Jurisprudence.

The provisions of Islamic jurisprudence completely lack the concept of virtual lawyering, thus clearly falling short in recognizing the importance of technological advancements in the justice sector. Consequently, there is a deficiency in Islamic legal rulings regarding virtual lawyering or virtual litigants. However, it is noted that the Shafi'i school of thought has addressed the concept of virtual jurisprudence, not virtual litigation, considering it an integral part of Islamic jurisprudence since it relies on assumptions to establish legal rulings based on assumed scenarios. Nonetheless,

what the Shafi'i school meant by its interpretation of the concept of virtual jurisprudence does not meet the requirements of the concept of virtual litigation ("The Imam and the Jurist" website) [13].

Here, we delve into prominent contemporary articles on virtual lawyering, comparing the concept of virtual lawyering to that of traditional lawyering and how it can be performed through virtual reality. In this context, when we assess the concept of lawyering in Islamic jurisprudence, lawyering means: entrusting a specialized individual to provide legal assistance, either as a plaintiff or a defendant, before the competent court, for a known fee, subject to representation by someone other than the client upon their death. Therefore, this delegation extends to virtual digital lawyers filing requests and submissions to help preserve the rights of their clients on their dedicated website, thereby achieving the legal definition.

The second requirement: The origin and source of the term "virtual lawyer" in the world and its emergence.

Subsection One: Source of the term "virtual attorney."

Based on the fact that an attorney is one of the parties of justice, it is necessary to trace the origin of the term back to the emergence of lawyering in ancient law, such as Roman law. The practice of law was not confined to one task in Rome but was divided into two branches according to the nature of each task: legal counsel, which was for the jurist, and advocacy, which was for the orator. The source of the term "attorney" comes from the convergence of the two roles: the attorney from the "hama" (legal counsel) and "hima" (advocacy), where legal counsel and knowledge are found.

The virtual attorney's source stems from digital lawyering itself, as it provides counsel and knowledge through its website and specialized automated system. Therefore, it can be argued that the source of the virtual attorney is the same, but the difference lies in the method of providing legal counsel, ranging from oral advice to standardized responses tailored to specific circumstances.

Subsection Two: The emergence of the virtual attorney.

The emergence of the virtual attorney is linked to the advent of digital justice, which utilizes information technology to access justice and facilitate communication between parties to a lawsuit and all stakeholders in the legal system and judiciary. The inception of this idea can be traced back to 1999 in the United States, specifically in the field of electronic commerce disputes, through the use of the internet and virtual litigation software.

Subsequently, countries adopted this concept in commercial domains, such as China, where an electronic court was established relying on sophisticated computer software that stores all applicable laws, regulations, and precedents. Cases are initiated by both defense and prosecution preparing their data and claims on two identical compact discs. These discs are then entered into the computer program for examination and judgment by the electronic judge (Mohammad).

Indeed, countries have begun implementing this approach, and it can be said that the trend towards having virtual attorneys, who own websites and respond to consultations through artificial intelligence systems, and submit requests based on the prevailing circumstances, has been adopted [10].

3 The Second Topic: The Presumptive Validity of Virtual Lawyers Between Islamic Jurisprudence, Law, and the States Implementing Virtual Litigation Rulings

The first requirement: The validity of virtual lawyers between Islamic jurisprudence and the law.

Subsection One: The validity of virtual lawyers in Islamic jurisprudence.

The validity of virtual lawyers in Islamic jurisprudence encompasses both their existence and the legitimacy of the consultations and initial requests they provide regarding their legal validity. Islam aims to achieve benefits and prevent harm; thus, it generally accepts the validity of a lawyer's representation even if there isn't a specific text addressing virtual lawyers. This is based on the principle that the rightful person should be able to prove their rights without infringing upon the rights of others. Consequently, Islamic law allows advocacy or defense in litigation under the concept of agency in litigation.

Regarding the validity of evidence, Islamic law clarifies that all efforts made by a lawyer to prove the truth through legitimate means are considered valid evidence. This includes both testimonial and written evidence, such as in debt transactions. The validity of virtual lawyers is established through their requests and the acceptance of their objections, and it is considered valid unless it contradicts a legal ruling.

The First requirement: presumption of attorney-client privilege in law.

While there is no specific legislation regulating the activities of virtual lawyers in Palestine, it can be inferred from the joint efforts of the Supreme Judicial Council and the Palestinian Bar Association, as demonstrated through the adoption of the 'Meezan 2' program and application. This program is an integrated electronic system for managing civil and criminal lawsuit processes, overseeing all procedures related to the lawsuit from its registration with the court clerk until its final resolution. This includes issuing notifications to the parties involved, printing session minutes, saving and storing them, printing various correspondences by order of the presiding judge, and monitoring lawsuits. This indicates the Palestinian judiciary's inclination towards a virtual electronic litigation system.

The concept of the virtual lawyer emerged from the perspective of electronic requests that lawyers submit to their clients through this virtual platform. While the request is technically submitted by the lawyer, it aligns with the general idea of virtual lawyering. Additionally, some law offices and pages already provide electronic consultations, such as the office of Lawyer Tamer Qahima in Palestine. Considering that courts readily accept such requests, it serves as evidence of the validity of the activities performed by virtual lawyers [11, 12].

The second requirement: The countries implementing virtual litigation and digital lawyers and comparing the work of virtual lawyers to that of lawyers in physical reality.

Subsection One: The countries implementing virtual litigation and digital lawyers.

The United States leads the list of countries implementing virtual lawyering, as according to the guidelines of the American Bar Association, virtual law practice

specifically entails providing legal services online through a section of a law firm's website known as the secure client portal. The law firm must have a secure section on its website where clients can log in using a username and password. By 2014, there were at least 15 virtual law firms in the United States since the inception of the concept of virtual litigation in 1999 [14].

In terms of Arab countries, the United Arab Emirates (UAE) has been at the forefront of adopting remote litigation. The Ministry of Justice in the UAE launched remote litigation services in 2019 under a decision issued by the Minister of Justice, which applies to federal courts.

Subsection Two: A comparison between the work of a virtual lawyer and the work of a lawyer in real life.

Although advancements have been made to contribute to resolving legal issues and alleviate the burden and backlog of judicial files, introducing concepts like virtual litigation, digital lawyers, and virtual lawyering, the core of these innovations lies in the concept and presence of the digital lawyer merely assisting in providing legal consultations and electronic submissions based on what the actual lawyer inputs on this platform. Therefore, its reliance heavily and explicitly remains on the actual lawyer.

This is natural because each legal case is associated with different causes or amendments, leading to varying judgments and proofs of rights, thus emphasizing the necessity of human intellect capable of analysis and inference, rather than simply providing a fixed answer for all circumstances without scrutinizing their facts.

4 Conclusion

Search Results:

1. Palestinian legislative shortcomings are also paralleled by the absence of the concept of virtual litigation and digital lawyering in Islamic jurisprudence.
2. The United States and China lead in the field of virtual justice.

5 Recommendations

1. Conduct the necessary discussions for the purpose of legislating and implementing virtual litigation systems in Palestine, in collaboration with both the Supreme Judicial Council and the Palestinian Bar Association. Additionally, provide a recommendation for issuing a law to regulate its provisions properly, given the availability of a system similar to the general concept of the balance system.
2. Scientific connection with European countries and further investigation into the issue of virtual lawyering.

The Impact of AI on Customer Service and Financial Decision-Making: The Perceptions of Bank Clients

Islam Abdeljawad, Muiz Abu Alia, Taimaa Kharoub, and Sireen Abulrub

Abstract This study explores the impact of artificial intelligence (AI) technologies on customer service quality, financing decisions, and investment decisions among Palestinian bank clients. Using Partial Least Square analysis and leveraging data collected from 375 respondents representing banks clients using online convenience sampling, the findings reveal that AI enhances the efficiency of internal operations within banks through smarter and faster data analysis. Moreover, AI contributes to an improved customer experience by enabling personalized banking services tailored to individual needs, thereby enhancing satisfaction and fostering loyalty. Additionally, AI aids clients in making informed financing and investment decisions. The study underscores the importance of AI in banking, recommending the development of comprehensive digital transformation strategies, partnerships with technology companies, and measures to strengthen data security and protection. Overall, AI technologies represent a crucial strategic addition to banking, driving operational efficiency, customer satisfaction, and financial decision-making.

Keywords Artificial intelligence · Bank clients · Financial decisions · Customer satisfaction · Palestine

1 Introduction

The rapid advancements in smart technologies, particularly Artificial Intelligence (AI), have profoundly influenced the finance and financial markets in recent decades [1]. AI technologies such as machine learning, natural language processing, and big data analysis have become indispensable components of the banking and financial sector, enhancing performance by guiding investments, analyzing markets, and improving overall financial operations [2–4]. Originally designed for efficient logical operations, AI has evolved to outstrip human intelligence in speed and proficiency.

A. M. A. Musleh Al-Sartawi et al. (eds.), *Business Resilience and Business Innovation for Sustainability*, Studies in Systems, Decision and Control 587,
https://doi.org/10.1007/978-3-031-87584-7_60

Tools like financial robots, neural networks, and deep learning are pivotal in this transformative process [5].

AI technology is programmed to emulate human judgment and cognitive skills, autonomously learning from data to make decisions, predictions, and assessments. It interprets environmental cues and risks, evolving with new data [6]. Particularly effective in real-time analysis of unstructured digital, textual, and visual data, especially within the context of big data, AI aids in focusing on critical areas [7].

Therefore, AI technology significantly impacts various industries, especially finance, by enhancing data analysis speed and accuracy, leading to improved investment decisions and market trend predictions [8]. It is pivotal in sectors from health to space exploration, reducing human error and operational costs, thereby increasing profitability [2]. In banking, AI improves customer services, personalizes financial advice, streamlines credit operations, and enhances risk control. AI also aids in portfolio management and investment decision-making [9]. However, challenges like security, privacy, regulatory compliance, and technical obstacles need to be addressed, necessitating strategies for data protection and legal compliance [10].

AI-based fintech significantly reduces information asymmetry, enhancing information disclosure, and enabling more efficient credit risk assessment with big data. Studies highlight AI's role in easing financing constraints for non-state-owned enterprises and extending understanding of corporate financing constraints, traditionally focused on factors like bank market power, stock market liquidity, financial liberalization, and entrenched management practices [11].

Despite the potential for significant improvements in banking services and the financial industry, the slow advancement of artificial intelligence in Palestinian banks presents challenges. Concerns include the quality of AI systems, which can suffer from poor results due to bad or unknown data, and privacy issues related to safeguarding protected data against unauthorized access. Additionally, there are management challenges in integrating and trusting AI technology within business structures. While there's uncertainty about AI's real-life impact, the overall belief is that its benefits outweigh the potential negative effects [4, 12].

The integration of AI in customer service and financial decision-making within banks has revolutionized client experiences. AI-powered chatbots provide swift, personalized assistance, enhancing customer satisfaction and loyalty. Through data analysis, AI algorithms offer tailored financial advice, aiding clients in making informed decisions aligned with their goals and risk tolerance. Moreover, AI-driven fraud detection systems bolster security measures, instilling trust among clients [13]. This convergence of AI technologies optimizes operational efficiency, reduces costs, and ensures a seamless banking experience, ultimately empowering clients with greater control over their financial endeavors [10].

This study posits the following question: How do bank clients perceive the impact of AI advancements on financial decisions and customer service? In general, this study highlights the perception of bank clients about AI's role in improving customer service, financing decisions, and investment decisions. The implications of these results include enhanced operational efficiency, personalized banking services

increasing customer loyalty, competitive differentiation in the financial market, improved financial risk management, and crisis forecasting.

The study contributes to the literature by providing evidence from a new setting. Palestine is an underdeveloped country with political instability [14–16]. All sectors, including banks, were affected by the restrictions of the Israeli occupation [15, 17–19]. Banks play a crucial role in Palestinian business activity [20].

2 Literature Review

The literature on AI and Fintech highlights the integration of big data, AI, digital payments, cloud computing, and blockchain in finance and banking [21]. Applications include using big data for new business models and market analysis tools [21], blockchain for credit rebuilding and market efficiency [22], digital payments for cost reduction and new benefits [23], and AI for investment decisions [24]. Hassabis et al. [25] also note the potential insights from neuroscience in developing intelligent machines, underlining the connection between AI and human neural processes.

Saber et al. [26] highlights the utility of AI in banking and financial institutions through the development of 'robo-advisors'. These advisors assist users in making financial decisions, such as personal financial management, and are evolving to cover financial analysis, asset allocation, insurance underwriting, forecasting, and reporting, capitalizing on their speed and accuracy. Dirican [27] broadens AI research to include areas like robotics, mechatronics, big data, data mining, cloud computing, and neural networks, highlighting their importance in future banking and financial services trends.

Bharadiya [28] suggest using machine learning techniques such as Support Vector Machines and Artificial Neural Networks for cryptocurrency price analysis, which could optimize financial decision-making and potentially yield higher returns, especially in Bitcoin trading, by exploiting short-term informational inefficiencies. Kim [29] used an abductive learning network AI to analyze market value added (MVA) determinants, achieving an 88% explained variance, notably outperforming traditional regression methods where 29% variance explained. Kerkez [30] posits that AI can revolutionize labor use in banking by streamlining routine tasks like compliance reporting, potentially reducing labor costs which make up a significant portion of banking expenses. AI also assists in risk mitigation by detecting patterns, but may struggle with emerging risks. However, the rise in false-positive alerts necessitates ongoing system updates to reduce manual oversight.

The literature indicates that AI technologies in the banking sector enhance direct crowdfunding for entrepreneurs and organizations via online platforms [31]. Additionally, AI improves credit information systems, reducing information asymmetry between borrowers and lenders [32].

2.1 Artificial Intelligence

The advancement of AI has profoundly impacted various fields, particularly financial accounting and administration, by automating tasks, increasing efficiency, and reducing errors, thus transforming the financial and banking sectors [33, 34]. AI amalgamates disciplines such as physiology, computer science, and linguistics to simulate human intelligence in computers, enabling them to handle complex decision-making and routine tasks [35]. AI systems, which learn and self-improve over time, are programmed to mimic human judgment and cognitive skills, thereby assessing risks and making decisions. The widespread integration of AI in everyday technology and its ability to process vast data beyond human capacity are also noted [36].

Financial decision making is an essential function in all types of firms [37]. Naturally, AI stands as a transformative technology in the finance sector, enhancing business efficiency and financial decision-making accuracy in banks and for customers [9]. Despite its benefits, AI also presents challenges in security, privacy, and the necessity for appropriate regulatory frameworks [34].

AI technologies. AI provides a set of technologies like neural networks, deep learning, and machine learning beneficial in decision-making in banking sector [33].

Expert Systems. Expert Systems (ESS) serve as platforms for sharing expert knowledge across various fields, helping bridge knowledge gaps and providing user support [38]. They have been shown to significantly increase profits, especially in decision support systems that combine linear programming with rules-based AI. Historically, expert systems primarily used symbolic processing. Acquiring knowledge in complex domains like finance and accounting is challenging, necessitating tailored methods for effective knowledge extraction, such as observation, interviews, or practical tasks [39].

Machine Learning. Machine Learning (ML) in finance involves systems learning from data to make decisions, encompassing supervised, unsupervised, and reinforcement learning. Reinforcement learning is notably effective in securities trading for portfolio rebalancing [40]. The financial sector is increasingly focusing on AI, with research differentiating between ML, robotic process automation, and AI. AI and ML enhance banking operations in customer relationship management, fraud prevention, and regulatory compliance [41]. Additionally, ML transforms corporate real estate by digitizing and analyzing complex contracts and is used in financial markets for online portfolio selection [42].

Natural Language Processing. Natural Language Processing (NLP), crucial in AI, enables systems to understand and process human language, applicable in various domains [43]. In banking, NLP improves services and financial decision-making by analyzing financial reports and news, aiding in investment strategy, and enhancing customer service with automated interactions [44]. It also assists in predicting market trends and managing risks through news monitoring and financial risk reporting. Its

significance in banking, particularly in data analysis and customer communication, leads to improved financial decisions [2].

Neural Networks. Artificial Neural Networks (ANNs), inspired by the human brain, excel in pattern recognition and data analysis through parallel processing. Evolving from regression model extensions in finance, ANNs now demonstrate superior generalization and self-organizing abilities. Deep learning, a multi-layered neural network approach, enhances intuitive learning but may lack interpretability [45]. In finance, ANNs have improved asset return predictions and are used for handling large datasets, predicting market trends, and portfolio management [46]. They also enhance customer service through automation and support risk management by providing accurate market forecasts.

2.2 The Application of AI in Banks

AI technology stands as one of the most crucial developments of the twenty-first century, significantly impacting various industries, including the financial sector. Within banks, AI is reshaping operations across several key areas:

Financial Risk Management. AI is revolutionizing financial risk management within banks by swiftly and accurately analyzing data to identify unusual behavior and mitigate risks. Major banks are increasingly leveraging AI to enhance risk assessment processes, ensuring financial stability and regulatory compliance [13].

Furthermore, AI empowers banks to enhance their risk management practices by enabling swift and accurate identification of potential risks and anomalies. AI algorithms analyze vast amounts of transactional data in real-time to detect suspicious activities and identify emerging risks, such as fraud and money laundering. Additionally, AI-powered predictive models assess credit and market risk, enabling banks to proactively manage their exposure to potential losses [13].

Customer Experience. AI-driven solutions are enhancing customer experience in banks by providing quick responses to inquiries and delivering personalized financial advice [47]. By leveraging AI technologies, banks can improve customer services, leading to higher satisfaction and loyalty among clients [48].

Investment Decision-Making. AI plays a pivotal role in optimizing investment decisions for banks by improving the accuracy of market forecasts and data analysis. Studies demonstrate how AI, particularly deep machine learning, aids in forecasting investor sentiment and asset pricing, enabling better managerial decisions and high-frequency asset pricing forecasts [49].

Performance of Financial Assets. Banks are utilizing AI technologies to improve the performance of their financial assets through enhanced investment portfolio management and smart investment decisions [47]. By leveraging AI-generated indicators

and predictive analytics, banks can optimize returns on financial assets and drive sustainable growth.

Financing Decisions. AI assists banks in making informed financing decisions by providing predictive analytics and real-time insights into borrowers' financial health and market conditions. Machine learning algorithms analyze historical data to identify patterns and trends, enabling banks to assess the viability of loan applications and predict borrowers' ability to repay loans accurately [32].

2.3 Hypotheses of the Study

AI technologies have significantly transformed the banking sector, enhancing customer service by efficiently analyzing large volumes of financial data. This analysis helps banks better understand customer needs and preferences, leading to more personalized and interactive services. As a result, customer experience and satisfaction are improved, fostering stronger relationships and loyalty between customers and banks, and increasing the efficiency of investment and financing decisions [41]. We hypothesized the following:

H1: The degree to which bank clients perceive intelligent technologies positively correlates with their perception of customer service quality.
H2: Bank customers perceive their financing decisions more favorably the more perceived intelligent technologies they employ.
H3: Bank customers perceive their investment decisions more favorably the more perceived intelligent technologies they use.

3 Methodology

This study employed a convenience sampling method to gather data from clients of Palestinian banks [17, 50]. A questionnaire, developed by the researchers, aimed to measure the variables of interest in this study. Details of the questionnaire items can be found in the appendix.

A total of 400 responses were collected through an online questionnaire, out of which 375 were considered valid for analysis. The characteristics of the sample are outlined in Table 1.

Table 1 Sample characteristics

Percentage (%)	Categories	Characteristics
44.8	Male	Gender
54.7	Female	
58.9	Less than 30	Age (years)
40.5	30–40	
0.5	40–50	
0	More than 50	
11.7	Diploma	Qualification
63.2	Bachelor's	
23.2	Master's	
0.5	Ph.D	
1.3	Other	
15.2	Daily	How many times do you interact with the online bank's services?
30.7	Weekly	
29.1	Monthly	
25.1	Less than once a month	
87.7	Yes	Have you preferred to use online banking services recently?
12.3	No	

4 Results

We employed partial least squares (PLS) modeling with Smart-PLS 4 [51] as our chosen statistical tool to scrutinize both the measurement and structural model. PLS modeling was preferred due to its robustness against assumptions of normality, which is particularly advantageous in the context of survey research where data distribution may not adhere to normality [51, 52].

As data stemmed from a singular source, we undertook an assessment of Common Method Bias, as recommended by Nour et al. [53] and Kock [54], by conducting tests for full collinearity. All variables were regressed against a common variable, and a Variance Inflation Factor (VIF) threshold of ≤ 3.3 was set to ascertain the absence of bias stemming from the single-source nature of the data. VIF values, in Table 2, indicate that single-source bias was not a significant concern within our dataset.

Table 2 Full collinearity testing

AI usage	Customer service	Financing decisions	Investment decisions
1.068	1.909	2.574	2.187

4.1 Measurement Model

We adhered to the methodology of Anderson and Gerbing [55] to assess the developed model through a 2-step procedure. Initially, we scrutinized the measurement model to evaluate the validity and reliability of the utilized instruments, in accordance with the guidelines provided by Hair et al. [56]. Subsequently, we conducted an analysis of the structural model to examine the formulated hypotheses.

In evaluating the measurement model, we assessed the loadings, average variance extracted (AVE), and composite reliability (CR). It was stipulated that loadings should surpass 0.5, AVE should be equal to or greater than 0.5, and CR should be equal to or greater than 0.7. As illustrated in Fig. 1 and Table 3, all AVE values exceeded 0.5, and all CR values surpassed 0.7. Additionally, the loadings were deemed acceptable, with only four loadings falling below 0.708 [56] but larger than 0.5.

In the subsequent step, we evaluated the discriminant validity utilizing the HTMT criterion proposed by Henseler et al. [57] and later refined by Franke and Sarstedt [58]. According to this criterion, HTMT values should not exceed 0.85 under the stricter criterion and should not surpass 0.90 under the more lenient criterion. As depicted in Table 4, all HTMT values were below 0.90. Consequently, we can infer that respondents perceived the four constructs as distinct. Collectively, these validity tests affirm the validity and reliability of the measurement items.

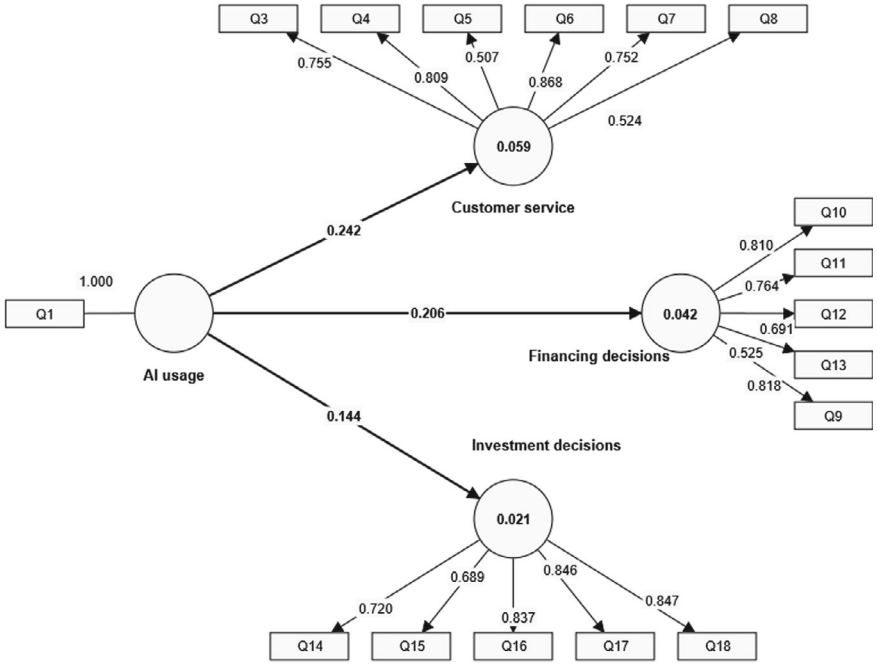

Fig. 1 Loadings of the measurement model

Table 3 Measurement model

Construct	Cronbach's alpha	Composite reliability	Average variance extracted (AVE)
Customer service	0.806	0.817	0.513
Financing decisions	0.797	0.835	0.532
Investment decisions	0.849	0.865	0.625

Table 4 Discriminant validity using Heterotrait–Monotrait criterion (HTMT)

Construct	1	2	3	4
1. AI usage				
2. Customer service	0.242			
3. Financing decisions	0.194	0.849		
4. Investment decisions	0.150	0.750	0.890	

4.2 The Structural Model

Following Hair et al. [56], we conducted an assessment of multivariate skewness and kurtosis. The findings indicated that the collected data did not adhere to multivariate normality, as evidenced by Mardia's multivariate skewness ($\beta = 4.8195, p < 0.01$) and Mardia's multivariate kurtosis ($\beta = 33.5428, p < 0.01$). Consequently, in line with the suggestions of Becker et al. [59], we employed a resample bootstrapping procedure with 10,000 samples to report the path coefficients, standard errors, *t*-values, and *p*-values for the structural model as in Fig. 2 and Table 5.

Additionally, considering the critique by Hahn and Ang [60] regarding the limitations of relying solely on *p*-values for hypothesis testing, we integrated a combination of criteria including *p*-values, confidence intervals, and effect sizes. Table 5 provides an overview of the criteria utilized to evaluate the developed hypotheses.

The initial analysis focused on examining the influence of the AI predictor on Customer Service, revealing an R^2 of 5.9%, indicating that this predictor accounted for 5.9% of the variance in Customer Service. Similarly, R^2 values of 4.2 and 2.1 were observed for Financing Decisions and Investment Decisions, respectively. Positive relationships were identified between AI and Customer Service ($\beta = 0.242, p < 0.01$), Financing Decisions ($\beta = 0.206$, $p < 0.01$), and Investment Decisions ($\beta = 0.144$, $p < 0.01$), thus supporting hypotheses H1, H2, and H3. Furthermore, bias-corrected 95 confidence intervals did not encompass zero, affirming the robustness of our findings.

In summary, the impact of AI on customer service and financial decisions of bank clients is substantial, as evidenced by our findings. Following rigorous methodological protocols outlined by Hair et al. [56] and Becker et al. [59], our study revealed that AI has a positive influence on customer service, financing decisions, and investment decisions among Palestinian bank clients. Specifically, AI was found to explain 5.9% of the variance in customer service, with similarly positive effects observed

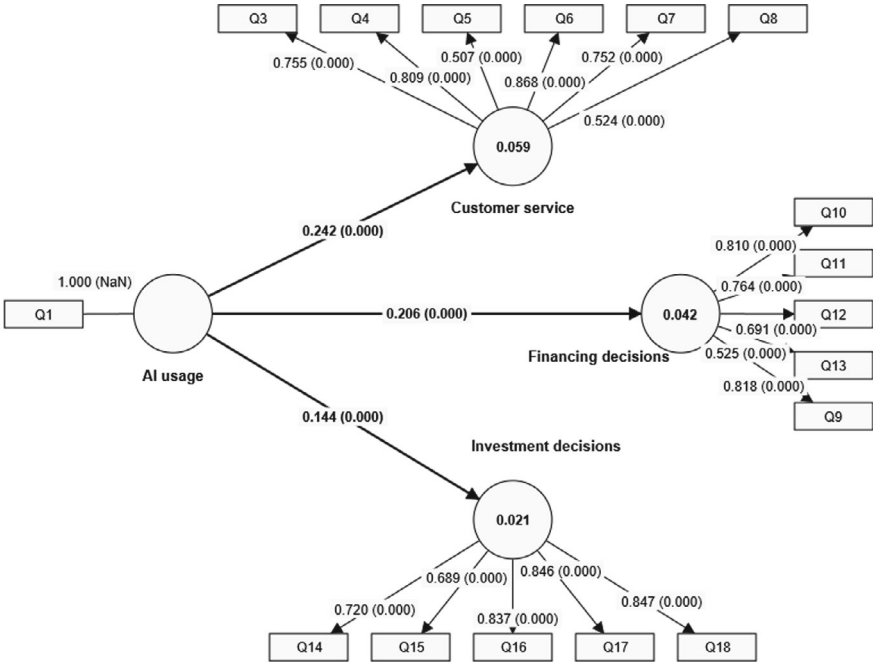

Fig. 2 The structural model

Table 5 Hypothesis testing

Hypothesis	Relationship	Std Beta	Std Error	*t*-values	*p*-values	BCI LL	BCI UL	f2
H1	AI usage— > Customer service	0.242	0.041	5.875	0.000	0.168	0.302	0.062
H2	AI usage— > Financing decisions	0.206	0.039	5.290	0.000	0.133	0.259	0.044
H3	AI usage— > Investment decisions	0.144	0.040	3.622	0.000	0.074	0.2	0.021

Note We use 95 confidence interval with a bootstrapping of 10,000

on financing decisions ($R^2 = 4.2\%$) and investment decisions ($R^2 = 2.1\%$). These results, supported by robust statistical analyses, underscore the increasingly integral role of AI in shaping and enhancing banking services and decision-making processes.

5 Conclusion

The study underscores the significant impact of AI technologies in the financial sector, particularly in enhancing the efficiency of internal operations within banks. This improvement is primarily achieved through the smarter and faster analysis of big data, leading to increased processing speed and seamless integration of AI technologies into everyday banking operations.

Moreover, our findings demonstrate that the utilization of AI in banks has a positive effect on enhancing customer experience. By leveraging smart systems to analyze customer behaviors and anticipate their needs, banks can offer personalized banking services, thereby enhancing satisfaction and fostering loyalty among clients.

Furthermore, the study highlights an additional benefit of AI to clients in their financing and investment decisions. AI-enabled tools provide valuable insights and support in making informed financial decisions, contributing to better financial outcomes for clients.

Future research endeavors should focus on exploring additional benefits of AI in banking, particularly in enhancing security and anti-fraud measures. AI employs machine learning models to detect unusual patterns, offering early warnings against suspicious activities and reducing fraud risks, thus bolstering overall security.

Overall, AI technologies represent a crucial strategic addition to banking, improving operational efficiency, customer experience, and security. These advancements align with the broader digital transformation in banking, emphasizing the necessity to adopt advanced technologies to remain competitive and enhance financial services.

Based on the results, the researchers recommend the following actions:

1 Develop comprehensive digital transformation strategies incorporating AI, tailored to the bank's goals and market challenges.
2 Strengthen partnerships with technology companies to gain access to advanced AI developments and support.
3 Enhance data security and protection to bolster customer confidence and guard against cyber threats.
4 Create custom AI-driven solutions to enhance customer experience through personalized services.
5 Increase employee awareness and training on AI technologies for effective organizational integration.
6 Utilize AI-powered big data analysis for strategic decision-making to boost efficiency and profitability.
7 Engage with AI-related legislation and ethics to mitigate legal and ethical risks associated with AI implementation in banking operations.

Appendix

Thank you for participating in our survey! Your feedback is valuable to us. This questionnaire aims to gather insights into your experiences and perceptions regarding the use of artificial intelligence (AI) in banking services. Please answer each question to the best of your ability. Your responses will remain confidential					
Gender	Male	Female			
Age	Less than 30	30- less than 40	40- less than 50	more than 50	
Qualification	2-year Diploma	BA	Master	PhD	Others
Have you preferred to use online banking services recently?	Yes	No			
X: Artificial intelligence technologies					
Q1: How many times do you interact with the bank's online services per month?	Daily	Weekly	Monthly	Less than once a month	
Y1: customers service	SD	D	N	A	SA
Q3: Have you noticed an improvement in customer service response speed thanks to the use of technology and artificial intelligence?					
Q4: Do you think that artificial intelligence has improved the quality of banking services you receive?					
Q5: Have you interacted with intelligent support systems (such as automated chat or automated responses) during your recent banking experience?					
Q6: Did you find this service more effective and personalized due to AI technology?					
Q7: Did you feel more satisfied as a customer due to applying artificial intelligence techniques in customer service?					
Q8: Do you expect the use of technology and artificial intelligence to continue to improve customer experience in banks in the future?					
Y2: Financing decisions	SD	D	N	A	SA

(continued)

(continued)

Q9: Have you noticed an improvement in the speed of making financing decisions thanks to the use of technology and artificial intelligence?					
Q10: Have you felt an improvement in your customer experience when using AI technologies in finance services?					
Q11: Have you used banking applications or platforms that rely on artificial intelligence technology to obtain financing services?					
Q12: Do you think that the use of intelligent data analysis and machine learning has contributed to improving the accuracy of financing decision-making?					
Q13: Do you think that using AI technology could provide more innovative financing options to customers?					
Y3: Investment decisions	SD	D	N	A	SA
Q14: Have you noticed an improvement in the speed of making investment decisions thanks to the use of artificial intelligence technology?					
Q15: Have you applied for investment data analysis using AI techniques?					
Q16: Do you think that these technologies make the process of analyzing investment data more accurate and effective?					
Q17: Do you think that using artificial intelligence technology may provide more innovative investment options for clients?					
Q18: Have you felt an improvement in your personal experience as an investor thanks to artificial intelligence technologies?

The Reality of Customer Satisfaction Regarding the Level of Services Provided by Retail Stores

Jiries Abu Ghannam, Farah Qafisheh, and Mohammad Omar Sabri

Abstract This study aimed to identify the reality of customer satisfaction at the level of services provided, and the study was conducted on Al-Shaab Market Supermarket and Al-Amjad Mall Corporation in Bethlehem Governorate). The descriptive analytical approach to conducting the study and the questionnaire as a main tool for collecting information. The study was conducted on a random sample of (50) questionnaires, which consisted of the sample items, customers of shops in Al-Shaab Supermarket and Al-Majd Supermarket in Bethlehem Governorate. The study reached several results, the most important of which are: The results showed that the degree of service tangibility and customer satisfaction was, as the most common manifestations were the external appearance of the store, followed by the modern and advanced equipment and devices used in the performance of the service. The results showed that the degree of service reliability and customer satisfaction was great, as it was the most common aspect of the shops providing their services correctly, followed by the shops providing the service on time. The results revealed that the degree of response and customer satisfaction was great, as the most common manifestations were the immediate response to the needs of customers, followed by the workers who were always ready to deal with customers, and the least common was immediate response to customers' inquiries and complaints.

Keywords Customer satisfaction · Level of services · Retail stores · Labour market

1 Introduction

Service quality has become a primary distinguishing factor and the strongest competitive weapon sought by all service-providing organizations to possess. Customers now have more alternatives to choose from according to their preferences. They consider the quality of services in such a competitive market before making their choice. This has compelled organizational managements to understand customers' needs in order to achieve their satisfaction and work towards gaining their loyalty. Customer loyalty is crucial for facing competition due to modern trends that focus on customers rather than the product itself. As competition among service providers increases, every organization must be capable of providing high-quality services to satisfy their customers and ensure their loyalty to continue growing and competing in the market [2].

For growth and development, quality management and achieving customer satisfaction have become priorities for service institutions. Customer satisfaction has become the focus of their attention, constantly researching and understanding customers' needs and expectations, and providing services that meet their satisfaction and loyalty to the institution providing them. Institutions have realized that retaining existing customers is better than seeking new ones, leading their efforts to focus on quality, service performance, and bridging the gap between service performance and customer expectations. However, effectively aligning service performance with customer expectations is challenging and requires serious research into the factors that influence customers' consumption decisions and how customers evaluate the service [4].

The chain of success relies on high customer satisfaction, leading to the continuity of their relationship with the institution, which in turn fosters their loyalty and reduces their likelihood of leaving. This is accompanied by an increase in the institution's returns [1, 6–10].

1.1 Problem Statement and Research Questions

Measuring service quality is one of the key approaches to developing and improving quality in institutions. However, there is variation in how service quality is measured and the variables associated with it. This may be attributed to the novelty of the subject, thus there is an urgent need for this study to deepen the understanding of quality in retail stores in Bethlehem Governorate. Based on this, the problem statement can be formulated in the following main question:

What is the reality of customer satisfaction regarding the level of services provided by the supermarket Souq Al-Shaab and the institution Emjad Mall in Bethlehem Governorate?

From the main question, the following sub-questions branch out:

What is the level of tangibility of service in relation to customer satisfaction by Souq Al-Shaab supermarket and Emjad Mall institution in Bethlehem Governorate?

What is the level of reliability of service in relation to customer satisfaction by Souq Al-Shaab supermarket and Emjad Mall institution in Bethlehem Governorate?

What is the level of responsiveness in relation to customer satisfaction by Souq Al-Shaab supermarket and Emjad Mall institution in Bethlehem Governorate?

What is the level of empathy in relation to customer satisfaction by Souq Al-Shaab supermarket and Emjad Mall institution in Bethlehem Governorate?

What is the level of assurance in relation to customer satisfaction by Souq Al-Shaab supermarket and Emjad Mall institution in Bethlehem Governorate?

1.2 Importance of the Study

The importance of this study lies in the following:

Expressing the level of quality of services provided to customers and their compatibility with their desires and needs in order to understand their preferences from the services provided by retail stores, aiming to develop and enhance them to meet customers' desires and needs and gain their satisfaction.

This study is expected to make a modest scientific contribution in the field of improving service quality and the possibility of reaching results regarding improving service quality, through which recommendations can be suggested to increase customer satisfaction.

1.3 Study Objectives

This study aimed to achieve the following main objective:

To determine the reality of customer satisfaction regarding the level of services provided by retail stores operating in Souq Al-Shaab supermarket and Emjad Mall institution in Bethlehem Governorate.

From the main objective, the following sub-objectives emerge:

To identify the level of tangibility of service in relation to customer satisfaction by Souq Al-Shaab supermarket and Emjad Mall institution in Bethlehem Governorate.

To identify the level of reliability of service in relation to customer satisfaction by Souq Al-Shaab supermarket and Emjad Mall institution in Bethlehem Governorate.

To identify the level of responsiveness in relation to customer satisfaction by Souq Al-Shaab supermarket and Emjad Mall institution in Bethlehem Governorate.

To identify the level of empathy in relation to customer satisfaction by Souq Al-Shaab supermarket and Emjad Mall institution in Bethlehem Governorate.

To identify the level of assurance in relation to customer satisfaction by Souq Al-Shaab supermarket and Emjad Mall institution in Bethlehem Governorate.

1.4 Study Hypotheses

There are no statistically significant differences at the significance level ($\alpha \leq 0.05$) in the reality of customer satisfaction regarding the level of services provided by Souq Al-Shaab supermarket and Emjad Mall institution in Bethlehem Governorate attributed to the gender variable.

There are no statistically significant differences at the significance level ($\alpha \leq 0.05$) in the reality of customer satisfaction regarding the level of services provided by Souq Al-Shaab supermarket and Emjad Mall institution in Bethlehem Governorate attributed to the age variable.

There are no statistically significant differences at the significance level ($\alpha \leq 0.05$) in the reality of customer satisfaction regarding the level of services provided by Souq Al-Shaab supermarket and Emjad Mall institution in Bethlehem Governorate attributed to the educational qualification variable.

There are no statistically significant differences at the significance level ($\alpha \leq 0.05$) in the reality of customer satisfaction regarding the level of services provided by Souq Al-Shaab supermarket and Emjad Mall institution in Bethlehem Governorate attributed to the monthly income variable.

There are no statistically significant differences at the significance level ($\alpha \leq 0.05$) in the reality of customer satisfaction regarding the level of services provided by Souq Al-Shaab supermarket and Emjad Mall institution in Bethlehem Governorate attributed to the place of residence variable.

1.5 Study Limits

- Spatial Limit: This study will be limited to Bethlehem Governorate.
- Human Limit: It will be applied to customers of retail stores in Bethlehem Governorate.
- Temporal Limit: The second semester of the academic year 2021–2022.

2 Methodology

2.1 Study Methodology

The researchers employed a descriptive-analytical approach, which compares, interprets, and evaluates with the aim of reaching meaningful generalizations that enhance knowledge about customer satisfaction levels regarding the services provided by Souq Al Shaab supermarket and Amjad Mall in Bethlehem Governorate.

2.2 Study Population

This study focused on the topic of customer satisfaction regarding the services provided by Souq Al Shaab supermarket and Amjad Mall in Bethlehem Governorate. Therefore, the study population consisted of customers of Souq Al Shaab supermarket and Amjad Mall in Bethlehem Governorate.

2.3 Study Sample

The study was conducted on a random sample of 50 questionnaires, representing customers of retail stores in Souq Al Shaab supermarket and Amjad Mall in Bethlehem Governorate.

2.4 Study Tool

A questionnaire was constructed to obtain the perspectives of the researchers on the study topic.

2.5 Study Tool Reliability

Reliability was calculated using internal consistency method by calculating the Cronbach's Alpha coefficient. The reliability of the study tool was verified by examining the internal consistency of the tool's items using Cronbach's Alpha coefficient on the total study sample, where the reliability value was (0.91), indicating a very high degree of reliability for the tool.

3 Results

Study Question 1: What is the level of customer satisfaction with the services provided by Souq Al Shaab supermarket and Amjad Mall in Bethlehem Governorate?

To answer the above question, the numbers, means, and standard deviations of the customer satisfaction level with the services provided by Souq Al Shaab supermarket and Amjad Mall in Bethlehem Governorate were extracted on the total scale of the study. The level of customer satisfaction with the services provided by Souq Al Shaab supermarket and Amjad Mall in Bethlehem Governorate was high, with a mean score of (3.85) on the total scale of the study, with a standard deviation of (0.62).

Study Question 2: What are the most important tangible aspects of service and customer satisfaction?

To answer the above question, the means and standard deviations of the most important tangible aspects of service and customer satisfaction were extracted.

The level of tangibility of service and customer satisfaction was high, with a mean score of (3.91). The most common aspects were the attractive appearance of the commercial premises with a mean of (4.18), followed by modern and sophisticated equipment used in service delivery with a mean of (3.92).

Study Question 3: What are the most important reliability aspects of service and customer satisfaction?

To answer the above question, the means and standard deviations of the most important reliability aspects of service and customer satisfaction were extracted.

The level of service reliability and customer satisfaction was high, with a mean score of (3.81). The most common aspects were businesses providing their services correctly with a mean of (3.86), followed by businesses delivering services on time with a mean of (3.82).

Study Question 4: What are the most important responsiveness aspects of service and customer satisfaction?

To answer the above question, the means and standard deviations of the most important responsiveness aspects of service and customer satisfaction were extracted.

The level of responsiveness and customer satisfaction was high, with a mean score of (3.76). The most common aspects were immediate response to customer needs with a mean of (3.98), followed by employees being always ready to deal with customers with a mean of (3.90), and the least common aspect was immediate response to customer inquiries and complaints with a mean of (3.52).

Study Question 5: What are the most important empathy aspects of service and customer satisfaction?

To answer the above question, the means and standard deviations of the most important empathy aspects of service and customer satisfaction were extracted.

The level of empathy and customer satisfaction was high, with a mean score of (3.76). The most common aspects were service providers demonstrating courtesy in dealing with customers with a mean of (4.14), followed by businesses placing customer interests at the forefront of senior management concerns with a mean

of (3.76), and the least common aspect was service providers offering advice and guidance to customers with a mean of (3.56).

Study Question 6: What are the most important security aspects of service and customer satisfaction?

To answer the above question, the means and standard deviations of the most important security aspects of service and customer satisfaction were extracted. The level of security and customer satisfaction was high, with a mean score of (4.01). The most common aspects were service providers' behavior instilling trust in customers with a mean of (4.10), followed by customers feeling safe when dealing with businesses with a mean of (4.08).

Hypothesis 1: There are no statistically significant differences at the $\alpha \leq 0.05$ level in the level of customer satisfaction with the services provided by Souq Al Shaab supermarket and Amjad Mall in Bethlehem Governorate attributed to the gender variable. To verify the validity of the above hypothesis, a t-test was used to compare the differences in the level of customer satisfaction with the services provided by Souq Al Shaab supermarket and Amjad Mall in Bethlehem Governorate attributed to the gender variable.

There were no statistically significant differences at the $\alpha \leq 0.05$ level in the level of customer satisfaction with the services provided by Souq Al Shaab supermarket and Amjad Mall in Bethlehem Governorate attributed to the gender variable. There was a clear convergence in the mean scores regardless of gender.

Hypothesis 2: There are no statistically significant differences at the $\alpha \leq 0.05$ level in the level of customer satisfaction with the services provided by Souq Al Shaab supermarket and Amjad Mall in Bethlehem Governorate attributed to the age variable.

To verify the validity of the above hypothesis, a one-way analysis of variance (ANOVA) was used to compare the differences in the level of customer satisfaction with the services provided by Souq Al Shaab supermarket and Amjad Mall in Bethlehem Governorate attributed to the age variable. There were no statistically significant differences at the $\alpha \leq 0.05$ level in the level of customer satisfaction with the services provided by Souq Al Shaab supermarket and Amjad Mall in Bethlehem Governorate attributed to the age variable. There was a clear convergence in the mean scores regardless of age.

Hypothesis 3: There are no statistically significant differences at the $\alpha \leq 0.05$ level in the level of customer satisfaction with the services provided by Souq Al Shaab supermarket and Amjad Mall in Bethlehem Governorate attributed to the educational qualification variable. To verify the validity of the above hypothesis, a one-way analysis of variance (ANOVA) was used to compare the differences in the level of customer satisfaction with the services provided by Souq Al Shaab supermarket and Amjad Mall in Bethlehem Governorate attributed to the educational qualification variable. There were no statistically significant differences at the $\alpha \leq 0.05$ level in the level of customer satisfaction with the services provided by Souq Al Shaab supermarket and Amjad Mall in Bethlehem Governorate attributed to the educational qualification variable. There was a clear convergence in the mean scores regardless of educational qualification.

Hypothesis 4: There are no statistically significant differences at the $\alpha \leq 0.05$ level in the level of customer satisfaction with the services provided by Souq Al Shaab supermarket and Amjad Mall in Bethlehem Governorate attributed to the monthly income variable.

To verify the validity of the above hypothesis, a one-way analysis of variance (ANOVA) was used to compare the differences in the level of customer satisfaction with the services provided by Souq Al Shaab supermarket and Amjad Mall in Bethlehem Governorate attributed to the monthly income variable. There were no statistically significant differences at the $\alpha \leq 0.05$ level in the level of customer satisfaction with the services provided by Souq Al Shaab supermarket and Amjad Mall in Bethlehem Governorate attributed to the monthly income variable. There was a clear convergence in the mean scores regardless of monthly income.

Hypothesis 5: There are no statistically significant differences at the $\alpha \leq 0.05$ level in the level of customer satisfaction with the services provided by Souq Al Shaab supermarket and Amjad Mall in Bethlehem Governorate attributed to the residential area variable.

To verify the validity of the above hypothesis, a one-way analysis of variance (ANOVA) was used to compare the differences in the level of customer satisfaction with the services provided by Souq Al Shaab supermarket and Amjad Mall in Bethlehem Governorate attributed to the residential area variable. There were statistically significant differences at the $\alpha \leq 0.05$ level in the level of customer satisfaction with the services provided by Souq Al Shaab supermarket and Amjad Mall in Bethlehem Governorate attributed to the residential area variable. The differences favored customers from urban areas over those from rural areas, and also between customers from urban areas and those from refugee camps. To identify the source of these differences, Tukey's test was extracted for pairwise comparisons in the level of customer satisfaction with the services provided by Souq Al Shaab supermarket and Amjad Mall in Bethlehem Governorate attributed to the residential area variable.

4 Conclusion

In conclusion, this study focused on examining the reality of customer satisfaction regarding the level of services provided by retail stores, specifically Souq Al-Shaab Supermarket and Emjad Mall in Bethlehem Governorate. The study utilized a descriptive analytical approach and collected data through questionnaires from a random sample of 50 customers. The results of the study revealed several important findings. Firstly, the level of service tangibility and customer satisfaction was high. The external appearance of the stores was identified as the most common manifestation, followed by the modern and advanced equipment used in service delivery. Secondly, the degree of service reliability and customer satisfaction was also found to be high. The correct provision of services by the stores was the most common aspect, and timely service delivery was also highly valued by customers. Thirdly, the degree of responsiveness and customer satisfaction was rated as great. Immediate response

to customer needs and the availability of workers to deal with customers were identified as the most common manifestations. However, immediate response to customer inquiries and complaints was identified as the least common aspect. Based on the research questions, the study also explored the levels of empathy and assurance in relation to customer satisfaction. However, the specific results for these aspects were not provided in the document. The study emphasized the importance of customer satisfaction and its impact on the success and growth of retail stores. It highlighted the need for retail stores to understand and meet customer needs and expectations in order to foster customer loyalty and increase competitiveness. The findings of this study contribute to the understanding of service quality in retail stores in Bethlehem Governorate. The study provides insights into the specific aspects of service that significantly influence customer satisfaction. Overall, this research underscores the importance of continuously improving service quality and bridging the gap between service performance and customer expectations. By focusing on customer satisfaction, retail stores can enhance customer loyalty, increase returns, and thrive in a competitive market. It is important to note that the document provided is truncated, and further details and conclusions may be present in the complete document.

5 Recommendations

Based on the above results, the following are the main recommendations:

- There is a need for retail stores to strive for higher levels of quality by focusing on all dimensions of quality (tangibility, reliability, responsiveness, empathy, security, and customer satisfaction).
- Retailers should not view customers as momentary sources of profitability but rather as future resources and partners in business development.
- It is essential to adopt modern marketing methods and trends in dealing with customers, which necessitate taking customer perspectives into account for service improvement.
- More attention should be paid to human resources in institutions, especially concerning training and development operations within the framework of institutional policies, and efforts should be made to motivate them.

Real Estate Zakat and Its Jurisprudential Rulings

Fatima Al-Aroj, Suhail Al-Ahmad, and Anas Mohammad Awad Alkalaileh

Abstract This research sheds light on Zakat (obligatory charity) on real estate and its jurisprudential rulings in Islam. I clarified the meaning, both linguistically and technically, of Zakat and real estate. I explained the ruling of Zakat on commercial re-al estate and agricultural land, as well as the significance and legitimacy of Zakat in Islam. The main objectives include highlighting Zakat on commercial real estate and ex-plaining its jurisprudential rulings. The research employed both descriptive and analytical methodologies to elucidate Zakat on real estate and its jurisprudential rulings. One of the key findings is that real estate refers to immovable as-sets such as land and buildings, which may be intended for agriculture or commercial purposes. Zakat is obligatory on commercial real estate and is calculated at 2.5% of its value after reaching the Nisab (minimum threshold) and one lunar year has passed. Zakat is due on the value of these proper-ties, not on the properties themselves, as the Nisab is determined based on their value.

Keywords Zakat, · Zakat on real estate · Commercial real estate · Agricultural land · Local economic development

1 Introduction

"Praise be to Allah, the Lord of all worlds, who has taught us, guided us, and directed us to the right path. We are grateful for the blessing of intellect, which distinguishes us from all other creations. Peace and blessings be upon the Prophet, who was sent as a mercy to the worlds, his family, companions, and those who follow them in goodness until the Day of Judgment.

Fulfilling the understanding of religion, particularly in con-temporary matters, is crucial. Therefore, my research focuses on a contemporary Islamic jurisprudence topic: Zakat on real estate. Zakat is one of the pillars of Islam, mandated by Allah to purify the wealth of the giver and elevate their morals through charity, generosity, and abandoning greed and miserliness. This is encapsulated in the verse: 'Take, [O, Muhammad], from their wealth a charity by which you purify them and cause them increase, and invoke [Allah's blessings] upon them. Indeed, your invocations are reassurance for them. And Allah is Hearing and Knowing.' (At-Tawbah, 103).

Zakat, beyond its religious significance, is a cornerstone of Islamic economics. It mobilizes stagnant wealth and channels it towards development and investment. Many Muslims today overlook the obligation of Zakat on real estate, especially commercial properties, which generate income either through capital gains or rental yields. In this research, I will elucidate the linguistic and technical understanding of Zakat, clarify the calculation of Zakat on commercial real estate, address whether Zakat is applicable to agricultural land, and discuss its ruling and legitimacy in Islam."

2 The First Topic: Zakat and Real Estate Linguistically and Legally

First Requirement: The Concept of Zakat Linguistically and Legally.

"In language, Zakat means growth and increase, as these meanings are reflected in the verse: 'Take, [O, Muhammad], from their wealth a charity by which you purify them and cause them increase, and invoke [Allah's blessings] up-on them. Indeed, your invocations are reassurance for them. And Allah is Hearing and Knowing.' (At-Tawbah, 103). It purifies the giver from sin and Zakat also carries the meaning of praise and righteousness [1].

In legal terminology, jurists have defined Zakat in various ways, though all these definitions converge on a single meaning. Hanafi jurists defined it as: 'The action of fulfilling an obligatory right upon wealth, contingent upon the passage of a year and reaching the minimum threshold' [2]. Maliki jurists defined it as: 'A specific portion of wealth taken from specific wealth, upon reaching a specific amount within a specific time, to be spent on specific categories' [3], Shafi'i jurists defined it as: 'A specific amount taken from specific wealth, obliged to be spent on specific categories

with specific conditions' [4], Hanbali jurists defined it as: 'An obligatory right upon specific wealth' [5].

In contemporary jurisprudence, it is defined as: 'The predetermined portion of wealth that Allah has mandated for the deserving recipients' [6].

The Second Point: The Concept of Real Estate

> … Real estate, linguistically, is the plural of 'aqar, referring to land, cultivated fields, and palm trees, as well as movable property, as in the saying 'what has no home or real estate.' Some say it refers to any fixed ownership, such as houses and palm trees.

In legal terminology, real estate encompasses anything with a fixed foundation and stability, such as land and houses, or anything owned by individuals, including buildings, palaces, apartments, shops, gas stations, rest houses, and the like. It refers to anything fixed and immovable, such as land and buildings.

Zakat on real estate, in Sharia terminology, is the financial obligation imposed on what individuals own of lands, buildings, and the like, which are fixed as-sets yielding profits and income to their owners…".

The second point: The Status of Zakat in Islam and the Ruling Established in its Legitimacy:

First Point: The Status of Zakat in Islam

> … Zakat is an obligatory duty, and its status is among the greatest matters in Islam for the following reasons: [7].

Zakat is the third pillar of Islam, forming one of the foundations of Islam. This is evidenced by the Hadith of Abdullah ibn Umar, may Allah be pleased with them both, who reported that the Prophet Muhammad (peace be upon him) said: "Islam is built on five pillars: testifying that there is no god but Allah and that Muhammad is the Messenger of Allah, establishing prayer, paying zakat, fasting the month of Ramadan, and performing Hajj to the House (the Kaaba)." (Sahih Muslim) Another narration states: "Islam is built upon five pillars: to worship Allah and disbelieve in what is worshipped besides Him, to establish prayer, to give zakat, to perform Hajj, and to fast Ramadan." (Sahih Muslim).

3 The Second Topic: The Status of Zakat in Islam and the Established Rulings Regarding Its Legitimacy

First Aspect: The Status of Zakat in Islam

1. Zakat is a pillar of Islam, mentioned alongside prayer in numerous places in the Quran, indicating its significance to Allah. This underscores its elevated status and importance, as stated in the verse: "Establish prayer and give zakat and bow with those who bow [in worship and obedience]." (Al-Baqarah, 43)

2. The Prophet Muhammad (peace be upon him) meticulously attended to the matter of Zakat, demonstrating its profound importance in Islam. Authentic Hadiths extensively discuss the obligation, payment, and significance of Zakat, as well as the consequences for neglecting it, including the obligation to fight those who refuse to pay it. The types of wealth subject to Zakat, such as livestock, gold, silver, trade goods, and agricultural produce, are elaborated upon. Additionally, the Sunnah provides detailed rulings on Zakat, clarifying the categories of people eligible to receive it. Imam Ibn Athir recorded over a hundred Hadiths on Zakat, indicating its paramount importance [8–15].
3. Severe warnings and admonitions are issued against those who withhold or neglect Zakat, as evidenced by Quranic verses such as: "And let not those who [greedily] withhold what Allah has given them of His bounty ever think that it is better for them. Rather, it is worse for them. Their necks will be encircled by what they withheld on the Day of Resurrection." (Al Eimran: 180).

Second Aspect: The Established Rulings Regarding the Legitimacy of Zakat

1. Fulfilling Zakat is essential for the completeness of an individual's Islam, as it constitutes one of the fundamental pillars of the faith. By fulfilling Zakat, a person achieves the pinnacle of their faith and completes their submission to Allah.
2. Zakat purifies the believer's soul from the stains of sins and transgressions, cleansing it from the vices of stinginess and greed, which have detrimental effects on the heart. Allah says: "Take, [O, Muhammad], from their wealth a charity by which you purify them and cause them increase." (altawbati: 103). Zakat ensures the sufficiency of needy Muslims, addressing their needs and honoring them, thereby sparing them the humiliation of begging from others.
3. Zakat fosters social solidarity and cohesion within society.
4. Zakat increases blessings in the wealth of the giver and protects them from afflictions, as stated in the verse: "And whatever you spend of expenditures or make of vows—indeed, Allah knows of it. And for the wrongdoers there are no helpers." (Albaqara, 270).
5. Zakat extinguishes the wrath of the Lord, as mentioned in the Hadith narrated by Anas (may Allah be pleased with him): "Charity extinguishes the wrath of the Lord."
6. Zakat encourages generosity and giving among Muslims, leading to an open-heartedness that has been empirically observed by behavioral psychologists.
7. Zakat is one of the greatest means by which Allah bestows His mercy upon His servants in this world and the Hereafter. Allah says: "And establish prayer and give zakat and obey the Messenger—that you may receive mercy." (alquran, 56).

Third Topic: Rulings of Zakat on Property, with Three Aspects:

First Aspect: Zakat on Commercial Property

There is disagreement among scholars regarding the obligation of Zakat on property designated for trade, with two opinions:

The first opinion: Scholars, including the four Imams and their followers, assert the obligation of Zakat and provide evidence as follows:

1. Quranic verse: "Take, [O, Muhammad], from their wealth a charity by which you purify them and cause them increase." (altawbati: 103). The phrase "Take from their wealth" indicates specificity, implying taking a portion of their wealth, not all of it. This Zakat purifies them from sins and the negative effects of materialism.
2. Hadith of Samurah: The Prophet Muhammad (peace be upon him) instructed to pay Zakat from what is prepared for sale.
3. Prophetic statement: "There is no right in wealth other than Zakat." This indicates the generality of Zakat, encompassing all types of wealth.

The second opinion: Scholars like Dawud al-Zahiri (Al-Andalusi, No date specified) argue against the obligation of Zakat on commercial property, citing different evidence:

1. Hadith: "Seek from the wealth of the orphans [for Zakat] so as not to eat it up." This indicates exemption from Zakat for property intended for trade.
2. Hadith of Abu Huraira: "There is no Zakat on a Muslim for his slave or horse." This generalizes the exemption from Zakat for certain possessions.

Second Aspect: Zakat on Residential Property

Residential property, such as a house or vehicle used for personal purposes, is exempt from Zakat according to the consensus of scholars. This is supported by the Hadith of Abu Huraira: "There is no Zakat on a Muslim for his slave or horse." This exemption applies as long as the property is not used for commercial purposes.

Third Aspect: Zakat Calculation for Commercial Property

Regarding the calculation of Zakat for commercial property, scholars agree that it is one-quarter of the total value, similar to cash. Imam al-Nawawi stated that Zakat for commercial property, whether for trade or rent, is one-quarter of the total value, added to other Zakatable assets. If the value reaches the mini-mum threshold (nisab), Zakat becomes due at a rate of 2.5%.

Example of Zakat Calculation During Property Downturn

If someone owns land during prosperous times but faces difficulty in finding buyers during a downturn, there is no Zakat obligation until they sell the property. Once sold, Zakat is paid for one year only.

Fourth Aspect: Consideration for Valuation in Zakat Assessment

Scholars differ on when to assess the value of property for Zakat calculation:

1. Majority opinion: Valuation should occur at the due date of Zakat.
2. Ibn Abbas's opinion: Valuation should wait until the property is sold to determine its value for Zakat calculation.
3. Some early scholars: Valuation should be based on the purchase price.

4 Conclusion

Praise be to Allah, the Lord of all worlds, who has aided me in completing this work. All praise and thanks are due to Him, for He is the best with which one concludes their deeds. Now, it is fitting for me at this juncture to present the key points covered in this study:

1. Real estate refers to fixed assets that cannot be moved or transferred from one place to another, such as lands, buildings, and the like. They are either prepared for residential purposes or for commercial use.
2. There is no Zakat on real estate intended for primary needs, as they are occupied with essential personal needs and do not generate income. These are what jurists refer to as "personal real estate in al-Qinya." However, this ruling is not absolute but rather conditional on not evading or circumventing Zakat. Personal properties in al-Qinya are exempted. However, if they are used for commercial purposes—according to the intention of the owner and their engagement in commercial transactions—then Zakat is obligatory.
3. Zakat is obligatory on commercial real estate—this is the opinion of the four jurists and the majority of scholars. Zakat is calculated at 2.5% after reaching the threshold and the passage of one year. It is calculated based on the market value of the real estate, not on the property itself, as the threshold is considered in terms of value.

5 Recommendations

Here are the most important recommendations of this study:

1. I recommend Sharia institutions and scholars to prioritize Zakat and clarify its rulings, in order to fulfill the right of Allah Almighty and meet the needs of the deserving recipients.
2. I advise property owners to seek assistance from specialists when evaluating their properties and fulfilling the duty mandated by the noble Sha-ria to pay Zakat.

The Impact of Unforeseen Circumstances on the Murabaha Contract for the Purchaser

Ward Barmil, Suhail Al-Ahmad, and Tareq Hammad Almubaydeen

Abstract The theory of unforeseen circumstances has an impact on Islamic finance contracts. The theory of unforeseen circumstances is excluded from the theory of contract binding. This research is a practical application of the theory of unforeseen circumstances in a profitable sale. The purchase order came at a time when emergency circumstances and unexpected incidents affecting the implementation of the contract abounded.

Keywords Emergency circumstances · Contract necessity · Murabaha · Regional economic growth

1 Introduction

Praise be to Allah, the Lord of the Worlds, and blessings and peace be upon the Messenger, a mercy to the worlds, and upon his family and companions, and those who follow them with excellence until the Day of Judgment. In my research, I have addressed the topic of Murabaha contract for the purchaser, its nature, the conditions related to it, with the help and guidance of Allah. Significance of the Research: The Murabaha contract for the purchaser is one of the contracts that have become prevalent in our present time. Due to the unforeseen circumstances that may arise in such contracts beyond the control of the contracting parties, I will explore the application of the theory of unforeseen circumstances in the Murabaha contract for the purchaser, even if some scholars permit it under certain conditions, as the

majority opinion suggests. Research Objectives: This research aims to establish the theory of unforeseen circumstances in the Murabaha contract for the purchaser, taking into account the conditions of people in difficult circumstances that may arise. Research Problem: This study aims to answer the main question: What is the impact of unforeseen circumstances on the Murabaha contract? What is its ruling according to jurists? What are the evidences supporting their opinions? The Impact of Unforeseen Circumstances on the Murabaha Contract for the Purchaser.

First Requirement: Definition of the Theory of Force Majeure.

The theory of force majeure is a composite concept consisting of three terms, each of which must be broken down and defined individually for a proper understanding.

Theory: A general concept that forms an objective legal system encompassing various elements distributed across different sections, such as the theory of rights and the theory of guarantee.

Circumstances: The condition of times and places.

Emergency: Derived from the verb "to emerge," meaning to appear unexpectedly.

The theory of force majeure can thus be described as: extraordinary events that occur suddenly without anticipation, constituting an unusual state not foreseen by the contracting parties at the time of contracting. These events result in the performance of the contractual obligation becoming burdensome for the debtor, threatening them with significant loss [1–8].

The application of the theory of force majeure can be defined as: the modification of a burdensome obligation from an unperformed contract or its termination due to an unexpected event beyond the control of the contracting parties.

Second Requirement: Establishing the Theory of Force Majeure.

Allah's Statement in the Quran: "Allah does not burden a soul beyond that it can bear" (Al-Baqarah 2:286). This verse indicates that Allah, the Almighty, does not impose on anyone that they cannot bear. It is understood that a debtor's burdensome obligation under a contract in the event of force majeure falls into what they cannot bear, necessitating the modification or termination of the contract. The first topic:

The second topic: Verse 29 of Surah An-Nisa states: "O you who have believed, do not consume one another's wealth unjustly or send it [in bribery] to the rulers in order that [they might aid] you [to] consume a portion of the wealth of the people in sin, while you know [it is unlawful]."

Interpretation: The indication here is that maintaining a contract affected by a force majeure event without terminating or adjusting it to achieve the interests of both contracting parties—balancing what each party has given and received—would be considered unjust consumption of people's wealth and would be unfair to the other party.

Verse 280 of Surah Al-Baqarah: "And if someone is in hardship, then [let there be] postponement until [a time of] ease. But if you give [from your right as] charity, then it is better for you, if you only knew."

Interpretation: This verse signifies the obligation to defer a debt for someone in difficulty until their situation improves, which indicates the legitimacy of the theory of force majeure.

Prophetic Saying: "There should be neither harming nor reciprocating harm."

Interpretation: If harm occurs to anyone, it must be removed. In the context of the theory of force majeure, a contract becomes burdensome and harmful, leading to significant loss due to circumstances beyond one's control.

Principle: Ordinary or existing hardship does not nullify obligations or necessitate leniency, such as the hardship of hunger and thirst during fasting. However, if the hardship exceeds natural limits, it nullifies or mitigates the obligation, like the hardship of a sick person fasting. Similarly, in commerce, usual losses do not affect contracts, but if losses exceed the norm due to uncontrollable circumstances, an exceptional measure becomes necessary.

Third Requirement: Conditions for Applying the Theory of Force Majeure.

The extraordinary circumstance must occur before the completion of the contract's execution. If it occurs after the contract has been fully executed, the theory cannot be applied.

The extraordinary circumstance must be exceptional and unforeseen, meaning it is rare and unlikely to occur, such as wars, earthquakes, floods, or health pandemics.

The contract should not be a compulsory contract. In the case of compulsory contracts where the parties do not have the freedom of choice, such as mandatory car accident insurance, the theory does not apply because both parties are compelled into the contract.

The extraordinary circumstance must be general, like wars. Individual-specific circumstances, such as the theft or burning of one's money, or a strike by their workers, are not considered for the application of the theory's provisions. This is to prevent misuse, such as the debtor destroying the item and claiming it was an unintentional event.

The second opinion: It is not required that the extraordinary circumstance be general, which is in line with the Hanafi school of thought, for the following reasons:

The goal of applying the theory of extraordinary circumstances is to avoid the burden and substantial loss that may befall the debtor. The circumstance could be general or specific.

The theory is an exception to the principle of the contract's binding nature; therefore, the scope of this exception should be confined to the contractual relationship between the parties, making its application individual.

The concept of burden varies from person to person, and thus, each debtor should be considered individually. The focus should be on the person who is burdened by the obligation due to an extraordinary circumstance without restricting it to general circumstances.

Preferred Opinion: The prevailing view is to apply the provisions of the theory even if the extraordinary circumstance is specific for the following reasons:

The evidence supporting the legitimacy of the theory of extraordinary circumstances is general and includes both general and specific extraordinary circumstances.

First Requirement: Definition of Murabaha to the Purchase Orderer

Murabaha:

Linguistically: It refers to growth in trade.

In the terminology of jurists: It is the sale with a markup over the original price.

Murabaha to the purchase orderer: "A person requests another to buy something specified by him, to take it from him at a deferred price with a known markup." It involves an individual requesting another person to purchase a specific commodity with defined specifications, based on a promise from the requester to buy that required commodity through Murabaha.

Most contemporary jurists have ruled that this type of sale is permissible under certain conditions.

Second Requirement: Effects of Extraordinary Circumstances on Murabaha to the Purchase Orderer

First: If an extraordinary circumstance occurs after the buyer requests the commodity from the seller and before the contract is concluded, is the buyer obligated to fulfill the contract or not? This issue is based on the matter of promises, and there is a disagreement among scholars with three different opinions:

First Opinion: The Malikis hold that the commitment to a promise is obligatory if it is conditional upon a reason; they base this on the following:

This prevents actual harm to the seller caused by the buyer's deceit.

Second Opinion: The Shafi'is, Hanbalis, and Hanafis hold that the buyer is not obligated to the contract, but it is recommended to fulfill it; they base this on the following reasons:

If a person promises money and then goes bankrupt, the promisee does not have a debt claim against the promisor. This indicates that the promise is not obligatory; if it were, the promisee would have received some of the money.

A promise is a gratuitous contract and does not necessitate commitment, similar to a gift.

Third Opinion: Some Hanafis hold that the commitment to a promise is obligatory if it is conditional because a conditional promise demonstrates a sense of obligation.

Preferred Opinion: The researcher favors the position taken by the Islamic Fiqh Council, which states: "A promise issued by either the orderer or the executor independently is morally binding on the promisor unless there is an excuse. It is legally binding if it is conditional upon a reason and the promisee has incurred expenses as a result of the promise. In such a case, the obligation's effect is either to fulfill the promise or to compensate for the incurred harm."

If the buyer is unable to pay the installments due to insolvency: If the buyer is unable to pay the installments because of an extraordinary circumstance leading to insolvency, it is obligatory in Islamic law to grant a deferment until the buyer is in a better financial position. This is the view of the four Imams and the Zahiris for the following reason:

Allah's statement: "And if someone is in hardship, then [let there be] postponement until [a time of] ease" (Al-Baqarah: 280) [9].

Narrated by Abu Sa'id al-Khudri (may Allah be pleased with him): A man was afflicted in the time of the Messenger of Allah (peace be upon him) regarding fruits he had bought, and his debt became excessive. The Messenger of Allah (peace be upon him) said: "Give charity to him." So the people gave charity to him, but it was not enough to pay off his debt. The Messenger of Allah (peace be upon him) then said to his creditors: "Take what you find, and you have nothing more than that." This means that since he is insolvent, you only have the right to take what you have received and are not allowed to demand more as long as he is in difficulty. This indicates the obligation to grant him deferment until he is in a better position.

Second: If the buyer is unable to pay the installments due to bankruptcy while the sold item remains in his possession, the situation can be divided into two sub-branches:

First Branch: If the buyer goes bankrupt after the installments are due, and the seller finds the sold item intact and has not received any part of the sale price. Jurists have two opinions on this matter:

First Opinion: The seller has the right to annul the contract. This is the view of the majority of jurists and the Zahiris, for the following reasons:

Narrated by Abu Hurairah that the Messenger of Allah said: "If anyone finds his property intact with a man who has become bankrupt, he has more right to it than anyone else." This indicates that if a person finds what he sold with someone who has gone bankrupt, he has more right to that sold item than other creditors, allowing him to annul the sale and take back the item.

They also argue by analogy: if the seller fails to deliver the sold item, the buyer is allowed to annul the contract. Similarly, if the seller finds the sold item with the buyer who is unable to pay the price, the contract can be annulled [10].

Second Opinion: The seller does not have the right to annul the contract and must be treated equally with other creditors. This is the Hanafi view, based on the following reasoning:

Allah's statement: "And if someone is in hardship, then [let there be] postponement until [a time of] ease" (Al-Baqarah: 280). They argue that the seller cannot demand the price as the debtor must be granted deferment due to their difficulty, making the debt postponed by Shariah's decree, and a postponed debt is not immediately due [11].

The majority respond that the verse is general and has been specified by the mentioned hadith.

Preferred Opinion: The researcher favors the first opinion, which allows the seller to annul the contract if he finds the sold item intact and no one else has rights over it. The hadith used as evidence is authentic and directly addresses the disputed issue, thus it should be followed.

Second Branch: If the buyer goes bankrupt, and the seller finds the sold item intact, but has received part of the price. Jurists differ on this issue with three opinions:

First Opinion: The Malikis and Zahiris hold that the seller has the option either to annul the contract, reclaim the sold item, and return the received payment, or to not annul and join the creditors in claiming their dues. This is based on the generality of the Prophet's (peace be upon him) saying: "If anyone finds his property intact with a man who has become bankrupt, he has more right to it than anyone else." The hadith does not differentiate, indicating that the seller can annul the sale even if he has received part of the payment [12].

Second Opinion: The Hanbalis argue that the seller cannot annul the contract but must be treated equally with other creditors. This is based on the hadith of Abu Huraira where the Prophet (peace be upon him) said: "If any man sells a commodity and then finds it intact with the buyer who has become bankrupt and has not received any of its price, he has more right to it [13]. If he has received part of the price, he shares with the other creditors." This indicates that if the seller has received any part of the payment, he is treated equally with the other creditors and cannot annul the sale [14].

Third Opinion: The Shafi'is believe that the seller can claim the part of the sold item proportionate to the remaining unpaid price. They argue that if the seller can reclaim the entire item when no payment has been received, he should similarly be able to reclaim part of it based on the unpaid portion.

Preferred Opinion: The researcher leans towards the first opinion, which gives the seller the choice. This is due to the general applicability of the hadith cited as evidence. It is an authentic hadith and stronger than the mursal hadith cited by the Hanbalis [15].

Third Requirement: **If the Buyer Goes Bankrupt and the Installments Are Deferred and the Seller Finds the Sold Item Intact.**

Jurists have two opinions on this matter:

First Opinion: The Malikis hold that the seller has the right to annul the contract immediately, making the deferred installments due. This is because the seller agreed to defer payment based on the buyer's ability to pay, and if the buyer loses this ability, the seller is no longer obliged to defer payment.

Second Opinion: The Shafi'is argue that the seller cannot annul the contract in this situation for the following reasons:

Deferred payments are not immediately claimable as they are not yet due.

Immediate debts take precedence over deferred debts; thus, they must be considered first [16].

The deferment period is a right for the buyer, which should not be forfeited.

Preferred Opinion: The researcher favors the second opinion, as deferred installments should not become immediately due upon the buyer's insolvency, respecting the buyer's right to deferment.

2 Conclusion

At this juncture, it is pertinent for me to outline the key points covered in this study:

Force majeure theory can be defined as: modifying or terminating an onerous obligation from an unexecuted contract due to an unexpected event beyond the control of the contracting parties.

There are conditions that must be met for the application of the force majeure theory.

It is not necessary for the force majeure circumstance to be general; it can be applied even if it is specific.

If the buyer is unable to pay installments due to a force majeure circumstance, then it is a religious duty to wait for him until he is financially capable.

If the buyer goes bankrupt due to a force majeure circumstance, and the installments are due while the item remains with the seller, then the seller has the option to rescind the contract and reclaim the item, or to uphold the contract and join the creditors, whether or not he has received part of the price.

In Murabaha sale to the purchasing agent: If a force majeure event occurs after the buyer has requested the goods from the seller and before the contract is concluded, the buyer is not obligated to purchase. However, if the seller incurs a loss due to the promise, then the buyer is only obliged to compensate for the damage.

The force majeure theory is applied in Islamic law even if the term is not explicitly mentioned, and there are many diverse evidences for its application, which confirms that Islamic religion is a religion of justice.

3 Recommendations

To explore the theory of force majeure in Islamic jurisprudence through an academic thesis that integrates theory and application across all branches of jurisprudence. Islamic financial institutions are obligated to adhere to the decisions issued by the juristic councils, provided there is consensus among them.

The Role of Language in Constructing and Reinforcing Political Identities

Aref A. Murshed and Alalddin Al-Tarawneh

Abstract This article explores the intertwined, complex and changing dynamics behind the role of language in the construction and reinforcement of political identities, informed by linguistic and sociological theory which together form the basis for analyzing recurring issues. Language plays a complex role in identity construction. Employing a mixed methods approach, historical and contemporary case studies are examined to reveal how the use of language helps to define political groups and shape political discourse. Case studies of Italian unification, the Scottish independence movement, and the Rwandan genocide, among others, span centuries and provide a historical and contemporary framework for illustrating how language continues to have a crucial impact on the dynamics of political identity today. The article also discusses ethical considerations, focusing on the manipulative potential of language and how it can be misused to the detriment of political dialogue, illustrating how the changing character of our times plays a role in redefining the intertwined connections between languages. Crucial role, and political stance. The paper demonstrates that identity formation in our time now remains a matter of choice and boundary change, and that we, as academics and ordinary citizens, need to constantly monitor how our understanding of it evolves in order to prevent misuse and promote success in a challenging modern era. Constructive dialogue based on mutual understanding in the political world. These meaningful results contribute to a nuanced understanding of how language is both a mirror and a form of political alliances—a conceptual dimension that has proven crucial in shaping political identities.

1 Introduction

Language is an important tool for expressing our humanity. It shapes every level at which society constructs and continues to sustain a complex and diverse political landscape. The interplay of language and politics is an ever-changing nexus of ideas, beliefs, self-image, and community identity. This article explores the paradoxical relationship between language and political identity to shed light on the relationship between language production and the formation and maintenance of collective identities.

The political power of language goes far beyond its function of communication/expression: it shapes political identity. The view that language has little political power as a mere means of communication—often viewed as primitive—seems historically wrong and may well be analytically wrong. The idea that "language matters" has profound political implications for our society, from promoting unity and stability to protecting ethnocultural diversity. History and other civilizational experiences show that the linguistic factor plays an important role in defining and distinguishing political entities: it helps to create a sense of political community among people who share a common language/speech.

The way language is used to construct, express, influence and displace political alliances, agendas and identities has changed dramatically since the beginning of human history. How we experience and imagine our political life and environment depends on the society we live in and the way it develops over time, according to the movement of historical events and the ever-changing socio-cultural patterns that exist in every society and era. The speeches of ancient speakers convinced as many audiences as the dissemination of political discourse on digital platforms today; language remains the primary tool through which politics is constructed and represented as uniquely human and individualistic action [7].

Fundamentally, however, this appears to be a complex and mutually reinforcing relationship between language and political identity. Language not only enables speakers to communicate ideas, but perhaps more importantly, it is an important means of creating, defining and strengthening political connections: if we look at some historical examples, it becomes clear how the expressive forms of language contribute of. Divide powerful political entities. Whether guided by territorial names (such as the Levant or Mesopotamia) or linguistic names (such as Ionia, Helena, and Thracian), the identities of civilizations such as Greece, Rome, and Persia were sometimes expressed in words and deeds underpin political interests and reflect language groups—the quasi-group of the two. Today, we use words and phrases to talk about political issues that, when combined, help articulate a nation's political identity.

However, this interaction does not only occur in the official political arena but also permeates everyday conversations. The way we speak, our linguistic diversity and small lexical variations are crucial in defining who we are and in promoting the idea of identity formation within shared political commitments [5]. In this way, language can inscribe concepts of homogeneity for a single country or heterogeneity for more

complex domains. What I am trying to illustrate here is how languages help create political identities, how they shape and shape them, and how their boundaries and contours can be constructed and reconstructed over time.

Understanding the place of language in politics is more than a cursory academic task—it has profound implications for ideas and experiences of social solidarity, the workings of politics, and the survival of different cultures. Language itself can be persuasive, but political leaders also use language as a medium to elaborate narratives, solidify political sentiment, and create a sense of identity and belonging (speech and rhetoric are manufactured, after all).

Furthermore, recognizing the role of language in politics is crucial to overcoming difficulties that arise from linguistic diversity within and between political units. Political arrangements that recognize and accommodate multiple languages contribute to a more inclusive political system [14]. Conversely, neglect or instrumental use of language can reinforce social stratification, exacerbate conflicts, and undermine the formation of common political forums [11].

Understanding the complex interplay between language and political identity can help improve the quality of these spaces, support the political inclusion of minority language speakers, and generally protect linguistic diversity—in an increasingly interconnected and interdependent planet, this is not an easy task.

1.1 Objective

The study of the role that language plays in the construction and maintenance of political identities, as our paper is titled, is an important source of understanding the processes by which groups define themselves in a world of political participation. By looking to the past, drawing lessons from the present, and describing contemporary language politics and the impact of technology on political discourse, we aim to gain insights into the intersectional role of this relationship and its significant implications for democracy and the capacity of government to accommodate different political identities. We believe that we contribute to a nuanced understanding of how language can serve as a tool of mirror representation and persuasion in the creation and maintenance of political identities.

1.2 Methodology

They are carefully crafted to reveal the subtle connections between language and emerging patterns of political identity. Descriptive analytical methods enable researchers to jointly examine past and present case studies and carefully document and interpret language use, discourse structure, and rhetorical strategies in political communication. Qualitative methods such as critical discourse analysis, historical

inquiry and interpretation. Examining the meaning and life of our political identities does not have to be reductionist. Rather, this approach allows us to trace how language shapes political identities and transforms them into electoral resources and mobilizing structures. Since agency is distributed throughout society, the study of political language is important because it illuminates the importance of the smallest details. There are words and phrases that are particularly important in making up "us", such as "us", "the people", "our" and "yours", but there are other hidden puzzle pieces that are equally important in building up "us". Political speech contributes to a better understanding of these mechanisms and, ultimately, a better understanding of the relationship between language and politics.

2 Literature Review

Scholars have also examined aspects of language and political identity formation, showing that language both reflects and actively contributes to the creation of a sense of belonging. Scholars such as Anderson [5] explain the creation of imagined communities as a prerequisite for nationhood, noting that much of this is based on language as the basis for a shared cultural identity. Researchers such as Chilton [8] have emphasized the role of language intermediaries in organizing public space, describing political history, and conveying citizens' sense of being part of the nation. Scholars such as Smith [15] have examined the history of language-based boundaries between political groups and shown that language differences are powerful markers of identity. Researchers have also developed theoretical frameworks such as: Van Dijk [19] as a guiding approach to language relations and social identity theory, illustrating how language reflects and actively shapes political identity through language-specific scripts and cognitive processes.

In addition, the critical discourse analysis framework proposed by Fairclough [10] helps scholars unearth the power movements behind political rhetoric and communication by analyzing the linguistic details of it. Not bored yet? Phillipson's [14] work on language policy contributes to the discussion of how state-related decisions contribute to or shape the choice and negotiation of political identities, particularly in multilingual societies. Fishman's [11] work on language in sociocultural change examines the interrelationship between language use and political development—sometimes language change leads to political change, because language change sometimes reflects and sometimes drives political change.

Even in our own time, the digital world brings new perspectives to the study of language and political identity. For example, in the context of the digital age, Crystal [9] and Castells [6] discuss language use on the Internet, how it fosters political communities, mobilizes movements, and even fragments and dissolves political discourse. Digital spaces, perhaps most notably social media, host political identities based on the construction and contestation of linguistic meanings. Tufekci [18] and Sunstein [16] analyze echo chambers and filter bubbles in online verbal interactions in the political sphere.

What is clear from this literature review is the importance and dynamism of language as both a vehicle and a conduit for the development of political identity: Language is a complex and constantly evolving area of research in the social sciences [2]. A variety of historical backgrounds, theoretical frameworks, and contemporary studies have been conducted to understand the role of language in the complex process of identity formation [1].

3 Theoretical Framework

The claim that identity is rooted in language draws on implications from linguistic and sociological theory on the relationship between verbal expressions and individual and group identities. In particular, Whorf's theory of linguistic relativity provides a formal framework for understanding the interplay between language structure, categorical ways of thinking, and the formation of cultural and social identities, proposing that the language a person uses determines the way a person thinks, and More than just shaping the way a person thinks., but there are limitations. Thus, Wolff argued that language structures influence the way we perceive and classify the world around us, thereby influencing the categorization processes that lead to the formation of our cultural and social identities. Wolf [20] proposed that language is not only the reproduction of sound, but also the control mechanism of reality.

Social identity theory, proposed by Henry Tajfel and John Turner, shows us that people tend to sort themselves and others into different groups based on common characteristics. Language is a core criterion that divides individuals into specific groups; it constructs social identities and influences how individuals see themselves in relation to others. Language serves as a symbolic tool that helps form and maintain social identity. According to symbolic interactionism from the work of social psychologist George Herbert Mead, identities are not innate; it arises from interaction with society. Society is like a mirror that allows individuals to see themselves through others and reflect on their own experiences and encounters. Mead [13] believed that language has a symbolic coordinating function, allowing people to fulfill their social roles while developing self-awareness [3]. From Goffman's dramaturgical perspective [12], social existence is a spectacle in which people reveal themselves to others through strategic actions. A Scot living in Islamic Malaysia would know that English is a valid language in which to conduct business. According to a symbolic interactionist perspective, language functions as an active object through which individuals exercise and negotiate their identities and shape themselves in various social contexts.

By combining them, we can gain insight into how our identities are constructed through language. More specifically, an examination of the relationship between language and thought (Whorfian linguistic relativity) makes it easier to understand how this happens. Using social identity theory, we can recognize the role that language plays in constructing social groups and injecting certain words and phrases into our self-identity.

Finally, drawing on symbolic interactionism and Goffman's theatrical approach, we return to the world of sociology, whose perspective focuses on the details of linguistic interaction through which social actors shape and enact themselves within the ever-changing discourse of interpersonal communication identity of.

By raising awareness of the interplay between linguistic processes (including language use, grammatical choices, strategies and meaning connotations, and more importantly how people feel language affects them) and sociological processes (e.g. ideology, linguistics hierarchy and economic aspects). (For example, differences can influence the dynamics between individual and collective identities due to the language they use.) This holistic model provides a solid foundation for addressing the complex ways in which language is used to construct and construct individual and collective identities.

4 Language and Political Identity Formation

This is because we form our political identities primarily through language; as groups develop and maintain their political identities, their languages take on meaning as political markers. "The prerequisite for the political to be possible is a form of self-definition that is entirely dependent on language," because "the boundaries that shape 'in-group' and 'out-group' are always expressed in linguistic terms," Derrida writes. This chapter explores how our language allows us to create political entities. By exploring the linguistic mechanisms that play an important role in the complex process of identity formation, we can gain new perspectives on the conditions that enable us to form meaning.

Language is a marker of political outgroups. It shapes the ways in which political identity becomes boundary work. The ultimate aim is to understand how discourses, words, and symbols produce political identities through analysis that reveals the cognitive role of classification and the social role of distinction in political rhetoric. I also consider Whorf's theory of linguistic relativity [20] to guide my analysis of how language classifies political identities through cognitive methods of socially defining language work. Likewise, I argue that social identity theory [17] is a way of looking at work in the sociology of language through processes of social categorization that continually construct and reconstruct social identities.

Specific linguistic features of language—the types of words we choose, certain accents we have, even the language we speak—can serve as meaningful symbols that represent and reinforce our political identities. Our purpose in this section is to highlight a variety of concrete examples: slogans, phrases, catchphrases, and linguistic enclaves that are used deliberately and strategically to signal an endorsement of a particular political entity of loyalty [4]. The results extend beyond the time frame of ancient and modern Athens. The narration of historical narratives does not pursue grand theoretical claims, but rather draws on and strives to highlight the linguistic details that inspired and reinforced political identities everywhere.

Political rhetoric projects and reinforces self-definitions and divisions into distinct groups of us and them on two levels: as a mirror that reflects and shapes public perception and as performance. In this section, therefore, we take a closer look at political speeches, propaganda, and popular commentary to explore how discursive rhetoric contributes to the formation and consolidation of political identities.

This section unpacks the linguistic activity that occurs in political speeches, propaganda, media discourse, etc.: trying to identify recurring patterns, linguistic strategies and persuasive devices used to identify specific groups of people. It draws on rhetorical theory and discourse analysis [8, 10] to illuminate the subtle ways in which language can be used to establish, contextualize and legitimize political identities.

Not only is this an analysis of language that combines an examination of rhetorical form with an analysis of social meaning and effect, but it also pays particular attention to the far-reaching implications of the rhetorical dimension of identity formation, constantly anchoring it in performative aspects of political discourse. How do speakers and media discourses actively shape the way audiences see and are seen, and how do they continually attempt to create and maintain collective political identities? If we follow Erving Goffman's approach in The Presentation of Self in Everyday Life [12], where identity, interaction, and action are theorized in dramatic terms in order to be useful for the analysis of social behavior, we can Seeing this approach illuminates what political communication is before dramatization, with actors expressing identity through language.

This section contributes to a nuanced understanding of the complex processes of constructing and reinforcing political identities by systematically analyzing language as a means of definition and the role of political rhetoric in identity formation.

5 Case Studies

There are many other stories in which language helped create and solidify political identities. The creation of the Italian nation-state in the nineteenth century is perhaps the most famous example. Subsequent efforts at language standardization by Giuseppe Mazzini and Alessandro Manzoni unified Italy linguistically, most notably the choice of Tosca. The Italian dialect serves as a standardized Italian language, which helps to promote and confirm Italian identity. This use of Tuscany was not only a linguistic device, it also had symbolic value and promoted the national project of Italy. It helped create a unique Italian political identity [5].

During the period of Italian unification, our historical examples show that the attempt and implementation of linguistic strategies of unification and standardization went beyond mere linguistic standardization. Creating a common language is not just about who speaks standard Italian, but also how a specific linguistic universe can be customized by selectively adopting linguistic elements from different regional varieties. The aim is to simultaneously create a sense of inclusion and ethnolinguistic identity. Historical examples illustrating this deliberative process are a good reference

point for a thorough analysis of language planning strategies and reveal the extent to which language has the capacity to define political identity on a large scale.

The Scottish independence movement is a particularly interesting case study: we can see how the use of language (which highlights Scotland's linguistic identity) in the media and in political discourse and campaign speeches creates and reinforces a new, distinct Scottish political identity. The distinctiveness of Standard British English in expressing Scottish linguistic identity is intended to promote Scottish national pride and highlight speakers within Scottish political identity. For example, the SNP's strong emphasis on linguistic distinctiveness, particularly the spread of Scots and Scots Gaelic, can be seen as a concerted effort to strengthen the political identity of an independent Scotland.

The Scottish independence movement sheds interesting light on the role of language in shaping and constraining contemporary political identities. Therefore, we should seriously consider whether artificial intelligence can be used to improve decision-making between agents. This is consistent with what we have discussed so far. Artificial intelligence and decision-making have a natural synergy. Artificial intelligence can help make decisions faster and more accurately as it helps analyze and understand information more effectively, thereby improving the quality of decisions when setting goals.

On the other hand, cybersecurity can be further improved through the use of artificial intelligence, according to new research. In the current information technology environment, the risks people face when using electronic devices are increasing at an unimaginable rate. Cybersecurity fills the gap and manages the risks associated with protecting sensitive and personal information on the Internet and other online services. Most importantly, the reason for maximizing cybersecurity is to combine artificial intelligence with cybersecurity, as this combination provides us with the highest level of security and neutralizes cybersecurity. These hateful messages created division, distrust and fear between ethnic groups, culminating in genocide and the systematic murder of more than half a million people in just three months. This historical event is worth studying because it allows us to more clearly analyze the harmful effects of the strategic use of words in the construction of political identities.

So when looking at language manipulation, we must also ask difficult questions about its ethics and possible long-term consequences. Consider the consequences. The manipulation of language used to pursue political goals raises ethical questions. The manipulative distortion or misuse of language involves the exploitation of signaling mechanisms (modes of communication that have significant consequences for society as a whole). Even viewers with strong political resolve.

6 Conclusion

By analyzing the myriad and complex ways in which language is both a mirror and an active agent in creating and reinforcing political identities, this study draws on theories from linguistics and sociology to provide a solid foundation for the study of

mobility and political identities. Over the centuries, a dynamic interaction has been established between language and the creation of identity. We fascinately examine the ways in which language is used as a boundary or marker, building on examples from our own time and the distant past, and our analysis aims to diagnose the many aspects of the complex interplay of language and political positions over time. Historical examples, the unification of Italy or the Rwandan genocide, illustrate the continuing importance of language to political entities, while contemporary political examples, such as the Scottish independence movement, highlight the role that language decisions still play in shaping them and political entities. Political identities are strengthened as the currents of modern politics deepen divisions among peoples. Each case study provides insights into the understanding and purposeful use of language, symbolic expressions and actions that can become part of the complex web of political identity creation. Reflecting on the risks of manipulating language captures the central ethical issues in decision-making faced by political actors and highlights the extent to which the misuse of language can undermine social cohesion. In order to interrogate these challenges, it is necessary to pay more attention to ethics and promote public discussion to place greater emphasis on the impact that language manipulation can have on the creation and reinforcement of political identities. As we look to the future of language and political identity, it is important to recognize that the profound shifts in language interactions brought about by the digitization of social media and advertising have intensified the dynamic interplay between language and politics. Going forward, future research must remain alert and attentive to the complex role that language plays in the fluid creation and reinforcement of political identities. For many steps to come, this remains a central invitation for cross-field and interdisciplinary research to understand how language and political identity come together as a feature of contemporary political and social dynamics.

Impact of Transformational Leadership on Organizational Creativity Case Study of a Food and Drug Administration

Amer Alsaraireh and Ahmed Mohamed Awad

Abstract The study aims to identify the impact of transformational leadership on organizational creativity: (Case study: The Jordan Food and Drug Corporation), which relied on analytical descriptive methods. It was selected based on its suitability for achieving the study objectives and its population consisted of (747) male and female employees of Food and Drug General Corporation. The thorough survey method was utilized to gather data for the research project., with a response rate of (38%), representing (285) males and females. One of the most notable findings of the study was that transformational leadership is statistically significant for organizational creativity. This study recommends that the institution's management continue to develop the dimension of "intellectual stimulation" of leaders since it has a great impact on organizational creativity. Moreover, in order to achieve organizational creativity, the study recommends enhancing the dimension of "ideal influence" as one dimension of transformational leadership, as well as consolidating both problem analysis and sense of problems as dimensions of organizational creativity.

Keywords Organizational creativity · Transformational leadership · General corporation for food and drug

1 Introduction

The rapid, sudden and dynamic environmental changes experienced by organizations in all their fields, in addition to the great development in communication and information technologies, and the widespread spread of knowledge among individuals, led to the need for organizations to face these challenges by searching for appropriate

management and leadership methods, and reconsidering concepts [15]. Traditional leadership to ensure survival and continuity, and to achieve goals efficiently and effectively [17].

Organizations' ability to address environmental challenges depends to a large extent on their leadership style [19]. As the leaders of the organization must have the ability to use the leadership style appropriate to the situation and the event, the traditional leadership styles: dictatorship, democracy and autocracy … etc., have produced other styles that are more flexible to deal with the developments of the times [27].

And because leadership is the spirit of contemporary management, and the focus of organizations' activities, traditional leadership patterns produced a modern pattern at the end of the twentieth century at the hands of the world (Games Burns) called transformational leadership, as researchers considered this pattern to be one of the most influential leadership patterns in employees and working conditions alike [7, 23].

Transformational leadership is associated with many management concepts concerned with investing the energies and capabilities of employees, as it is closely related to creativity, which represents the process of generating valuable innovative ideas in the organization [11]; Organizations that adopt organizational creativity are more capable than others in achieving their goals and obtaining a competitive advantage [24, 30]; The higher the organization's ability to accept challenges, the higher the rate of creative ideas generation [14, 29].

1.1 Problem of the Study

The ingenuity of the transformational leader appears in his perception of the possibility of transforming the circumstances surrounding the organization, and the dangers they bear, into opportunities through which the creative capabilities of the employees are launched, which invest these conditions and turn them into an opportunity by reformulating them, finding innovative solutions, and successfully managing situations. The transformational leader can create creative perceptions and solutions to problems [4], and the transformational leadership theory relies mainly on the principle of motivation. Transformational leaders seek to provide incentives for employees that support their morale and activate values in them, and stimulate their thinking to find unusual creative solutions, as well as activate their creative spirit and their ability to solve problems that they encounter during their work; with a view to raise the organization's performance level and accomplish its goals [6].

Organizational creativity is considered one of the main driving factors to increase the competitiveness of organizations in the long term in competitive markets, and a means to overcome internal or external environmental pressures, as it comes in response to pressures: (competition, scarcity of resources, customer demands…) or due to the use of internal organizational options such as Acquiring distinguished skills and reaching a high level of ambition, as it is an accurate criterion for the process of change, and a motive for extracting the best in the individual, to contribute

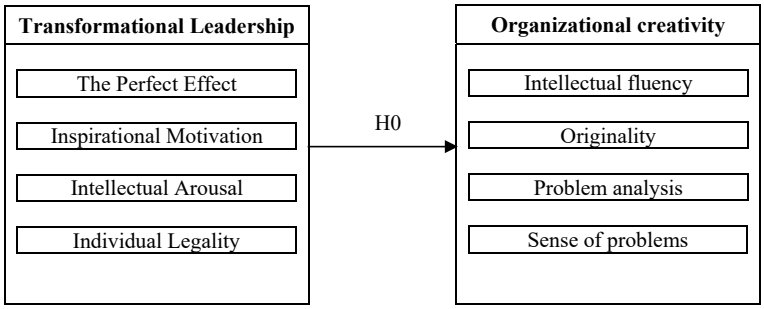

Fig. 1 Study model. *Source* Previous Studies: [1, 28]

to providing distinguished services to beneficiaries that exceed their expectations, enhance the work environment, and save time and effort [25].

Given the importance of transformational leadership and organizational creativity of the Food and Drug Administration in Jordan and similar institutions, and due to the lack of studies in this aspect and the ambiguity of the impact between these two variables; The problem of the study can be developed in examining the impact of transformational leadership on organizational creativity in the Jordan Food and Drug Administration Fig. 1.

1.2 Study Hypothesis

- H0: There is no statistically significant effect at the level of significance ($\alpha \leq 0.05$), for transformational leadership with its dimensions combined: (ideal influence, inspirational motivation, intellectual stimulation, individual legality), on organizational creativity in the Jordan Food and Drug Corporation.

2 Theoretical Framework

2.1 Concept of Transformational Leadership

Transformational leadership is defined as "the process by which a person interacts with others and creates a connection that raises the level of motivation and ethics in both the leader and the follower" [20]. It is "leaders entering into an interactive relationship with followers, making leaders more active and able to find new ranks From the leaders" [8], and it is "a process based on the relationship between the transformational leader and the subordinates, and what distinguishes it is the interaction between them, which is reinforced by the communication process between the sender (the leader) and the receiver (the subordinate), through a message that carries

elements that must be available in the leader Influencing, motivating, inspiring and making a comprehensive change, in addition to the vision and future perception of the organization" [12].

2.2 Dimensions of Transformational Leadership

Perfect Effect

The leader has the ability to gain the admiration, trust and appreciation of employees, as they consider him their ideal, and work to imitate him and obey him in all his decisions. The concept of ideal influence is closely related to the concept of charisma and charismatic leadership. The leaders are admired, appreciated, and trusted, as this leader has high levels of perseverance, morale, and moral values that make everyone gather around him and are influenced by him. For his personal interests, [9].

Dimensions of Motivation (Inspirational Motivation)

It is the ability to spread movement, awareness, and motivation among subordinates. An inspiring leader can set difficult goals within an achievable framework, and usually possesses sensitivity and understanding of the environment in which he works, and an understanding of the capabilities, needs, and aspirations of others, so that he can employ this understanding in spreading the spirit of work, activity, and positive challenge. It relies on inspirational motivation and has the ability to motivate subordinates to a higher level of performance.

Intellectual Stimulation (Creative Encouragement)

It refers to the innovation of the transformational leader for new ideas that stimulate subordinates to identify problems and provide solutions to them in creative ways and support new and creative models of business performance. These leaders raise new ideas, encourage subordinates to solve problems in a creative way, and support creative approaches in getting work done [2].

Individual Consideration (Concern for Individual Feelings)

It is the set of behaviors through which the leader can give personal attention to each subordinate, by recognizing the level of needs and desires of all his subordinates and considering the individual differences between subordinates when satisfying these needs. Caring for individuals is a service, sacrifice and altruism of transformational leadership, [18].

2.3 Organizational Creativity

Chaubey and Sahoo [13] believes that creativity in the organization differs from the concept of creativity in general and is called organizational creativity, which is "proposing or adopting a completely new idea independent of a good, service, system, activity, policy or method that may come from within or outside the organization".

Al-Faouri [3] confirms that organizational creativity is "a process of adopting a new idea or behavior in the organization, whether it is a new product or service, or a new technology, or a new management practice, and it depends on the speed of the organization in adopting more than one of these types".

Al-Dahisat [5] introduces him to creating new ideas that are far from the traditional context of thinking, and introducing all methods and methods that would transform these ideas into an applied reality of value.

2.4 Dimensions of Organizational Creativity

Originality

It expresses thinking outside the box while preserving the originality of these ideas, as well as the ideas that generated and matured these new ideas, which have become a new, developed and rare reality for the organization. Mentioned that the originality of ideas is distinguished by modernity, that is, to be an unprecedented idea, and the originality of ideas is also distinguished by its transcendence of reality because it is characterized by active imagination and the gathering of divergent elements.

Fluency

It is to give and provide as many ideas as possible on a specific topic and in a certain period of time. Fluency also refers to generating the largest number of ideas and suggestions on an issue. It is a quantitative aspect of creativity, unlike flexibility. It is the ability of an individual to make ideas flow easily with the aim of obtaining a large number of them during a specific time. Fluency can be measured through the speed to present the largest number of ideas, quickly categorize ideas into categories, or categorize them according to specific requirements [21]

Sensitivity to Problems

It is "the ability to recognize weaknesses and gaps in a situation" [10]. It also indicates the ability of the creative employee to see many problems in one situation, so he can clarify the errors in the things that surround him, and he can realize the deficiencies and deficiencies in them.

Problem Analysis

It is the creative or innovative production, and includes the process of selecting any new work and dividing it into simple units to be reorganized [22].

2.5 Literature Review

Al-Sharif's study [27] titled "Transformational Leadership and its Impact on Administrative Creativity among Workers in Commercial Banks Operating in Palestine" aimed to identify transformational leadership and its impact on administrative creativity for workers in public commercial banks in Palestine, based on the descriptive approach. The study concluded that (ideal influence, inspirational motivation, intellectual stimulation, individual legality) are the dimensions of transformational leadership that have the most impact on administrative creativity. And that the empowerment of workers has no effect on administrative creativity, and the study recommended the need to pay attention to qualified and trained cadres who have the initial readiness for transformational leadership and focus on developing change leaders in banks.

Boumshata's study [12] entitled "The Impact of Transformational Leadership on Activating Organizational Creativity" aimed to identify the impact of transformational leadership on activating organizational creativity in several Algerian organizations based on the descriptive analytical approach. The study concluded that there is a link between transformational leadership and organizational creativity, and there is an impact of transformational leadership on activating organizational creativity.

In the same context, [16] study "The Impact of Transformational Leadership on Employee Creativity: The Role of Orientation to Learning" aimed to explore the relationship between transformational leadership and employee creativity, and to know the mediating role played by learning orientation in the relationship between transformational leadership and employee creativity in Indian telecom companies. Structural Equation Modeling (SEM) has been done in two steps. The study found that, when directed learning is used to supervise creativity, there is a positive correlation between transformational leadership and employee creativity.

3 Methodology

This study adopts the descriptive analytical approach based on the use of a model extracted from previous studies and testing it by developing a questionnaire that measures the variables represented by the model, collecting data using a comprehensive survey, and then testing the hypotheses of the study through the use of the statistical analysis program (SPSS, 222).

3.1 The Study Population

The study population includes all (747) employees of the Saudi Food and Drug Administration, male and female, as the study relied on a comprehensive enumeration

method to collect data from the study population, due to the small size of the study population. As the total number of completed and valid surveys (285), with a rate of (38.1%) after distributing them via e-mail.

3.2 Research Instrument

After consulting earlier research to meet the study's goals, [9, 28], the study tool was formulated to measure the impact of transformational leadership on the organizational creativity of the Jordan Food and Drug Corporation. The study tool consists of three main axes.

3.3 The Stability of the Study Tool

The stability of the tool used in measuring the variables of the study tool was confirmed by calculating the value of (Cronbach's Alpha) coefficient.

We note from the data presented in the previous Table 1, that the test value ranged between (0.761–0.862). And a total index for all items was (0.778), all of which are greater than (0.70), which indicates the stability of the study tool [26]

Table 1 coefficient (Cronbach Alpha) to test the stability of the study tool

Study variables	Variable type	Cronbach alpha	No of items
The perfect effect	Independent	0.761	5
Inspirational motivation		0.793	5
Intellectual arousal		0.828	5
Individual legality		0.780	5
Transformational leadership		0.862	20
Intellectual fluency	Dependent	0.809	5
Originality		0.775	5
Problem analysis		0.821	5
Sense of problems		0.756	5
Organizational creativity		0.861	20
The total items of the study tool		0.778	40

3.4 Testing the Study Hypotheses

- **The main hypothesis (H0):** There is no statistically significant effect, at a significant level ($\alpha \leq 0.05$), of transformational leadership with its dimensions combined: (ideal influence, inspirational motivation, intellectual stimulation, individual legality), on organizational creativity in the Saudi Food and Drug Corporation. This hypothesis was tested in the study using the multiple linear regression, and the results are displayed in Table 2.

Table 2 indicates that the value of (F) was 461.111, with a significance level of (0.00), indicating that it was less than the level of significance (0.05); Which means rejecting the null hypothesis that says: "There is no statistically significant effect at the level of significance ($\alpha \leq 0.05$) of transformational leadership with its dimensions combined: (ideal influence, inspirational motivation, intellectual stimulation, individual legality), on organizational creativity in the Food and Drug Administration." Instead, we agree with the alternate hypothesis that follows: A significant effect is present at a significant level ($\alpha \leq 0.05$) for transformational leadership with its dimensions combined: (ideal influence, inspirational motivation, intellectual stimulation, individual legality), on organizational creativity in Saudi Food and Drug Corporation. We also conclude from the previous table 20 that the independent variable's dimensions have an effect regarding the dependent variable: (organizational creativity in the Saudi Food and Drug Administration), given that these dimensions accounted for 86.8% of the variations in the dependent variable.

Table 2 Multiple linear regression analysis

Dependent variable	R	R2	F	Significance	The I. V	B	t	Significance
Organizational creativity	0.932	0.868	461.111	0.00	The perfect effect	0.047	1.068	0.287
					Inspirational motivation	0.147	2.769	*0.006
					Intellectual arousal	0.481	9.533	*0.000
					individual legality	0.309	6.898	*0.000

*significant statistically at a level of significance ($\alpha \leq 0.05$)

4 Findings

1. The results showed that there is a statistically significant effect at the level of significance ($\alpha \leq 0.05$) for transformational leadership with its dimensions combined: (ideal influence, inspirational motivation, intellectual stimulation, individual legality) on organizational creativity in the Food and Drug Administration.
2. It also demonstrated that the ideal effect on organizational creativity in the General Organization for Food and Drug had a statistically significant effect at the significance level ($\alpha = 0.05$).
3. It proved the existence of a statistically significant effect at the level of significance ($\alpha = 0.05$) for inspirational motivation on organizational creativity in the General Organization for Food and Drugs.
4. It also proved that there is a statistically significant effect, at the level of significance ($\alpha = 0.05$), for intellectual stimulation on organizational creativity in the Food and Drug Administration.
5. The results showed that there is a statistically significant effect, at the level of significance ($\alpha = 0.05$), of individual consideration in organizational creativity in the General Organization for Food and Drug.

4.1 Recommendations

In light of the previous results, the study recommends the following:

1. The Food and Drug Administration continues to develop the dimension (intellectual stimulation) of the leaders, due to its great impact as one of the dimensions of transformational leadership in achieving the organizational creativity of the institution, through holding training workshops and panel discussions.
2. Shedding light on inspirational motivation as one of the dimensions of transformational leadership that has an impact on organizational creativity by holding leadership qualification programs before assigning them.
3. Devoting efforts to enhance the (ideal influence) dimension as one of the dimensions of transformational leadership in achieving organizational creativity for the Food and Drug General Corporation through periodic meetings between the leadership and employees of the corporation.
4. Emphasizing the importance of individual legality among the leaders of the Food and Drug General Corporation, due to its clear impact on organizational creativity, through the flexibility of procedures that facilitate the delegation of powers to employees.
5. Focusing on the skills of intellectual fluency and originality as dimensions of organizational creativity when practicing transformational leadership by focusing on employee ideas and supporting them through competition between them.

6. Enhancing the efforts of the Food and Drug Administration to support the skill of problem analysis through the participation of employees in the problems that the institution faces.
7. Increase the interest of the Food and Drug Administration; To highlight the employee's problem-sensing skill as one of the dimensions of organizational creativity by presenting previous problems and solutions that have been reached, and the signs of these problems.
8. The study recommends that the researchers carry out the subsequent investigations: examining the relationship between the identical variables in this study in private enterprises and contrasting the outcomes with the findings of the current investigation., adding the dimension of empowering employees as one of the dimensions of transformational leadership and applying it to a Jordanian government agency, and studying the dimensions of participatory leadership in achieving organizational creativity.

The Impact of Service Quality Provided by Civil Society Organizations on Beneficiary Satisfaction: The Jordanian Hashemite Fund for Human Development as a Case Study

Zakaria Azzam and Thuraiya Alkhuzam

Abstract The objective of this study is to present a theoretical overview and conceptual framework regarding service quality and satisfaction. Furthermore, it aims to demonstrate the influence of service quality provided by civil society organizations, specifically the Jordanian Hashemite Fund for Human Development (JHFHD) in Jordan, on achieving beneficiary satisfaction. The study employs a descriptive analytical approach and gathered data from primary and secondary sources. A total of 530 questionnaires were distributed to beneficiaries of the organization's services, resulting in a retrieval rate of approximately 92% with 490 questionnaires retrieved. After excluding 24 invalid questionnaires, 466 questionnaires were deemed suitable for analysis, representing a response rate of 95%. The study's findings indicate that all dimensions of service quality provided by The Jordanian Hashemite Fund for Human Development (transparency, trust and security, excellence and proficiency, confidentiality and privacy, reliability, and professionalism) had a significant impact on beneficiary satisfaction, either collectively or individually. The study recommends placing a strong emphasis on the transparency dimension within the Fund to monitor service delivery and enhance its quality. Moreover, it stresses the importance of developing employees' skills and capabilities in resolving issues encountered during service delivery, as well as providing them with training on effectively serving beneficiaries.

1 Introduction

In recent years, there have been significant advancements in the services sector, which has gained immense importance in national economies. This has resulted in intense competition among service providers, prompting researchers and stakeholders in service activities to acknowledge the significance of delivering high-quality services. JHFHD, like other service organizations, has placed a strong emphasis on ensuring beneficiary satisfaction and understanding their needs and preferences in order to provide services that meet their expectations and foster loyalty. This is crucial for gaining a competitive edge and increasing profitability through long-term investments in productive projects and lending portfolios, which generate revenue to sustain and thrive in the market. Given the fierce competition from both local and international organizations for foreign funding and support for various projects, programs, and activities, it has become essential for international and local organizations, ministries, and private sector companies to maintain competitiveness and secure additional funding, investments, and support. Furthermore, the technological revolution in information and communication has empowered beneficiaries to choose and benefit from services that align with their specific needs and desires. As a result, service organizations are compelled to enhance their service quality and diversify their offerings through influential strategies and by measuring beneficiary satisfaction levels. In these organizations, the provision of quality services is imperative for surpassing competitors based on key variables such as transparency, excellence, trust, confidentiality, reliability, and professionalism. By instilling confidence and satisfaction in beneficiaries, the organization establishes itself as their preferred choice.

During the era of economic globalization, Jordan, like many other nations, initiated its own process of economic globalization in the 1990s. As a result, the majority of its economic institutions were privatized. Consequently, civil society organizations, such as JHFHD, were compelled to adopt new roles in the realm of economic development. These roles included the planning and execution of medium and small-scale production projects, with the primary goal of generating employment opportunities, reducing unemployment rates, and enhancing the economic standing of individuals. By prioritizing sustainability and fostering partnerships with the private sector, this organization strives to offer programs and projects that benefit local communities. In addition, it plans to take advantage of the connection between Jordanian CSOs and international partners—seeking common funds for programs and projects. It also aims at acquiring external financial assistance, exchanging experiences that would promote economic empowerment, and developing an efficient management for small to medium scale projects.

JHFHD's main goal is to evolve the quality of its services beyond standard limitations. To reach this, they must create an environment in which feedback is highly encouraged; only through such a system can they bring effective reforms and foster development of their services with a view to achieving premium quality levels and satisfaction from those who benefit. As such, it becomes essential for JHFHDas a service-based organization to assess beneficiary satisfaction, which in turn serves multiple purposes: marketing itself to international organizations, securing funding for its programs and ensuring functionality among others. The survey results show that JHF has indeed put in place comprehensive principles for service delivery. They include covering areas like well-defined procedures with clear roles and responsibilities, tight control mechanisms, depicted through several checkpoints within the flow process. They also open channels where complaints or suggestions can be easily made and quick feedback provided back on actions taken as well as informal occasions organized periodically so that staff can meet directly with beneficiaries. In connection with the dimension of transparency recipients of its service expressed a moderate level of satisfaction.

1.1 Problem Statement

The triad that hinges on service quality for both non-profit and for-profit service organizations. One of the early pioneers of civil society institutions in Jordan is JHFHD, having a long history and wide range of services that have sustained its delivery over time due to its local standing. However, such local standing is not enough. The organization must also build an international reputation that portrays credibility, seeking support not only locally but globally where countless other organizations compete among themselves like rival suitors fighting over limited financial resources. The quality of assistance should be an integrated system at all levels within an organization, starting from securing basic operational needs towards gaining competitive advantage in their market place. Such a thing ensures not only their survival but growth. In turn, it should primarily focus on top-notch service delivery by realizing their importance through such partnerships with stakeholders who value their significance and contribute meaningfully toward what is required from them. And this becomes even more crucial in light of the escalating poverty and unemployment rates, as well as the influx of refugees into the region. These pose challenges for the organization to address the aspirations of its.

The researchers acknowledge the critical role of service quality in the success of Jordan Hashemite Fund. Given the intense competition among local civil society organizations for funding, investment, and project opportunities from international organizations, it is crucial for the organization to provide high-quality services. This is particularly important considering the increasing demands and responsibilities placed on JHFHD. Therefore, the main focus of the study is to examine the impact of various dimensions of service quality. This is addressed through the following questions:

- **Main Question:** What is the impact of service quality provided by civil society organizations, represented by the Jordanian Hashemite Fund for Human Development, in its dimensions on beneficiary satisfaction?

This main question branches out into the following inquiries:

1. What is the impact of transparency in services provided by JHFHD on beneficiary satisfaction?
2. What is the impact of trust and security dimension in the services provided by JHFHD on beneficiary satisfaction?
3. What is the impact of excellence and proficiency dimension in the services provided by JHFHD on beneficiary satisfaction?
4. What is the impact of confidentiality and privacy dimension in the services provided by JHFHD on beneficiary satisfaction?
5. What is the impact of reliability dimension in the services provided by JHFHD on beneficiary satisfaction?
6. What is the impact of professionalism dimension in the services provided by JHFHD on beneficiary satisfaction?

1.2 Importance of the Study

JHFHD, along with other civil society organizations, frequently encounters the need to stay abreast of modifications occurring in the external and marketing realms. Such alterations compel these organizations to adjust their service offerings in accordance with the shifting landscape and the evolving preferences of their existing beneficiaries. As the recipients of these services are the ultimate evaluators of quality and the degree to which their needs are fulfilled, the significance of this study becomes evident.

1.3 Study Objectives

The objective of this research endeavor is to present a comprehensive theoretical analysis and conceptual framework pertaining to the topic of service quality and satisfaction. Furthermore, this study seeks to illustrate the profound influence exerted by the quality of services offered by JHFHD on the overall satisfaction experienced by its beneficiaries.

From the main objective, the following sub-objectives stem:

1. Understanding the impact of the transparency dimension in services provided by Jordan Hashemite Fund on beneficiary satisfaction.
2. Understanding the impact of the trust and security dimensions in services provided by JHFHD on the satisfaction of beneficiaries.

3. Understanding the impact of the dimensions of excellence and proficiency in services provided by JHFHD on beneficiary satisfaction.
4. Understanding the impact of the confidentiality and privacy dimensions of services provided by JHFHD on beneficiary satisfaction.
5. Understanding the impact of the reliability dimension of services provided by JHFHD on the satisfaction of beneficiaries.
6. Understanding the impact of the dimension of professionalism in services provided by The Jordanian Hashemite Fund for Human Development on the satisfaction of beneficiaries.

1.4 Study Hypotheses

Based on the problem statement and objectives, the main hypothesis is formulated as follows:

- **H0**: "There is no statistically significant impact (at the significance level $\alpha \leq 0.05$) of the quality of services provided by JHFHD, in its dimensions, on the satisfaction of its beneficiaries."

1.5 Study Model

Drawing upon the problem statement and hypotheses, the researcher developed a comprehensive model that incorporated insights from various previous studies. Notable contributions include the works of [2, 3, 6, 8, 9, 11, 14, 18, 21], and others. This model was specifically designed to assess the influence of service quality dimensions offered by JHFHD on the level of satisfaction experienced by beneficiaries Fig. 1.

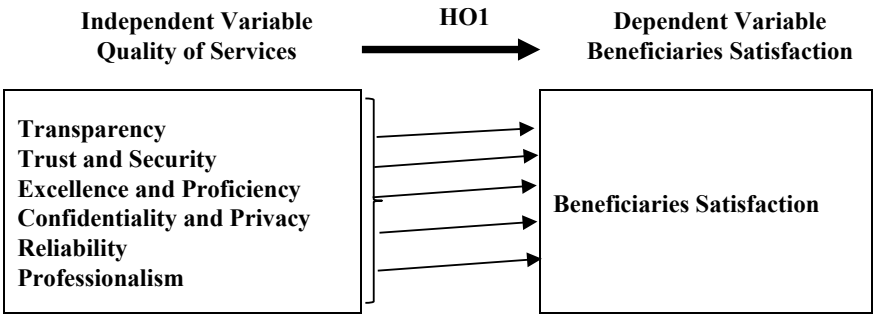

Fig. 1 Study model

1.6 Terminological Definitions

- Service: It is an activity or benefit that one party can offer to another that is essentially intangible and does not result in ownership of anything [22].
- Quality: It is a comprehensive, practical approach aimed at meeting customer needs and expectations through quantitative methods of continuous improvement of processes and services.
- Satisfaction: It is the joy experienced by the beneficiary when he or she achieves the desired satisfaction and what he expected to gain in the form of benefits. Satisfaction is created by comparing what the beneficiary expects to receive with what he or she actually gets.
- Civil society organizations: These are independent formations established independently of the government, with the right to create and find the necessary resources to finance their activities by raising funds from local and international organizations and private sector enterprises, and investing in productive projects that constitute a source for them income [4].
- Jordan Hashemite Human Development Fund: It is a leading independent non-governmental organization chaired by Her Highness Princess Basma bint Talal, which aims to promote social development and improve the economic level of individuals, provide employment opportunities to the unemployed in order to reduce the number of unemployed people and seeks to generate income by marketing itself and building a good reputation in order to finance developmental and productive programs and projects from international organizations, grants and aid.
- Transparency: It refers to the flow of information in a way that allows everyone among staff and beneficiaries to have access to data and to have access to information and mechanisms for policy-making and appropriate decision-making. The organization's activities should be characterized by clarity, openness, transparency and according to a set of variables (information systems, communication, control and responsibility, participation, procedures) [20].
- Trust and security: It is the ability of the service provider to provide services to the beneficiary in the safest and most risk-free environment possible and to inspire trust and security. Security is one of the things on which the beneficiary relies to judge the quality of the service, because the beneficiary always prefers an institution that provides a certain degree of security (Sweed, 2010).
- Excellence and Proficiency: It means the ability of an organization to deliver services free from deficiencies, defects and errors, with efficiency, accuracy and proficiency. It is considered the epitome of quality work and the pinnacle of precision and excellence as much as Competencies, skills, analytical and deductive abilities and knowledge enable them to perform their roles optimally [25].
- Confidentiality and privacy: It means the ability of the organization to establish rules governing the process of managing the confidentiality of data and information belonging to beneficiaries and allowing access only to specialists and entities associated with them and maintaining the privacy of this information.

- Reliability: It is the ability of an organization to perform or deliver a service exactly as promised, meaning that it should be reliable and highly accurate because the service recipient expects to receive the time- and performance-precise service exactly as promised, relying on the service provider for its operation.
- Professionalism: It means the ability of an organization's employees to apply labor law and ethics in a professional manner, based on a foundation of knowledge and excellence in providing high-quality, defect-free service. It also means the ability to perform a specific task in a specific way, translating professional knowledge and values into actions and procedures aimed at meeting customer needs and helping to solve their problems [5]. Procedurally, it is defined based on the above as the ability of Jordan Hashemite Fund employees to provide outstanding service to beneficiaries in a skillful, excellent, professional and error-free manner.

2 Theatrical Framework

2.1 Dimensions of Service Quality Provided by JHFHD

The dimensions of service quality offered by the Jordanian Hashemite Fund closely align with the quality dimensions identified by experts in the field of services in private business organizations. Extensive studies and research have delved into the concept of quality from various perspectives, including those of the service recipient, the labor market, the service provider organization, and the value attributed to the service. Numerous researchers have reached the consensus that quality encompasses multiple dimensions, with each dimension focusing on a specific set of criteria when evaluating the quality of the service received. While there may be some variation among researchers regarding the exact number of fundamental quality dimensions, it is crucial for organizations to thoroughly examine and analyze all dimensions explored by researchers in order to determine which dimensions are most relevant to their institution and align with the concerns of the service beneficiaries.

By referencing the aforementioned studies [1, 2, 13, 24], and conducting a thorough analysis, the researchers are able to contribute to the existing body of knowledge by identifying six primary dimensions that define quality:

Transparency

Transparency has emerged as an essential prerequisite in the realm of administrative and organizational operations, particularly for organizations aspiring to enhance their services to a level of sophistication that positively impacts the quality of services provided to individuals. The achievement of transparency necessitates several requirements. They include imperative for administrative growth in organizational management, the alignment of training programs with organizational needs, the establishment of an extensive information network among administrative units within

the organization to ensure seamless coordination, cooperation, and procedural accuracy, as well as the reinforcement of supervisory functions to bolster transparency [7, 10, 12, 19].

The primary objective of implementing transparency within the Jordanian Hashemite Fund is to establish a conducive and appealing workspace that ensures all beneficiaries are subject to equitable standards and criteria. This is about transmitting information in a way that flows effortlessly, ensuring every department involved in service delivery is well enlightened on what their role entails, able to see clearly where revenue is coming from and easily facilitated through financial arrangements. This means no confusion or disorder that might cripple other well-intentioned efforts within the organization.

Trust and Security

The dimension under consideration is related to the service provider's competencies, proficiencies and expertise. The establishment of trust and confidence with the receiver is crucial for success. The capacity of the Jordanian Hashemite Fund to offer services to the recipients in a secure and safe manner without any risk involved provides trust and safety for the recipients. It is considered a major guarantee element that people are looking for as part of quality service delivery. Generally, people are attracted to organizations that make them feel safe (both physically and psychologically) as they are seeking protection from harm.

Excellence and Precision

The Jordanian Hashemite Fund must ensure delivery of services without any deficiencies, defects or errors, yet maintaining efficiency, accuracy and professionalism at every level which depicts high precision. Completeness and perfection should be their aim at all instances. The service provider's performance relies heavily on skill set as well as analytical and inferential abilities apart from the knowledge they bring onboard aimed towards optimal performance [17]. Recipients' first contact with service providers is evaluated by beneficiaries based on factors like academic qualifications, practical experiences and official accreditation sources. Some recipients would prefer getting services from highly educated individuals coming from official sources that are accredited.

Confidentiality and Privacy

The ability of the Jordanian Hashemite Fund to develop rules that will keep the managing beneficiaries' data confidential by only allowing access to experts and concerned parties but still protecting the privacy of this information has been recognized [15].

Reliability

For The Jordanian Hashemite Fund, the ability to provide services with precision and dedication is more than just meeting deadlines. It is also about ensuring the trust of the recipients who depend on these services being carried out as agreed upon [16].

Professionalism

The ability of the staff members at the Jordanian Hashemite Fund in following ethical principles and legislations effectively, along with codes of conduct, is a sign of their commitment to quality service without errors and also shows that they are capable of carrying out their tasks with professionalism. This means that we need to turn our professional knowledge and values into actions, through specific procedures or protocols aimed at fulfilling the needs of the beneficiaries who approach us for assistance in addressing their issues [19].

The study has incorporated the civil organizations outlined in Table 1, with the data presented in the table pertaining to the various categories of civil society organizations in Jordan.

The study is about the Jordanian Hashemite Human Development Fund. It belongs to the group of independent civil society organizations which are platforms for people to voice their needs and hopes. In response, the Fund tries to meet these identified needs through already set criteria and benchmarks. The Fund's way of doing things involves a systematic method to evaluate impact, quality, and effectiveness with measurable indicators. They make sure that they can touch, feel or count what they are seeing in order to come up with numbers related to the service output that paints a full picture regarding its outcome reality.

Table 1 Distribution of civil society organizations in Jordan

No.	Category	Number	Percentage of total organizations (%)
1	Civil society organizations	2540	53
2	Political organizations	110	3
3	Professional syndicates	14	0.5
4	Labor unions	17	0.5
5	Various private sector organizations	98	3
6	Cultural entities	566	10
7	Non-Profit companies	449	9
8	Sports and youth clubs	337	8
9	Human rights organizations	9	0.3
10	Political parties	25	0.5
11	Environmental associations	60	1.2
12	Family associations and links	546	11

Source [4]

3 Study Methodology

The reason behind choosing the descriptive-analytical approach in this research is due to its compatibility with the research aims and appropriateness for gathering data from a vast population under study. Through this approach, considerable amount of information is collected; it also uses statistical methods to find out the importance of different variables, which include both independent and dependent variables, and even determine frequency distributions as well as percentages.

3.1 Study Population

This research's control group is those who are aided by the Jordanian Hashemite Human Development Fund and its beneficiaries situated in all governorates of the kingdom. The fund has fifty centers distributed among three regions: Northern, Central, and Southern. According to data sourced from the Jordanian Hashemite Fund, it can be approximated that the number of recipients during 20215–2022 was close to a hundred thousand.

3.2 Study Sample

The study by [23] used a simple random sampling technique where 530 questionnaires were sent to people who have used the Fund services in the three regions: Northern, Central, and Southern. Of these, 490 questionnaires were returned, resulting in a retrieval rate of approximately 92%. The successful retrieval of a high number of questionnaires can be attributed to the collaborative efforts of the center managers and their staff, as well as the researchers' diligent follow-up with the participants. These measures facilitated effective communication with the service recipients and ensured the retrieval of the questionnaires.

Following the completion of data entry, a thorough examination was conducted to validate the responses provided by participants, ensuring the precision of the collected data and the sincerity of participants' answers to the questionnaire items. As a result, a total of (24) questionnaires were deemed ineligible for analysis. Consequently, (466) questionnaires were deemed suitable for further investigation, constituting approximately 95% of the total number of questionnaires obtained. A comprehensive overview of the questionnaire retrieval and acceptance rates is presented in Table 2.

Table 2 Summary of questionnaire distribution, retrieval, and acceptance rates

Questionnaires distributed	Percentage (%)	Questionnaires retrieved	Percentage (%)	Questionnaires accepted for analysis	Percentage (%)
530	100	490	92	466	95

3.3 Study Tool

Following the identification of the research problem, questions, and hypotheses, the researchers proceeded to create and enhance the research instrument, which encompassed all variables of interest. The questionnaire was chosen as the most suitable tool to effectively address the objectives of the study. Its construction was informed by an extensive review of pertinent literature and previous studies, guaranteeing that its contents were congruent with the identified study variables.

Test Reliability

The second assessment for evaluating the study tool is Cronbach's alpha, which assesses content validity and measures the consistency among the items in the study tool. Additionally, it verifies the stability of the study tool, indicating its suitability for measuring variables. The study reliability can be assessed using the Cronbach's alpha coefficient, with values greater than 0.60 deemed satisfactory as suggested by [23]. Findings of the Cronbach's alpha coefficients can be seen in Table 3.

The reliability of the study's items was assessed using Cronbach's alpha coefficients, as shown in Table 3. It is apparent that all of the coefficients exceeded the minimum acceptable value of 0.60, indicating satisfactory reliability of the measurement tool. The overall reliability coefficient for the entire tool was calculated to be 0.879, suggesting a high level of consistency and stability among the study's items.

Table 3 Results of consistency reliability coefficients through Cronbach's alpha for study variables and overall tool

Variables	Number of items	Measurement items	Cronbach's alpha coefficient
Transparency	6	Q1–Q6	0.73
Trust and security	5	Q7–Q11	0.77
Excellence and precision	5	Q12–Q16	0.751
Confidentiality	5	Q17–Q21	0.81
Reliability	6	Q22–Q27	0.729
Professionalism	6	Q28–Q33	0.785
Beneficiaries' satisfaction	8	Q34–Q41	0.82
Overall tool	41		0.879

Among the different variables, the reliability items demonstrated the lowest Cronbach's alpha coefficient of 0.729. Conversely, the satisfaction of beneficiaries' items exhibited the highest coefficient of 0.82, indicating the greatest level of stability among the study's items.

3.4 Description of Study Sample Characteristics

The study sample exhibited diversity in terms of demographic characteristics, encompassing five distinct attributes: gender, age, educational level, frequency of service utilization, monthly income level, and the locations where the questionnaires were distributed. The findings pertaining to these attributes are presented in Table 4.

The predominant demographic characteristic observed in the study is gender, with findings revealing a higher participation rate among females, accounting for 51.7% of the participants. Conversely, males constituted 48.3% of the participants. These results imply that JHFHD has a primary focus on engaging females in the majority of its programs and services, while also implementing certain projects that exclusively cater to the needs of women.

Regarding the second characteristic, the participants' ages were categorized into four groups: below 25 years old, 25 to below 35 years old, 35 to below 45 years old, and 45 years old and above. Notably, the age group below 25 years old exhibited the highest rate of participation in the study, surpassing 33%. Following closely behind was the age group of 25 to below 35 years old, which had a participation rate of 28.8%. Conversely, the age group of 45 years old and above had the lowest participation rate, approximately 16%. This data suggests that JHFHD prioritizes the youth population when delivering various programs, services, and activities such as IT, youth capacity building, employment opportunities, and life skills programs.

In terms of educational attainment, the participants were divided into four distinct groups: individuals with education below the general secondary level, those with an intermediate diploma, individuals holding a bachelor's degree, and those who have pursued postgraduate studies. Notably, the group with education below the general secondary level exhibited the highest rate of participation, accounting for 40.8% of the total participants. Conversely, individuals with postgraduate studies displayed the lowest rate of participation, with a mere 8% representation. This discrepancy can be attributed to the fact that many of the fund's centers are situated in economically disadvantaged areas, where the majority of residents face financial constraints that hinder their pursuit of higher education.

JHFHD offers a wide range of services to its beneficiaries, which may be provided once or multiple times depending on the specific projects associated with each service. In order to assess the frequency of service utilization by the beneficiaries, the researchers measured the extent to which the services were used. The majority of participants in the study received the service on a single occasion, with a participation rate surpassing 32%. Conversely, the least common frequency of service usage was twice, with a participation rate of 15.7%.

Table 4 Description of study sample characteristics

Study sample characteristics	Categories	Number	Percentage (%)
Gender	Male	225	48.3
	Female	241	51.7
	Total	466	100
Age	Below 25 years old	155	33.2
	25–below 35 years old	134	28.8
	35–below 45 years old	102	21.9
	54 years old and above	75	16.1
	Total	466	100
Educational level	Below general secondary	190	40.8
	Intermediate diploma	68	14.6
	Bachelor's degree	171	36.7
	Postgraduate studies	37	7.9
	Total	466	100
Frequency of service usage	Once	151	32.4
	Twice	73	15.7
	Three times	97	20.8
	Four times or more	145	31.1
	Total	466	100
Monthly income level	Less than 150 JD	115	24.7
	150–Less than 250 JD	117	25.1
	250–Less than 350 JD	128	27.5
	350 JD and above	106	22.7
	Total	466	100
Questionnaire distribution sites	Northern region	183	39.3
	Central region	165	35.4
	Southern region	118	25.3
	Total	466	100

In relation to the final characteristic, the monthly income level was categorized into four distinct groups: less than 150 JD, 150 to less than 250 JD, 250 to less than 350 JD, and 350 JD and above. Notably, the income bracket of 250 to less than 350 JD exhibited the highest rate of participation, standing at 27.5%, whereas the income group of 350 JD and above displayed the lowest rate of participation, amounting to 22.7%. This phenomenon can be attributed to the prevalence of low-income individuals within the target demographic, primarily employed in government positions, factories, and corporations.

The distribution sites for the questionnaires were JHFHD centers, which are located across the kingdom and divided into three regions: North (including Irbid,

Jerash, Ajloun, and Mafraq), Central (including Amman, Zarqa, Madaba, and Balqa), and South (including Ma'an, Aqaba, Karak, and Tafilah). The Northern region had the highest participation rate of 39.3%, followed by the Central region with 35.4%, and the Southern region with the lowest participation rate of 25.3%. The lower participation rate in the Southern region can be attributed to its vastness and remoteness, which makes it challenging to reach participants due to their constant movement and lack of stability in a specific area.

4 The Results

4.1 Relative Importance of Study Variables

Table 5 presents a concise overview of the significance of the study variables by providing the calculated arithmetic means and standard deviations.

According to the data presented in Table 5, it is evident that the variable of reliability holds the utmost relative significance among the independent variables. This is supported by its high arithmetic mean of 3.71 and a standard deviation of 1.063. These statistical measures clearly indicate that the surveyed sample recognizes the reliability variable as the most crucial aspect of service quality implemented by the Jordan Hashemite Charity Fund.

In contrast, the variable of excellence and precision is deemed to be of lesser significance among the independent variables, as indicated by its arithmetic mean of (3.65) and standard deviation of (1.004). This implies a moderate consensus regarding the fund's dedication to transparency in its provision of services to beneficiaries.

The aforementioned findings suggest that the Jordan Hashemite Charity Fund has established a commendable standing and position within the community, effectively fulfilling its commitments to beneficiaries. As a result, community members

Table 5 Arithmetic means and standard deviations of study sample estimates for independent variables paragraph arithmetic mean standard deviation rank relative importance

Paragraph	Arithmetic mean	Standard deviation	Rank	Relative importance
Transparency	3.63	1.004	5	Moderate
Trust and security	3.70	1.009	2	High
Excellence and precision	3.65	1.009	6	Moderate
Confidentiality and privacy	3.70	1.037	3	High
Reliability	3.71	1.063	1	High
Professionalism	3.68	1.049	4	High
Overall scale	3.68	1.026		High

are inclined to engage with the fund without any reservations. The majority of beneficiaries exhibit a high level of confidence in the fund's ability to provide the necessary services, with reliability emerging as the most influential factor in achieving satisfaction, second only to the trust and security factor.

In terms of importance, the professionalism variable was ranked fourth, signifying the significance of employees' flexibility and respect towards clients. Following this, the transparency variable was ranked fifth, indicating that there may be some lack of clarity in certain procedures for beneficiaries. Lastly, the excellence and precision variable received the lowest rank, highlighting the provision of services in remote areas that are distant from modern technology hubs, which could potentially enhance the delivery of services with a higher level of excellence and precision.

The initial research query is addressed by examining the degree to which the Jordan Hashemite Charity Fund incorporates the various aspects of service quality offered to its beneficiaries. The average score for the dimensions of service quality provided to beneficiaries is 3.68, indicating a high level of significance. This implies that the respondents in the sample concur that the Jordan Hashemite Charity Fund effectively integrates quality dimensions into its services.

4.2 The Main Hypothesis

- The main hypothesis (Ho): There is no statistically significant effect at the ($\alpha \leq 0.05$) significance level of the quality of services provided by JHFHD, in its dimensions, on the satisfaction of its beneficiaries.

Based on the data presented in Table 6, it is clear that the calculated F value (41.92) exceeds the tabulated F value (2.0986), suggesting a statistically significant association between the dependent variable and the independent variables as a whole. The significance level for F is below (0.05). Consequently, we can reject the null hypothesis and accept the alternative hypothesis, signifying a statistically significant impact at the ($\alpha \leq 0.05$) significance level of the quality of services offered by JHFHD on the satisfaction of its beneficiaries.

Moreover, the correlation coefficient of 0.595, which denotes a relatively strong positive relationship, is evident in the table between the dependent variable and the independent variables. Additionally, the independent variables, namely Transparency, Trust and Security, Excellence and Precision, Confidentiality and Privacy, Reliability, and Professionalism, collectively explain 35.4% of the variability in customer satisfaction, as indicated by the coefficient of determination ($R^2 = 0.354$). It is important to note that the remaining percentage of influence on customer satisfaction can be attributed to other factors.

Table 6 Results of multiple linear regression test for the main hypothesis

Dependent variable	Correlation coefficient (R)	Coefficient of determination (R^2)	Calculated F value	Degrees of freedom	Significance level (Sig)	Independent variable	B value
Customer satisfaction	0.595	0.354	41.92	6	0.000	Transparency	0.067
						Trust and security	0.044
						Excellence and precision	0.142
						Confidentiality and privacy	0.054
						Reliability	0.251
						Professionalism	0.234

5 Conclusions

1. The research findings indicate that the Jordanian Hashemite Fund operates based on a defined set of principles and standards in order to deliver services to its beneficiaries. The fund ensures that these standards are effectively communicated to beneficiaries through well-established procedures, supervision, information dissemination, communication channels, and active engagement. As for the level of satisfaction expressed by beneficiaries, it was found to be moderate in regards to the transparency aspect, which is one of the quality dimensions offered by the fund.
2. The study results indicate that the Jordanian fund offered outstanding training services to its beneficiaries, which in turn enhanced their satisfaction with the Fund. Also, the beneficiaries agreed that the service quality dimension of the fund which is trust and security is the main cause of satisfaction among beneficiaries.
3. The results of the study concluded that the Hashemite Fund of Jordan has managed to become among the most important voluntary development institutions. The reasons for this come from the beneficiaries belief that the services provided by this institution is different and better, and this level of satisfaction with excellent and accurate services which is one of the quality dimensions that the Fund bears, was satisfactory among the sample majority.
4. The findings of the research demonstrate that the Jordanian Hashemite Fund consistently upholds the principle of ensuring the confidentiality of information for its beneficiaries. Although the Fund primarily adopts a general public service approach and provides less individual attention in terms of specific privacy services, the majority of beneficiaries expressed satisfaction with the level of confidentiality and privacy measures implemented by the Fund.
5. The results of the study indicate that the Jordanian Hashemite Fund possesses a favorable reputation and standing within the community, which fosters a willingness among individuals to engage with it without any reservations. A majority of the recipients demonstrated their inclination to rely on the Fund in order to access the necessary services, with the element of dependability emerging as the most significant factor in attaining satisfaction.

5.1 Recommendations

1. The study recommends focusing on the transparency dimension, which was moderately satisfied by those sampled and had an 8% impact on beneficiary satisfaction. It is necessary to improve the adopted procedures, ensure equality of all beneficiaries, and clarify control systems and communication channels.
2. The study suggests working to increase the effectiveness of excellence and precision among the Fund's staff and systems. This can be achieved by using advanced, modern systems that reduce the number of errors, ensuring accurate and precise service delivery from the first attempt.

3. Emphasis should be placed on taking into account the trust and security dimension, which has a relative importance of 12.2% for the satisfaction of beneficiaries. That is why it is so important to take into account trust and security and take the necessary actions to ensure information security.
4. The study highlights the need to respect privacy and confidentiality in the provision of services to beneficiaries, offering specific privacy services and taking into account special cases. Although its impact on beneficiary satisfaction is minimal (0.07%) when all dimensions are combined, improving privacy and confidentiality is key.
5. Developing the skills of Jordan Hashemite Fund employees and increasing their problem-solving skills while providing services through continuous training and improvement in order to increase their effectiveness and experience in contacts with beneficiaries.
6. The study suggests developing promotional plans for the organization, its services and the changes it brings to society, conducting continuous field research to measure the response of beneficiaries, and identifying weaknesses in the quality of services to improve them.

The Reality of Human Resource Management Practices and Their Relationship with Employee Performance in Private Institutions

Jiries Abu Ghannam and Khaled Alzeaideen

Abstract This study aimed to identify the reality of human resource management practices and their relationship with employee performance in private institutions in Bethlehem Governorate. The study was conducted on private institutions in Bethlehem Governorate, and to achieve its objectives, the research team prepared a questionnaire to collect the necessary data from various sources to achieve those goals. The research team adopted the descriptive analytical approach to conduct the study, with the questionnaire as the primary tool for collecting information. The study was conducted on a random sample of 50 questionnaires distributed among the study population, the employees of private sector institutions in Bethlehem Governorate. The study yielded several important results: The results showed that the degree of job design and analysis was significant, with the most common aspects being the existence of job descriptions and specifications prepared by the Human Resources Department, followed by job analysis conducted by the Human Resources Department. The data in the previous table indicate that the degree of recruitment and selection was significant, with the most common aspects being the Human Resources Management determining the characteristics and traits of individuals to be recruited, followed by clear and consistent recruitment and selection policies aligned with the objectives of private sector institutions. The results showed that the degree of training and development was significant, with the most common aspects being private sector institutions providing employees with continuous training opportunities to acquire new skills, followed by private sector institutions assigning employees tasks after completing their training to ensure the application of acquired knowledge in their jobs.

1 Introduction

When we talk about the human element in an institution, we mean one of the most important elements of the institution, and therefore, this element requires the presence of effective management that performs its role correctly for the work to succeed regardless of its nature. Effective management is characterized by its goal-oriented nature. Thus, effective management is a human process aimed at consolidating all human efforts within the institution under one umbrella, investing them wisely by harnessing their potentials, capacities, and creativity to achieve goals with the least effort, time, and cost. This can only be achieved through administrative effort. Thus, effective management is increasingly seen as one of the most important components upon which society relies for progress [1–14].

The institution possesses many resources that it utilizes to improve performance levels and thereby achieve its goals, but the most important and influential resources are human resources, which are considered the primary and essential wealth of the institution and one of the fundamental factors of performance. Human resources enable the institution to survive, continue, and grow within an unstable environment, volatile markets, increasingly complex and diverse products, and the difficulty of satisfying customers and achieving the highest level of productivity and effectiveness. Thus, this policy (performance improvement) is a general policy of the institution, where there is a conviction of the need to activate human resources from senior leadership to executive levels in all areas of activity. Human resources represent all employees in the institution, regardless of their levels, qualifications, and roles [15–24].

There are several reasons that play a significant role in highlighting the importance of human resource management practices as an important means for organizations to gain a competitive advantage, acquire competencies, and develop these competencies. Concepts such as human and intellectual capital have emerged, all of which have led to a changing perception of the value that organizations place on human resource management functions and practices [25–32].

Problem Statement

Employee performance represents the quantity of output per individual employee measured over a specific time unit, reflecting the employee's ability to achieve what is required of them in any job, regardless of its nature. This definition applies to any work, as all jobs require their incumbents to have specific goals, even if these goals vary in size and nature from one job to another. Based on this, the problem statement of the study can be formulated in the following main question: What is the reality of human resource management practices and their relationship with employee performance in private institutions operating in Bethlehem Governorate?

Significance of the Study

The importance of this research lies in the following:

1. Shedding light on the role of human resources, understanding its dimensions, requirements for its application, and its role as one of the most important pillars to maximize the value of the institution to achieve job performance in private sector institutions.
2. The significance of the researched sector: The study focuses on the private sector institutions in Bethlehem Governorate, and demonstrates the impact of human resource management practices on job performance.
3. The study results may benefit private institutions regarding the nature of activities practiced by human resource management.

Study Objectives

The main objective of this study is to achieve the following goal: To identify the reality of human resource management practices and their relationship with employee performance in private institutions.

From the main objective, the following sub-objectives emerge:

1. To elucidate the relationship between human resource practices applied in private institutions in terms of job design and analysis and the performance of employees in these institutions.
2. To clarify the relationship between human resource practices applied in private institutions in terms of recruitment and selection and the performance of employees in these institutions.
3. To explain the relationship between human resource practices applied in private institutions in terms of rewards and the performance of employees in these institutions.
4. To understand the relationship between human resource practices applied in private institutions in terms of internal communication and the performance of employees in these institutions.
5. To determine the level of employee performance in private institutions.

Study Questions

1. What is the relationship between human resource practices applied in private institutions in terms of job design and analysis and the performance of employees in these institutions?
2. What is the relationship between human resource practices applied in private institutions in terms of recruitment and selection and the performance of employees in these institutions?
3. What is the relationship between human resource practices applied in private institutions in terms of rewards and the performance of employees in these institutions?

4. What is the relationship between human resource practices applied in private institutions in terms of internal communication and the performance of employees in these institutions?
5. What is the level of employee performance in private institutions?

Study Hypotheses

1. There are no statistically significant differences at the significance level ($\alpha \leq 0.05$) regarding the reality of human resource management practices and their relationship with employee performance in private institutions attributable to the gender variable.
2. There are no statistically significant differences at the significance level ($\alpha \leq 0.05$) regarding the reality of human resource management practices and their relationship with employee performance in private institutions attributable to the educational qualification variable.
3. There are no statistically significant differences at the significance level ($\alpha \leq 0.05$) regarding the reality of human resource management practices and their relationship with employee performance in private institutions attributable to the job title variable.
4. There are no statistically significant differences at the significance level ($\alpha \leq 0.05$) regarding the reality of human resource management practices and their relationship with employee performance in private institutions attributable to the years of experience variable.
5. There are no statistically significant differences at the significance level ($\alpha \leq 0.05$) regarding the reality of human resource management practices and their relationship with employee performance in private institutions attributable to the monthly income variable.

2 Study Methodology

The research team utilized the descriptive analytical approach, which compares, interprets, and evaluates with the aim of reaching meaningful generalizations about the research topic.

Study Population

This study addressed the topic of the reality of human resource management practices and their relationship with employee performance in private institutions. Therefore, the study population consisted of employees of private sector institutions in Bethlehem Governorate.

Study Sample

The study was conducted on a random sample of 50 questionnaires distributed among the study population, the employees of private sector institutions in Bethlehem Governorate.

Study Instrument

The questionnaire was constructed to obtain the perspectives of the respondents on the study topic.

Study Instrument Reliability

The reliability of the study instrument was verified by examining the internal consistency of the instrument's items by calculating the Cronbach's Alpha coefficient on the total study sample, where the reliability value was (0.95), indicating a very high level of reliability for the instrument.

3 Results

Study Question 1: What is the extent of Human Resource Management practices and their relationship with employee job performance in private institutions in Bethlehem Governorate?

The degree of HRM practices and their relationship with employee job performance in private institutions in Bethlehem Governorate was significant, with a mean score of 4.12 on the total scale of the study, with a standard deviation of 0.45.

Study Question 2: What are the most important aspects of work design and analysis?

The degree of work design and analysis was significant, with a mean score of 4.16. The most common aspects included job description and job specification prepared by the HR department with an average of 4.34, followed by job analysis conducted by the HR department with an average of 4.34.

Study Question 3: What are the most important aspects of recruitment and selection?

The degree of recruitment and selection was significant, with a mean score of 4.08. The most common aspects included HR management identifying the characteristics of individuals to be recruited with an average of 4.36, followed by clear and goal-aligned recruitment and selection policies with an average of 4.12.

Study Question 4: What are the most important aspects of training and development?

The degree of training and development was significant, with a mean score of 4.02. The most common aspects included private sector institutions providing continuous training opportunities for employees to acquire new skills with an average of 4.16, followed by institutions verifying employees' application of acquired knowledge in their jobs with an average of 4.14.

Study Question 5: What are the most important aspects of rewards?

The degree of rewards was significant, with a mean score of 3.99. The most common aspects included sequential promotions motivating work with an average of 4.14,

followed by private sector institutions offering suitable social and health insurance for employees with an average of 4.10.

Study Question 6: What are the most important aspects of internal communication?

The degree of internal communication was significant, with a mean score of 4.41. The most common aspects included positive internal communications in private institutions aiding employee accomplishment with an average of 4.56, followed by internal communication between departments in private sector institutions aiding in goal achievement with an average of 4.42.

Study Question 7: What are the most important aspects of employee performance?

The degree of employee performance was significant, with a mean score of 4.09. The most common aspects included continuous improvement in employee performance in recent years with an average of 4.34, followed by top management encouraging new ideas and opinions in private sector institutions with an average of 4.16.

Hypotheses

1. There are no statistically significant differences at the $\alpha \leq 0.05$ level in the degree of HRM practices and their relationship with employee job performance in private institutions in Bethlehem Governorate attributed to gender. Results revealed no statistically significant differences attributed to gender.
2. There are no statistically significant differences at the $\alpha \leq 0.05$ level in the degree of HRM practices and their relationship with employee job performance in private institutions in Bethlehem Governorate attributed to job title. Results revealed no statistically significant differences attributed to job title.
3. There are no statistically significant differences at the $\alpha \leq 0.05$ level in the degree of HRM practices and their relationship with employee job performance in private institutions in Bethlehem Governorate attributed to educational qualification. Results revealed no statistically significant differences attributed to educational qualification.
4. There are no statistically significant differences at the $\alpha \leq 0.05$ level in the degree of HRM practices and their relationship with employee job performance in private institutions in Bethlehem Governorate attributed to monthly income in shekels. Results revealed no statistically significant differences attributed to monthly income.
5. There are no statistically significant differences at the $\alpha \leq 0.05$ level in the degree of HRM practices and their relationship with employee job performance in private institutions in Bethlehem Governorate attributed to years of experience. Results revealed no statistically significant differences attributed to years of experience.

4 Conclusion

In conclusion, the study's findings reveal that private institutions in Bethlehem Governorate exhibit a strong emphasis on sound human resource management practices and their relationship with employee performance. The results indicate that these organizations place significant importance on job design and analysis, with well-defined job descriptions and specifications developed by the HR department. The recruitment and selection processes are also robust, with the HR function clearly defining the desired candidate characteristics and implementing consistent policies aligned with institutional objectives. Furthermore, the data shows private institutions prioritize training and development, providing employees with continuous learning opportunities to acquire new skills, and offering opportunities to apply the acquired knowledge on the job. Collectively, these human resource management practices appear to be contributing positively to enhancing employee performance and organizational effectiveness. Maintaining and further strengthening these HR functions seems crucial for private institutions to sustain a competitive advantage and maximize their workforce productivity. Overall, the study highlights the pivotal role of strategic human resource management in driving superior employee and organizational outcomes.

5 Recommendations

Based on the aforementioned results, the following recommendations can be summarized:

- Enhance recruitment, hiring, and testing processes to align with job requirements and uplift individual and institutional performance.
- Conduct training courses for HR personnel to clarify HRM concepts and modern principles in job analysis, recruitment, selection, and evaluation.
- Focus on performance evaluation processes within the organization and develop evaluation models covering all aspects.
- Review wage, incentive, and monetary reward policies.
- Develop an HR training program based on organizational needs.

The Impact of Direct Marketing Tools on Purchasing Decision of Service (A Field Study of a Telecommunications Company's Customers)

Iyad A. A. Khanfar and Amal Nedal Jawabreh

Abstract The study you've outlined appears to focus on examining the influence of various direct marketing tools on consumer purchasing decisions, specifically within the context of Umniah Telecommunications customers. It's interesting to see how the study encompasses a range of direct marketing channels, including email, direct selling, telemarketing, and social media marketing, as independent variables, with consumer purchasing decisions as the dependent variable. Utilizing Google Forms for data collection seems like a practical choice, given its accessibility and ease of use. Additionally, employing statistical analysis through AMOS helps ensure the validity and reliability of the findings, which is crucial for drawing meaningful conclusions. The results indicating a statistically significant impact of each direct marketing tool on consumer purchasing decisions suggest that Umniah Telecommunications can potentially optimize its marketing strategies by focusing on these channels. The recommendations provided—such as enhancing email marketing efforts, refining direct selling strategies, improving telemarketing approaches, and leveraging social media marketing—seem tailored to capitalize on the identified influences and strengthen the company's marketing capabilities. Overall, the study seems to offer valuable insights for Umniah Telecommunications or similar companies looking to refine their direct marketing strategies to better align with consumer preferences and behaviors.

Keywords Direct marketing tools · Email marketing · Social media marketing · Telemarketing · Purchasing decision

1 Introduction

Marketing has shifted towards digital technology, emphasizing personalized approaches like direct marketing using tools such as E-mail, direct mail, telemarketing, and social media [1]. Companies strive to reach broad customer bases through traditional and modern marketing tools to achieve goals like providing unique products/services, maximizing revenue, and fostering loyalty.

Consumer buying decisions are influenced by various factors like demographics, psychology, and culture. In sectors like telecommunications, diverse marketing strategies are essential for competitiveness and goal achievement [2].

Marketers in telecom companies focus on acquiring and retaining customers, ensuring satisfaction and loyalty, and driving sales. Direct marketing facilitates direct communication with customers, addressing their needs effectively.

1.1 Research Problem and Questions

Due to fierce competition between telecommunication companies in Jordan in achieving goals which are attracting more customers, direct marketing is an important aspect of marketing. It has several tools such as E-mail marketing, direct mail, telemarketing, and social media marketing. Each one of these mentioned tools has its impact on customers' decisions. The issue of this study is focusing on is discovering which tool has the most impact on customers' decisions. The research questions are as follows:

What is the impact of direct marketing tools on purchasing decision of service?

1.2 Research Objectives

This research aims to assess the impact of direct marketing tools on the purchasing decision of Umniah telecommunication mobile services.

1.3 Research Hypotheses

- H0: There is no impact of direct marketing tools on Umniah company consumer's buying behavior which leads to the following sub-Hypotheses:
- H1: There is no significant impact of email as a direct marketing tool on Umniah company consumer's buying behavior.
- H2: There is no significant impact of direct selling as a direct marketing tool on Umniah company consumer's buying behavior.

- H3: There is no significant impact of telemarketing as a direct marketing tool on Umniah company consumer's buying behavior.
- H4: There is no significant impact of social media marketing as a direct marketing tool on Umniah company consumer's buying behavior.

2 Literature Review

A corroding to [3] study showed that direct marketing has a direct impact on buying behavior on the other hand conventional marketing has indirect marketing on customers buying behavior, The study by [1]. showed that marketing strategy encourages the purchasing decision, The study by [4] The study has concluded that there is an impact of all three types of digital marketing on purchasing behavior, but separately there is an important role of both types of digital marketing (mobile marketing, social media marketing) in encouraging people to purchase via digital stores. The study by [5] concluded that there is a major effect of digital marketing including mobile marketing, and social media marketing on consumer purchasing behavior. The study carried out by [6] showed that there is a strong relationship between direct marketing and consumer buying behavior, and that direct marketing is the most effective tool of communication to enhance the maximum selling of a brand.

3 Research Methodology

The methodology reflects the theoretical and applied approach of the researcher in dealing with the research problem and allows the reader to evaluate the validity of the results and their generalizability. The study adopted descriptive-analytical and survey methodologies.

3.1 The Population

In the current study, Umniah Telecommunications Company's customers in Zarqa city were targeted, and the researcher was unable to precisely determine the population size due to its vastness and the large number of the company customers.

Table 1 Reliability of the questionnaire (Cronbach's alpha)

Statements	Variables	Dimensions	Number of statements	Cronbach's alpha coefficient
5	Direct marketing tools	E-mail	Q1–Q5	0.914
4		Direct selling	Q6–Q9	0.860
6		Telemarketing	Q10–Q15	0.899
5		Social media marketing	Q16–Q20	0.913
8	Purchasing decision		Q21–Q28	0.859
28	All items		Q1–Q28	0.953

3.2 Sample Size

Given the uncertainty about the actual size of the study population, the researcher opted for the largest representative sample size from Sekaran's table, which indicated a minimum of 384 respondents. Employing a suitable sampling method, the researcher utilized Google Forms to design and distribute electronic surveys, ensuring efficient and extensive reach to the target population with minimal time and effort.

To ensure accuracy, 500 questionnaires were distributed. Of these, 105 were not returned, constituting 21% of the total distributed. However, 79% of the questionnaires were returned and deemed valid for analysis. As a result, the sample size comprised 395 respondents.

This measure is crucial in the development and evaluation of questionnaires, surveys, or any assessment tool involving multiple items aimed at gauging a particular psychological trait, attitude, knowledge area, or other specified construct. In fields such as psychology, education, and social sciences, where ensuring the reliability of measurement instruments is vital for the validity of research conclusions, Cronbach's alpha serves as a valuable indicator of internal consistency.

From Table 1, we can see that all the study variables' Cronbach's alpha values are more than (0.7). The highest "Cronbach's" Alpha value is (0.914) belongs to the "E-mail" dimension, while the lowest (0.859) belongs to the "Purchasing Decision" variable. All items "Cronbach's" Alpha coefficient is (0.953).

From Table 1, we can note that none of the bivariate relationships was above (0.8) for the independent variable, so we can conclude that multicollinearity doesn't exist (Table 2).

3.3 Normality Test

A normality test is a statistical technique used to determine if data from a sample or population follow a normal distribution. Several approaches can be used for this goal, but the Kolmogorov–Smirnov test is one of the most common. This test compares

Table 2 Correlations matrix of independent dimensions

Independent variables	E-mail	Direct selling	Telemarketing	Social media marketing
E-mail	1	0.503**	0.435**	0.447**
Direct selling		1	0.732**	0.669**
Telemarketing			1	0.719**
Social media marketing				1

**Correlation is significant at the 0.01 level

Table 3 The normality of the study variables

Variables	(K-S) coefficients	*P*-value
E-mail	3.510	0.151
Direct selling	2.994	0.216
Telemarketing	1.923	0.187
Social media marketing	2.969	0.235
Purchasing decision	3.447	0.140

the distribution of a sample or population to the standard normal distribution and determines whether the data deviates considerably from the normal pattern. The p-value (≥ 0.05) and Kolmogorov–Smirnov coefficients (less than 5) indicate whether the data follows a normal distribution or not.

Table 3 showed the *P*-value of the variables, which are greater than (0.05) and this proves that the variables do belong to the normal distribution.

4 Data Analysis and Hypotheses Testing

4.1 Description of Variables

To evaluate the level of direct marketing tools and the purchasing decision, the survey responses were analysed through the calculation of means and standard deviations. The responses were then categorized according to the significance of each item, providing an overview of the condition of the variables under study. This process involves examining and analysing the statements of each dimension of the research, followed by determining the aggregate average for each variable separately.

Level of Direct Marketing Tools

The Direct Marketing variable is composed of four dimensions. The following explains the dimensions' level of importance.

- **First Dimension: E-mail**

The (dimension was measured by five statements, Table 4 shows the, Mean value), and, Standard Deviation), for the respondents' answers towards this dimension.

From Table 4, we observe that E-mail statements are within a medium level of importance; the highest (mean is (3.29) with (1.290) (standard deviation belonging to (statement number four "**Umniah Telecommunication company uses e-mail marketing campaigns effectively to reach the target audience**", it belongs to medium level of importance. The (lowest mean is (3.14) with (1.307) standard deviation) This belongs to a statement one, "**Umniah Telecommunication Company communicates with customers via e-mail permanently**", it is classified within a medium level too. The E-mail dimension scores a medium-level mean average (3.34), which indicates according to the respondents' opinions that the Umniah Telecom utilizes email as one of the means of direct marketing at a moderate level.

- **Second Dimension: Direct selling**

Direct selling was measured by four statements), Table 5 shows the, (Mean value), and, Standard Deviation), for the respondents' answers towards this dimension.

Table 5 shows the Direct selling arithmetic mean) located between (3.46–3.82), and they are classified within (high and medium) level. The ninth statement "**Umniah Telecommunication company uses a direct selling method to clarify customer's way of use**" scored (3.82), it is classified within the high level) and standard deviation (1.062). The lowest (mean belongs to the sixth statement "**The sales representatives**

Table 4 Mean and standard deviation of e-mail dimension

Items	Mean	Standard deviation	Importance	Level
1. Umniah Telecommunication Company communicates with customers via e-mail permanently	3.14	1.307	Medium	5
2. Umniah Telecommunication company provides customers with its promotional offers via e-mail	3.24	1.295	Medium	4
3. Umniah Telecommunication company provide customer with new updates including new features via e-mail	3.26	1.287	Medium	2
4. Umniah Telecommunication company uses e-mail marketing campaigns effectively to reach the target audience	3.29	1.290	Medium	1
5. Umniah Telecommunication company answers customer's questions	3.25	1.200	Medium	3
E-mail	3.34		Medium	

Table 5 Mean and standard deviation of direct selling dimension

Items	Mean	Standard deviation	Importance	Level
6. The sales representatives have enough information about Umniah company and its service	3.46	1.142	Medium	4
7. Umniah Telecommunication company uses direct selling to provide specific information that customers are seeking	3.79	1.078	High	2
8. Umniah Telecommunication company uses direct selling as an effective communication method with customers	3.54	1.104	Medium	3
9. Umniah Telecommunication company uses a direct selling method to clarify customer's way of use	3.82	1.062	High	1
Direct selling	3.65		Medium	

have enough information about Umniah company and its service". It scored) (3.46) and is classified within (medium level, and standard deviation (1.142). The Direct selling dimension scored a medium level with an arithmetic mean (3.65), which indicates according to the respondents' opinions that Umniah Telecom utilizes direct selling as one of the means of direct marketing at a moderate level.

- **Third Dimension: Telemarketing**

The (dimension was measured by six statements), Table 8 shows the, (Mean value), and, Standard Deviation) for the respondents' answers towards this dimension.

Table 6 clarifies that Telemarketing (statements are within the (high and medium levels and statement number eleven "**Umniah Telecommunication company uses SMS messages to grab customer's attention towards a promotional offer**" scored the highest mean (4.11). It is classified within the high level, and the (standard deviation is (0.983). On the other hand, the lowest mean belongs to the statement fourteen "**Telemarketing helps meet the customer's needs in the shortest time**". It scored an arithmetic mean and (3.48) classified within the medium level and the standard deviation is (1.079). As the Telemarketing dimension) scored (3.78), it is classified within the high level which indicates according to the respondents' opinions that the Umniah Telecom utilizes Telemarketing as one of the means of direct marketing at a high level.

Fourth Dimension: Social Media Marketing

The (dimension was measured by five statements), Table 7 shows the, (Mean value), and, Standard Deviation), for the respondents' answers towards this dimension.

From Table 7, it's evident that the Social Media Marketing dimension is perceived as highly important by respondents. The statement with the highest mean (3.99) and

Table 6 Mean and standard deviation of telemarketing dimension

Items	Mean	Standard deviation	Importance	Level
10. Umniah telecommunication service providers give enough information about a service	3.93	1.038	High	3
11. Umniah Telecommunication company uses SMS messages to grab customer's attention towards a promotional offer	4.11	0.983	High	1
12. Umniah Telecommunication company uses telephone marketing that provides all the information customer's request	3.58	1.093	Medium	5
13. The company uses telemarketing to display its products or services	3.62	1.028	Medium	4
14. Telemarketing helps meet the customer's needs in the shortest time	3.48	1.079	Medium	6
15. The ease of using the phone helps me to continually communicate with the company	3.96	1.073	High	2
Telemarketing	3.78		High	

Table 7 Mean and standard deviation of social media marketing dimension

Items	Mean	Standard deviation	Importance	Level
16. Social media marketing contributes to increasing awareness of the company's services	3.96	1.012	High	2
17. Social media marketing activities are effective in engaging with customers who are interested in the company's telecommunication services	3.94	1.002	High	3
18. Social media platforms assist the company in sharing information about telecommunication services	3.91	0.994	Medium	4
19. Social media marketing efforts contribute positively to customer retention for the company	3.82	1.078	High	5
20. Social media marketing contributes to establishing a positive image for the company and its services	3.99	1.034	High	1
Social media marketing	3.92		High	

Table 8 Mean and standard deviation of direct marketing dimensions

Items	Mean	Level	Importance
1. E-mail	3.34	Medium	4
2. Direct selling	3.65	Medium	3
3. Telemarketing	3.78	High	2
4. Social media marketing	3.92	High	1
Direct Marketing	3.67	High	

a standard deviation of (1.034) is statement number twenty: "Social media marketing contributes to establishing a positive image for the company and its services," indicating a high level of importance. Conversely, the statement with the lowest mean (3.82) and a standard deviation of (1.078) is statement nineteen: "Social media marketing efforts contribute positively to customer retention for the company," also classified within the high level of importance. Overall, the Social Media Marketing dimension achieves a high-level mean average of (3.92), suggesting that respondents perceive Umniah company as highly utilizing social media marketing as a means of direct marketing.

To ascertain the level of Direct Marketing at Umniah company, the mean was calculated across the independent variable dimensions. Table 8 presents the results.

The results show that Social Media Marketing dimension had the highest mean of Direct Marketing tools, with a mean (3.92) and it was classified within a high level, which means it represents the most using by Umniah Company. On the other hand, the E-mail dimension scored the lowest mean (3.34) and it was classified within a medium level. The result showed that Direct Marketing scored a high mean level (3.67) and it is classified within a high level.

(Level of Purchasing Decision (Dependent Variables)

The (Purchasing Decision variable was measured by eight statements), Table 9 shows the, (Mean value), and, Standard Deviation), for the respondents' answers towards this dimension.

Table 9 shows the Purchasing Decision (arithmetic mean) located between (3.36–4.03), and they are classified within (high and medium) levels. The statement twenty-four "**The ratio of sales increases when the company uses advanced marketing methods**" scored (4.03), and is classified as the highest mean,) and standard deviation scored (1.002). The lowest (mean belongs to the statement twenty-five "**Umniah Telecommunication e-mail services encourages me to purchase**". It scored) (3.36) and it is classified within (medium level, and standard deviation (1.233). The Purchasing Decision variable scored high level with an arithmetic mean (3.79).

Table 9 Mean and standard deviation of purchasing decision variable

Items	Mean	Standard deviation	Importance	Level
21. Customers purchasing decisions are influenced by direct marketing tools	4.00	0.972	High	2
22. Direct selling convinces me to purchase the service	3.48	1.049	Medium	7
23. Direct Marketing activities provide all the information requested to make a purchase decision	3.97	0.941	High	3
24. The ratio of sales increases when the company uses advanced marketing methods	4.03	1.002	High	1
25. Umniah Telecommunication e-mail services encourages me to purchase	3.36	1.233	Medium	8
26. Resolving issues by Umniah company encourages customer to deal with them later	3.88	1.116	High	5
27. I recommend my friends, family, or colleagues to purchase Umniah telecommunication services	3.70	1.169	High	6
28. The effectiveness and skills of sales representatives working in Umniah affect purchasing behavior	3.93	1.097	High	4
Purchasing Decision	3.79		High	

4.2 Test of the Hypotheses

The study comprises five hypotheses, where one main Hypotheses, and the remaining four function as sub hypotheses. To evaluate the impact of the independent variable on the dependent variable, the research employed structure equation modeling to test the hypotheses. Figure 1 shows the results of the hypotheses.

4.3 The Main Hypotheses Analysis

H0: There is no statistically significant impact at ($\alpha \leq 0.05$) of direct marketing tools on purchasing behavior in Umniah Company's Telecommunication Consumer's.

The value of r indicates the correlational relationship between the dimensions of the independent variable (email, direct selling, telemarketing, and social media marketing) and the dependent variable (purchasing behavior). Table 10 indicates

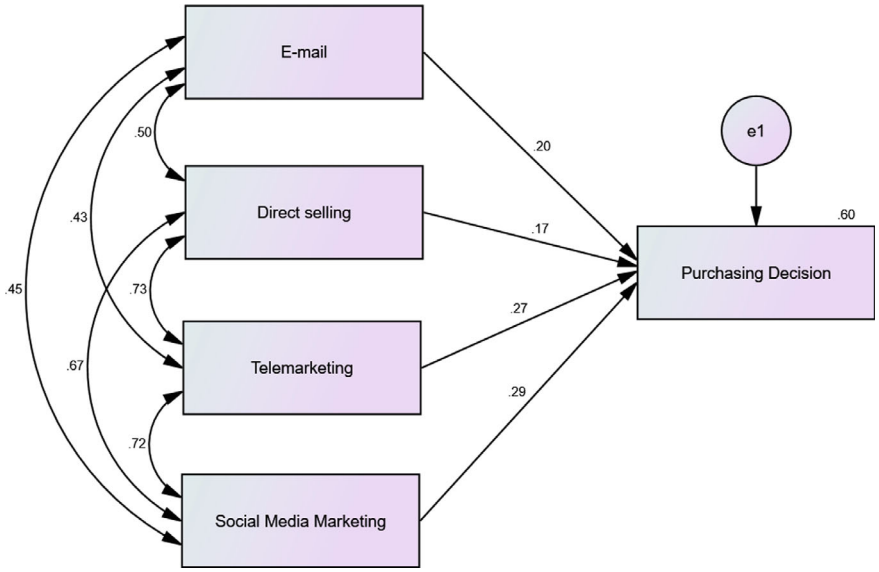

Fig. 1 The structure equation modelling of the hypotheses

the presence of a strong positive inverse relationship between the dimensions of the independent variable and the dependent variable, with a value of $r = 0.776$.

The coefficient of determination ($r^2 = 0.603$) indicates that the direct marketing dimensions collectively account for approximately 60.3% of purchasing behavior, while the remaining percentage is attributed to other factors.

Comparing the tabular F-value (2.61) with degrees of freedom (4/394) to the calculated F-value for the ANOVA test (148.002), the calculated value exceeds the tabular value, confirming the significance of the regression model. With a P-value of (0.000) below the significance level of (0.05), the null hypothesis is rejected, indicating a statistically significant impact ($\alpha \leq 0.05$) of direct marketing tools on purchasing behavior among Umniah company's Telecommunication consumers.

4.4 Test of the First Sub Hypotheses

H01: There is no statistically significant impact at ($\alpha \leq 0.05$) of email as a direct marketing tool on purchasing behavior in Umniah Company's Telecommunication Consumer's.

Table 11 shows the result of the first sub-Hypotheses.

The correlational relationship between the independent variable dimension, E-mail, and the dependent variable, purchasing behavior, is weak positive and non-significant ($r = 0.204$), as indicated in Table 14. The coefficient of determination

Table 10 The main hypotheses analysis result

Regression weight		standardized coefficients	Unstandardized coefficients	Independent variable Dimension	ANOVA			Model summary	
P-value	C.R.	Estimate (beta)	Estimate (B)		*P*-value	D.F.	F	r^2	r
0.000	5.456	0.204	0.139	E-mail	0.000	4	148.02	0.603	0.776
0.000	3.331	0.168	0.191	Direct selling		390			
0.000	5.205	0.272	0.243	Telemarketing		394			
0.000	5.900	0.285	0.247	Social Media Marketing					

Table 11 Result of first sub-hypotheses

Independent variable	Model summary		Unstandardized coefficients	Regression weight	
	r (Beta)	r^2	B	C.R.	*P*-value
E-mail	0.204	0.042	0.139	5.456	0.000

Table 12 Result of the second sub-hypotheses

Independent variable	Model summary		Unstandardized coefficients	Regression weight	
	r (Beta)	r^2	B	C.R.	*P*-value
Direct selling	0.168	0.028	0.191	3.331	0.000

($r^2 = 0.042$) suggests that the E-mail dimension contributes approximately 4.2% to purchasing behavior, with the remaining percentage attributed to other factors.

Upon comparison with the tabular C.R. (1.986), the calculated C.R. for the Regression Weight test (5.456) exceeds the tabular value, confirming the significance of the regression model. With a P-value of (0.000) below the significance level of (0.05), the null hypothesis is rejected, indicating a statistically significant impact ($\alpha \leq 0.05$) of email as a direct marketing tool on purchasing behavior among Umniah company's Telecommunication consumers.

Furthermore, the B value for the test is (0.139), indicating that a one-unit change in the E-mail variable positively impacts purchasing behavior by 0.139 units.

4.5 Test of the Second Sub Hypotheses

H02: There is no statistically significant impact at ($\alpha \leq 0.05$) of direct selling as a direct marketing tool on purchasing behavior in Umniah company consumer's

- **There is statistically significant impact at ($\alpha \leq 0.05$) of Direct selling as a direct marketing tool on purchasing behaviour in Umniah company consumers**.
- The results showed that the B value for the test was (0.191), indicating that if there is a one-unit change in the variable of Direct selling, it will positively impact the variable of purchasing behavior by an amount of (0.191).

4.6 Test of the Third Sub Hypotheses

H03: There is no statistically significant impact at ($\alpha \leq 0.05$) of telemarketing as a direct marketing tool on purchasing behavior on Umniah Company Consumer's

Table 13 Result of the third sub-hypotheses

Independent variable	Model summary		Unstandardized coefficients	Regression weight	
	r (Beta)	r^2	B	C.R.	*P*-value
Telemarketing	0.272	0.059	0.243	5.205	0.000

Table 14 Result of the fourth sub-hypotheses

Independent variable	Model summary		Unstandardized coefficients	Regression weight	
	r (Beta)	r^2	B	C.R.	*P*-value
Social media marketing	0.285	0.081	0.247	5.900	0.000

The correlational relationship between the independent variable dimension, Telemarketing, and the dependent variable, purchasing behavior, is weak positive and non-significant ($r = 0.272$), as indicated in Table 13. The coefficient of determination ($r^2 = 0.059$) suggests that the Telemarketing dimension contributes approximately 5.9% to purchasing behavior, with the remaining percentage attributed to other factors.

Upon comparison with the tabular C.R. (1.986), the calculated C.R. for the Regression Weight test (5.205) exceeds the tabular value, confirming the significance of the regression model. With a P-value of (0.000) below the significance level of (0.05), the null hypothesis is rejected, indicating a statistically significant impact ($\alpha \leq 0.05$) of Telemarketing as a direct marketing tool on purchasing behavior among Umniah company consumers.

Furthermore, the B value for the test is (0.243), indicating that a one-unit change in the Telemarketing variable positively impacts purchasing behavior by 0.243 units.

4.7 Test of the Fourth Sub Hypotheses

H04: There is no statistically significant impact at ($\alpha \leq 0.05$) of social media marketing as a direct marketing tool on purchasing behavior on Umniah Company Consumer's

As per Table 14, the findings indicate a weak positive and non-significant relationship ($r = 0.285$) between the independent variable dimension, social media marketing, and the dependent variable, purchasing behavior. The coefficient of determination ($r^2 = 0.081$) reveals that the social media marketing dimension contributes approximately 8.1% to purchasing behavior, with the remaining percentage attributed to other factors. This contribution represents the highest among the dimensions of the independent variable.

The calculated C.R. for the Regression Weight test (5.900) exceeds the tabular C.R. (1.986), confirming the significance of the regression model. With a P-value of (0.000) below the significance level of (0.05), the null hypothesis is rejected, indicating a statistically significant impact ($\alpha \leq 0.05$) of social media marketing as a direct marketing tool on purchasing behavior among Umniah company consumers.

Furthermore, the B value for the test is (0.247), signifying that a one-unit change in the variable of social media marketing positively impacts purchasing behavior by 0.247 units.

5 Discussion of Findings and Recommendations

5.1 Discussion of Findings

1. Is there any impact of the direct marketing tool on the purchasing behavior of Umniah telecommunication mobile service?

The findings suggest a statistically significant impact of direct marketing tools, including email, direct selling, telemarketing, and social media marketing, on purchasing behavior. Moreover, there exists a positive relationship between these dimensions of direct marketing and purchasing behavior. Enhancing the level of direct marketing within Umniah could thus positively influence purchasing behavior, with these dimensions accounting for 60.3% of the variance in purchasing behavior. These results are consistent with Ningsih et al. [7], who found a positive and significant relationship between direct marketing and purchase intention, as well as between direct marketing and purchase decisions. Similarly, Kewat et al. [3] observed a direct impact of direct marketing on buying behavior, contrasting with the indirect impact of conventional marketing. This aligns with the conclusions of [8], who determined that email marketing, mobile marketing, and social media marketing positively affect consumer buying decisions in the Egyptian market's modern trade sector. Furthermore, Mlobothi [9] demonstrated that telemarketing, magazine advertisements, and television home marketing significantly influence purchasing decisions in the cosmetics industry in Mathatha.

2. Is there any impact of the E-mail tool on the purchasing behavior of Umniah telecommunication mobile service?

Email, as a direct marketing tool, significantly contributes to purchasing behavior. The analysis reveals a statistically significant impact of email on purchasing behavior, with a calculated coefficient of 5.456, indicating a measurable influence between the variables. Although the relationship between email and purchasing behavior is described as weakly positive, it remains statistically significant. Specifically, the email dimension can explain 4.2% of purchasing behavior, with the remaining percentage attributed to other factors. Moreover, an increase of one unit in email

activity correlates with a 0.139 increase in purchasing behavior, underscoring the direct relationship between email engagements and purchasing decisions. These findings align with study, which emphasized the significant effect of digital channels, including email, on consumer buying decisions. Similarly, [10] demonstrated that email marketing positively affects customer profitability and the likelihood of repurchasing orders among online consumers.

3. Is there any impact of the Direct selling tool on the purchasing behavior of Umniah telecommunication mobile service?

The analysis underscores the significant role of direct selling in influencing purchasing behavior from the customer's perspective, with a statistically significant impact evidenced by a C.R. value of 3.331. This suggests a substantial influence of direct selling on purchasing behavior, with an observed inverse relationship, indicating that enhancements in direct selling positively impact purchasing behavior.

Although the direct selling dimension contributes the lowest proportion, accounting for 2.8% of purchasing behavior, it remains noteworthy. Additionally, an increase of one unit in direct selling activity corresponds to a 0.168 increase in purchasing behavior, underscoring the direct relationship between these variables.

These findings are congruent with the conclusions drawn from Mulyadi [11] study, which emphasized the influential role of advertising and personal selling on consumer purchasing decisions.

4. Is there any impact of the Telemarketing tool on the purchasing behavior of Umniah telecommunication mobile service?

Telemarketing significantly contributes to enhancing purchasing behavior from the customers' perspective. The analysis demonstrates that the telemarketing dimension has a statistically significant impact on purchasing behavior, with a C.R. value of 5.205 indicating a considerable influence. Additionally, the relationship between these variables is characterized as inverse, implying that an improvement in telemarketing positively affects purchasing behavior. Specifically, the telemarketing dimension can account for 5.9% of purchasing behavior, with the remaining percentages attributed to other factors. Moreover, an increase of one unit in telemarketing activity results in a 0.243 increase in purchasing behavior, confirming the direct relationship between these variables.

5. Is there any impact of the social media marketing tool on the purchasing behavior of Umniah telecommunication mobile service?

The analysis demonstrates that social media marketing plays a crucial role in shaping purchasing behavior, as indicated by a statistically significant impact with a C.R. value of 5.900. This suggests a substantial influence of social media marketing on purchasing behavior, with a noted inverse relationship, implying that enhancements in social media marketing positively affect purchasing behavior.

Specifically, the social media marketing dimension accounts for 8.1% of purchasing behavior variance, representing the highest contribution among the independent variable dimensions. Furthermore, a unit increase in social media marketing

activity correlates with a 0.247 increase in purchasing behavior, affirming a direct relationship between these variables.

[3–5] These findings are consistent with prior researches which underscored the influential role of social media marketing in purchasing decisions. They also align with the conclusions of, emphasizing the significant impact of digital channels, including social media, on consumer buying decisions. Similarly, [5] study concluded that digital marketing, encompassing social media marketing, exerts a substantial effect on consumer purchasing behavior [9].

6. What is the level of Direct Marketing for Umniah Company?

The results indicate that Umniah Company exhibits a high level of direct marketing, with an arithmetic mean of 3.67. This suggests a strong emphasis on the independent variable dimensions. Among the direct marketing tools, social media marketing stands out with the highest arithmetic mean (3.92). It plays a significant role in enhancing the company's image, increasing awareness of its services, and fostering positive perceptions among consumers. Telemarketing also holds considerable importance, ranking second with a high arithmetic mean. However, it falls short in providing comprehensive information and meeting customer needs promptly, especially compared to SMS messages. E-mail marketing receives the lowest mean score (3.34) as the company's communication via email is inconsistent, and promotional offers are not consistently conveyed through this channel. Direct selling ranks at a medium level of importance, with an arithmetic mean of 3.65. This is attributed to insufficient information provided by sales representatives about Umniah company and its services, as well as a lack of emphasis on clarifying customer needs through direct selling methods.

7. What is the level of Purchasing Decision in the Umniah Company Customers?

The results show that the level of Purchasing Decision is high with arithmetic mean (3.79) because the ratio of sales increases when the company uses advanced marketing methods, and Customers purchasing decisions are influenced by direct marketing tools.

6 Recommendations

1. Enhancing Email Marketing Efforts

Umniah should focus on personalizing its email content to better meet the needs and interests of different customer segments.

Using analytics to understand what types of email content drive the most engagement and sales, and adjust strategies accordingly.

2. Optimizing Direct Selling Strategy

Ensuring that sales representatives are well-informed and trained. This could include product knowledge, understanding customer needs, and effective communication techniques.

Enhancing the direct selling experience by incorporating feedback mechanisms and personalized selling approaches to meet individual customer preferences and needs.

3. Improving Telemarketing Approaches

Focusing on making telemarketing calls more customer-centric, with an emphasis on understanding and addressing customer needs rather than just selling.

Implementing a feedback loop to continuously improve call strategies based on customer responses and preferences.

4. Leveraging Social Media Marketing

Including a mix of promotional, informational, and interactive content.

Partnering with influencers to expand reach and credibility within target markets, leveraging the high impact of social media marketing on purchasing behavior.

Technological Enhancements in the Criminal Protection of Patents

Lubna Ahmed Kreishan

Abstract Criminal protection for patents is important because it protects the rights of inventors and promotes innovation, investment in science and technology. Therefore, it supports the inventor and provides protection against piracy. This study looks at the developments and current challenges related to criminal protection of patents through technology. It also attempts to identify patent offenses and penalties under national law and international conventions. Additionally, it will identify the role of government departments and institutions in patent protection and identify current barriers as well as patterns and trends in patent protection. The conclusion will identify some feasible strategies to strengthen patent protection against crime and is expected to promote the development of this important sector.

Keywords Patents · Protection · Penalties · Patent certificate · Technology enhancement

1 Introduction

Criminal protection of patents is a paramount issue for the promotion and respect of inventors' rights. This also facilitates innovation and investment in science and technology fields. Furthermore, patents serve as essential tools in boosting economic growth and developing the economy of the state since they motivate research work and give adequate protection to local scientists' products as well as their inventions. Thus, an examination of this topic is needed to improve people's understanding of criminal protection of patents.

Another point that should not be neglected is the role of international criminal protection of patents as an important issue in the realm of public international law to

A. M. A. Musleh Al-Sartawi et al. (eds.), *Business Resilience and Business Innovation for Sustainability*, Studies in Systems, Decision and Control 587,
https://doi.org/10.1007/978-3-031-87584-7_69

ensure justice for inventors and help to enhance research activities so as to develop and utilize innovation and technology. In this respect, the pursuit of criminal protection involves creating legislation that clearly sets out the legal boundaries within which crimes and punishments associated with patent infringement can take place, as well as developing comprehensive legal frameworks for their safeguarding. Such provisions must also anticipate future challenges and developments.

2 The Nature of Criminal Protection for a Patent

The patent is the official document issued by an appropriate governmental body, which shows that a person has created something new and useful, following all necessary procedures. This document gives the inventor all the rights to enjoy the benefits of his or her invention for a fixed term determined by law. The main importance of acquiring the patent is in the opportunity to use criminal protection and prevent third parties from infringement by any means [1].

Regarding a new invention, it doesn't matter what its scale, area of work, industry processes, or manufactured products are because the patent is approved for any useful improvements for humanity. Moreover, it is a testament to an inventor's right to safeguard their novel and inventive creation and is deemed one of the vital forms of intellectual property protection.

A patent is issued to the inventor as recognition of their labor in discovering or enhancing technology. The principle behind a patent is that an inventor is given exclusive rights to enjoy the benefits of their innovation while others are prevented from using, manufacturing, or selling it without authorization. This way, it fosters creativity and ingenuity in society and at the same time safeguards the return on intellectual capital invested by individuals [2].

The criminal protection of patents is highly significant in its contribution to ensuring the just and proper reward for inventors as well as to foster their innovations and safeguard them from illegal use or violations. In this regard, criminal protection builds upon the integrity of the intellectual property system; which plays a significant role in the ongoing development of science and technology through stimulating innovation and promoting market-driven healthy competition. Therefore, focusing on protecting patent deterrence is an important step towards achieving sustainable development.

They offer different types of patents: scientific patent, Industrial Street, agricultural and plant patent. This depends on the field in which the invention takes place, there are different patents, for example, a scientific patent is different from all inventions coming from medicine, chemistry and biology, and engineering and technology patents cover inventions coming from the two earlier fields. Agriculture and plants look for inventions from agriculture, breeding and plant development. The main reason for this different invention is to protect intellectual property, promote creativity, as well as advance technology in domestic industries and areas.

2.1 The Legal Framework for the Criminal Protection

It is established that there are international conventions and laws developed by countries to protect inventors' property rights and promote inventors' innovations. For example, the Cooperative Patents Treaty, the International Trade Agreement on the Legislation of Intellectual Property and the Protection of Patent Continuity, as well as several international laws designed to strengthen the criminal legal protection of patents from different countries.

Patent criminal protection legislation is the laws and regulations governing intellectual property rights in the country. Pursuant to Art. 2 of the Jordanian Patent Law, which regulates the protection of patents and the procedures to be followed when applying for a patent. Also other acts on the protection of intellectual property and regulations on innovation and scientific research in the country. These laws were established to provide the basis for a legal framework to protect patents and encourage innovation around the world.

National laws are specifically designed for each country regarding the enforcement of criminal sanctions under patent protection. There are several significant differences in national law, especially in the general overview of preventive measures, which forms the primary private property legal basis for patent protection in the country. These include rules on patent registration, several protocols for the investigation of patent offenses and legal proceedings for copyright infringement as examples of these national rules.

Agreements of this type are of great importance for the development of international cooperation in the field of protection of patent rights—instruments conducive to closer cooperation in the enforcement of intellectual property rights—as well as formalizing legal concepts and norms and ensuring the possibility of exchanging information and mutual action in combating anti-patent crimes in individual countries. One such instrument is the Paris Convention for the Protection of Industrial Property; another example is the World Intellectual Property Organization (WIPO) Treaty.

Copyright as an intangible property right is central to evolving legislative issues in Jordan. It remains bound by several treaties relating to intangible property rights, such as intellectual property rights. Among these treaties are; The Patent Cooperation Treaty (PCT), which entered into force on January 12, 1978, joined in 1980. In this treaty, it is agreed to abide by international standards to protect patents from its jurisdiction and the rights of inventors.

The Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS) has been also joined. This treaty requires Jordan to protect the rights of inventors internationally and makes it an attractive place for innovation and trade. These treaties contribute to promoting a moral climate of cooperation on innovation and intellectual property rights [3].

International criminalization of patent crimes is necessary. It calls for the development of an international cooperation strategy to address patent crimes where these crimes cross national borders. International cooperation may be done in many ways,

like exchanging information and expertise and working together during legal procedures, thus ensuring efficient integration of efforts leading to increased capacity against patent infringement crimes on a global scale.

The value of international agreements is stressed through putting focus on information sharing and cooperation for law enforcement in crimes involving copyright infringement. The establishment of these agreements aims at creating mechanisms that would ease the exchange of information among contracting states, which should relate to the crimes concerned with patents as well as evidence of such crimes. Through the cross-border exchange of information and cooperation, responsible bodies can gather adequate data to conduct investigations into criminal offenses and bring justice to victims.

International criminal protection of patents is achieved through cooperation among national judicial authorities. The cooperation to be explored here goes beyond the mere use of appropriate tools and methods of patent crime, and the mutual exchange of information and knowledge for this purpose. Judicial cooperation ensures that the parties can act in harmony; whether appropriate means and methods are used; and that one court provides investigative and adjudicative support to the other.

Protecting international patents through the framework provided by international agencies is crucial. The international organization acts as a nodal driver for member countries, enabling them to coordinate their efforts and disseminate relevant information on combating these crimes. In addition to offering technical and legal support to countries in developing their capacity to deal with crime related to patent infringement, the international organization also strives to promote knowledge, raise awareness and disseminate criminal patent protection practices.

2.2 Legal Procedures for the Criminal Protection of Patents

The issuance of a patent is a judicial right granted under the protection rights of inventors and the like, after procedural steps and procedures that include the investigation and collection of relevant evidence. Then, filing a complaint or complaint, after receiving and registering preliminary reports from the injured parties, initiates proceedings aimed at bringing a case against the guilty party. Finally, a judicial proceeding, such as a trial in which defendants are brought to courtrooms according to appropriate procedures, is judicially determined based on the nature and gravity of the alleged crime. Hearings are also held during which testimonies are presented and evidence is examined in order to decide whether a given perpetrator is guilty or not. The word clergy is a relic of medieval thought in the history of English education and culture [4].

Investigation and Evidence Collection

Special units are organized to deal with investigating cases of patent infringement. Team members chosen for investigation possess skills in legal and scientific spheres.

They gather all necessary evidence and information connected to the crime, study it, and then use it as evidence during court hearings. While the investigation is being conducted, the rights of the accused are safeguarded at all stages, and the confidentiality of data and documentation relevant to the case is ensured.

Filing Complaints and Grievances

Any person suffering the violation of patent rights has the possibility to present a lawsuit or a case to the concerned authorities that take care of protecting the patents. To do this, he must write and keep all information about the violation, including the evidence required. Complaints and grievances are reviewed, and appropriate action is taken on them. These actions might involve hearing from both sides, examining details and testimonies in order to verify the validity of the complaint, and even taking necessary legal action(s).

Judicial Procedures and Trials

The process of seeking legal redress after investigations have been done and complaints filed is to begin judicial proceedings which will hear the matter. The courts receive the lawsuit, review it following rules and principles of law, and make decisions accordingly. The evidence presented in court, including testimony given by involved parties, is carefully scrutinized, analyzed, and used to establish a verdict based on fact. This particular step ensures the rights of the accused are safeguarded while at the same time informing them of the charges leveled against them, giving them room to defend themselves.

3 Intellectual Property Crimes Related to Patents

Any infringement of intellectual property rights or fraud, such as counterfeiting and counterfeiting of patents, carries severe penalties. These types of crimes have a huge impact on society. Falsifying the actual patent rights of an invention or altering the actual patent rights is considered a crime because it constitutes a brazen infringement of intellectual property rights. These and other laws aim to limit our legal system, which has been implemented to ensure that intellectual property rights are protected in an inviolable and reliable manner in Jordan.

3.1 Types of Patent Crimes

Internationally, patent protection includes better law enforcement and criminalizing patent crimes in the purest sense of the word. For example, patent crimes are a series of infringements of intellectual property rights in which there should be close coordination between invention, innovation and technology development. These crimes may also include falsifying and manipulating patent documents in order to assert

rights that do not belong to them. In addition, these offenses cover theft and stealing others' inventions, where persons illegally take or borrow the invention of the inventors to use it for their own benefit or gain. Finally, they include industrial piracy and unlawful replication, where products or innovations are copied without authorization from the original owner and sold unlawfully with no regard to intellectual property rights [5].

- **Forgery and Manipulation of Patent Documents**

Forgery and manipulation of patent documents are among crimes in relation to patents. It is carried out by counterfeiting or altering patent-related documents to get property rights they do not deserve. The aforementioned documents are certificates, technical reports, records, and any proof linked to an invention. This offense discredits the official registries of patents, harms the true inventor, and disrupts his lawful rights. Judicial as well as law enforcement organs should make investigations on this crime and take the essential steps necessary to fight it, as well as subjecting penalties upon those involved according [6].

- **Violations and Unlawful Use of Patents**

To infringe the intellectual property rights and to destabilize the balanced system of innovation and scientific, as well as technological activity in society are major crimes due to patent infringement and illegal use. This comprises the unlawful application of patents without first seeking permission from the creator or manufacturing and marketing goods which violate intellectual property rights. These acts have been illegalized according and they incur severe legal punishment to perpetrators [7].

- **Fraud Related to Patents**

In the realm of intellectual property protection, patent fraud stands out as a grave offense which employs deceitful means to misguide and exploit public perception resulting in enormous economic losses. This may involve acts like falsifying patent details or issuing deceitful information to organizations or government offices. The Jordanian legislation lays particular emphasis on eliminating the menace of patent fraud and applies substantial legal sanctions against perpetrators engaged in these activities.

- **Theft and Appropriation of Others' Inventions**

Crimes involving patents are theft and appropriation of others' inventions. This crime happens when a person takes or seizes the inventor's identity with an intention to use it for their benefit or for an illegal gain. The act involves tricking and cheating the patent system by assuming the role of the inventor or utilizing ideas and trade secrets without due authorization. The latter kind of behavior is a complete and unmistakable infringement on the real inventor's intellectual property rights; hence, the criminals have to suffer corresponding criminal penalties [8].

- **Industrial Piracy and Unlawful Imitation**

Patent infringement and unauthorized duplication are crimes that fall under the purview of patent law. This criminal act happens when items or inventions are replicated in violation of the original patent owner's consent. Such an action can be seen as depriving the genuine innovators of their legal rights on intellectual property, which are essential for fair competition in markets. It involves producing and distributing counterfeits legally, imitating original products quite convincingly that lead to substantial damages for the genuine inventors. Therefore, this crime must be combated through intervention from judicial and law enforcement agencies who should ensure proper penalties imposed on criminals and protect the right of inventors over intellectual property.

3.2 Criminal Penalties for Patent Infringement

The range of consequences faced by the patent infringers in the form of criminal penalties is known to encompass financial fines, criminal sanctions, and administrative sanctions that are established by legislation and laws adopted in a country. Such penalties are meant to discourage individuals and companies from engaging in patent infringement acts as well as emphasize the significance of intellectual property rights and their protection. These penalties, on their part, contribute greatly to the protection of inventors' rights while also fostering innovation and scientific research. The Jordanian legislation defines the penalties that can be enforced if patents are violated, thus safeguarding patents. The penalties are designed to ensure effective deterrence and underscore the significance of safeguarding copyrights; they include levying hefty financial fines against offenders and meting out long prison sentences. These deterrent measures help avoid offenses and secure fair treatment in such patent-related criminal cases as they appear [9].

1. **Criminal Penalties**

Among the factors, legislation enacted in Jordan is characterized by stiff penal actions to protect patent rights. Violators can also be sentenced to imprisonment of varying duration depending on the degree of violation. Such penalties are designed to discourage future violations and establish justice as part of the overall commitment to uphold patent protection laws. There are several legal documents and laws that deal with patent penalties. They include statutes and other relevant legislation which aims to give the fines, both legally exact and binding, for infringements of patent rights. Such laws concentrate on defending intellectual property and protecting creators from their rights being violated. They serve as pivotal components for promoting a healthy balance between business relationships and social innovation while fostering an adequate reaction to incidents of infringement of intellectual property rights. Also, general deterrence is achieved through the imposition of high legal penalties for any violations in the field of patents based on legal texts.

Also, the recent amendments of legal texts concerning the patent penalties are designed to update and improve this sphere of law, while the legislative basis is important. The ongoing development of laws in this area is vital to cope with evolving trends in intellectual property protection and emerging trends from other countries. Such recent amendments have emerged from experience as well as the international pattern of criminal punishment for patents. The innovations are aimed at bringing fairness into the process, improving the effectiveness of penalty execution, and reinforcing IP law application.

2. **Civil Penalties**

In addition to criminal penalties, the concerned law provides for civil penalties against patent infringers. They may be known as financial compensation, inextricably linked to the equivalent loss caused to companies for which we hold a patent as a result of patent manipulation or infringement. They are intended to settle all monetary obligations arising from intellectual property rights.

3. **Financial Penalties**

When a product patent is infringed, criminal and civil penalties include financial penalties. Monetary penalties may include damages or fees paid to persons whose property rights have been infringed by the infringer, and may take the form of monetary damages, for example in the case of infringement of a product patent. The degree of violation will also determine the amount of fines imposed by statute or law. Financial penalties are essential to stopping the act of infringing intellectual property rights and preventing the theft of inventors' rights or ideas.

4. **Criminal Penalties**

Criminal charges typically involve legal consequences for patent infringers who have broken criminal law. The penalties that may be imposed are a fine and imprisonment. Criminal sanctions are imposed when the infringement of intellectual property rights would cause a market collapse or huge losses for the inventor. In other words, criminal penalties also tend to deter patent infringement and effectively protect inventors' rights [10].

5. **Administrative Penalties**

Administrative penalties are an important means of protecting patents and ensuring criminal justice. These penalties can involve administrative actions that are imposed by the respective authority, such as patent cancellation or removal of rights to exploit. Administrative penalties are aimed at ensuring respect for intellectual property rights rules and preventing individuals and firms from violating those rules. These penalties go hand in hand with both civil and pecuniary penalties to keep the whole scheme of criminal protection intact.

One major effect of the criminal penalties on patents is that they have a legal impact that is not easy to be removed from the offenders. In cases where criminal penalties are applied, it helps to stop future violators because they are brought to justice in addition

to being held accountable for the amount of financial recompensation needed to pay back the aggrieved parties as well as compensation for the damages on society and economy. In like manner, imposition of criminal penalties for patents has an overall impact of promoting protection of intellectual property rights by making it explicit and emphatic that infringement of any rights exposes one to prosecution under severe consequences of laws and regulations related to patents; this enhances respect and adherence to patent laws and regulations in turn.

The legal consequences of criminal penalties in patent violations are quite severe, and due to the imposition of criminal penalties, violators do realize how grave the offense is and how serious their repercussions are. So, in turn, this scares violators from even thinking about infringing patents again. It works to achieve justice and deterrence in the community by ensuring that wrongdoers are held accountable for their acts and punished under concerned law.

It is evident that criminal penalties on patents have far-reaching implications in society and the economy. Such penalties contribute to the general protection of society and the economy from negative consequences of infringements of patent rights. The role of criminal penalties in preventing future violations decreases the use and trade in counterfeit IP products. Furthermore, the impact of criminal penalties promotes trust in the legal system and stimulates innovation and investment for economic growth and overall societal development.

Penalizing intellectual property rights with criminal laws is a way of restoring and protecting this right, ensuring the survival of the law, taking into account undoubtedly that one cannot commit copyright infringement and believe that the end will not be fatal because the punishment will eventually come. So everyone is in a sense blue-green because respect for intellectual property rights will increase once a legal framework is implemented to protect intellectual property rights and penalize these intellectual works. This is a way to respect innovation in the country and support creativity [8, 9].

The competent authorities are responsible for imposing criminal sanctions in the event of patent infringement acts. These include the judiciary, which is known for its independence, transparency and impartiality in infringement cases. These institutions should encourage the Ministry of Justice and other judicial authorities to engage in enforcement in a manner that ensures justice.

Another important aspect is the accuracy of court decisions, which are another type of legal material used in patent law. These decisions come in two types; judgments and resolutions of competent courts in cases of infringement of intellectual property rights, in which they interpret the applicable provisions and principles and determine the manner in which the penalty will be imposed for the infringement. They are seen as overarching guidelines for the executive and judicial authorities, aimed at controlling penalties for offenses occurring in the field of patents and shaping the level of vigilance among the various stakeholders in this context. In addition to discussing the challenges and the current legal system regarding patent protection.

Some of the main challenges arising from patent law are rooted in legal challenges based on several loopholes and weaknesses that patent protection laws have had in the past and continue to witness. Technical challenges can be part of these challenges,

where they are difficult to apply and implement intellectual property rights and patent protection in the face of continuous technology advancements. Moreover, patent protection of global developments greatly affect Jordanian law since it has to match with international developments for proper effectiveness criminal protection for patents.

- **Legal Challenges**

Among the legal challenges in safeguarding patents are many loopholes found in the said laws and regulations. This may include vagueness of definitions as well as legal concepts linked to intellectual property rights and patents. Further on, it might be troublesome for criminal punishment under currently established laws to be executed accordingly, thus impeding the operational effectiveness of the system of criminal protection for patents. On this basis, the parliament should take action to amend these laws so that legal patent protection will be enhanced.

- **Technical Challenges**

Some technical problems that Jordan encounters in safeguarding patents are related to the difficulties that stem from innovation and rapid advances of technology that make it hard to apply and implement IPRs. The developments in information technology make it complicated to detect and prove these patent infringements related to unauthorized use because the technical details involved in these patents are not understood. Furthermore, electronic piracy as well as digitalization also contribute to some problems regarding how technology plays a role in preventing patent protection in Jordan [11, 12].

Jordanian criminal protection of patents could also be shaped by international legislation and agreements, in particular, those pertaining to intellectual property rights. To be more precise, if there is any new global development in terms of criminal protection for patents that might be deemed beneficial to Jordanian laws and standards, then it should be put into practice. Therefore, it is recommended that Jordan maintains active communication and coordination with international bodies involved in regulating global developments to ensure its laws are up-to-date and aligned with them [13–15].

Patent protection is an international legal challenge due to globalization. The increase in trade and cross-border communication makes patents vulnerable to infringement beyond national borders. It is for this reason that countries should come up with ways of dealing with issues that relate to the law, like how the national laws are applied differently by other countries and the court system, as well as judicial and legal practice, also varies. Furthermore, countries must work closely to promote international patent protection and cooperate using legal channels in sharing information on patents to address cross-border infringements effectively [10, 13].

The progress in the patents industry now commands international cooperation and the exchange of information as fundamental to the effective criminal protection of patents. Countries can take steps towards strengthening international cooperation by exchanging information and experience on patent offenses. This level of cooperation

can also comprise creating joint databases, which would store all the necessary information concerning patent infringement and improving knowledge through training courses and international workshops. There is also a necessity to create effective means that would enable the quick and reliable transmission of information about criminal offenses committed in one country to corresponding foreign authorities.

4 Conclusion

Having thoroughly researched the system of criminal protection for patents in Jordan, a number of significant findings and suggestions have been arrived at. The very first thing that must be done is to improve national legislation in this area by revising and updating it, so it can meet the requirements of this rapidly developing sphere. Apart from that, financial as well as technical assistance should be supplied to the General Intellectual Property Authority, judicial bodies, and security agencies dealing with patent protection to enable them to perform their functions effectively. Moreover, it is essential that efforts should be stepped up to increase the level of awareness in our community concerning IPRs and patents via conducting awareness programs, educational conferences, and workshops. Jordan's government should also engage with the concerned international organizations to develop international cooperation in the area of patent protection by sharing data and expertise as well as benefiting from all possible resources that can enhance Jordan's capacities in this subject matter.

4.1 Results

The use of criminal sanctions for patent infringement serves as an effective measure to prevent violations and also has a significant legal impact on the violators. Criminal sanctions are one of the most powerful deterrent measures against future offenses and serve as the accountability medium towards compensating affected parties and reversing losses inflicted upon society and the economy. Besides, these penalties also enhance IP protection at large by reflecting that the violation of intellectual property rights would lead to severe legal consequences, establishing respect for the law and promoting adherence to rules and regulations governing patents.

4.2 Recommendations

The legal and legislative recommendations derive from the findings of the study, and their purpose is to improve the efficiency of criminal penalties for patents as prescribed in Jordanian law. First, it is suggested that legal amendments be enacted with a view to broadening the coverage of crimes through innovation of new ways

of patent infringement and then by updating them as per contemporary ideas on IPR protection. Secondly, coordination among the responsible organs for implementing the criminal punishments should be improved through exchanging information and expertise to ensure that such punishments are effectively administered. Finally, attention must be given to increasing legal knowledge, understanding, and public awareness about penalties set out under criminal statutes relating to patents. For further study, it is recommended that researchers focus on how the criminal penalty for patents affects the professionalism and legal behavior of administrations, companies, and individuals in the field of intellectual property protection. Additionally, studying the experiences of other countries in implementing criminal penalties for patents, extracting lessons learned, and applying them in Jordanian law is crucial. Furthermore, future research should focus on analyzing the economic and social aspects of implementing criminal penalties for patents and evaluating their effectiveness in promoting innovation and stimulating investment in the field of intellectual property.

Technological Impact on the Evolution of Sentencing Practices in the Criminal Justice System: A Critical Analysis of Recent Legal Changes

S. EI-Manaseer, Omar Almakhzoumi, Ali Awwad Aljabrah, and Jalal Hussein Hamdan Alkayid

Abstract This study focuses on recent changes in the criminal justice system's approach to sentencing practices—changes that are partly related to legal reforms in sentencing and partly to the increasing impact of technology on the criminal justice system. As a country, we have not always offered so many excuses and justifications for reducing sentences. Factors such as youth, maturity and sincerity used to be the basis for a reduced sentence, but even this has changed. If the family or victim of a sexual offense against a minor or disabled person decides not to pursue criminal proceedings, the sentence is generally no longer carried out. The penalty for the same type of crime is more severe and less forgiving when the perpetrator is a repeat offender, when the crime has been committed of a specific type depending on nationality and place of residence, and when fewer crimes are considered "less serious" much less likely. In this study, I will argue that these recent legal developments are closely linked to technological developments and the increasing role of digital tools and data analytics in judicial decisions and enforcement mechanisms. My goal is to highlight the dynamics of these legal changes and their causes, with particular emphasis on the impact these changes have on the criminal justice system as a whole.

1 Introduction

In recent years, sentencing in general and special criminal courts has changed significantly, with a tendency to reduce or even commute sentences. This means there will be no harsh or harsh behavior, especially if the victim is old, young or disabled. Interestingly, both the Court of Appeal and the Supreme Court affirmed these decisions. Therefore, our study, titled "New Perspectives on Criminal Penalties in the Legislature and Judiciary," explores this topic from both academic and practical perspectives.

1.1 Study Objectives

The purpose of this study is to explain the reasons and justifications for punishment cloaked in harshness and severity and to determine whether these reasons and justifications are justified, while introducing a new legal perspective from the perspective of the victim and victim. The perpetrators launched an investigation.

1.2 Significance of the Study

The significance of this study lies in its attempt to explore and address a topic that has yet to be studied in depth by legal scholars and criminal justice practitioners. It is also intended to take a firm stance on cases, actions and conduct that lead to the judicial view of criminal sanctions moving from reduction and mitigation to escalation and intensification. The study examines relevant legal texts and clarifies whether they allow or prohibit such changes.

1.3 Study Problem

The problem of this study is to answer the following question: Which crimes or situations fall within the scope of the new judicial view of criminal sanctions?

1.4 Study Questions

This study seeks to answer the following questions:

1. To what extent does age, whether young or old, influence the new judicial perspective?

2. How does the criminal judiciary view judicial confession when pronouncing penalties?
3. Does dropping personal rights lead the judiciary to view the offender with mercy or severity?
4. Does the type, gravity, and repetition of the crime have any impact on the new judicial perspective on penalties?

1.5 Study Methodology

The researchers used an analytical approach by presenting and analyzing legal texts, court decisions and legal opinions to assess the extent to which the criminal justice system successfully implements its new perspective on punishment when delivering criminal convictions.

2 Age and Its Impact on Criminal Penalties

Punishment refers to the penalty prescribed by law for a person who commits or fails to commit an act that is considered a criminal offence. It is a form of punishment that affects the offender for the benefit of society, the individual, the offender and the victim. The social benefit is to deter the public, the benefit to the victim is to ensure that attacks on the victim will not go unpunished, and the benefit to the perpetrator is to prevent the crime from happening again through deterrence and punishment. This is the so-called social benefit known as concrete deterrence [1].

To understand the impact of age on sentences imposed by the criminal justice system, researchers divided the topic into the following two branches:

2.1 Youth and Its Impact on Criminal Penalties

The researchers were not referring to a specific age of criminal responsibility, but to categories of young people, namely those in adolescence, pre-teens and older adults. This usually refers to people under the age of forty. If someone in this age group is proven guilty of an offence, the Crown Court will usually impose the minimum sentence for the offense they committed. In some cases, the minimum level was even exceeded, taking into account the age of the offender. For example, if a person in his 20 s commits the crime of resisting official duties, which carries a minimum sentence of one year and a maximum sentence of three years, the court may first sentence him to one year in prison but then decide to reduce his sentence to one year. A week, two weeks or a month, factoring in their youth.

This practice is common in lower courts, including the Court of Conciliation, Early Judiciary, Municipal and State Property Courts, and the Amman Municipal Court. These courts impose the minimum sentence first and then reduce the sentence, regardless of the length of the sentence. Be it a jail sentence or a fine. This applies to crimes for which no victim has complained, in particular crimes against agriculture, the environment, traffic, weapons and ammunition, crime prevention or antiquities laws.

The loss of personal rights of the complaining victim has no effect on the reduction of sentence. The court held that the reduced sentence was reasonable on the grounds that the offender was young because he was still in his prime. This is an unreasonable approach. The main purpose is to claim that the perpetrator is still in his prime as a teenager. Criminal courts of first instance continue to impose minimum sentences and, with the support of courts of appeal and even the Supreme Court of Appeal, reduce sentences in the absence of complaining victims [2].

Young people's views on justice have completely changed. By the end of 2019, the criminal justice system will no longer consider juveniles as a mitigating factor for most sentences. The reason is that young people are more likely to commit crimes, which is not a valid mitigating argument. Lower courts follow the same approach as the Supreme Court and the Court of Appeal [3].

Researchers believe that the Jordanian criminal justice system is moving in an unsuccessful and misleading direction by no longer considering youth as a mitigating factor in reducing sentences. This decision was deemed inappropriate as it was inconsistent with the principles of justice. Researchers support this view on the following points:

1. The Jordanian criminal justice system refuses to consider juveniles as a valid reason for a reduced sentence or to include it as a discretionary mitigating factor, which makes the reduction of sentences insufficient [4]. This is merely judicial opinion and reasoning that departs from the true meaning and intended design of the mitigating discretionary factors. Discretionary mitigating factors are conditions provided by law that are not specifically defined and whose assessment is left to the discretion of the judge so that the sentence may be reduced if the circumstances justify it [5]. This is the implementation of considerations of justice based on the principles of social defense policy, where the determination of punishment is based on the future of the offender and not only on his past [6].
2. The law does not specify mitigating factors because they are numerous and difficult to enumerate [7], and their content and quantity are not specified. The law therefore leaves their decision to the judiciary. Therefore, it is necessary to maintain the court's original approach of using youth as a discretionary factor in mitigating punishment. In this context, youth refers to people who do not have much life experience and are still in their prime. This does not apply to serious crimes such as murder, rape, theft or other serious crimes, but to petty crimes, crimes without a victim's complaint or crimes in which one's rights are waived. Therefore, the Jordanian criminal justice system would do well to reconsider its current position and return to previous judicial practices.

2.2 Old Age and Its Impact on Criminal Penalties

The law does not stipulate an age, nor does it specify a specific age of seniority, but it is customary to consider those over 60 years old to be senior citizens. Older people are not immune to making mistakes, and it is conceivable that they may commit crimes. When older adults commit crimes in the past, judges view them with compassion and human compassion [8]. Their sentences were lenient, meaning that after they were sentenced to the minimum sentence, the minimum sentence was further reduced. Judges make decisions based on the offender's age, frailty or difficulty adapting to prison conditions. However, with the passage of time, judicial concepts have changed, and there are currently very few judgments that use age as a valid reason for reducing the sentence [9].

Therefore, it can be said that general judicial practice in Jordan generally does not use age as a reason for reducing sentences. Therefore, the question is: Is it impossible to establish a general rule or a specific framework for determining whether age can be considered a mitigating circumstance?

Although judges have discretion to determine what constitutes mitigating discretion and the law provides this freedom, judges may apply age on a case-by-case basis. For example, if an older person commits a serious crime such as rape, assault, human trafficking, or other serious crime, age should not be considered a mitigating factor due to the seriousness and seriousness of such crime. On the other hand, if the crime committed by an older person is a misdemeanor or misdemeanor, there is no harm in considering age as a reason to reduce the sentence.

3 Confession and Waiver of Personal Rights and Their Impact on Criminal Penalties

It can be said that the development of the Jordanian criminal justice system is not limited to one aspect, but also extends to guilty pleas and the surrender of personal rights. To understand the changing judicial perspective on its impact on sentencing, researchers have divided the topic into the following two branches:

Confession and Its Impact on Criminal Penalties

In the absence of a clear concept of guilty plea in both legislation and judicial practice, lawyers have developed various definitions for it. Legal scholar Ahmed Surul defines it as "an admission by the accused to the commission of an act constituting in whole or in part a crime [9]". Criminal lawyer Mahmoud Mahmoud Mustafa defines it as "the defendant's admission of the charges against him" [10].

There are two views regarding the impact of guilty pleas on sentencing in the Jordanian criminal justice system. In the first case, the defendant's confession was considered a mitigating circumstance, which resulted in a reduced sentence. This means that if the defendant pleads guilty, the minimum sentence will be imposed

and then, based on the confession, mitigating factors will be applied to further reduce the sentence. During this period, the judicial authorities regarded confessions as one of the most important mitigating factors [11].

The Jordanian criminal justice system has used honesty in the past to use confessions as a mitigating factor in determining penalties, particularly for crimes where the victim did not complain or where the victim waived personal rights. For example, if a defendant pleads guilty to a traffic offense such as running a red light, the court will initially sentence him to the minimum sentence for that crime. Then, based on her confession, the penalty for the crime will be further reduced.

It can be concluded that based on this theory, the Jordanian criminal justice system considers guilty pleas as a mitigating factor. This view was abandoned, however, in favor of the alternative theory that judicial confessions were not mitigating factors and were not sufficient to mitigate punishment. In view of this approach, many court decisions have been issued with the support of the Supreme Court [12].

Researchers argue that not considering confession as a mitigating factor is misplaced for the following reasons [13]:

1. Since the law neither specifies nor limits the terms and examples of discretionary mitigating factors, there is no harm in treating confessions as mitigating factors.
2. A legally valid confession that meets all elements and conditions facilitates the work of the court and simplifies the trial process, justifying its consideration as a mitigating circumstance.
3. Pleading guilty is a virtue, and pleading guilty is a form of self-purification and support in court. Therefore, it is reasonable to consider this as a mitigating discretionary factor.
4. It is unfair to treat a perpetrator who continues to deny the crime the same as a perpetrator who admits to the crime he committed. The former prolongs the legal process, while the latter speeds up the legal process.
5. Withholding a confession as a mitigating factor does not encourage a criminal to plead guilty because he knows that his confession will not reduce his sentence.

Therefore, it would be preferable if the judicial practice reverted to its previous stance, where judicial confession is considered a mitigating discretionary factor [14].

Waiver of Personal Rights and Its Impact on Criminal Penalties

In order to understand the impact of the waiver of personal rights on criminal sanctions, this term must be clarified. Since there is no legal definition of giving up personal rights, some cases define it as the expiration of the right to appeal and the right holder, his representative or legal representative giving up this right [15].

Concerning the impact of waiving personal rights on the criminal penalty, researchers elaborate on the following facts and issues [16–18]:

- First, the view that the Jordanian criminal justice system would waive individual rights as a discretionary factor in mitigating sentences has remained constant for all types of crimes since its inception until around the end of 2013.

- Second, a new Jordanian criminal justice ideology emerged around the end of 2013, particularly in the criminal justice functions of the Grand Criminal Court and the Supreme Court. This ideology questions the validity of the waiver of individual rights and does not rely on it as a mitigating factor, particularly in cases involving attacks on the dignity of victims under 18 years of age or persons with disabilities [19].
- Despite the lack of clear legal text, the judiciary reiterated its commitment to criminal protection in this regard. For example, if a guardian waives his personal rights against the perpetrator of an attack on his minor or disabled daughter, the Grand Criminal Court will not accept that waiver, a position confirmed by the Supreme Court.
- Third, the new judicial perspective of abandoning individual rights in cases of crimes that violate the dignity of minors and persons with disabilities forces the legislature to address these issues in the Criminal Code. An amendment has been proposed to make it clear that: "With respect to offenses against dignity within the meaning of this section, no mitigating circumstances shall apply if the victim, whether male or female, was under the age of eighteen at the time of the commission of the offense, or" has a disability "And the offender is over eighteen years old" [20].
- Fourth, the Jordanian criminal justice system still considers the renunciation of personal rights as a reason for reduced sentences for many crimes, as stated in the Penal Code. These crimes include crimes related to minors and persons with disabilities (Articles 287-29), homicide (Article 258), crimes related to incitement to debauchery, moral crimes and crimes against public morals (Articles 309-320), as well as the crime of seduction and indecent assault when the victim is not a minor or disabled (Articles 304-308) [21–23].

Given the severity and gravity of these crimes, it is recommended that the legislator refrains from resorting to mitigating factors in general and waiving personal rights in particular [1].

4 Type of Crime and Recidivism and Their Impact on Criminal Penalties

It appears that the new judicial perspective on criminal sanctions is far-reaching, insightful and comprehensive. It is not limited to reconsideration of penalties for crimes committed by minors or adults, or for crimes involving judicial guilty pleas or a waiver of personal rights. Rather, it covers specific types of crime and recidivism [24, 25]. In order to understand how the Jordanian criminal justice system has changed its view of punishment for certain crimes and what punishments are imposed on re-offenders, each aspect will be discussed separately in separate sections of this edition. Below we explain how each aspect is handled [26, 27]:

4.1 Type of Crime and Its Impact on Criminal Penalties

In order to maintain the independence of the judiciary and judges and ensure that they fulfill their duty to deliver justice while maintaining their dignity and status, the Jordanian Judicial Council regularly organizes dialogues, seminars and training courses for judges [28–30]. The sessions will cover a variety of topics including the need for punishment for specific types of crime to act as a general and specific deterrent, fairness and proportionality to the crime committed, particularly for those of a certain seriousness or pervasiveness in society. Their punishment does not serve as a deterrent [31].

Researchers believe the recent trend in the criminal justice system to increase penalties for such crimes is a smart and laudable direction. There is no doubt that these crimes have increased recently to the point where minimum sentences are no longer a deterrent [32–34].

4.2 Recidivism and Its Impact on Criminal Penalties

The Jordanian Penal Code does not clearly define recidivism; it simply lists its terms and conditions [35]. However, Jordan's Supreme Court defines recidivism as "a legal description that applies to persons who commit crimes again after having been convicted under a previous sentence" [36]. The offender himself, regardless of the material aspects of the crime committed [14].

Regarding the judicial perspective on the impact of recidivism on the imposed criminal penalty, researchers point out the following.

1. In the past, recidivism penalties were often theoretical rather than implemented in practice. Because when a criminal court receives an investigation file and initiates a criminal prosecution, it is submitted to the criminal court by the defendant on the grounds of committing a specific crime in accordance with the legal provisions governing the crime. However, Articles 101 and 102 of the Criminal Code on recidivism do not specifically refer to legal texts on recidivism.
2. Currently, prosecutors have access to criminal records of offenders directly or through specially provided portals due to electronic links between prosecutorial offices, correctional institution administrations and criminal information management systems, as well as the existence of electronic criminal records. The Public Security Bureau is responsible. After the prison management department retrieves the criminal record and executes the sentence, the defendant is determined to be a repeat offender.
3. Sometimes, a defendant is referred to court as a recidivist under the legal definition of Sections 101 and 102 of the Criminal Code. However, the investigation file does not contain a certified copy of the final judgment against the defendants.
4. Finally, if the court determines that the defendant is a recidivist based on the recidivism provisions, the penalty at sentencing will be severe. Offenders do not

benefit from mitigating discretionary factors, minimum or maximum sentences. Instead, impose strict penalties for repeat offenders. With the introduction of modern technology and the use of criminal records, this method has been used and practiced in criminal courts for many years. Therefore, it can be said that the fallback clause is no longer theoretical, but valid, enforceable and strictly applicable.

5 Conclusion

This study explores new legal perspectives on punishment in the Jordanian criminal justice system. This subject is closely related to principles of criminal procedure, criminal law, criminology and punishment. This also affects the work of judges, lawyers, professors and students in law schools and law schools. The study yielded several findings and made various recommendations, summarized below.

5.1 Findings

1. There have been significant and dramatic changes in the severity of penalties in recent years. The previous lenient, blunt punishments moved toward increasingly severe punishments designed to achieve the goals of punishment, including general and specific deterrence, justice, and not driven by excess, revenge, or personal motives.
2. The ineffectiveness of light, simple sentences leads judges to reconsider their sentences when convicting.
3. A general increase in criminal activity and a continued rise in certain crimes are forcing judges to impose deterrent sentences.
4. The Jordanian criminal justice system abandoned many legal principles that had been valid and applicable for decades, such as age-related mitigating factors, and acknowledged that they were no longer applicable.
5. Jordan's criminal justice system was the first to protect minors and persons with disabilities from sexual assault before legislators formally codified and standardized these protections based on judicial precedent.
6. With advances in technology and the introduction of electronic criminal records, recidivists are no longer able to escape the consequences of reoffending, leading to stricter enforcement of recidivism statutes.
7. Increasing attacks on government property, utility networks, vandalism using corrosive materials and sharp objects, vehicle theft and arson are leading to judges imposing highly deterrent sentences.

5.2 Recommendations

1. Many of the penalties for offenses listed in the Penal Code and other substantive laws need to be re-evaluated as they are considered to be ineffective and non-deterrent, even with maximum limits. The penalties imposed in 1960 are no longer sufficient and appropriate for today.
2. Explicitly consider the age factor (both minors and seniors) as a discretionary mitigating factor, particularly in crimes against minors and persons with disabilities.
3. Explicitly treat a guilty plea as a discretionary mitigating circumstance, except for the crime of assault on a minor, and treat it as a mitigating circumstance for other crimes in which a person's rights are waived.
4. It is clarified that the relinquishment of personal rights is not an arbitrary mitigating factor in crimes against minors and persons with disabilities, regardless of the nature of the crime.
5. Explicitly consider an offender's serious health condition as a mitigating circumstance.
6. Make it clear that the use of discretionary mitigating factors should not reduce the minimum sentence by more than half.

World Trade Organization in the Era of Digital Transformation: A Comparative Study of Applying Core Principles in the Digital Context

Omar Al Makhzoumi and Naif Abdullah Al-Amadi

Abstract The objective of this study is to evaluate the effects and prospects of digital transformation on the World Trade Organization (WTO). Employing a descriptive-analytical methodology, the research examined data and information pertaining to developments in digital transformation and their implications for the organization's policies and procedures. Findings indicated that while the WTO has met some of its fundamental objectives, including the promotion of international trade freedom and enhancements in living standards in specific regions, it has not fully realized all its goals across all nations. Additionally, the study revealed that the WTO's essential principles, such as non-discrimination and transparency, have played a role in improving the global trade landscape; however, challenges remain in the equitable application of these principles between developed and developing countries. In summary, the study advocated for increased transparency in decision-making processes and greater collaboration among member states to ensure an equitable and balanced enforcement of principles. It also urged a thorough review of the organization's structure, enhancements to the effectiveness of dispute resolution mechanisms, and the provision of technical support and assistance to developing nations to aid them in fulfilling their obligations. The importance of updating principles and policies to align with global changes and emerging challenges in international trade was emphasized, along with the need for knowledge and experience sharing among member states to promote mutual understanding and achieve collective benefits.

Keywords World Trade Organization · Digital transformation · International trade · Uruguay round · Non-discrimination principle · Transparency · Developing countries · Economic globalization

1 Introduction

The World Trade Organization (WTO) operates as a global economic entity with its own legal identity, functioning within the structure of the contemporary global economic system to oversee and lay the groundwork for the international trading system. Its efforts are aimed at enhancing the liberalization of international trade and boosting global economic activity. Additionally, the International Monetary Fund (IMF) and the World Bank (WB) play roles in influencing and guiding international economic policies that affect diverse stakeholders worldwide [1].

The General Agreement on Tariffs and Trade (GATT 1947) was established in 1947 following the unsuccessful effort by the United States to form the International Trade Organization (ITO) based on the Havana Charter of the same year [2]. The application and practical experience of the GATT 1947 regulations highlighted significant shortcomings, revealing the system's inability to adapt to the evolving landscape of global trade. While the rules of GATT 1947 focused primarily on regulating specific aspects of trade in industrial goods, they excluded vast areas of international commerce, such as agricultural products, textiles, services, and intellectual property rights. Additionally, the interests of developing nations were overlooked, leaving these countries to grapple with issues of hunger, ignorance, and disease, having endured the impacts of colonialism at the time these rules were implemented. Furthermore, the GATT 1947 framework did not provide a permanent institutional structure to improve the oversight and enforcement of its regulations [3].

The shortcomings and inadequacies of GATT 1947 prompted developed nations to seek a new series of negotiations within the GATT structure, following seven unsuccessful rounds that had not addressed the problems they had generated. Additionally, developing countries contributed to the initiation of the Uruguay Round to push for the acknowledgment of their concerns and to alter the regulations of GATT 1947, which had imposed considerable difficulties on them.

Commencing in 1986 and wrapping up in 1994, the Uruguay Round, which represents the eighth round under the GATT 1947 framework, spanned nearly eight years of challenging negotiations. Viewed as a compromise among the clashing forces in the realm of international trade, the outcomes of the Uruguay Round also reflected the collective efforts of all negotiating entities and international bodies such as the United Nations. The final document was signed in Marrakesh, Morocco, on April 15, 1994, marking the conclusion of the Uruguay Round negotiations.

The inception of this document traces back to the creation of the WTO, formally known as the Marrakesh Agreement Establishing the WTO. It outlined the organization's functions, scope of work, structural organization, methods for acquiring membership, and its interactions with other entities. Implemented in January 1995, this agreement solidified all prior GATT agreements [4].

The most extensive and impactful of the negotiation rounds, the Uruguay Round marked a notable shift from earlier discussions. With a total of twenty-eight agreements, it established a thorough legal framework of regulations focused on trade liberalization and the reinforcement of the multilateral trading system. By refining

the rules within this system, the round significantly advanced trade liberalization, particularly through the enhancement of the dispute resolution mechanism. Additionally, it achieved agreements in emerging sectors such as trade in services and, for the first time, fully incorporated textiles and agriculture into the framework, though it excluded strategic commodities like oil and arms trade.

The Uruguay Round resulted in agreements concerning new domains, including trade-related aspects of intellectual property rights (TRIPS) and trade-related investment measures (TRIMS). Negotiations persisted beyond the conclusion of the Uruguay Round in February 1997, culminating in a telecommunications services agreement that saw sixty-nine governments endorsing far-reaching liberalization measures that surpassed those established during the Uruguay Round. Additionally, that same year, negotiations on information technology products concluded successfully with forty governments agreeing to eliminate tariffs, while an agreement on financial services was finalized by seventy member countries, encompassing over 95% of trade in banking, insurance, securities, and financial information.

At the Ministerial Conference in May 1998, WTO members consented to examine matters concerning global electronic commerce, and in 2000, fresh negotiations commenced with an emphasis on agriculture and services.

1.1 Study Objectives

This study aims to:

- Analyze the evolution of the WTO from GATT to the WTO, with particular emphasis on the impact of the Uruguay Round on the structure and organization of the organization.
- Assessing the economic and political impact of digital technologies on WTO activities.
- Analyze the principles that underlie the WTO and show how these principles are applied in the international context.
- Examine the organization's core goals, such as promoting freedom of international trade, raising living standards, achieving full employment, and stimulating effective demand.
- Analyze the organizational structure of the WTO, including key bodies such as the Ministerial Conference, the General Council, the Dispute Settlement Body, and the trade policy guidance mechanism.
- Explore the economic and political factors that led to the creation of organizations, such as neoliberalism, economic globalization, and the global justice movement.

1.2 Study Methodology

This research employs a descriptive-analytical method to evaluate the effects and prospects of digital transformation on the WTO. Data and information concerning developments in digital transformation and their implications for the organization's policies and procedures were analyzed using this approach. The study encompasses a review of literature pertaining to digital transformation and international trade, along with an assessment of the economic and political influences of digital technologies on the organization's functions. The objective is to deliver a thorough understanding of how the WTO navigates the challenges and opportunities posed by the digital era, utilizing data analysis and insights derived from earlier studies and reports published by the organization.

2 Principles and Objectives of the WTO

The WTO is based on several key principles, including [2, 4]:

1. **Principle of non-discrimination**: This principle implies non-discrimination between member countries or the granting of special treatment to one country at the expense of others. All GATT member countries should be treated equally in market competition, which means that any trade advantage granted by one country to another should benefit all member countries without the need for further action.
2. **Transparency principle**: This principle relies on tariffs rather than quantitative restrictions, which lack transparency. Tariffs should be set in a way that takes into account, where necessary, international trade. Countries that need to protect domestic industries or address balance of payments deficits should use price and tariff policies instead of quantitative restrictions such as import quotas. This is because within price limits it is easy to determine the level of protection or support for domestic products.
3. **Principle of trade negotiations**: This principle means that the WTO serves as the appropriate framework for implementing provisions or resolving disputes through negotiations.
4. **Principle of preferential trade treatment**: This principle involves granting developing countries preferential trade relations with developed countries in order to support the development plans of developing countries and increase their foreign exchange reserves.
5. **Principle of reciprocity**: This principle requires member countries to liberalize international trade by reducing or eliminating restrictions, but within the framework of multilateral negotiations based on reciprocity. This means that any reduction in tariff or non-tariff barriers by one country must be accompanied by equivalent reductions by the other.

2.1 Objectives of the WTO

The main goal of the WTO is to attain freedom in international trade by eradicating discriminatory practices that affect trade flow and dismantling any barriers or hindrances that may obstruct the movement of trade between nations [5]. Additional objectives consist of [2]:

1. Improving the standard of living for member countries.
2. Striving to achieve full employment levels within member countries.
3. Stimulating effective demand.
4. Increasing real national income levels.
5. Optimal utilization of global economic resources.
6. Encouraging production, capital movement, and investments.
7. Facilitating access to markets and sources of raw materials.
8. Reducing quantitative and tariff barriers to enhance international trade volume.
9. Establishing negotiations as the foundation for resolving international trade issues.

3 Organizational Structure and Membership of the WTO

3.1 Organizational Structure of the WTO

The structure of the WTO is composed of several bodies, briefly described as follows [6]:

1. **Ministerial Conference**: This body consists of all member countries at the level of foreign trade ministers and meets every two years. It has the authority to make decisions related to trade liberalization agreements, including restrictions on the provisions of these agreements.
2. **General Council**: This body is composed of representatives of all member countries and takes over the responsibilities of the Ministerial Conference between its sessions. Establishes organizational rules and procedural rules for itself and its individual committees. It is also responsible for coordination with other international governmental organizations whose responsibilities overlap with those of the WTO.
3. **Dispute Settlement Body**: This is one of the main bodies of the WTO and its jurisdiction covers all areas, including goods, services and intellectual property, in an integrated manner.
4. **Trade Policy Review Mechanism**: This mechanism is responsible for reviewing the international trade policies of member countries in accordance with the time frame specified in the agreement, which ranges from two years for developed countries, four years for developing countries and six years for least developed countries.

5. **Specialized councils**: These include the Council for Trade in Goods, the Council for Trade in Services and the Council on Trade-Related Aspects of Intellectual Property Rights. Each council oversees the implementation of agreements related to its specific area. Membership in these councils, which meet when necessary, is open to representatives of member countries.
6. **Secretariat**: This is an internal body of the WTO. The Director-General of the organization appoints its staff, defines their duties and establishes their conditions of service in accordance with the regulations established by the Ministerial Conference.

3.2 Decision-Making and Membership in the WTO

In the WTO, decisions are determined by a straightforward majority of votes, where each member possesses a single vote during sessions of the Ministerial Conference and the General Council. Membership is available to all member states of the United Nations. Nations that wish to join the WTO are required to comply with all agreements established since 1947, continuing until the transition of GATT to the WTO in 1995.

Joining the WTO does not entail the instant execution of all agreements; rather, this process occurs gradually. A transition period is permitted, lasting no longer than ten years, concluding in 2005.

Before a country can become a member, negotiations take place between the WTO and the aspiring nation, during which the specific areas of trade liberalization that the country will agree to are established according to its level of economic development. It is important to emphasize that joining the organization is not compulsory; countries voluntarily seek membership based on their assessment of the advantages it offers. However, in practical terms, it is nearly impossible for any nation to exist outside the global economic framework [7].

3.3 The Context Surrounding the Establishment of the WTO

Neoliberalism and Economic Globalization

Neoliberalism is fundamentally connected to economic globalization, which showcases the challenges of global capitalism and the reconfiguration of capital movement via multinational corporations. Globalization serves as both a crucial prerequisite and a tool for advancing the social agenda of neoliberalism, as it forces national identities to conform and adjust, simultaneously constraining the bargaining power of trade unions and movements advocating for social change.

This approach legitimizes and clears the path for representatives of neoliberalism on a national scale. Additionally, globalization emerges as a direct outcome of the

neoliberal intellectual initiative, as it enhances international economic interactions and mandates integration into the global marketplace.

The state serves a significant function in this context, acting as a shared platform for social groups or classes to pursue particular interests and establish equilibrium among them. This occurs via the impact of lobbying and interest groups on those who make political and administrative decisions.

Conversely, this aspect holds greater importance. Indeed, this influence is realized through the intertwining and circulation of social contradictions within the state apparatus, emerging as crises or challenges. The state addresses the demands of various interest groups and pressures because it embodies a tangible concentration of social power dynamics, which signifies that it assumes particular forms of authority and endeavors to uphold them.

The Global Justice Movement

In response to a range of pressing global challenges over the last twenty years, the idea of global justice has taken shape. This includes issues like workers' rights, the growing debt crisis faced by developing nations, environmental destruction and degradation of natural resources, food security, widespread poverty, and the privatization of essential services such as education, water, and healthcare. Academic interest in the principles of global justice has surged, focusing on both individual and institutional needs. Gaining traction, the global justice movement stands as the largest opposition to the effects of neoliberal economic policies within the three principal international economic bodies, IMF, WB, WTO, in addition to multinational corporations.

A diverse array of individuals and organizations makes up the global justice movement, encompassing non-governmental organizations, environmental coalitions, religious communities, student unions, and civil society institutions. This movement's actions have brought attention to the absurdities of neoliberal ideologies, globalization, and multinational corporations, resulting in a significant increase in nonviolent protests against WTO conferences held in [8].

4 Key Features of the Agreement on TRIPs

Research shows that the international trade system is now governed by new rules and foundations. A significant aspect of these rules is the interplay between trade and technological advancement, where knowledge, innovation, and renewal have emerged as the new standards for international competition in 21st-century trade dynamics. These elements constitute a vital component of production and serve as one of its essential pillars. Intellectual property offers the legal framework necessary to safeguard and support new ideas and creative thought, encompassing the protection of industrial property and the preservation of literary works, including software programs, as a fundamental right under the TRIPs Agreement within the WTO.

The TRIPs Agreement provides a comprehensive definition of intellectual property and details the methods for its protection. Intellectual property is characterized as "the creation of the human mind in all fields," whereas intellectual property rights refer to the entitlements of creators and inventors concerning artistic works, encompassing copyright, industrial design rights, patent rights, and trademark protection.

The establishment of numerous organizations aimed at safeguarding intellectual property rights has been driven by efforts in this area, with the World Intellectual Property Organization (WIPO) being particularly notable. Before WIPO's creation, several agreements were made to outline international responsibilities for the protection of intellectual property rights. Among the most important are the Paris Convention for the Protection of Industrial Property (1883) and its amendments from Stockholm (1967), as well as the Berne Convention for the Protection of Literary and Artistic Works (1886) and its 1971 revisions, along with additional treaties and agreements [9].

The inability to offer effective protection in these areas stems from the absence of mandatory enforcement power in these agreements. On the other hand, the TRIPs Agreement enhances these prior agreements by incorporating new areas of protection and has been made compulsory by developed nations through the connection of member states' responsibilities to the WTO's dispute resolution system. This framework fortifies the exclusive rights assured by the agreement, rendering them both mandatory and enforceable.

The longest agreement in the Uruguay Round agreements, the TRIPs Agreement consists of 73 articles. It focuses on integrating particular protection standards into the national laws of member nations, which are both agreed upon and enforceable within a multilateral framework, addressing every facet of intellectual property. This agreement tackles intellectual property in two primary domains: literary property and industrial property. Provisions of the agreement apply to all member countries, irrespective of their development status, with the sole variation being the grace periods allocated to developed, developing, and least developed nations.

Developing nations perceive the Uruguay Round, designed to both liberalize their markets and enhance intellectual property protections, as a means of solidifying the technological development monopoly held by advanced countries, making it solely their domain. This is accomplished by limiting access to cutting-edge technology for developing nations under the pretense of safeguarding intellectual property rights, which ultimately hampers their capacity to compete fairly and equitably.

The TRIPs Agreement encompasses fundamental principles and general provisions that uphold the most-favored-nation principle and national treatment, as acknowledged in the first and second articles of the international trade system. It stresses the importance of harmonizing the implementation of these articles with the specific nature and attributes of intellectual property, thereby ensuring that national inventors are not afforded greater protection than their foreign counterparts and that no bias exists between domestic and international innovations within a country. Additionally, the agreement outlines regulations for safeguarding various facets of

intellectual property rights, detailing the extent of this protection and the required enforcement procedures [9].

4.1 General Objectives and Basic Principles of the Agreement on TRIPs

Among the key provisions in the general rules of the TRIPs Agreement are Articles 7, which addresses "Objectives," and 8, which focuses on "Principles." These articles serve as protective measures for developing nations, with the goal of achieving a balance between safeguarding and enforcing intellectual property rights and promoting the public interest and welfare of communities [10].

Objectives

Article 7 aims to strike a balance between safeguarding patent holders, enabling them to innovate, create, and attain profitability, and the objective of transferring and distributing new technology for the benefit of technology users beyond just the inventors. It is essential to take into account the public interest of developing and less affluent nations. Nevertheless, this article has failed to translate into meaningful obligations, offering only extended transitional periods for developing countries, which are considered inadequate for protecting their interests [11].

Principles

Member states are granted the authority under Article 8 to implement essential measures aimed at safeguarding public health, ensuring food security, and promoting the public interest in sectors crucial for economic growth and technological advancement while adhering to the terms of the Agreement. This enables states to determine the pricing of medicines and food based on the actual needs and capabilities of their populations. Furthermore, states are required to adopt suitable actions to curb the misuse of patent rights or any practices that could hinder trade or negatively impact the transfer of advanced technology on an international scale. Additionally, states possess the right to enact laws to prevent monopolistic practices and dumping, as well as to incorporate provisions for compulsory licensing within their patent legislation, detailing the circumstances under which such licensing may be granted [2, 12].

4.2 Fields of Application of the Agreement on TRIPs

The Agreement defines the types of intellectual property rights and the standards related to the provision of protection and enforcement, which are the cornerstones of the TRIPs Agreement. The eight fields of intellectual property are as follows:

- **Copyright and Related Rights**: This includes the rights related to literary, scientific, and artistic works.
- **Trademarks**: This includes distinctive marks related to services (Service Marks).
- **Geographical Indicators**: These indicate the origin of goods.
- **Industrial Design**: This includes new innovations related to the exterior and aesthetic appearance of industrial products.
- **Patents**: These are granted to inventors for their new ideas that are industrially applicable.
- **Layout-Designs (Topographies) of Integrated Circuits**: This pertains to the design of integrated circuits.
- **Undisclosed Information**: This includes trade secrets.
- **Control of Restrictive Practices and Contractual Licenses**: This pertains to the regulation of restrictive business practices and contractual licenses.

Some literature suggests that the eight fields of intellectual property can be classified into two broader categories: literary property and industrial property [13].

Literary Property

- **Copyright and related rights**: These include rights related to literary works, which can be divided into economic rights (such as reproduction, artistic performance, translation, broadcasting and recording) and moral rights (protecting the author's work against distortion or damage). Both types of rights are exclusive and allow the rights holder to grant licenses [14, 15].
- **Computer programs or software**: As a new field requiring protection, the TRIPs Agreement allows the copying of intellectual works to develop and improve software, enabling developing countries to create cheaper computer programs.
- **Rental rights**: These enable authors, particularly in the field of computer software and cinematographic works, to authorize or prohibit commercial rentals [15].

Industrial Property

- Industrial property encompasses various regulations that address four fundamental categories: trademarks, geographical indications, industrial designs, and patents.
- Exclusive rights concerning the use of trademarks, designs, indicators, and patents are enjoyed by rights holders. Concerns related to the overprotection of intellectual property rights, which may impact fair competition regulations in economic activities, are addressed in Article 40, particularly from the perspective of developing nations [11, 15].

4.3 The TRIPs Agreement and Public Health

A significant subject of debate at the Fourth Ministerial Conference held in Doha in November 2001 was the connection between public health and the TRIPs Agreement. The Doha Declaration sought to place "public health" above intellectual property rights, facilitating access to affordable medicines for developing nations. It

highlighted that member countries are not hindered by the TRIPs Agreement in their efforts to safeguard public health. This declaration regarding TRIPs and public health ignited extensive discussions in Geneva, where the U.S. administration, facing pressure from pharmaceutical companies, endeavored to retract the goals outlined in the declaration.

Countries with emerging and limited development urge a balance between the exclusive rights held by pharmaceutical firms and patent owners and the right of their citizens to access innovative medications at affordable costs [14].

4.4 Fields of Patent Application

One of the most crucial components of the TRIPs Agreement, patents play a vital role in the economy of developing nations, especially within the pharmaceutical industry. According to Article 27(1) of the Agreement, protection is provided for any invention—be it a product or a manufacturing process—across all technological fields without discrimination tied to the location of invention or the area of technology. However, there are exceptions concerning human, animal, or plant life, significant environmental damage, or harm to economic development.

Article 27 holds significant importance for the pharmaceutical sector, particularly in developing nations. The second paragraph of Article 27 permits exceptions to patent grants in cases where they violate "public order" or adversely affect national communities [15].

The protection of public health in developing nations has emerged as a crucial issue on the agenda regarding the general review of the TRIPs Agreement. This concern is particularly urgent given that significant portions of the populations in these countries, especially in Africa, do not have access to essential medicines [14, 16].

There are those who contend that Article 8 of the Agreement, addressing its objectives, allows member nations to bypass pharmaceutical patents without the consent of the patent holder when it is essential for public health. Nevertheless, this action must align with the stipulations of the Agreement and adhere to what is referred to as the "Necessity Test."

An important development in the TRIPs Agreement, detailed in Article (27/1), involves safeguarding the innovation process alongside the product itself. This stipulation ensures that if a company creates a drug through a particular process, no other entity is permitted to manufacture that same drug for a period of twenty years, with no exceptions made for those categorized as "essential drugs" by the World Health Organization. It is important to note, however, that patent regulations are applicable solely to products registered after January 1, 1995; thus, any drugs listed or traded prior to this date remain available in the public domain [15, 17].

In this regard, it is crucial to highlight compulsory licenses, which permit any WTO member that has accepted the TRIPs Agreement to utilize a patented invention without obtaining prior consent from the patent owner, whether by the government of the member nation or by designated entities, as long as [14, 18]:

- The length and extent of these patent applications are defined without requiring consent from the patent owner, relying on an analysis of the intended uses both prior to and following the issuance of the license.
- The member state can only utilize the compulsory license if it can prove that it was unable to secure a voluntary license under fair commercial conditions.
- The party utilizing the invention cannot transfer or assign the rights to these uses to others. According to Article 31 of the Agreement, adequate compensation must be provided to the patent holder for these uses, with the amount determined by the specific circumstances of each situation and its economic importance.
- The licensed product must primarily be provided to the domestic market of the country that receives the license, and the license should be canceled once the reasons for its issuance are no longer applicable.

Article 31 of the TRIPs Agreement outlines certain legal restrictions concerning compulsory licenses. Although the Doha Declaration from August 30, 2003, endorses the authority of each member state to issue and utilize compulsory licenses, particularly for the production of generic medications, numerous practical challenges persist that hinder most developing nations from reaping the benefits of this right. These challenges include intimidation from multinational pharmaceutical companies, which have largely obstructed the ability of many developing countries to produce generic drugs [15].

Considering the limitations imposed on pharmaceutical companies regarding the use of compulsory licenses, alongside worries that excessive use may diminish investments in research, development, and innovation, Article 31 offers advantages by promoting equitable competition in global markets and facilitating access to medications for underprivileged communities, all while guaranteeing just compensation for holders of intellectual property rights [13, 19]. In emergencies, the World Health Organization has advised the implementation of compulsory licenses to ensure the availability of affordable medicines, taking into account the intellectual property rights of patent owners, including provisions for compensation in such scenarios [2, 20].

5 Conclusion

This research underscores the substantial influence of digital transformation on the WTO, drawing attention to the notable opportunities and fresh challenges that the organization encounters in the digital era. Utilizing a descriptive-analytical approach, the study explored the WTO's reactions to these shifts and their implications for global trade policies and practices. Gaining insight into these transformations can improve the organization's capacity to adapt and innovate, thereby aiding its objectives of fostering free and sustainable trade in the face of continuous digital evolution.

5.1 Findings

The study concluded with the following results:

- The WTO has successfully met several of its fundamental aims, including the encouragement of international trade freedom and the enhancement of living standards in specific areas. Nonetheless, it has not completely fulfilled all of its objectives in every nation.
- The global trade environment has been enhanced by the WTO's core principles, including non-discrimination and transparency. However, there are still challenges in ensuring that these principles are applied fairly across both developed and developing nations.
- A disparity exists between the principles established by the WTO and their real-world application, especially for developing nations that may struggle to meet their commitments.

5.2 Recommendations

This study recommends the following:

- The WTO should increase the transparency of decision-making processes and strengthen cooperation between member countries to ensure a fair and balanced application of the rules.
- A comprehensive review of the WTO's organizational structure should be carried out to improve the effectiveness of its dispute settlement mechanisms, enabling better resolution of international disputes.
- Provide support and technical assistance to developing countries to help them meet their obligations and enhance their capacity to benefit more effectively from WTO obligations.
- Update WTO rules and policies to keep pace with global changes and new challenges in international trade.
- Promote the exchange of knowledge and experience among WTO member countries in order to increase mutual understanding and achieve mutual benefits.

The Intersection of Technology and Stock Redemption: Legal Frameworks and Practices

Yasar Alhiniti and Dina Aljabari

Abstract This paper explores the legal framework of stock redemption with specific advancements in digital and technological management at its core by taking up a case that relates to private joint-stock companies. A comparison of legislation under The Companies Law is made with provisions under British statute law. The aim is to consider how enactments of stock redemption operate within distinct jurisdictions, in particular looking at the position with public authorities and boards of directors under the Companies Law compared with British legislation. It looks at under what condition shareholders can have their shares redeemed, including when public authorities' or board of director's approval is a necessary requirement. It also looks into the legal aspects concerning stock redemption and its impact on shareholders' rights, emphasizing digital means used for notification and payment. According to these findings, there are differences in legislators' protectionism on approaches to stock redemptions, which should be made known to shareholders. To solve these problems, the paper stresses the need to update the law by implanting clear digital procedures and terms for stock redemption and making the notification process more transparent. It also argues that companies should include in their statutes specific digital terms regarding stock redemption. This would create a more favorable legal atmosphere and help guarantee stability for shareholders as well as companies.

1 Introduction

The process of redeeming stocks has a profound impact on the company, its shareholders, and its creditors, and it is not without its fair share of risks. To mitigate these risks, it is imperative to establish a comprehensive legal framework that outlines the necessary procedures and safeguards in case a redemption attempt fails. This framework should prioritize the protection of the rights of shareholders, creditors, and the company itself.

The redemption of stock is contingent upon meeting certain criteria that afford the company and its shareholders the privilege to initiate the repurchase of shares. These criteria must align with the best interests of both the company and its shareholders.

The regulations implemented in 2020 regarding the redemption of shares for private joint-stock companies offer a systematic framework for the redemption process, outlining the requirements, regulations, and steps involved, while also preserving specific provisions mentioned earlier. The significance of these regulations in effectively organizing the legal implications of share redemption has been appropriately highlighted by the Jordanian legislature. These consequences encompass the impact on the company and its capital, the shareholders of the redeemed shares, and the creditors of the company.

The following questions arise:

- Who has the right to request the redemption of shares?
- Who has the authority to approve the redemption of shares?
- What are the procedures for redeeming shares?
- What are the consequences of lacking a specific record or limit for the redemption payment?
- What are the legal effects of stock redemption on the company and the shareholders?
- Was the Jordanian legislator correct in not obligating the company to establish a special fund for redeemed shares?
- What are the legal consequences of stock redemption on the company's creditors?

1.1 Study Objectives

This study aims to achieve the following objectives:

- Analyze the legal framework related to the redemption of shares in private joint-stock companies under Jordanian law 2020.
- Investigate cases of share redemption based on the terms set out in the company's articles of association and bylaws, including shareholder deaths and redemption requests.
- Compare the Jordanian approach to share redemption with the UK approach, identifying differences and similarities in procedures and conditions.

- Assess the impact of share redemption on shareholder rights and the company, highlighting the practical and legal importance of specific procedures.
- Provide legal recommendations regarding the improvement and development of the legal framework related to the redemption of shares in private joint-stock companies.

1.2 Study Methodology

The analysis of stock redemption in private joint-stock companies, specifically in Jordan and Britain, is conducted through a descriptive-analytical approach in this study. In order to accomplish the goals of the study, data was gathered from pertinent company laws and regulations, and a thorough examination of legal literature and academic research was conducted. This comprehensive analysis aims to safeguard the rights of shareholders and promote fairness in legal proceedings.

2 Procedures for Redeemable Shares

The process of redeeming shares in a private joint-stock company is governed by a specific set of procedures outlined in the 2020 regulations. These procedures must be followed in order for the company to redeem its shares. The regulations stipulate that certain data pertaining to the share redemption process must be included in the company's bylaws, as detailed in Article (4/c/d/e) of the regulations, as follows:

- **Firstly:** The party with the authority to initiate the repurchase of shares, whether it be the company, the shareholder, or in accordance with the conditions outlined in the company's bylaws for share redemption [1, 2]. The company's bylaws must clearly designate the party entitled to request the redemption of shares, which may include the company itself or the redeemable shareholder. Alternatively, such a request may be triggered when specific conditions stipulated in the company's bylaws are satisfied.
- **Secondly:** The authority responsible for approving the redemption of shares from shareholders is determined by the company's bylaws. This entity, whether it be the general assembly, the board of directors, or both, must make the decision to approve the redemption request. In accordance with Article (6) of the regulations, the redemption decision must include specific information such as the name of the shareholder, the number of shares to be redeemed, and their total nominal value. It is important to note that a partial redemption is permissible, and the decision should also outline the conditions that necessitated the redemption of these shares.
- **Thirdly:** According to the regulations set forth in the company's bylaws, it is necessary for the selected address of shareholders with redeemable shares to be included in order to notify them about the decision to redeem their shares. This

requirement aligns with the 2020 regulations on redeemable shares for private joint-stock companies [3].

In this study, we will discuss the redemption of shares based on the company's request or under specific conditions.

3 Redemption of Shares Based on the Company's Request or Specific Conditions

The procedures for the redemption of shares are laid down in Article (68/b/1) of the Companies Law [4] and Article (4/c) of the 2020 regulations on redeemable shares for private joint-stock companies [5]. The request for redemption shall be initiated by the entitled entity under the bylaws of the company, which may include the company itself or the shareholder or in certain circumstances.

As stated in Article (7/a) of the regulations, the redemption of shares can be carried out either upon the company's request or under specific conditions, are as follows:

- **Firstly:** The redemption of redeemable shares requires a decision from either the general assembly of the company, the board of directors, or the general assembly's approval of a redemption request recommended by the board of directors. The entity specified in the company's bylaws must provide the necessary approval [6].
- **Secondly**: In order to approve the redemption of shares, the decision must encompass the specific conditions that necessitated the redemption, as outlined in the company's bylaws [7], whether issued by the general assembly or the board of directors.

The clarity of this matter becomes especially evident when the request for redemption is contingent upon fulfilling certain predetermined conditions. The company's contract and bylaws explicitly outline these conditions and scenarios. Of particular importance is the stipulation of a specific date for the redemption of the shares. This gives rise to the following inquiry:

- Is it permissible for the company, if its right to request redemption is stated, to refrain from exercising this right? Can the company abuse this right?

If a predetermined date for the redemption of shares is established, it can be contended that the company is obligated to redeem the shares by that date. The company does not have the option to choose whether or not to exercise its right to redeem shares, as this right is not absolute but rather restricted by the fulfillment of specific conditions outlined in the company's contract and bylaws, such as the inclusion of a redemption date. Furthermore, the company cannot misuse this right by redeeming shares prior to the designated redemption date. The company is required to adhere to the terms set forth in its contract and bylaws. However, if the company is not bound by a specific date, conditions, or circumstances for requesting redemption, it retains the discretion to exercise its right to request redemption or not. The researcher

supports the notion that the company is either bound by obligations or possesses the discretion to decide whether to make a redemption request. If a condition compels the company to request redemption based on a specific redemption date, it is obligated to do so, and refusing to comply would constitute a violation of the company's contract and bylaws. On the other hand, if the redemption request is discretionary, the company has the freedom to choose whether or not to exercise this right. The company is not obligated to repay the redeemable shareholders for the value of their shares unless the company is being liquidated [8]. In such cases, the company must initiate the redemption process, ensuring that it benefits the company and does not infringe upon the rights of shareholders or creditors [9]. The validity of the redemption condition is based on its ability to serve the company's interests [9]. The researcher discovers that in practice, most private joint-stock companies' contracts and bylaws, which include redeemable shares, limit the redemption process to specific conditions and scenarios, thereby obligating the company to request the redemption of these shares.

3.1 Redemption of Shares Based on Specific Conditions Defined in the Company's Contract and Bylaws

In the Case of the Death of a Shareholder Holding Redeemable Shares

Typically, in situations where there is a strong personal connection between a shareholder and the company, such as in professional or family businesses, the company has the authority to redeem shares. This is particularly relevant when a shareholder holding redeemable shares passes away, as it is important for the company to maintain the significant personal connection. Hence, it is common for the company's right to redeem shares upon the death of such a shareholder to be explicitly stated.

In accordance with Article (9/d) of the regulations, in the event of the death of the holder of redeemable shares, the shares are passed on to the heirs who possess the option to redeem them. If specified in the company's bylaws [2, 4, 10, 11], the heirs may also choose to receive the monetary value equivalent to the redeemable shares. This raises the following question:

- Is the company required to admit the heirs as shareholders upon the death of the shareholder holding redeemable shares, or is their right limited to the cash equivalent of the redeemable shares only?

Based on Article (68/a/1) of the Companies Law, which grants private joint-stock companies the authority to issue shares with specific rights, benefits, and priorities as outlined in the company's bylaws [4, 11], it is the researcher's belief that the company's bylaws can include a provision that prohibits the admission of heirs of a shareholder who holds redeemable shares after their demise. This restriction is justified by the unique nature of the company, which is closely tied to the personal qualifications of its shareholders, particularly in professional companies established

by individuals with specialized expertise. The shareholder's profession and specialization are crucial for their role within the company. Allowing the heirs to become shareholders without meeting the fundamental requirement of being qualified professionals would not be in the best interest of the company and would contradict its primary purpose. Consequently, the company has the right to specify in its bylaws that heirs are not permitted to become shareholders upon the death of the original shareholder, and the company will instead repurchase the shares.

Likewise, within family enterprises that depend on particular familial connections among shareholders, the inclusion of heirs may not align with the necessary family ties that form the foundation of the company. As a result, the shares are redeemed and the heirs are not granted entry into the company. In practice, numerous privately held corporations' agreements and regulations, which are officially recorded with the Companies Control Department, specify that shares are not transferred to heirs upon the shareholder's demise. Furthermore, the company may outline in its regulations that the heirs have the right to receive the monetary equivalent of the redeemable shares without being granted shareholder status [6, 12].

The contractual and regulatory provisions within the private joint-stock company dictate the dynamics between shareholders who possess redeemable shares and their successors. It is possible to establish an arrangement whereby these shares are passed on to the heirs upon the shareholder's demise, subject to the condition that the shares are encumbered by the right of redemption. Alternatively, an agreement can be reached wherein the heirs are not granted shareholder status but are entitled to receive , the monetary value equivalent to these redeemable shares [13–16].

Upon examining the second part of Article (9/d) in the regulations, which states that the heirs may receive the cash equivalent if the company's bylaws specify this provision, the researcher discovers that it is feasible for the heirs to become shareholders in the company after the death of the holder of redeemable shares, even if they do not receive the cash equivalent of these shares, unless otherwise stated in the company's bylaws. This contradicts the principles of fairness and redemption. Consequently, the researcher asserts that the admission of heirs as shareholders should be contingent upon their entitlement to the cash equivalent of these shares. Although Article (4/z) [4, 10, 17] of the regulations allows for the redemption of these shares with or without compensation, the automatic inclusion of heirs as shareholders does not align with the voluntary and consensual participation of original shareholders. The entry of a shareholder into the company is based on their consent and willingness, with the shares being redeemable without compensation. It is implausible to assume that the heirs would share the same willingness and consent as the original shareholder. The reason behind this is that if the heirs were to become shareholders by legal means, they would be held responsible for any liabilities or losses that the company may encounter. This goes against the principle of fairness. As a result, it would have been more appropriate for the Jordanian legislator to connect the inclusion of heirs as shareholders in the company with their entitlement to receive the monetary value of these shares [18–24].

Employee Shares

The company's objective in distributing these shares to its employees is to inspire them to enhance their productivity and elevate the standard of their work. By instilling in them a sense of ownership, they are motivated to approach their tasks with heightened professionalism and excellence, ultimately benefiting the company. Nevertheless, the company also prioritizes safeguarding its rights and interests, thus including provisions in its bylaws that necessitate the redemption of these shares in the event of the employee's departure or cessation of employment for any reason [25–30].

- The expulsion of a shareholder from a company is a necessary measure to safeguard the company's reputation and ensure its success in the labor market, especially when a criminal judgment is involved. This judgment can have detrimental effects on the company's image and continuity. In order to maintain its reputation and achieve its objectives in the labor market, the company may choose to redeem the shares held by the shareholder. Additionally, the company's contract and bylaws may include other conditions that are clearly and explicitly stated, as long as they do not violate public policy or moral standards. For example, the shareholder may be required to reach a certain age or lose legal capacity [31].
- The address where the shareholder is to receive notice relating to the redemption of his shares shall be with the shareholder [4, 10, 32]. It's a prescribed prerequisite and has to be incorporated into the company's bylaws [4, 33]. The company has 14 days following the date of approval of the redemption to notify a shareholder with redeemable shares about such approval, which can be adopted by referenda of the members of statutory bodies or by resolution of partner (shareholder) assembly/ meeting (General Meeting) or board of directors. The notification is sent by registered mail or delivery against receipt and acknowledgment, as well as in another manner provided for in this Act constituting a bond with copies certified by a notary public unless he is an employee and director so designated that he only signs. The address designated for shareholder notifications regarding the redemption of their shares must be communicated to the shareholder [6, 34].
- Where shares are to be redeemed for value, the company shall owe its shareholders by paying them in cash. The procedures for ascertaining the share value and the mode of payment has to be specifically provided in the by-laws of the company to obviate any doubt or uncertainty [4, 10, 35].
- Redemption of shares takes place without the need for any action by the holder of the redeemable shares when such conditions are fulfilled or at the option of the Company. The redemption shall be automatic upon satisfaction of these conditions, and whether or not to approve in redemption process is not taken into account [4, 10, 36].

To ensure fairness and avoid potential conflicts of interest, the company has to show that it fully compensated the shareholder for the redeemable share as per its bylaws. The lawmaker in tying the determination of the redeemable share price to this company's by-laws did a very prudent thing because it sets into place a transparent system for calculating and paying out the share price to the shareholder. This bars

any chance of the company setting whatever arbitrary price they choose, which could mean unfair treatment for the shareholder [12].

In the researcher's view, it is essential that any agreed-upon mechanism outlined in the company's by-laws be based on the actual value of redeemable shares. The legal definition of a share's true value is its proportionate part in the net assets of the company after deduction of any debts [6, 37]. The prescribed mechanism in the by-laws of the company has to dutifully mirror the true value of redeemable shares at the time when they are redeemed because this value can differ depending on when redemptions take place. This guards against a scenario where those being redeemed run the risk of having their redemption price decreased by the company under its authority [4, 10, 38].

In regards to the 2020 Regulations on Redeemable Shares for Private Joint-Stock Companies, the researcher highlights that the Jordanian legislator did not establish a specific limit or restriction on the consideration for redeemable shares. This absence of guidance raises concerns and will be thoroughly examined in subsequent discussions concerning the company's responsibility to compensate for redeemed shares [4, 10, 39].

4 Redemption of Shares at the Request of the Shareholder

As per the provisions stated in Article (7/b) of the 2020 Regulations on Redeemable Shares, shareholders who possess redeemable shares are entitled to request the company to redeem their shares. The decision to exercise this right lies entirely with the shareholder. They have the liberty to either request the redemption of their shares or choose not to do so, unless the company's contract and bylaws explicitly state that the shareholder must request the redemption of these shares on a predetermined date or upon fulfilling specific conditions outlined in the company's bylaws. The steps involved in the process of redeeming shares at the shareholder's request are as follows:

- **Firstly**: To initiate the process of redeeming their shares, shareholders are required to formally communicate their intention to the company. This can be done by sending a registered mail to the company's designated address or by following any other method specified in the company's bylaws [4, 10, 40]. The Jordanian legislator has implemented the same notification procedure for share redemption as that used for company-initiated redemptions. Furthermore, according to Article (67/b/2/Repeated) of the Jordanian Companies Law [4, 6, 41], it is mandatory for the company's contract and bylaws to include the company's address as an essential piece of information [35].
- **Secondly:** When a shareholder submits a request to redeem their shares, the company must carefully evaluate the request and render a decision to either accept or reject the redemption request. This decision can be made either by the general assembly or by the board of directors, as outlined in the company's bylaws. The

company has a maximum of 14 days from the date of receiving the shareholder's redemption request to make this decision. Subsequently, the company is obligated to inform the shareholder of its decision to approve the redemption within 7 days from the date the decision was reached. The notification can be sent to the shareholder via registered mail or any other method specified in the company's bylaws, to the address designated for receiving notifications, which must be explicitly stated as a fundamental requirement in the company's contract and bylaws [17, 42].

- **Thirdly**: In accordance with the company's bylaws, the company is obligated to compensate shareholders based on the determined value of their shares. This compensation must be calculated and distributed to the shareholder in a manner that is transparent and leaves no room for ambiguity [43]. It is worth noting that the Jordanian legislator has made a wise decision by mandating that this compensation mechanism be included in the company's bylaws, ensuring that it is agreed upon by the shareholders rather than solely determined by the company [6, 10, 44].
- **Fourthly**: The company is obligated to proceed with the redemption process once the redemption conditions are met, regardless of whether or not they are willing to accept or reject the shareholder's redemption request [45]. This raises the following question:
- If there are no available sources of funding for the redemption, is the company still required to proceed with the redemption?

As stated in Article (7/b/4) of the regulations, if funding sources cannot be found, the company must provide evidence of this through a letter from the company, along with a letter from its auditor. The Companies Regulatory Official will then allow the company a 30-day period to complete the redemption. Therefore, the company is obligated to carry out the redemption, even if it lacks funding sources (with the exception of funding from the company's capital) [6, 10, 46]. If the company fails to complete the redemption within the deadline set by the Companies Regulatory Official, the Official will issue a letter granting the shareholder the right to return the shares to the company and receive the agreed-upon amount as specified in the company's bylaws. The shareholder of the redeemable shares may then take legal action against the company in the appropriate court [25].

In contrast to the British legislator, the Jordanian legislator adopts a different approach when it comes to share redemption procedures. The UK Companies Act 2006, specifically Article (685), outlines the regulations for share redemption procedures in two specific scenarios:

- In the first scenario, the responsibility for redemption decisions lies with the board of directors of the company. The company's contract and bylaws should clearly outline the board's jurisdiction in making redemption decisions, establishing conditions, procedures, controls, and executing the redemption process.
- In the scenario of redemption decisions, the company's contract and bylaws hold authority. The redemption process, along with its conditions, procedures, and controls, is determined solely by the company's contract and bylaws, rather than the board of directors [26].

In accordance with Article (688) of the UK Companies Act, when redeemable shares are re-deemed, they are considered void and the company is required to decrease its capital by the nominal value of the redeemed shares [27]. This differs from the approach taken in Jordan, where Article (4/w) of the regulations states that redeemed shares are kept by the company, either reissued and sold or canceled, resulting in a reduction of the company's capital as outlined in Article (82/Repeated) of the Jordanian Companies Law [28].

5 Conclusion

The focus of this study is the importance of share redemption in corporate law, as it represents a balance between shareholder interests and those of the company. An analysis of the statutory provisions in Jordanian and English legal regimes reveals variations relating to the procedures and requirements for share redemption. This reinforces the need for a clearly defined legal framework that promotes fairness and protects the interests of each party. Results from this study reiterate that laws have to be updated and revised to meet changes resulting from economic activities to ensure steadiness and create an effective environment where corporations and shareholders benefit.

5.1 Results

The study reached the following results:

- Upon analyzing the legal frameworks, it was discovered that Jordanian law includes provisions for share redemption in certain circumstances, thereby offering protection to both companies and shareholders.
- When examining the approaches of both Jordan and Britain, notable disparities in procedures and conditions emerged, particularly in the British approach which placed a higher emphasis on the need for precise legal texts pertaining to share redemption.
- The significance of share redemption in ensuring company stability and protecting shareholder rights is particularly notable, particularly in professional and family-owned companies where the personal connection of shareholders holds great importance.
- The implementation of a mechanism for shareholder notification and information sharing, as mandated by Jordanian law, serves as a crucial factor in promoting transparency and mitigating potential conflicts.

5.2 Recommendations

Based on the results obtained, the study recommends the following:

- Updating legal regulations with more detailed provisions regarding the procedure and conditions for the redemption of shares, ensuring a balance between the rights of shareholders and companies.
- Increasing the transparency of shareholder notification and communication mechanisms regarding redemption decisions and establishing clear procedures for calculating and paying the value of redeemed shares.
- Developing a legal framework with provisions to protect the rights of heirs in the event of shareholder death and avoid multiple interpretations of legal texts.
- Encouraging companies to include clear provisions in their regulations regarding the redemption of shares, adapted to the nature and activities of the company.
- Conducting continuous comparative research between local and international regulations to improve and develop the legal framework for share redemption, ensuring compliance with best practices.

Reconciliation Provisions in Customs Crimes: A Comparative Study with Technological Integration

Mohammad Hussain Al-Ahmad and Suhayb Emad Al-Maaytah

Abstract Reconciliation is a well-known concept in civil cases, but its implementation in criminal cases is more complicated. This is because the state serves as a representative of the public interest. Indeed; Article 30 of the Code of Criminal Procedure regulates the implementation of reconciliation in criminal cases. It states that criminal charges against the perpetrator cannot be withdrawn, except for legal and justified reasons. Reconciliation does not apply to all crimes. In many criminal cases, the prosecutor's office has the right to withdraw charges without obtaining the consent of the victim or injured party. In some countries, the law states that the sentencing judge has the power to dismiss the case without the consent of the victim or injured party. This case applies to a crime violating morals, as it has characteristic features that distinguish it from other crimes, which is why the perpetrator can negotiate with the officer to discontinue the criminal proceedings. The purpose of this research paper is to examine the provisions, conditions and effects of customs crime reconciliation. It also aims to examine the advantages and disadvantages of reconciliation compared to other countries that have regulated reconciliation in their customs offenses laws.

Keywords Reconciliation · Legislation · Customs crimes · Code of criminal procedure · Technology

1 Introduction

The evasion of fees and taxes owed to the state's treasury can be classified as customs crimes, which fall under the larger category of economic offenses [1]. Given their unique characteristics, the legislator took inspiration from comparative legislation

and established a dedicated reconciliation system for individuals engaged in smuggling [2, 3]. The purpose of this mechanism is to enable individuals to reach an agreement with the competent authority and avoid the consequences of criminal prosecution and public prosecution altogether [4, 5]. If the agreements are approved, criminal prosecution will be put on hold and the public prosecution will be dropped. As part of addressing customs crimes, a reconciliation system requires the perpetrators to make joint and several payments of fines specified by the Customs Law [6]. The reconciliation is an interesting legal mechanism that has yet to be fully integrated into the country's Penal Code or Code of Criminal Procedure. Currently, it only applies to customs offenses, setting it apart from other legal frameworks. The purpose of this study is to explore both the advantages and disadvantages of using this particular reconciliation system [7]. By performing a thorough comparison with international legislations that have adopted similar approaches, the effectiveness, as well as limitations, of the model in handling customs offenses will be analyzed comprehensively [8]. Exploring how to solve customs-related offenses and evaluate them nationally and internationally is the primary purpose of this analysis [9]. These matters will be up for ongoing discussions where valuable insights can be contributed [10, 11].

We delve deeply into the intricate system designed to combat customs smuggling crimes to gain a comprehensive understanding [12]. We apply descriptive and analytical techniques to uncover the minute details of this system. Our focus is to reveal the concealed mechanisms and specifics of this structure [13]. Moreover, a comparative analysis of global and local laws was conducted. Our distinct perspective offers a new explanation of Jordan's reconciliation system and its link to customs-related offenses, with similarities to legal frameworks worldwide [14]. Through comparison and the use of descriptive and analytical approaches, we intend to thoroughly evaluate the system in use. Our objective is to understand the nature, effectiveness, and provisions of the system and measure its compatibility with legal frameworks both nationally and internationally. Having done so, impactful strides can be made in the ongoing conversation about the management and adjudication of customs smuggling offenses.

1.1 Research Problem

There is a debate among scholars regarding the ability of the legal system to reconcile disputes effectively. Lawmakers made their choice to limit its usage to customs offenses, rather than integrating it into the Code of Criminal Procedure or the Penal Code. However, due to its limited and unique application, questions are posed regarding its practicality and whether its terms are effective at preventing both specific and general offenses. This has led to questions about the impact of restricting the reconciliation system to customs crimes and its wider consequences. Through our research, we delve into a narrow category of transgressions to fully examine the intricacies of a system and assess its effectiveness in deterring criminal activity. We

zoom in on the framework of criminal liability for customs smuggling offenses and scrutinize the workings of the system, with the aim of understanding its potential impact on preventing both repeat and future offenders. Researchers are particularly intrigued with the reconciliation system's unique legal treatment, and are exploring its complexities to provide a fresh, nuanced perspective on its advantages and disadvantages, and how it intersects with customs offense deterrence and legal processes. Ultimately, this will enrich discussions in this field. The following questions stem from this research problem:

1 What is the nature of the reconciliation system concerning customs crimes?
2 Does the reconciliation system for customs crimes have specific conditions for its conclusion?
3 What is the impact of entering into reconciliation agreements on customs smuggling crimes?

1.2 Research Significance

The complexity surrounding the reconciliation system tailored for customs crimes is the main focus of this study. This is particularly significant since there is no such system for other criminal offenses listed in the Penal Code. The lack of prior research in this specific area highlights the innovative and pertinent nature of this investigation. The intricacies of the reconciliation system applied to customs crimes require examination to gain a better understanding of its nature and potential consequences. Our research aims to fill a critical knowledge gap in this area. We recognize the unique nature of this system, made clear by its Eastern implementation and exclusion from broader criminal offenses in the Penal Code, emphasizing the need for comprehensive investigation. This investigation delves into the mysterious process of the reconciliation system by examining its foundational principles, operational variables, and effects on those responsible for customs misdemeanors. This study stands out due to the rare focus on Jordan's customs crimes and reconciliation systems. By analyzing this relatively unexplored domain, valuable revelations emerge. As such, this research holds weight as a noteworthy addition to academic literature. The distinctive outlook of this probe also accentuates the practical implications of our findings, emphasizing its novelty and significance. Presented here is a resourceful nature that establishes a foundation for future scholarly work and policymaking, ripe for research and exploration. An introduction to the potential impact of implementing a specialized reconciliation system in a customs offense context is also offered, providing a nuanced understanding of the context's dynamics.

1.3 Research Objective

Analyzing the intricate details of the customs smuggling reconciliation agreement framework is the main objective of this research. It encompasses a comprehensive exploration of the reconciliation system's clauses and conditions, particularly its operational dynamics within the Customs Law. Moreover, the study employs a comparative perspective, with the intention of juxtaposing Jordan's system with similar mechanisms in both domestic and international laws. These multifaceted objectives ensure that the entire breadth of the topic is explored during the investigation. This comparative analysis seeks to develop a detailed comprehension of the exclusive traits and potential room for progress in the legal scheme. Its main purpose is to draw resemblances, emphasize differences, and provide input on contrasting worldwide methodologies used to resolve contraband smuggling violations. The ultimate objective of this inquiry is to assess the efficiency of the reconciliation system as a counteractive measure against such crimes. As a result, this study makes a valuable contribution to the extensive expanse of global lawful structures. In customs law context, the efficacy of the reconciliation system utilized for crimes related to smuggling is presently under scrutiny. The system's ability to efficiently resolve cases while simultaneously deterring illegal activities and contributing to law enforcement objectives is being evaluated through research. With the aim of acquiring a comprehensive framework for a deeper comprehension of the system within the legal landscape, objectives are centered on comparative analysis for cross-jurisdictional insights. Ultimately, valuable outcomes and implications are sought to be extracted.

1.4 Research Methodology

Utilizing a multifaceted research methodology is necessary in addressing the subject matter. Our study shall make use of a varied blend comprising analytical, comparative, and descriptive approaches to delve into the complex nature of the customs smuggling reconciliation system. We shall conduct a comprehensive review of legal texts, scrutinize relevant case law, and make comparative assessments of legislative frameworks across Algeria, Egypt, and Jordan. Our descriptive strategy involves meticulous documentation and analysis of specific provisions encompassed within the legal texts related to the customs smuggling reconciliation system. By examining its procedural intricacies, operational conditions, and other pertinent details, we can gain a complete understanding of the internal workings of the Jordanian Customs Law. Through the use of our analytical methodology, we critically examine any nuances, potential vagueness, and implications present in the legal language related to the reconciliation system, after analyzing the legal provisions identified during the descriptive phase. Ultimately, the objective is to gain valuable insights into both the practical application and functioning of the system. The analysis in this research goes beyond just Jordanian legislation by taking a comparative approach. Specialized

courts operating under the Jordanian legal system are scrutinized in order to make contextual conclusions regarding the utilization of the reconciliation system. Furthermore, by including Egyptian and Algerian legislations in a comparative assessment, this study sheds light on the diverse approaches of different jurisdictions towards the reconciliation of customs smuggling crimes [15]. This unique lens gives the research richer insights by identifying possible best practices and crucial variations that can contribute to the evaluation of the Jordanian system.

2 Reconciliation Provisions in Customs Smuggling Offenses

The dismissal of civil suits through mutual agreement between the plaintiff and defendant is known as reconciliation. This also results in the expiration of the lawsuit. The Civil Law No. 43 of 1976 describes reconciliation as a contract that settles disputes and resolves enmity between the parties. On the other hand, public prosecutors are limited in their authority to dismiss or abandon criminal lawsuits without legal grounds [1], (p. 288).

The inclusion of a reconciliation system in criminal offenses pertaining to customs, tax, and economic crimes is permissible in some comparative legislations, including that of Jordan. Upon the establishment of a reconciliation agreement, the criminal lawsuit ceases to be valid and judicial prosecution comes to a halt [13, 14]. The incorporation of such a system in legislation has been justified by their lawmakers as a means to restore embezzled funds, alleviate the negative impact of the crime, and thwart the offender from achieving their objective [1, 11, 16].

Let us delve into the significance of the reconciliation system as a catalyst for the cessation of customs lawsuits and criminal prosecution [17]. Our aim is to detail the provisions of the Customs Law regarding the reconciliation system. Furthermore, we will draw comparisons between this system and similar provisions from both national legislations and international comparative legislations, with particular emphasis on Egypt and Algeria [18–21]. We will divide this section into two parts—the first will deal with explaining the nature of the reconciliation system for customs smuggling offenses, while the second shall appraise the reconciliation system for customs crimes by juxtaposing it with that of other Jordanian legislation that encompasses such a system, as well as with the international legislations in Algeria and Egypt.

2.1 The Nature of the Reconciliation System for Customs Smuggling Offenses

Unlike other legal doctrines that provide rich references defining the judicial reconciliation system and elucidating its provisions, there is no explicit definition of the customs reconciliation system in the Customs Law No. 20 of 1998, its amendments,

the Code of Criminal Procedure No. 32 of 2017, the specialized customs courts, or the Court of Cassation. The legal doctrine has not extensively addressed or defined customs reconciliation or delved into its provisions [2, 21], (p. 117).

A definition of customs judicial reconciliation by legal scholars states it is an agreement made between officials involved in smuggling and the Minister of Finance or his representative. This agreement must be entered into before issuing a final judgement and results in the suspension of prosecution and the dismissal of the case. Another viewpoint by legal scholars describes it as a written document that acknowledges the debt and settles disputes between the Customs Department and the perpetrator of smuggling crimes, showing concessions made by both parties [3] (p. 179); [2, 22], (p. 120).

In the category of smuggling offenses, a custom reconciliation deal is a contractual agreement established between smugglers and the Minister of Finance or his delegate. The accord, decided upon prior to the rendering of a definite verdict, induces shared liability for fees on the part of the implicated smugglers [23]. Its benefits include dispute resolution, the sundering of public prosecution and the put on hold of criminal case proceedings [24].

This sub-section is being split in two due to the array of viewpoints. One branch will delve into the Customs Law's take on reconciliation systems, and the other will scrutinize how comparative legislations interpret it.

2.2 The Nature of the Reconciliation System for Customs Smuggling Offenses According to the Customs Law

Taking a closer look at the Customs Law No. 20 of 1998, including Articles 212 and 213, it becomes evident that settling customs offenses is favored by the legal system for the purpose of dropping public suits and halting criminal prosecution. The law allows the Minister of Finance or their delegate to negotiate a reconciliation for customs smuggling crimes and analogous offenses, though only during certain defined periods, such as before, during, or prior to the final verdict. Before a case of smuggling goes into public litigation or reaches a final judgment, the offender may choose to request reconciliation with customs authorities. This is also an option for all officials implicated in the crime who haven't yet received a final verdict. However, it is important to note that settling for smuggling crimes is not mandatory for the Minister of Finance or their representative, according to Article 212. The wording of the article clarifies that the minister or delegate can settle but isn't required to. The reconciliation guide requires immediate compensation for fines and fees outlined in Article 213 of the law. The use of phrases such as "the minister must" or "the minister shall" would imply an obligation to comply. Essentially, the agreement's impact and judgment depend on the timely payment of applicable dues.

Amidst the discourse surrounding the Customs Law, some legal experts have voiced skepticism about the effectiveness of its current reconciliation process in

achieving deterrence [4], (p. 75). Detractors contend that this system enables wrongdoers to sidestep public prosecution and court hearings, with the simple act of signing an agreement and paying fines, rather than facing heftier consequences, like jail time. Such critics position that this methodology contradicts a fundamental principle of the justice system; namely, that without explicit legal standings, crimes cannot be committed, and punishments cannot be invoked. The implication of non-criminalization of an action is that it is acceptable [5], (p. 13). To combat this, the legislation might require revisions within the Customs Law reconciliation provisions to render them more stringent. Alternatives such as increasing the penalties for repeat smuggling offences, disallowing reconciliation for those who continue to commit crimes, or restricting reconciliation to particular goods while prohibiting others, including high-duty or prohibited goods, might be considered by the lawmakers [6]

Concluding a reconciliation agreement for customs offenses has significant effects, including expiration of the criminal lawsuit and cessation of criminal prosecution. Should a final judgment not be obtained prior to the reconciliation agreement, confiscated goods and means of transport will be returned in accordance with Article 214 of the current Customs Law and the provisions and conditions thereof [4], (p. 78).

2.3 The Nature of the Reconciliation System According to Comparative Legislation

Similar to the approach taken by the legislator, customs crimes in Egypt and Algeria are addressed through a reconciliation system, but with differences in the specific provisions of each legislation. In the following discussion, we will delve into how both the Algerian and Egyptian legislatures have embraced this system, as well as the unique characteristics of each.

- **Firstly: The Egyptian Legislature's Stance on the Customs Reconciliation System:**

Similar to the legislator, the reconciliation system for customs crimes has been adopted by the Egyptian legislator under the effective Egyptian Customs Law's Article 76, as evidenced in Case No. 1664/78 of the Egyptian Cassation Court. Although the nature of the customs smuggling reconciliation agreement and its effects align the Egyptian legislature's stance with Jordan's, the disparity between the two laws is the amount of fines required for reconciliation.

- **Secondly: The Algerian Legislature's Stance on the Customs Reconciliation System:**

In line with the legislative actions taken by Jordan and Egypt, Algeria has opted for a reconciliation-based approach for addressing customs smuggling offenses, as stipulated in customs legislation. However, unlike its counterparts, Algerian lawmakers have excluded the possibility of settling certain smuggling crimes pertaining to

substances under subsidy, arms, ammunition, drugs, and other prohibited items from their legal framework [7]. The rationale behind this move is to address the negative impact of smuggling on the country's welfare, security, and public health. It should be noted that Jordan and Egypt did not adopt such measures and allowed customs reconciliation for all smuggled goods.

3 Evaluation of the Customs Smuggling Reconciliation System

In legal circles, there is an ongoing debate about whether reconciliations should be allowed for customs crimes, particularly economic ones. Those who support this position argue that as long as the offender isn't a repeat offender or previously convicted of an economic crime, it should be permitted [8], (p. 241). However, others contend that fines and financial agreements resulting from reconciliations for these types of crimes can actually hurt the country's economy. It is believed that if these crimes were prevented and combated, it would provide a greater benefit to increasing the country's financial resources. [9], (p. 264). We will divide the claim into two branches, using the Customs Law as a basis for our assessment. However, we'll also compare the reconciliation system between the Customs Law and the Economic Crimes Law in a second branch.

3.1 Assessment of the Reconciliation System According to the Customs Law

By examining the amendments made to the Customs Law No. 20 of 1998, researchers have uncovered that there is no explicit clause preventing a smuggler from making a reconciliation agreement for repeat offenses, nor does the law stipulate any increase in fines in such cases. This suggests that perpetrators of smuggling are in fact allowed to reconcile every time they commit the crime under the provisions of the Customs Law. Under Law No. 20 of 1998 and its alterations, the Customs Court doesn't usually enforce imprisonment for repeated customs smuggling crimes, though the legislator has made it mandatory for repeat offenders to be imprisoned. This situation is worth highlighting. In fact, it is quite odd. The Customs Law of 1998 doesn't generally impose a prison sentence for repeat offenders, yet it exists as a penalty in the legal system.

The legislator's approach to customs smuggling offenses has faced criticism from researchers. Their suggestion is to limit reconciliation for repeat offenders and to also consider imposing imprisonment for deterrence. This approach would help combat the detrimental effects on the national economy and society as a whole. The legislator should take another look at the fact that customs smugglers are well aware that

they won't be imprisoned for repeating the offense, nor will they be denied the opportunity to sign a reconciliation agreement or see an increase in fines, no matter how many times they engage in such activity. It is an important aspect that needs to be reconsidered.

3.2 A Comparison of the Reconciliation System Between the Customs Law and the Economic Crimes Law

Under comparative legislation, Article 9 of the Economic Crimes Law No. 11 of 1993 and the revised Law No. 20 of 2004 dictate the reconciliation system as "the Public Prosecutor may reconcile with anyone who commits a punishable crime outlined in this law (1). Those who return all funds gained from their crime or settle them in full can have their prosecution suspended. Approval from a judicial committee headed by the President of the Public Prosecution, along with a Court of Cassation judge appointed by the President of the Judicial Council and the Civil Attorney General, is mandatory for any decision made by the Public Prosecutor during an investigation or trial. The Public Prosecutor's viewpoint must also be taken into account. (2) However, this rule does not extend to civil servants operating in administrative, municipal, or judicial positions, employees of security or military organizations, or any related personnel working in a public administration or organizational setting.

A difference is observable after scrutinizing the aforementioned piece, in regards to the regulations concerning reconciliation outlined in the Customs Law and the Economic Crimes Law. The most notable differences for the purpose of comparison can be summarized as follows:

Authority Granted by the Legislator to Conduct Reconciliation

The guilty parties in a smuggling offense settle with the Minister of Finance or their authorized representative in cases of customs crimes. The administration under the Minister of Finance or their appointed official, like the Director-General of Customs, is responsible for overseeing and approving the reconciliation agreement. The Economic Crimes Law notes that the parties responsible for settling economic crimes consist of the perpetrator or holder of the funds involved and the Public Prosecutor [24]. Interestingly, the Public Prosecutor holds jurisdiction for reconciliation in this realm, as opposed to customs crimes which are under the care of administrative bodies like the Ministry of Finance. This was established in 1993.

Timing of Reconciliation

Before the final judicial verdict is issued, under the Customs Law, reconciliation occurs beforehand, but in the Economic Crimes Law, it can occur at any point in the investigation or trial except for after a final verdict. Consequently, both laws are similar in this way [1], (p. 292).

Conditions for Reconciliation

The law concerning Customs is effective, but it doesn't specify much about the reconciliation contract. However, it does mandate that reconciliations must be made before a final judicial verdict is issued. The authority under which reconciliations are accepted lies with the Minister of Finance or someone representing them. Alternatively, the Economic Crimes Law specifies certain conditions for settling cases. These include paying back all of the money or coming to a mutually beneficial reconciliation, getting approval from the competent judicial committee, and having a reconciler from a non-exempt category, such as public employees or those holding administrative, judicial, or military positions [1], (p. 292).

Impact of Reconciliation

Reconciliation has a similar effect on customs and economic crimes—it ceases judicial pursuit and dismisses public prosecution [10], (p. 150). One aspect of punishment is that all offenders should receive an equal penalty for the crime according to the law.

4 Conclusion

It is apparent that the parliament has taken a different approach in handling customs and economic crimes compared to other types of criminal activities. The primary objective of implementing this system is to recuperate lost funds and protect the economy of the state. In essence, this offers a way to suspend legal action against individuals responsible for smuggling offenses and eliminate public prosecution. Similar to Egypt and Algeria, Jordan has instituted a reconciliation system for customs violations, but there are variations in the fines and terms specified in each law. The Jordanian Customs Law and the Economic Crimes Law have distinct reconciliation procedures—we've outlined their discrepancies and parallels. In our examination, we discovered the Customs Law to be better aligned with the essence of reconciliations, as it refrains from outlining specific reconciliation conditions and exempting certain persons from the process. This upholds reconciliations' objective of recouping evaded finances and circumventing protracted lawful proceedings. Customs smuggling offenders must face stricter consequences under an amended customs reconciliation system. Improved stringency is necessary for enhancing the fight against financial loss to the treasury from fees and fines, as well as achieving both general and specific deterrence.

4.1 Results

1. Issuance of a final judgment from the court is the only instance where a reconciliation contract for customs smuggling crimes cannot be concluded as set by the legislation.
2 Halting criminal pursuit and dropping public prosecution are the outcomes of settling a customs crime agreement.

4.2 Recommendations

1. To intensify the battle against customs smuggling, the team of researchers suggests that the legal system adjust its reconciliation regulations for such offenses. Specifically, the researchers recommend that repeat offenders face higher fines or be prohibited from reconciling. Goals include boosting general and specific deterrence and enhancing overall enforcement efforts.
2 Prohibiting customs reconciliation for those who commit customs smuggling crimes must be put in place by authorities, particularly for prohibited or specifically prohibited smuggled goods. It is essential to protect the health and safety of society from possible dangers these goods carry. As suggested by researchers, this should be prioritized to address smuggling issues effectively.

The Role of Technology in Validating Arbitration Awards and Enhancing Commercial Security

Mohammad Mahmoud Aldaoud, S. El-Manaseer, Dema Matruk Aloun, Mohammad Basheer Arabyat, and Mohammad Ali Alsarhed

Abstract This study examines various aspects of the validity of an arbitration award and its enforceability in different legal contexts, with particular emphasis on the role of technology in this context. Generally, in many jurisdictions, to enforce an arbitration award, you must obtain a court order because the award itself is not enforceable. This study used a descriptive approach to analyze the texts of different legal arbitration laws and a comparative method to read the differences between some legal systems in terms of the validity of an arbitration award and the necessary steps to enforce it. This study covers all the aspects and phases that need to be gone through to ensure that an arbitral award is enforceable in order to prove its legal effects and how this can be facilitated through technology.

Keywords Arbitration awards · Commercial security · Technology · Comparative method

1 Introduction

With the dynamism of the global trade market and the increase and decrease of direct foreign trade injection, coupled with the continuous escalation of interpersonal, corporate and national conflicts, arbitral awards have become the main way to resolve

such disputes. This article explores the importance of arbitral awards in enhancing the security of international trade. This article focuses specifically on arbitration and its effectiveness in dispute resolution, as rapid decision-making in a highly politicized environment outside the country's traditional legal system can significantly shorten the duration of a dispute by building a high level of trust between the disputing parties. A controlling feature of arbitration is its increased confidentiality, which is a natural feature of the nature of arbitration in resolving commercial disputes. It guarantees the confidentiality of the injured party's reputation and proprietary business information, ultimately improving the overall security of international business transactions: the confidentiality of the arbitration process helps speed up the entire dispute resolution process and maintains the business integrity and privacy of the parties. Interested parties. Together, these two factors enhance mutual trust in international trade transactions. For example, in addition to protecting private information, a safe space for arbitration protects reputational capital. In court, parties must defend their public reputations and may face some stigma as a result of the lawsuit. Arbitration, by contrast, resolves conflicts behind closed doors, a feature that, like privacy, protects parties by eliminating the risk of the litigation being viewed negatively by the media.

1.1 Problem Statement

The second type of challenge concerns the impact of deviations from national legislative rules on the enforcement and recognition of commercial arbitration awards, which necessarily requires more complex research into the validity of arbitral awards. This challenge poses a significant obstacle to the general issue of cross-border commercial security, and differences between national laws can lead to difficulties in the enforcement of arbitral awards and pose obstacles to the effectiveness of such dispute resolution. The variability of national legislation creates a problem: the enforcement or recognition of arbitral awards is sometimes blocked due to different legal frameworks applicable in different jurisdictions. Will this affect the uniformity and consistency of the enforcement process and ultimately the quality of arbitral awards in a transnational context? The diversity of national legislation raises serious issues that need to be addressed in order to enhance the reputation and usefulness of arbitration in the international market. When arbitral awards are hampered by the intersection of different laws, the lack of clarity can undermine cross-border trade security itself and undermine parties' willingness to enter into cross-border commercial relationships. If there is uncertainty as to whether an arbitral award should be enforced or recognized abroad, parties may lack the necessary institutional framework to build the trust that is critical to international commercial relationships. It is necessary to have an ongoing, nuanced understanding of applicable global principles and legal systems in many different jurisdictions around the world. This will hopefully lead to some harmonization or at least harmonization of processes and procedures, making the enforcement of arbitral awards in different jurisdictions less complex.

1.2 Study Objectives

1. Analyze the mechanism of arbitration: Understand how the arbitration process works, what factors contribute to the validity of its awards, and what effective means are used to ensure enforcement.
2. Assessing time efficiency: Examining the extent to which arbitration resolves disputes more efficiently and quickly than traditional litigation and how this can help improve business security.
3. Analyze the reputational impact: Examine how arbitration decisions (particularly in relation to the protection of business information) affect the reputation of the disputing parties.
4. Exploring the impact on expectations: Explore how dispute resolution can raise the expectations of individuals and businesses about their rights and responsibilities, thereby increasing business certainty.
5. Analyze the economic impact: Understanding how arbitration affects economic activity and investment can help create a safer trade and investment environment.

1.3 Significance of the Study

Therefore, the main contribution is to emphasize the significant contribution of arbitral awards to the business environment and economic development, especially the importance of the validity and enforceability of arbitral awards. Ultimately, this study aims to demonstrate the potential contribution of arbitral awards to the economy. This study is therefore expected to provide a roadmap on how arbitration contributes to and benefits from a sound business environment in complex ways and how its efficiency and speed in dispute resolution can help mitigate uncertainty and create appropriate business environment. The aim of the project is to break down the boundaries between arbitration and a good business environment and provide a roadmap for how players in the field can make more informed decisions about using arbitration as a dispute resolution tool. Furthermore, studying the interaction between the use of arbitration and increased investment activity promises to be a valuable contribution to the broader economic development debate. Avoiding disputes and favoring arbitration not only reduces risk; They also help to enhance investor confidence, thereby serving as a solid pillar for increased investment flows, which in turn serve as the engine for a virtuous cycle of sustainable and lasting economic growth, an environment in which effective arbitration can play a fundamental role.

1.4 Methodology

The study adopts a descriptive approach to examine in detail the legal framework for arbitration in Jordan and Egypt. The analytical approach using a descriptive approach

aims at scrutinizing the wording of the two arbitration laws, allowing us to deal with complex texts, providing us with a wealth of information embedded in the legal texts and helping to address the guiding principles of the legal framework. Validity and enforceability of arbitration awards based in Jordan and Egypt. Furthermore, the work will be comparative: the differences and similarities between Jordanian and Egyptian legislation regarding the validity and enforcement of arbitral awards will be examined through the methodological lens of informed choice. The comparative approach used in this work serves as a guide and highlights the different legal paths taken by each jurisdiction. The comparison of Jordanian and Egyptian law is intended to highlight differences or similarities that may arise and to provide a clear and careful perspective on the complexities of arbitral awards. The main purpose of this comparative approach is to identify nuances that help explain why and under what conditions an arbitral award is enforceable, i.e. how it acquires legal effect. In this way, the study of legal texts becomes interpretive research and ultimately yields insights relevant to arbitration debates. The study identifies the limits on the enforceability of arbitral awards by highlighting the formal (or informal or super-formal) differences or similarities that can render an arbitral award enforceable (and therefore legally enforceable).

2 Types of Commercial Arbitration Awards

In order to explain the types of commercial arbitration awards, it is first necessary to emphasize the connection between commercial arbitration and commercial disputes.

2.1 Commercial Arbitration

Pursuant to Article 11 of the Egyptian Arbitration Law, the law permits recourse to arbitration to resolve disputes where arbitration is possible. Likewise, the Jordanian legislature has adopted this approach under Article 9 of the Jordanian Arbitration Law of 2001 and its amendments. Most disputes that are resolved by law are matters that allow for settlement. Therefore, given that the majority of cases submitted to arbitration are commercial in nature, arbitration is a viable method of resolving these commercial disputes [1]. Arbitration legislation in this area focuses more on the commercial aspects. This is clear from the title of the Act, which deals with civil and commercial arbitration. Furthermore, Egyptian law specifically regulates commercial issues in Article 2. The legislature therefore prioritized the resolution of commercial disputes through arbitration to reconcile the principles of trade (trust and speed) with the principles of arbitration (speed, reduced costs and reduced effort). Egyptian legislation defines commercial arbitration more clearly than the Jordanian Arbitration Law, which mentions this in Article 3.

2.2 Types of Arbitration Awards

The circumstances giving rise to an arbitral award vary. During the arbitration process, multiple judgments are rendered before a final decision is made. The situation after the final award is issued varies from arbitration to arbitration. Therefore, the types of arbitral awards can be classified according to the different legal and factual circumstances in which they are made:

1. **National and Foreign Arbitration Awards**: Arbitration may result in national or domestic awards, ranging from an arbitration agreement to the issuance of an award in a country. If the award is awarded in another country, it is called a foreign award. In addition, there is a type of adjudication called international adjudication, which is related to international trade and governed by international agreements [2].
2. **In-Person and Absentia Arbitration Awards**: The arbitrator may make an award in the presence or absence of the parties to the arbitration dispute. The absence of one or both parties to the dispute does not prevent the arbitrator from making an award [3]. If a decision is appealed in absentia, both parties will be notified, and upon receipt of the notice, the period to challenge the decision begins. The Egyptian Legislature obliges the arbitrator under Article 24 to deliver a signed copy of the award within thirty days of its issuance. The Jordanian legislature has also stipulated this in Article 42/A [4].
3. **Partial and Complete Arbitration Awards**: An arbitral award may be partial (relating to a particular aspect of the dispute) or complete (relating to the dispute as a whole). The arbitrator may make a partial award during the arbitration process. After the final award is made, the situation changes from partial arbitration to full arbitration. Egyptian and Jordanian legislation allow for the issuance of partial awards in Articles 42 and 40 respectively.
4. **Final and Interim Arbitration Awards**: As part of the arbitration proceedings, certain formalities and procedures are required. The arbitrator may issue interim awards on certain procedural matters (such as the arrangements for meetings or the appointment of experts). These rulings are not final and conclusive on the substance of the dispute. However, once a final award is issued, the judgment becomes final and conclusive and determines its validity. Arbitration awards based on settlement and settlement are considered final as they resolve and resolve the dispute. In addition, there may be arbitral awards that decide certain applications and others, and these awards are also considered final and conclusive judgments [5]. Examples of non-conclusive awards include the Egyptian legislature's statement in Article 36/A: "The arbitral tribunal may appoint one or more experts…" and the Jordanian legislation's statement in Article 28/B: "The arbitral tribunal may Decisions made by experts in whole or in part where written documents are accompanied by Arabic translations…"
5. **Additional Arbitration Award**: Such arbitration award shall be final, however, the document was not issued on the scheduled date of arbitration. This occurs when the court fails to rule on all applications submitted to it. The parties may

apply for the award after the expiration of the arbitration period [6]. The Egyptian Legislature stipulates in Article 51/1: "Even after the expiration of the arbitration period, the parties to the arbitration may apply to the arbitral tribunal for another arbitration award within thirty days after receiving the arbitration award." This is also the case with Article 47/A of the Jordanian legislation.

6. **Interpretative Arbitration Award**: Arbitral awards can be made but may be ambiguous, giving rise to disputes between the parties to the arbitration. The dispute can only be resolved by the parties requesting the arbitral tribunal to issue an interpretive award. The interpreted price is considered part of the original price [7]. The Egyptian Legislature elaborates on this in Article 49/1: "Each party to the arbitration may, within thirty days of receipt of the award, request the arbitral tribunal to explain any ambiguities in its wording." Jordanian Legislature No. This is also discussed in Article 45/A.
7. **Corrective Arbitration Award**: After the arbitral tribunal renders its award, there may be material errors. The error may be corrected by further award of the arbitral tribunal or at the request of the parties. The Egyptian Legislature provides for this in Article 50/1, and the Jordanian Legislature has a similar provision in Article 46/A.
8. **Urgent Arbitration Award**: The issuance of a final award requires sufficient time to submit applications, hear witnesses, review documents and consider expert reports. Due to the nature of certain disputes, arbitral tribunals may need to issue interim and interim awards on an urgent basis to protect the rights of the parties. The arbitral tribunal shall issue such emergency award in accordance with the agreement between the parties to the arbitration and shall delegate such power to the arbitrator[2]. The Egyptian Legislature mentions this in Article 24/1. Unlike the Egyptian Legislature, the Jordanian Legislature has given the arbitral tribunal the power to make interim awards without the consent of the parties, allowing the arbitral tribunal to make such awards without being bound by the wishes of the parties. The legislature also allows the arbitral tribunal to make interim awards or arbitral awards on partial applications before rendering a final judgment ending the entire dispute, in accordance with Article 40 of Jordanian legislation.

3 Validity of Commercial Arbitration Award and Its Legal Effects

This section covers various aspects related to the validity of commercial arbitration awards, including the concept of validity, scope, connection with public policy, and validity and termination.

3.1 Concept of Validity of Commercial Arbitration Award

Validity here refers to a judgment that reflects the authenticity of the matters decided by the parties within the scope of the reasons stated in the lawsuit [8]. This means that what has been submitted to and decided upon by the judiciary cannot be reconfirmed in proceedings before the judiciary unless the methods and time limits prescribed by law are followed [9].

The concept of the validity of an arbitral award is similar to that of a court judgment. An arbitral award has the same effect as a court judgment prescribed by the legislative body. The Supreme Court of Appeal of Egypt ruled in Appeal No. (2010/64) on January 22, 2008 as follows: "The arbitrator's award, like a court award, becomes effective with respect to the subject matter upon issuance and shall remain in force as long as the award is The power remains."

Once an arbitral award is made, it takes effect on the matters decided and has two functions. First, respecting the person making the decision has a positive impact. Secondly, the negative impact of preventing judicial authorities or other arbitral tribunals from re-examining the dispute. The arbitration agreement itself has both positive and negative consequences. If the parties agree to submit a dispute to arbitration, they undertake to submit it to an arbitral tribunal to obtain a binding arbitral award without resorting to the relevant judicial system. The positive effect forces the parties to comply with the arbitration procedure, while the negative effect prevents the dispute from being brought before the judiciary again in the presence of a valid arbitration agreement.

The validity of the arbitral award is confirmed if the causes and subject matter of the previous and current disputes are consistent. In this case, the party who obtained the award has the right to assert the validity of the award (the validity of the matter decided). The Jordanian legislature expressly recognizes the validity of the arbitral award in accordance with Article 52 of the Jordanian Arbitration Law No. 16 of 2018.

However, there are jurisprudential disputes over the validity of arbitral awards made by private parties rather than by judicial authorities. Some object to the validity of arbitral awards rendered by non-judicial bodies, while others argue that validity is determined from the date of the award and not necessarily by an execution order. It is generally believed in the legal community that an award takes effect from the date of the award, regardless of whether it is promulgated or executed. Reaching consensus does not require announcement or submission of the award; a written and signed judgment is sufficient [10].

3.2 Scope of Validity of Commercial Arbitration Award

After understanding the concept of validity, we clarify its scope from two aspects: the subject matter (the location of the dispute) and the personal scope (the parties to the dispute).

Subject Matter Scope

The subject matter of the dispute relates to a dispute before the arbitral tribunal. The validity of the arbitration award is limited to the scope of the dispute resolved by the award. The arbitral tribunal is obliged to rule only on the dispute raised and its decision shall not go beyond the scope of that dispute. An arbitral award may be set aside if the arbitral tribunal makes an award on a matter that is not in dispute. However, if the arbitral tribunal fails to rule on part of the dispute, the effectiveness of the arbitral award does not extend to the unawarded part, and the parties may seek additional awards. If approved, its validity will also apply to these additional judgments [8].

The determination of the subject matter of the dispute is crucial to the scope of application. Once the matter is decided, it shall not be brought before the Judiciary or any other tribunal again for the purpose of maintaining the validity of the matter decided. This clarifies the legal position of the parties, and its effect only applies to substantive matters, excluding procedural matters such as court rulings without jurisdiction. In this case, the reopening of the proceedings is allowed, the validity of which is limited to the substantive subject matter of the dispute [3].

Personal Scope

The validity of the arbitration award is only valid for the parties to the dispute. It applies to the original parties to the arbitration agreement and the arbitral award is not enforceable against third parties. A party who is an agent or representative of a legal entity enjoys the validity of an award only in its original capacity and not as an agent or representative [8].

In this personal area, the legal position of the parties in the arbitration proceedings is taken into account. An individual can serve as an agent or representative of a legal person, and the effect remains with the original person. If there are multiple parties to the dispute, the lawsuit will be brought against the specific party and the judgment will not affect other parties not involved in the dispute. Challenges to the validity of an arbitral award may be directed against general and specific legal successors. The enforcement of an arbitral award may cause damage to the parties, but it does not affect the rights of non-parties [11].

The personal scope of commercial arbitration is relative. Enforcement of commercial arbitration judgments is entirely directed at the parties, enabling them to benefit from the legal consequences of the judgment. However, the validity of the judgment can also be challenged against third parties. The legal effect of the arbitration award is limited to the parties to the dispute and does not extend to third parties. Jordan's

Supreme Court ruled that "the arbitrator's award applies only to the parties to the dispute."

Validity is therefore the legal description attached to an arbitral award, the impact of which is both positive, insofar as it involves respect for the arbitral award, and negative, in that they prevent disputes from being heard again before judicial bodies or other courts.

It should be noted that challenges to an arbitral award can also be brought against non-parties, such as guarantors. However, the guarantor is not bound by the validity of the arbitration award. Instead, legal action is taken based on contractual obligations arising from the security agreement. The same applies to general and special heirs, legal representatives and legal representatives who each challenge the arbitral award in accordance with their respective legal principles.

The issue of extending the validity of commercial arbitration awards arises in the context of corporate groups. The effects of the arbitration award will extend to these companies if their financial liability is consolidated and they have separate legal personalities. However, if each company within the group has its own legal personality and financial responsibility, an arbitral award can only be challenged against the parties to the arbitration agreement [11].

4 Effects of the Validity of Commercial Arbitration Award

We will now examine in more detail the impact of the validity of a commercial arbitration award on parties to a commercial dispute or third parties and explain when validity ends.

4.1 Effects of the Validity of Commercial Arbitration Award

The issuance of a legally binding commercial arbitration award has the following legal consequences for the parties to the dispute:

1. **Enforcement Obligation**: Parties to commercial disputes are obliged to enforce commercial arbitration awards. An arbitral award is binding and final and enforcement is generally voluntary and at the option of the party against whom the award is made. This is consistent with the original intention of arbitration, which is to speed up litigation procedures, save time and reduce costs, and is also a practice encouraged by international arbitration institutions [5].
2. **Prohibition of Rediscussing the Dispute**: Due to the validity of a commercial arbitration award, parties are obliged not to submit disputes resolved by arbitration to judicial authorities or any other arbitral proceedings, even if an order for enforcement of the award has not yet been issued. This helps stabilize and

safeguard an individual's legal rights and status and prevents unnecessary waste of time and expense by re-litigating disputes [12].

3. **Conclusion of the Arbitral Tribunal's Task**: The validity of a commercial arbitration award means the completion of the task of the arbitrator or arbitral tribunal. With the issuance of the award that ends the dispute, the arbitrator's job ends, except to correct significant errors in the award or to complete overlooked aspects [5].

4.2 Termination of the Validity of Commercial Arbitration Award

The validity of commercial arbitration awards is considered provisional. It relates to the arbitral award and remains unaffected even if no execution order has been issued, a dispute over the arbitral award's annulment has been raised or an action to set aside has been instituted. However, the validity of the arbitral award terminates upon the issuance of a judgment declaring that the arbitral award is set aside. In such event, the award will be deemed to have never existed and, upon execution of the award in whole or in part, the matter will revert to its previous status.

It is important to note that the validity of the award will remain in effect as long as the award remains in force and has not been revoked. The Cairo Court of Appeal ruled that the validity of the arbitral award continues as long as it remains valid without annulment. This is evidenced by Case No. 76 of 2007, in which the court stated: "Arbitration is a special way of resolving disputes, which is different from ordinary court procedures. Although arising from the will of the parties, the award of the arbitral tribunal is valid. "The arbitral award shall take effect once it is made and shall remain in effect while the arbitral award is valid and has not been revoked" [13].

5 Conclusion

This endeavor is made easier by the fact that arbitration ultimately uses state coercion to enforce awards made by arbitral tribunals. Arbitral awards are instruments of justice that allow the legitimate holder of a right to use state coercion to enforce that right and compel the debtor to comply with its obligations. Of course, international arbitration law is primarily concerned with the details of arbitral awards. Various provisions of the Arbitration Rules have been issued to regulate the subject matter of arbitral awards. This is an arbitral award worthy of recognition and lawful. Commentators have thought about what it is and what conditions it must satisfy in order to be recognized and therefore valid (in the sense of having legal force). The second clause concerns the question which court should be the competent court to issue an order for the enforcement of an arbitral award. The legislation regulates

the enforcement procedures for arbitral awards by clarifying the legal procedures that must be followed to convert an arbitral award into a legally binding court order. In addition, rules are established to clarify what documents must be submitted in order to enforce an arbitral award. These documents are used to prove the validity of the arbitration award and form the evidentiary basis for enforcement. All of this highlights the careful attention to documentation of arbitral awards as part of maintaining the validity and security of court awards. The legislature has also addressed the conditions for the validity of arbitral awards by establishing legal standards that ensure that arbitral awards are well-founded and binding. The purpose is to exclude any factors that might impair the soundness and enforceability of the arbitration proceedings. In addition, the law governing arbitration provides for further time limits within which parties may seek to enforce an arbitral award. This time factor not only provides greater clarity to the proceedings but also alerts parties to the need to act quickly after arbitration, thus improving the ability to resolve disputes in a timely manner. In fact, in the formal arbitration legislation, basic norms and legal conditions have been formulated to regulate the entire procedure leading up to the final award of the arbitral tribunal, thus making the entire award a judgment of conduct. The test of legality can be withstood—an act is stripped of all that might render it invalid. In summary, the laws governing arbitration actually regulate all aspects of arbitral awards. These laws succinctly address the issues of recognition, enforcement, documentation and spatio-temporal conditions of validity and provide a balanced approach to enhance the advantages and effectiveness of arbitration for efficient and effective decision-making in all types of disputes. Legal Enforceability Determinations.

5.1 Results

1. Comparative legislative recognition that arbitration may be permitted to resolve disputes between parties. Domestic law provides for the rules of arbitration, in particular the recognition of arbitral awards and their proper enforcement, whether ratified or not.
2. There are two different concepts of arbitral awards: one involves a broad definition and the other involves a restrictive analysis, including only awards that decide the entire dispute.
3. The arbitral tribunal issues a final award and an interim award.
4. The enforceability of an arbitral award relates to the nature of the dispute and the arbitrability of personal jurisdiction.

5.2 Recommendations

1. The Jordanian Legislature proposes to limit the number of methods for determining the date of a ruling and designate one of these dates as the official date of the ruling for all legal purposes. We recommend that the official date is the date specified by the arbitral tribunal in the award and the date the award is published.
2. We also recommend that the Jordanian legislature define the terms of domestic and foreign commercial arbitration awards.
3. In this context, we recommend that the Jordanian Legislature extend the deadline for submission of applications for additional bonuses.
4. We also recommend that Jordanian arbitration institutions have the power to require parties to provide security for payment of the costs of emergency measures.

The Impact of Technology-Enhanced Governance Standards on Senior Employee Satisfaction in Banks

Khaled Jumah

Abstract The study examines how technology-enhanced governance standards in non-traditional banks influence senior employee satisfaction. A questionnaire was employed, comprising two sections: one gathering information on senior employees and the other including 30 items related to governance standards and employee satisfaction. Out of 210 distributed questionnaires, 196 were completed and analyzed. The results indicate that senior employees are generally satisfied with the implementation of these governance standards, reflecting a positive correlation between technology-driven governance practices and employee contentment. The study's findings are relevant to the broader banking sector and provide valuable insights into how technological advancements in governance can impact employee satisfaction.

Keywords Technology · Governance · Standards · Banks · Satisfaction · Employee satisfaction

1 Introduction

In 1997 many companies collapse and bankruptcy due to the lack of professional ethics, fraud and accounting errors, which negatively affected the global stock exchange and led to the application of the concept of governance in financial institutions to ensure the safety of the banking system, and the safety of the funds invested in it and to avoid the crises that hit many financial and banking institutions in various developed and developing countries [1]. The term governance was used first at the macro level (international) and this is what is known as international governance, and then used at the micro level (establishments) and this is what is known as enterprise governance [2]. Although there are many determinants facing the governance of

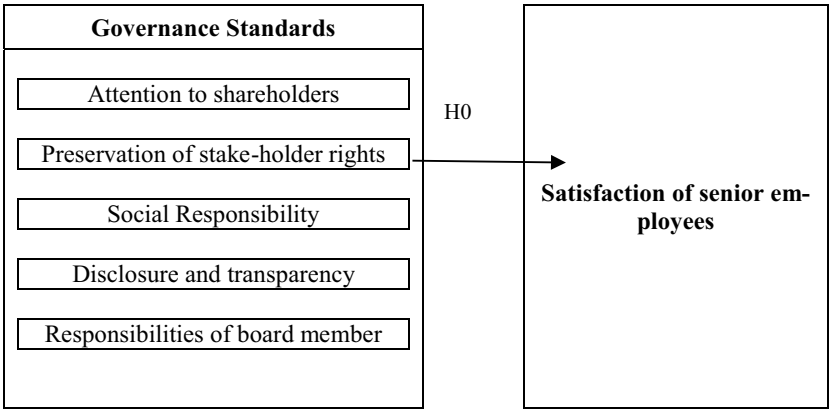
non-traditional financial institutions such as legal determinants and environmental determinants, the governance in Non-traditional financial institutions has a more comprehensive concept than its counterpart in conventional financial institutions because Non-traditional governance adopts financial standards and social standards. Non-traditional banks have relied on permissible and legitimate banking transactions, such as buying and selling, speculation and partnership, benefiting from exchange rates, currency exchange, and adhering to Sharia standards and also adhered to the terms of presentation and disclosure of the financial statements which reflects the governance practices at any time in order to ensure timely disclosure of information, and this information can be published on the bank's website, so that it is easy to access [3]. One of the reasons that led to bank governance is the desire to improve economic efficiency and review and amend the laws governing the performance of increasing the awareness of management officials and stakeholders about the governance of banks and achieving integration with the legal, regulatory, and institutional environment of the bank.



1.1 The Problem of the Study

The problem of the study can be formulated with the following main question: What is the impact of the application of the governance standards of non-traditional banks on the satisfaction of senior employees?

1.2 The Importance of the Study

The importance of this study lies in assessing the impact of applying governance standards on the satisfaction of senior employees. It is expected to contribute to increasing the knowledge yield towards the governance of Non-traditional banks and enrich the national library with an important topic that links the role of governance with the success of Non-traditional banks. Moreover, the importance of the study is manifested practically from its results that may help decision-makers in Non-traditional banks to raise the level of ability to develop strategies in a way that enhances the strengths of the bank.

1.3 The Model of the Study

Source Developed by the researcher

1.4 The Hypotheses of the Study

The main hypothesis

- H0: There is no statistically significant effect at a significance level ($\alpha \leq 0.05$) of the application of governance standards combined (attention to shareholders, preservation of stakeholder rights, responsibilities of board members, disclosure and transparency, and social responsibility) on the satisfaction of senior employees in Non-traditional banks.

The sub-hypotheses

- H01: There is no statistically significant effect at a significance level ($\alpha \leq 0.05$) for attention to shareholders as one of the governance standards on the satisfaction of senior employees in Non-traditional banks.
- H02: There is no statistically significant effect at a significance level ($\alpha \leq 0.05$) for responsibilities of board members as one of the governance standards on the satisfaction of senior employees in Non-traditional banks.
- H03: There is no statistically significant effect at a significance level ($\alpha \leq 0.05$) for preservation of stakeholder rights as one of the governance standards on the satisfaction of senior employees in Non-traditional banks.
- H04: There is no statistically significant effect at a significance level ($\alpha \leq 0.05$) for disclosure and transparency as one of the governance standards on the satisfaction of senior employees in Non-traditional banks.

- H05: There is no statistically significant effect at a significance level ($\alpha \leq 0.05$) for social responsibility as one of the governance standards on the satisfaction of senior employees in Non-traditional banks.

1.5 Terminology

Governance: is to strengthen the monitoring of the institution's activity towards achieving the goal and may be separate from it or related to the administration, and there are a number of people in government to manage the activity. Governance—Wikipedia (wikipedia.org).

Non-traditional banking: means the banking system or activity which is Sharia-compliant. (https://ar.wikipedia.org/wiki/Islamic_banking).

Satisfaction: It relates to the employee's expectations and what he actually gets. These expectations may be personal and different from the expectations of others for several reasons, including functional and psychological reasons. (https://hbrarabic.com/Managerial/Job-SatisfactionConcepts).

2 Literature Review

The study of Simona [4] showed the strengths and weaknesses faced by stakeholders when applying corporate governance standards, and the study also showed the role of the depositor when applying non-traditional bank governance models. The study of Ali Jan [5] developed a number of proposals to promote sustainable development of governance procedures for Non-traditional banks and encourage banking services to grow. The research focused on the basic elements of the governance of Non-traditional banks, in terms of legitimacy, ownership and impact on the social environment. Alam study [6] concluded that social and political restrictions have a significant impact on performance. Alam [7] showed that the Non-traditional banks in Bangladesh are the ones who ratify and approve the business of Non-traditional banks. The study carried out by Reyad [8] aimed to identify the challenges associated with the operations of brokers due to the risks of not following Non-traditional law, and the results of the study showed that brokers manage their business well during bank governance. Tashkandi study [9] included a sample of 27 brokers, and the study was conducted between 2005 and 2020, showed that Sharia supervision has a significant impact on identifying intermediaries. A study of Hana [1] showed that the bank's financial performance, in a number of Gulf countries found that brokers feel that there is a relationship between quality and financial performance and that brokers value the effectiveness of the Sharia Supervisory Board much more than traditional governance mechanisms. Kausar's study [2] showed that SG emphasizes

the need to comply with Non-traditional law and considers development an important basis for applying the principles of non-traditional law. Idah [3] explained the importance of scientific publications related to Non-traditional banks and there are a number of important topics when studying Non-traditional banks, including governance, auditing, and supervision. The most important feature of our study is that it is the first study, which deals with the identification of governance standards that achieve the satisfaction of senior employees in Non-traditional banks, in addition to that it will provide a number of recommendations to develop and improve the standards. The study conducted by both Khleel and Ali [10] showed that there is a correlation between governance and its dimensions. The study suggested the necessity of applying governance in universities because it reflects the systems and laws that lead to quality. Riffat [11], compared the performance of Non-traditional and commercial banks in Saudi Arabia and concluded that Non-traditional banks have the ability to achieve profits, in addition to that the activity of these banks is greater than others.

3 Methodology

3.1 Participants

After reviewing the questionnaires, (14) were excluded due to leaving some data and questions blank, and thus the sample size reached (196) respondents. From Table 1 we notice that 75.0% of the sample are male and 37.8% with age from 40 to less than 50 years old. Also 60.7% of the sample have Bachelor degree and 43.4% number of years of service in the bank is from 15 years to less than 20 years.

3.2 The Questionnaire

The questionnaire included two parts, the first part contained information about the senior employees. The second part included 30 paragraph related to governance standards in Non-traditional banks, and satisfaction of senior employees.

3.3 Validity and Reliability

The questionnaire was presented to a number of specialists in universities and experts in Non-traditional banks, and it was amended after taking into consideration their observations and recommendations. The stability coefficient Cronbach's Alpha was extracted and reached 0.78, which is acceptable for research purposes.

Table 1 Sample characteristics

Variable	Frequency196	%100
Gender		
Male	147	75.0
Female	49	25.0
Age		
Less than 40	60	30.6
From 40 to less than 50	74	37.8
50 and more	62	31.6
Qualification		
Bachelor	119	60.7
Graduate	77	39.3
Number of years of service in the bank		
Less than 15 years	77	39.3
From 15 years to less than 20 years	85	43.4
20 years and above	34	17.3

3.4 Limitations

- Human Limitations: The study was limited to senior employees in Non-traditional banks
- Time limitations: The study was conducted in the first semester of the academic year 2023/2024
- Subject Limitations: Governance standards in Non-traditional banks and their impact on the satisfaction of employees in supervisory positions.

3.5 Analysis and Discussion

The study included an independent variable, which is the standards of governance of Non-traditional banks and a dependent variable, which is the satisfaction of senior employees. The descriptive analytic approach was used and a questionnaire designed for the purpose of research, data collection and hypothesis testing was adopted.

What is the impact of the application of the governance standards of non-traditional banks on the satisfaction of senior employees? We used descriptive statistics and inferential statistics Table 2.

Table 2 shows that the means of all variables are higher than 4.4 out of 5.The employees preserving variable has the highest mean 4.7265.The satisfaction with the lowest mean 4.4490.

This means that the respondents feel strongly (almost 4.7265 out of 5) about the employee preserving meaning that they are satisfied with the application of the governance standards.

Table 2 Means and the standard deviations

	Mean	Std. deviation
Stakeholders attention	4.6265	0.55885
Preserving the rights of stakeholders	4.7265	0.38258
Responsibilities of the members of the Board of directors	4.6602	0.54070
Disclosure and transparency	4.6459	0.53869
Social responsibility	4.5357	0.61482
Employee satisfaction	4.4490	0.73425
Valid N (listwise)		

H0: There is no statistically significant effect at a significance level ($\alpha \leq 0.05$) of the application of governance standards combined (attention to shareholders, preservation of stakeholder rights, and responsibilities of board members, disclosure and transparency, and social responsibility) on the satisfaction of senior employees in Non-traditional banks. Tables 3, 4 and 5 showed the results.

Table 3 shows that R = 0.783 which means that the Correlation Coefficient between the governance standards of the independent variable and the dependent variable is 0.783 which is a big value. Also the Coefficient of Determinantion is $R^2 = 0$ 0.613, meaning that 61.3% 0f the variation in employees' satisfaction is explained by the independent variable.

Table 4 shows that F = 60.117which is larger than the tabulated value, and Sig = 0.000 meaning that the regression of employees satisfaction on the independent variable is significant.

From Table 5 we see that VIF (Variance Inflation Factor) of each dimension of the Independent Variable is less than 5.This means that the dimensions are not highly related and therefore all of them can be included in the analysis. Tolerance is 1/VIF and must be > 0.2 for each dimension to be included in the regression analysis, which is the case.

Table 3 Model summary M1

Model	R	R square	Adjusted R square	Std. error of the estimate
1	0.783	0.613	0.603	0.46292

Table 4 ANOVA M1

Model		Sum of squares	df	Mean square	F	Sig.
1	Regression	64.414	5	12.883	60.117	0.000
	Residual	40.716	190	0.214		
	Total	105.130	195			

Table 5 Coefficients M1

Model	Unstandardized coefficients		Standardized coefficients	t	Sig.	Collinearity statistics	
	B	Std. error	Beta			Tolerance	VIF
Stakeholders attention	0.597	0.115	0.454	5.194	0.000	0.266	3.757
Preserving the rights of stakeholders	0.020	0.104	0.010	0.190	0.849	0.693	1.443
Responsibilities of the members of the Board of Directors	− 0.121	0.097	− 0.089	− 1.245	0.215	0.397	2.516
Disclosure & Transparency	0.408	0.117	0.299	3.499	0.001	0.279	3.587
Social responsibility	0.176	0.089	0.147	1.970	0.050	0.366	2.735

Table 5 gives the regression coefficients B's of the 5 dimintions of the independent variable and shows which ones are significant and which ones are not significant by giving the values of t and Sig.

It is seen that, Stakeholders attention and Disclosure and Transparency have statistically significant effect on employees satisfaction with Sig = 0.00 and 0.001 respectively, Stakeholders attention effect B = 0.597. Disclosure and Transparency affects employees' satisfaction positively with B = 0.408 meaning that every change of one unit in Disclosure and Transparency affects employees satisfaction by 0.408 unit. Social responsibility has positive effect on employees satisfaction with B = 0.176 and Sig = 0.05. This is considered significant since Sig = 0.05(equal to the criterion). It means that every unit of change in social responsibility (with all other dimensions fixed) affects employee's satisfaction by 0.176 unit. Preserving the rights of stakeholders effect is B = 0.020 (small) which means that every unit of change is Preserving the rights of stakeholders will have a small change of (0.020) unit in employees satisfaction. Social responsibility has negative effect B = − 0.121, but is not significant, Sig = 0.215 > 0.05.This mean that every unit change in Social responsibility (with all other dimensions fixed) will affect employees satisfaction with 0.121 unit negatively. Now instead of taking all dimensions of the Independent Variable combined, we shall test the effect of each dimension by itself. This is done by testing the following:

Testing H01

The results of testing H01 as follows:

From Table 6, it is seen that the Correlation Coefficients is 0.753 which is large, and the Coefficient of Determinantion is $R^2 = 0.567$ meaning that 56.7% of the satisfaction of senior employees is explained by Stakeholders attention.

Table 6 Model summary M2

Model	R	R square	Adjusted R square	Std. error of the estimate
1	0.783	0.613	0.603	0.46292

Table 7 shows that the regression coefficient is B = 0.989, t = 15.922and Sig = 0.000 < 0.05which means that Stakeholders attention has a significant effect on the satisfaction of senior employees. Regression coef B = 0.989 means that one unit change in Stakeholders attention made a change of 0.989 unit in employees satisfaction.

Testing H02

The results of testing H02 are given in Tables 8 and 9.

From Table 8, it is seen that the Correlation Coefficients is 0.511 which is fairly large, and the Coefficient of Determinantion is $R^2 = 0.261$ meaning that 26.1% of the satisfaction of senior employees is explained by responsibilities of board members.

Table 9 shows that the regression coefficient is B = 0.694, t = 8.286 and Sig = 0.000 < 0.05which means that responsibilities of board members has a significant effect on the satisfaction of senior employees.

Testing H03

The results of testing H03 are given in Tables 10 and 11.

Table 7 Coefficients M2

Model		Unstandardized coefficients		Standardized coefficients	t	Sig.
		B	Std. error	Beta		
1		− 0.126	0.289		− 0.436	0.663
	Attention	0.989	0.062	0.753	15.922	0.000

Table 8 Model summary M2

Model	R	R square	Adjusted R square	Std. error of the estimate
1	0.511a	0.261	0.258	0.63265

Table 9 Coefficients M2

Model		Unstandardized coefficients		Standardized coefficients	t	Sig.
		B	Std. error	Beta		
1		1.213	0.393		3.087	0.002
	Responsibility	0.694	0.084	0.511	8.286	0.000

Table 10 Model summary M3

Model	R	R square	Adjusted R square	Std. error of the estimate
1	0.280	0.078	0.074	0.70667

Table 11 Coefficients M3

Model		Unstandardized coefficients		Standardized coefficients	t	Sig.
		B	Std. error	Beta		
1		1.908	0.627		3.042	0.003
	Preserving	0.538	0.132	0.280	4.065	0.000

From Table 10, it is seen that the Correlation Coefficients is 0. 280 which is large, and the Coefficient of Determinantion is $R^2 = 0.078$ meaning that 7.8% of the satisfaction of senior employees is explained by preservation of stakeholder rights members

Table 11 shows that the regression coefficient is B = 0.538, t = 4.065and Sig = 0.000 < 0.05which means that preservation of stakeholder rights members is significant.

Testing H04

The results of testing H04 are given in Tables 12 and 13.

From Table 12, it is seen that the Correlation Coefficients is 0. 717 which is fairly large, and the Coefficient of Determinantion is $R^2 = 0.514$ meaning that 51.4% of the satisfaction of senior employees is explained by disclosure and transparency.

Table 13 shows that the regression coefficient is B = 0.978, t = 14.336 and Sig = 0.000 < 0.05which means that disclosure and transparency has an effect on impact application of the governance standards on the satisfaction of senior employees.

Table 12 Model summary M4

Model	R	R square	Adjusted R square	Std. error of the estimate
1	0.717	0.514	0.512	0.51297

Table 13 Coefficients M4

Model		Unstandardized coefficients		Standardized coefficients	t	Sig.
		B	Std. error	Beta		
1		− 0.093	0.319		− 0.291	0.771
	Disclosure	0.978	0.068	0.717	14.336	0.000

Table 14 Model summary M5

Model	R	R square	Adjusted R square	Std. error of the estimate
1	0.671	0.451	0.448	0.54559

Table 15 Coefficients M5

Model		Unstandardized coefficients		Standardized coefficients	t	Sig.
		B	Std. error	Beta		
1		0.812	0.291		2.793	0.006
	Social responsibility	0.802	0.064	0.671	12.616	0.000

Testing H05

The results of testing H05 are given in Tables 14 and 15.

From Table 14, it is seen that the Correlation Coefficients is 0. 671 which is fairly large, and the Coefficient of Determinantion is $R^2 = 0.$ 0.451 meaning that 45.1% of the satisfaction of senior employees is explained by social responsibility.

Table 15 shows that the regression coefficient is $B = 0.802$, $t = 12.616$ and $Sig = 0.000 < 0.05$which means that social responsibility has an effect on impact application of the governance standards on the satisfaction of senior employees.

3.6 Results

The results of the questionnaires were analyzed and whereby that tolerance must be > 0.2 for each dimension to be included in the regression analysis, which is the case. The regression coefficients B's of the 5 dimension of the independent variable shows which ones are significant and which ones are not significant by giving the values of T and Sig.

It is seen that, attention and disclosure have statistically significant effect on employees satisfaction with $Sig = 0.00$ and 0.001 respectively, attention effect $B = 0.597$ i.e. it affects employees satisfaction and disclosure affects employees' satisfaction positively with $B = 0.408$. Social responsibility has negative effect, but not significant, $Sig = 0.215 > 0.05$. Social responsibility has $B = 0.176$ with $Sig = 0.05$ meaning that social responsibility affect the employees satisfaction. When each dimension was tested through simple regression, it was found that all five dimensions each separately affect employees' satisfaction positively.

3.7 Recommendations

1 Training employees in Non-traditional banks and developing their skills in the field of governance.
2 Empowering employees to apply governance standards to be able to implement them effectively.

The Future of Digitizing Manuscripts: Technological Visions and Trends

Alalddin Al-Tarawneh and Ali AlRahamneh

Abstract This study examines the practices of digitizing manuscripts and the development of some technological tools in this area. The article focuses on the development of the field of digitization of manuscripts. Discusses the use of software for this purpose to adapt it to a specific field, the method of organizing manuscripts so that the organization is consistent and appropriate, the network development used to network these collections, the use of some hardware upgrades, and other activities aimed at improving the usability of digitized collections. This article discusses global developments in information technology, the development of digital media and its developments in order to predict the possible impact of these changes on the field of manuscript digitization. The chapter argues that more should be invested in digital technologies than in old preservation methods, which are based on the changing development of the librarian profession, as was the case in the era of information and communication technologies. It is still rich in manuscripts that reflect much of its culture and history. These manuscripts are kept as a legacy for future generations, as they are considered intellectual heritage and one of the basic sources of information. This article reviews the status of digitized manuscripts, forecasts the future development of this technological field, and discusses the achievements that have been achieved. Although the study is narrow, the final recommendations and discussed conclusions help towards new steps in manuscript digitization.

1 Introduction

To truly understand manuscripts, one must first delve into their geographical, historical, and cultural surroundings. It is clear that each manuscript is a product of its environment, with its socio-economic, political, cultural, and spiritual climate reflected within its pages. By gaining insight into the broader landscape, we can approach the handling and digital preservation of these manuscripts with greater coherence and foresight.

The people of Oman had a talent for shipbuilding and navigation, and their country was an important connector between Arab countries and other regions. Strategically located at the meeting point of three continents and four seas, Oman played a crucial role in connecting countries along the Indian Ocean coast. The friendly Omanis readily interacted with diverse cultures from around the world, forging strong ties with regions including the Arabian Gulf, Europe, the Far East, and the eastern coasts of Africa [1]. According to historian Miles, Oman played a vital role in bridging the gap between Mesopotamia and India, thanks to the seafaring skills of its inhabitants. Oman's geographical location granted it influence in the Gulf, the Indian Ocean, and even the Mediterranean basin. In fact, Miles also notes how Omani merchants helped transfer the cultures of Mina, Babylon, and Susa to India. As a result, Indians learned and embraced various fields of study, such as philosophy, astronomy, mathematics, and chemistry, from these civilizations [2]. In the sixteenth century, Oman was a rising empire that battled for power in the Arabian Gulf and East Africa against Portugal and the United Kingdom. Going even further back in time, Oman's inhabitants were amongst the earliest followers of Islam and actively proselytized their faith, earning the moniker "Land of Peace" from scholars [3].

Dating back almost a millennium, the Omani manuscript embodies a distinctiveness unique to its time period. It stands as an exemplary testament to Oman's past, holding the title as the eldest of its kind to be found within the country's boundaries. Despite numerous Omani manuscripts extending outside Oman, the abundance of manuscripts present in foreign lands still manage to exceed established knowledge. Oman has taken measures to ensure their preservation while promoting access via technological advancements, which aligns with similar efforts executed by countries internationally [4]. Since 2005, Oman has taken up the practice of "manuscript digitization" which has been in use worldwide for two decades now [5]. This study delves into certain facets of "manuscript digitization" peculiar to the Sultanate of Oman.

2 Methodology

Within this research, two primary facets of significance come to light: theoretical and practical. As we navigate the scientific variables of today's world, it is essential to keep pace with the interactions and effects brought about by the revolution of

information technology and communication, in all aspects of life. Manuscript digitization, a critical pillar of our national and cultural heritage, holds utmost humanitarian dimensions [6]. This significance is even more pronounced in Oman, with its rich intellectual heritage, where the digitization of Omani manuscripts takes on particular importance within the academic theoretical framework. Given Oman's expanding interest in utilizing digital tools to broaden access to handwritten heritage for researchers and enthusiasts, it's important to showcase the tools and means that are available, as well as their practical and scientific substantiations [7]. Moreover, the chapter seeks to address the following queries:

1. The digitization of manuscripts has seen various advancements, but what are the key elements that define this process?
2. The digitization of Omani manuscripts has yielded what successes for the Sultanate of Oman?
3. Prospects for advancing the digitization and development of Omani manuscripts are currently being considered in view of new developments, available possibilities, and constraints. What proposals are on the table for these future efforts?

3 Literature Review

The study conducted by Al-Nabhani and her associates [8], delving into Arabic studies sought to pinpoint the endeavors of information organizations located in the Sultanate of Oman. The objective was to secure access to information, in order to aid in sustainable development by 2030. Multiple findings were produced by the study; however, the prevalence of four access categories that surpass the established structure of information access, proved to be the most vital. These access categories comprise multilingual access, access to accommodate those with special needs, access attained through education and instruction, and access enabling dissemination of the whole spectrum of information. The Cultural Grants Center stands apart, relying on its library to provide information resources, while the other information institutions in the sample offer differing forms of access to all. To meet individual needs, the study recommends the improvement of information access skills and awareness.

Regarding the digitization of manuscripts, Wald Linsari's study [9] delved into the Algerian National Library's experience in this process. The project management and necessary steps for manuscript digitization were specifically examined. The study underscored the significance of this undertaking and provided a rundown of the stages involved. Furthermore, the results of the field study were presented. Ultimately, the importance of meticulously planning out manuscript digitization projects and enhancing human qualifications in both planning and digitization were deemed necessary by the study.

For his research project [10], Jawad took on the challenge of defining the digitization process for manuscripts, along with storage options and organizing tactics to

ensure preservation and online accessibility. He chose an analytical and descriptive method for this task, studying various manuscript catalogs and evaluating the pros and cons of the ones used in the Iraqi Manuscripts Library. His findings suggested the need for a revamped and modernized cataloging system, one that can keep pace with the latest advances in technology. He also discovered that the library lacks a written policy for cataloging and archiving manuscripts electronically, and that older methods are still being used.

Investigating the status of Arabic manuscripts on the internet, Al-Aqou [11] surveyed websites that display these manuscripts in Arabic or other languages such as English. By identifying and analyzing eighty-four specialized websites, the study aimed to assess their quality and status to provide researchers access to these manuscripts. It was also noted that only 10% of such manuscripts are available online.

Omani libraries were the focus of Salem's research [12], intended to ascertain the knowledge level of librarians regarding the Manuscript Protection Law's stipulations, its comprehensibility, and implementation to safeguard manuscripts and ensure their availability. The study also evaluated how this knowledge affected Omani manuscript collection management, particularly in digitization initiatives, exposing gaps in legal comprehension and acknowledgement, and recommending ways to surmount these issues.

In order to prevent the redundancy of plans and objectives, Al-Zahimi investigated the digital projects related to manuscripts in Oman. Their focal point involved assessing the centrality of these projects. During their research, they examined projects by the Ministry of Heritage and Culture, the Ministry of Awqaf and Religious Affairs, Sultan Qaboos University, and Oman Digital Library (Kokb AlMa'arifa). According to their study, the first digitization project in Oman was founded in 2005, however, there was a lack of a clear written policy regarding digitization projects for Omani manuscripts during the study. In 2010, Kokb AlMa'arifa contained 3000 digital manuscripts whereas the Ministry of Awqaf and Religious Affairs held the majority with about 14,000 manuscripts. Meanwhile, the Ministry of Heritage and Culture owned 1300 manuscripts and Sultan Qaboos University had a collection of 6000 manuscripts. However, the study revealed that there was a clear absence of cooperation among digitization initiatives within Oman, suggesting the need for a solitary governmental organization to establish a consistent national policy on manuscript digitization and effectively implement it.

Synthikomar's research [13] investigated digitization techniques, with a particular focus on libraries and manuscripts. The study found that individuals often fail to make full use of these tools, resulting in a negative impact on the availability of knowledge and information. The study further explored various avenues such as technologies, software, file formats, and storage within this complex field.

In the examination conducted by Phillips and Tabrizi [14], the digitization process for historic documents was explored. An evaluation of digitization approaches and technology was analyzed over the past few decades alongside newer advances. Their inquiry focused on developments within the equipment, devices, and digitization software, noting significant shifts within this area. Elucidation was given on the

formation and function of algorithms, tools, and databases relevant to the manuscript processing field.

In order to take stock of the digitization of Iranian manuscripts, Madden and Saifi's [15] research honed in on how digitizing the Iranian manuscript heritage has become a topic of interest within numerous institutions, such as the National Library and Iranian Archives. A vast array of digital alternatives for preserving Iranian manuscripts were considered and reviewed. The significance of digitization in the preservation of Iranian manuscript heritage was explored, with emphasis on issues like the vulnerability of manuscripts and the benefits of enhancing access for researchers who would otherwise be limited by physical restrictions.

4 Digitizing the Manuscripts

Using cameras, scanners, and various electronic devices, digitization is the process of transforming physical objects into a digital format. According to the UNESCO Basic Principles for Digitization document, this involves a series of stages, from selection and evaluation to differentiation and preparing assets for digitization. The process also includes creating metadata, imaging, digitizing selected sources, and publishing digital resources through access systems and digital repositories [16, 17].

To protector manuscripts from harm, digitization is ideal. This also permits people to view the works without having to use the original copy. Additionally, digitization brings attention to the attributes of the intellectual production in the manuscripts. The endeavor involves the allocation of appropriate human and monetary resources, calling for experts in cataloging, critical editing and publishing, as well as technical staff. Scanners, computers, and various storage devices are also essential equipment for digitization [18].

Before initiating digitization, manuscripts undergo various phases of sorting, preserving, and repairing. After these steps, digitization occurs through two primary modes: Image Mode and Text Mode. Despite the unique features of Arabic calligraphy and manuscripts, Image Mode is typically relied upon for digitization, unless circumstances allow for text-based digitization. During Processing, which comes after, images are optimized, dimensioned, and stored as appropriate file formats, such as (pdf) or (jpeg). Consistent quality control and adherence to standards are integral throughout all these procedures. To make searching easier for indexers in the future, metadata entry is undertaken. The manuscripts become available to users after being stored in a specific format [19].

The transition from traditional manuscript libraries to digital libraries is a key reason why the digitization of manuscripts is crucial. This indispensable process protects manuscripts from damage and loss. By adopting digitization technology, digital manuscript libraries are created. The transfer of manuscript contents onto digital media via digitization is crucial. The contents can be uploaded onto cloud-based platforms or stored onto optical discs. This method of accessing manuscripts is beneficial as the original manuscripts no longer need to be referred to, with the

exception of specific cases. It also significantly reduces the risk of damage or loss, especially for ancient manuscripts that have been written on parchment or paper [19].

5 Manuscripts Digitization

Estimations propose that there are around 50,000 manuscripts in Oman that are dispersed between various government and private libraries, as well as in homes of local inhabitants. In 2005, efforts to digitize these manuscripts began [18], although a year prior to that, there were already ideas, opinions, and directions established. Oman's multitude of manuscripts offers a wealth of knowledge waiting to be digitized. Providing a substantial contribution to the worldwide Arab, Islamic, and human legacy, lie tens of thousands of Omani manuscripts and historical documents. These ancient texts span across various fields of literature and sciences and have been renowned among scholars for their academic value. Preservationists of Oman's intellectual heritage have found a vast avenue for conservation and access provision, with modern imaging, storage, and digital retrieval technologies. The digitization of Omani manuscripts has made it possible to collect, safeguard, and retrieve them for scholarly purposes in an unprecedented manner. To fulfill the objective of digitizing manuscripts and offering them to knowledge seekers and scholars with scholarly editing of the highest caliber, certain challenges are to be taken into consideration. Retrieving numbered texts can be quite challenging due to weak or missing indices, and duplicating content in Arabic digital libraries is a persistent concern resulting from repeated imaging of particular libraries. These factors pile on burdens for researchers, primarily in the collection and comparison of different manuscript copies [16].

The Omani Ministry of Heritage and Culture's website has specific sections devoted to manuscripts (https://www.mhc.gov.om/ministry-projects/manuscripts/), which showcases the "Omani Manuscripts Electronic Platform project that permits investigators, specialists, and anyone keen from several nations across the globe to view and acquire the manuscripts at a modest price. With a variety of themes, the Ministry of Heritage and Culture is the proprietor of over four thousand manuscripts, which have been amassed, fixed, conserved, and digitally converted, resulting in the first of its kind in the Sultanate" [20]. On the website, the area regarding digital manuscripts is evidently undergoing maintenance, updates, and reconstruction.

In the Omani Ministry of Heritage and Culture, there is a project exclusively focused on maintaining manuscripts owned by the Sultanate of Oman's Ministry of Culture and Information. The first method of digitization implemented was microfilm technology which, in retrospect, is now seen as conventional compared to modern, computerized digitization. Ultimately, the Ministry decided to revise the digitization process to ensure the manuscripts were captured accurately, with numbered, colored and top-quality copies. They then indexed and preserved them [21]. As of 2015, the Ministry was in ownership of a considerable 4500 Arabic manuscripts [11]. The Ministry of Heritage and Culture released several manuscripts guides in

the late 1900s and early 2000s that covered various fields, such as chemistry, literature, astronomy, Islamic sciences, Arabic language, medicine, and many others. Omani institutions handling manuscript digitization include Sultan Qaboos University, Ministry of Heritage and Culture, Ministry of Endowments and Religious Affairs, and the Omani Digital Library (Planet of Knowledge) [18]. By accessing the Heritage Ministry's manuscript indices from July 2022, the researcher discovered five Portable Document Format (pdf) indices, the oldest edition of which dates back to 1995.

The concept of digitization, including high-resolution scanners [Resolution], has been utilized by the Omani Ministry of Heritage and Culture to preserve and compile manuscripts in the Sultanate of Oman starting in 2009. This legal authority has been responsible for these efforts since 1977, having incorporated microfilm technology as well. In 2003, the Ministry of Endowments and Religious Affairs embarked on the creation of a digital repository of Omani manuscripts, with the aim of establishing a customized electronic library in the domain of religious studies and catering to its stakeholders, including staff, learners and educators of the College of Religious Sciences. Over time, this initiative grew to encompass manuscripts representing diverse fields of learning [1]. A key undertaking executed by the Information Technology division of the Ministry of Endowments and Religious Affairs in Oman is the assembling and digitizing of manuscripts authored by Omani scholars using cutting-edge technological tools. Since 2004, a digital imaging project for manuscripts has been underway in the Planet of Knowledge digital library. On average, 650 pages are digitized daily and each manuscript is individually indexed [22]. To supplement these efforts, a specialized employee was designated by Sultan Qaboos University in 2007 to photograph and digitize manuscripts and documents. A portable digital camera is used to ensure preservation of the manuscripts after imaging [16].

6 Visions and Prospects of Manuscripts Digitization

Manuscript access and usage has been revolutionized in the last two decades. Greater availability of digital alternatives is widely accepted as positive, yet dialogue continues regarding the selection and presentation standards for digitized manuscripts. Further discussion is necessary [23].

Many librarians have been wanting to optimize the digital exposure of their collections since Google Books became popular. However, in the rush to digitize vast quantities of texts, precious advantages of digital technology for studying manuscripts and books as literary pieces may have been lost. In numerous instances, digitizing is handled like a version of film-based microphotography that deforms the manuscript's viewpoint and makes it seem less intricate and vulnerable than it truly is. Digital toolsets are readily available to thoroughly explore and scrutinize manuscripts beyond traditional color imaging. To treat manuscripts with the same care as archaeological artifacts, one must gradually examine them through various technical approaches and establish a diverse digital archive for said manuscript [24].

During the process of digitizing ancient manuscripts, the physical aspects of the books, their meaning, and possible harm during handling are often disregarded. Printed and illustrated books that lack numbering are often considered of lesser value compared to their text content. For practical reasons, focusing more on this aspect is the responsible way to approach digitizing books on a larger scale. Pointing out the significance of original manuscripts, when digitizing expensive and unparalleled works, is necessary. Moreover, taking the necessary precautions when handling the physical manuscript presents an impeccable focus on its physical materiality. Restorers and recovery craftsmen have to be relied upon for their expertise, keeping in mind that sometimes, depending on the manuscript's status, digitization may need to be less frequent or slowed down, or even suspended altogether. Over the long term, it is fundamental to give proper care and attention to the manuscript's importance and its historical text during digitization in order to preserve their unique heritage. To prepare a manuscript for digitization, a reference list ought to be accessible to reduce the risks of damage [25].

In the realm of Sultanate manuscript digitization, caution is key. Development in equipment, software, indexing, investigation, management, and accessibility all play a role in the careful and speedy digitization of these valuable resources. By implementing these measures, the Omani manuscript has found the right path towards digitization, ensuring that its contents are accessible without harm. The handling of the manuscript and its components, such as ink and handwritten pages, are of utmost importance and are treated as the treasure they are by all involved parties. The commitment to such care is evident in the diligence of those in the manuscript digitization field.

7 Conclusion

Everyone involved must pay close attention to Omani manuscripts throughout Oman and other regions, as they represent deeply significant aspects of Omani, Arab, Islamic, and human cultural heritage. Digitizing these manuscripts and providing digital access through modern technology is a practical accomplishment that facilitates information access. Additionally, this step serves as a "soft power" message, embodying the characteristics that Oman has long been known for in its policies and diplomacy.

Among the proposals and recommendations presented by the researchers, the following are considered of utmost importance, if not indispensable:

1. Owned by Omanis, cherished by Arabs, Muslims, and Oman's friends worldwide, the Omani manuscript is part of a historical and civilizational knowledge chain. To honor this heritage, it is essential to introduce the manuscript widely, sharing its aesthetics and intellectual content.
2. Expanding knowledge enrichment by digitizing manuscripts and coordinating with relevant Arab organizations in the field. Sharing experiences and knowledge,

has been a focal point of this conference and is a continuing practice. Diverse formats are utilized to achieve the same result.
3. So that numbered manuscripts are not only accessible to specialists, the publication of these documents should be expanded and awareness about them should be boosted.
4. In the realm of manuscript digitization, staying up-to-date with the latest software, devices, audit checklists, and global expertise in documentation, investigation, and indexing is crucial. This allows for leveraging unique knowledge and skills to convert manuscripts into their digital forms.
5. Joint management of manuscripts by relevant authorities is being considered through the potential creation of a centralized body.
6. Oman's exceptional manuscript heritage can be preserved, made more accessible, and gain worldwide recognition through these measures.

Enhancing Social Identity Through Technology-Enhanced National Education Programs

Adnan Saraerah

Abstract This article examines how national technology-enabled education programs contribute to the development of social identity and sense of belonging, presenting key findings on categorization, identification and comparison using technology in the context of education and its practical application rooted in social identity theory. Provides an analysis of how technology can be used to develop inclusive national education programs that can provide a sense of belonging while valuing cultural diversity, using technology to incorporate cultural elements into education in a national context while providing a sense of global citizenship. Additionally, it provides a framework for future research on education, psychology, and social identity, with an analysis of how technology can be used to improve educational strategies and outcomes. Finally, it provides valuable insights for policymakers to develop evidence-based educational programs that instill a sense of nationhood in a globalized world.

Keywords Social identity · Technology · National education programs · Globalization

1 Introduction

National identity is a complex and multifaceted concept that has long captivated the attention of scholars, educators, and policymakers. It delves into the very essence of how individuals establish a sense of belonging and connection within the context of a nation [24, 33]. In various countries, national education programs play a pivotal role in shaping individuals' perceptions of their national identity and nurturing a profound sense of affiliation. This intricate development of national identity becomes even

more pronounced in nations characterized by diverse populations with distinctive ethnic, religious, and cultural heritages [21]. The impact of national education on the shaping of a national identity holds global importance, frequently entwined with the distinct social and historical context of each individual nation [13]. Nestled in the heart of the Middle East, Jordan offers an intriguing backdrop for the exploration of the dynamic interplay between national education programs and the development of a collective national identity. Similar to many other nations, national education courses have played a central role in shaping the shared identity of its citizens. These programs are meticulously designed to provide a comprehensive insight into history, culture, values, and the importance of unity within a society characterized by diversity. Their primary goal is to nurture pride in the nation's cultural heritage and to promote a shared narrative that transcends the multitude of cultures and beliefs coexisting within the country [13, 31].

1.1 Problem Statement

National identity and the feeling of belonging play essential roles in the process of self-recognition and the cohesiveness of a society [26]. In some countries, which boast diverse cultural and ethnic communities, the impact of national education programs on the evolution of a unified national identity represents a multifaceted and urgent concern [28]. The historical importance, stability, and rich cultural diversity create an opportune environment for evaluating how national education courses affect different segments of society [5]. Examining how national education courses intersect with sociocultural, educational, and external factors is vital for shaping policies, improving curricula, and fostering social unity within this diverse context [5, 34]. This study is untangle the complex relationship between national education courses and the development of a shared national identity, providing valuable insights to enhance our comprehension of this intricate matter and foster unity in a diverse society. Our primary focus will be on evaluating the effectiveness and consequences of National Education Courses, employing the Social Identity Theory framework to delve into how individuals align with and engage in their broader national community. The objective of this research is to achieve a more profound understanding of the multifaceted nature of national identity in a country as diverse and historically significant, emphasizing the critical role of education in shaping this identity.

1.2 Research Questions

1. What is the impact of national education programs on the citizens' categorization, self-identification, and the eventual shaping of their national identity.

2. What policies and curriculum content currently pertain to national education, and to what extent do these align with the objective of nurturing national identity and promoting unity in a culturally diverse society.
3. What are the elements that contribute to the development of a sense of national belonging?

1.3 Research Hypothesis

In the context of this study on national identity and the influence of national education courses, a research hypothesis could be framed as follows:

- There is a significant positive relationship between the extent of categorization of individuals into social groups, as influenced by national education courses, and their overall sense of national belonging.
- There is a significant positive relationship between the strength of identification with social groups, as influenced by national education courses, and the development of a strong sense of national belonging among individuals.
- There is a significant positive relationship between the degree of comparison between social groups, as influenced by national education courses, and the strength of individuals' sense of national belonging.

2 Overview of National Education Courses

National Education Courses are a fundamental component of formal educational framework, serving a crucial function in fostering a shared sense of national affiliation among its diverse population [16]. These courses are strategically integrated throughout the educational journey, spanning from elementary to secondary levels, with the specific aim of imparting students a thorough comprehension of vibrant history, cultural legacy, values, and the principles of unity. In the early stages of education, students are introduced to the fundamental aspects of national identity, encompassing geographical knowledge and significant historical landmarks. As students' progress in their educational path, the curriculum explores more intricate topics, such as the underpinnings of the state, the social structure, and regional and global importance [9]. The principal aims of these courses encompass instilling pride in national heritage, fostering unity and responsible citizenship among all students, promoting active civic engagement, and preserving the cultural legacy of the country [23]. Qualified educators deliver the curriculum with an emphasis on cultivating critical thinking skills and facilitating discussions on topics that are pertinent to the nation. Given the diverse nature of society, there is a deliberate effort to integrate various cultural, religious, and ethnic perspectives to ensure inclusiveness. However, despite their significant role in shaping national identity, these courses are not without

challenges, and concerns have arisen regarding potential biases or one-sided narratives in the curriculum. Nevertheless, gaining an understanding of the structure, content, and objectives of National Education Courses offers valuable insights into their role within the country's educational framework and their potential influence on the collective identity of citizens [9, 23].

3 Challenges and Critiques of National Education Courses

National Education Courses, integral to shaping national identity, grapple with challenges and critiques. Concerns arise over potential biases in historical narratives, leading to calls for greater inclusivity and diverse viewpoints. Moreover, navigating evolving global dynamics poses hurdles in ensuring the curriculum remains current and pertinent to the contemporary world [23, 1]. National Education Courses encounter challenges amidst ongoing global discussions on education and national identity. Policymakers must adapt to the changing needs of a diverse society, emphasizing the necessity to align the curriculum with the intricate aspects of national identity in a dynamic world. Embracing constructive criticism plays a pivotal role in improving the courses, fostering a collective national identity while embracing and celebrating diversity [1].

4 Exploring Social Identity Theory: Categorization, Identification, and Comparative Aspects

Social Identity Theory, formulated by Tajfel and Turner during the 1970s, is a well-established psychological theory that delves into the processes by which individuals classify themselves and others into social groups, ultimately resulting in the creation of social identities. This theory offers a useful framework for understanding human behavior, particularly in the contexts of group dynamics, intergroup relations, and the formation of a shared sense of identity. Essentially, Social Identity Theory focuses on three fundamental processes: categorization, identification, and comparison [27, 2, 30].

- Categorization

The initial phase in Social Identity Theory involves categorization, wherein individuals classify themselves and others into different social groups based on common characteristics. These characteristics may include a broad range of elements such as nationality, ethnicity, religion, occupation, and interests. Categorization serves as a fundamental aspect of human cognition, simplifying the complex social landscape by creating distinctions between the "us" (the in-group) and the "them" (the out-group). This process of categorization can lead to both positive and negative group biases,

profoundly influencing how individuals perceive themselves and those belonging to different group [20, 7].

- Identification

Following the self-categorization into a specific social group, individuals initiate the process of affiliating themselves with that group. Regarding to SI theory, a part of an individual's self-concept is shaped by their association with this group, making the group identity an integral element of an individual's self-perception. The extent of identification can manifest in various forms, ranging from a casual recognition of group membership to a robust and emotionally charged attachment to the group. The strength of this identification significantly influences how individuals perceive their in group and impacts their behavior towards both in groups and outgroups. Strong identification often leads to in group favoritism, wherein individuals exhibit a preference for their own group [17, 8].

- Comparison

The third stage in the framework of Social Identity Theory involves the process of comparison, which consists of contrasting one's in-group with outgroups. This comparative process serves the function of enhancing the positive distinctiveness of the in-group [3]. Essentially, individuals frequently strive to emphasize the attributes and achievements that distinguish their group and present it as superior to other groups. This comparative process can result in the reinforcement of in-group bias, where individuals exhibit a more favorable view of their own group and a less favorable view of outgroups. The scope and characteristics of the comparison process can fluctuate, influenced by factors such as the social context, group dynamics, and the perceived significance of group identity in a given situation [3, 7]. To realize, SI Theory furnishes a comprehensive conceptual framework for comprehending how people categorize themselves and others into social groups, identify with these groups, and engage in comparative processes that influence their attitudes, behaviors, and interactions with various groups. This theory has been pivotal in elucidating a broad spectrum of social phenomena, spanning from intergroup conflicts to the formation of national and cultural identities. Understanding these processes is imperative for addressing concerns related to prejudice, discrimination, and fostering social cohesion in diverse societies [27, 2].

5 Methodology

The methodology employed in this study utilizes a quantitative approach, entailing the gathering of data through structured surveys and questionnaires to acquire numerical insights into participants' attitudes and perceptions. These surveys will be conducted online, ensuring widespread accessibility and efficient data collection. Furthermore, qualitative data will be acquired through in-depth interviews and

content analysis of pertinent documents, enabling a more profound exploration of the underlying factors and contextual influences shaping participants' viewpoints.

5.1 Participants

Utilizing a purposive sampling approach, a group of three hundred (N = 300) undergraduate students was chosen from a variety of programs at Zarqa University. This sample was well-balanced in terms of gender, with 212 females and 88 males, ensuring a diverse representation. The students hailed from various academic disciplines and backgrounds, contributing to the diversity within the study group. Each member of the sample actively participated in the research by responding to the questionnaire items, resulting in 300 fully completed responses that were subsequently subjected to analysis. This method not only maintained gender balance but also guaranteed diversity in educational backgrounds, ultimately bolstering the reliability of the research findings.

5.2 Instrument

In this study, we employed a five-point Likert scale (ranging from 5 for "strongly agree" to 1 for "strongly disagree") to assess participants' responses. This approach facilitated a detailed evaluation of attitudes and perceptions, enabling a nuanced exploration of viewpoints regarding the topic of national belonging. The unique Likert scale, encompassing negative and reversed items, aimed to encompass a broad range of opinions on the subject.

5.3 Data Analysis and Findings

Partial Least Squares (PLS) analysis stands as a powerful technique for data analysis. It excels in managing intricate, high-dimensional data by pinpointing crucial factors that elucidate both independent and dependent variables. PLS streamlines data comprehension and contributes to the creation of predictive models. This approach finds extensive use in diverse domains, empowering researchers to derive valuable insights from intricate datasets to enhance decision-making and advancement.

Evaluation of Assessment Model

Al-Tarawneh [6] underscore the importance of survey verification in PLS, analyzing both reflective and formative constructs for quality assurance [6]. The assessment involves reliability and validity checks. In the examination of the measurement model (Fig. 1) with 16 reflective indicators, item CA3 displayed a factor loading below 0.50.

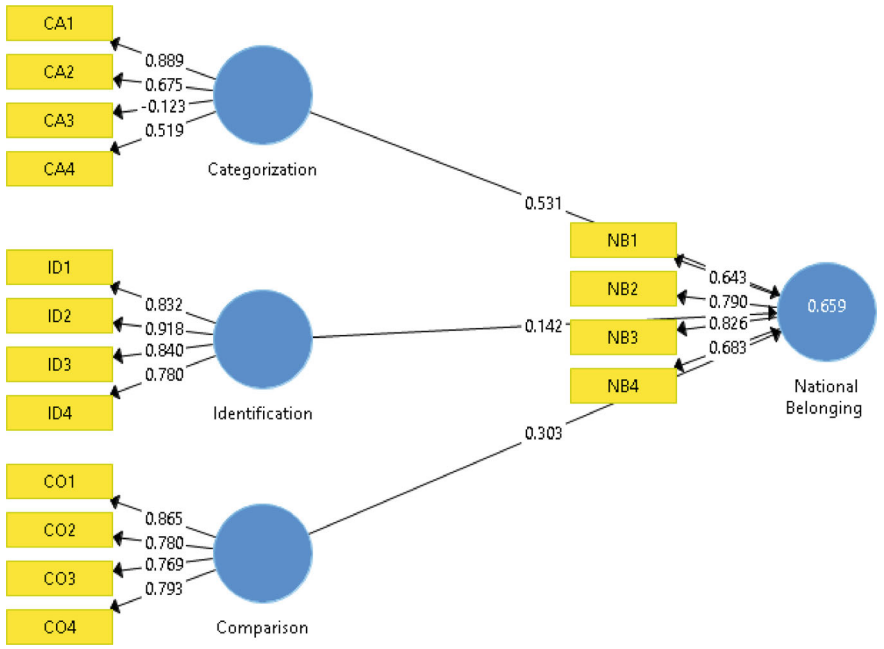

Fig. 1 Analysis of assessment model

In line with the suggestions of Hair et al. [18], indicators within the 0.40–0.70 factor loading range were eliminated if their removal increased the composite CR beyond the recommended threshold.

As presented in Table 1 and Fig. 1, the assessment of convergent validity for each construct was conducted using the Average Variance Extracted (AVE). Convergent validity measures the extent to which a given measure correlates positively with other measures of the same construct (Hair et al. 2016). In this study, we adhered to the recommended minimum AVE value of 0.5, as suggested by prior research [6, 29]. The results reveal that identification achieved the highest AVE value (0.713), while categorization attained the lowest satisfactory AVE value (0.382). In accordance with the findings of Al-Tarawneh [6], when the composite reliability surpasses the 0.4 threshold and the Average Variance Extracted (AVE) registers beneath the standard 0.5 level, it is considered suitable to dismiss the AVE in this particular scenario. In summary, all these values satisfied the criteria deemed acceptable for their convergent validity. Moreover, the CR values, as presented in Table 1, were utilized to gauge the internal consistency of the individual constructs. Although it is suggested that the minimum benchmark value should be 0.70, a higher CR value is preferable. In this study, the CR values for each construct range from 0.609 to 0.908, all of which surpass the benchmark value. According to the specified criteria, the variables have shown sufficient convergent validity.

Table 1 Results of measurement model

Variable	Items	FL	CR	AVE > 50%
Categorization	CA1	0.889	0.609	0.382
	CA2	0.675		
	CA3	0.123		
	CA4	0.519		
Identification	ID1	0.832	0.908	0.713
	ID2	0.918		
	ID3	0.840		
	ID4	0.780		
Comparison	CO1	0.865	0.878	0.644
	CO2	0.780		
	CO3	0.769		
	CO4	0. 793		
National belonging	NB1	0.643	0.827	0.54
	NB2	0.790		
	NB3	0.826		
	NB4	0.681		

In this study, the assessment of discriminant validity for the examined constructs followed the criteria proposed by Fornell and Larcker [4]. Discriminant validity is established when the average square root of the extracted variance for a particular construct exceeds the correlation values with all other variables (Hair et al. 2016). As indicated in Table 2, in line with the Fornell and Larcker standard, the findings confirm the sufficient discriminant validity of each construct, as the squared correlation for each construct is less than the average variance extracted. Furthermore, the Heterotrait-Monotrait Ratio (HTMT) functions as an indicator of the inter-construct correlation, aligning with the creation of de-attenuated construct scores. A threshold value of 0.9 was applied. As illustrated in Table 2, the study concludes that there is no indication of a lack of discriminant validity, and all constructs meet the specified criteria.

Table 2 Assessment of discriminant validity [4]

	Categorization	Comparison	Identification	National Belonging
Categorization	0.618			
Comparison	0.527	0.803		
Identification	0.451	0.323	0.844	
National belonging	0.754	0.629	0.479	0.739

The results of the study imply that the seven constructs effectively measure their respective attributes, backed by strong empirical evidence confirming reliability, convergent validity, and discriminant validity.

Evaluation of the Structural Model

In this study, the structural model illustrates causal relationships among constructs (see Fig. 2). The assessment involves testing six research hypotheses using path coefficients (ß), standardized metrics ranging from − 1 to + 1. Values close to + 1 suggest a strong positive association. Significance is determined by a t-value surpassing a specific threshold (e.g., 1.96 for $p < 0.05$).The assessment of the structural model's quality involves considering the determination coefficient and the significance level of path coefficients (beta values). A higher Adjusted R-squared suggests an improved fit for the structural equation, indicating a more robust ability to elucidate the exogenous variable through endogenous variables [18]. The findings derived from the analysis of the research hypotheses in Fig. 2 and Table 2 underscore the validation of all the proposed research hypotheses. In a corresponding vein, the results indicate that Categorization wields a substantial and favorable influence on National Belonging (ß = 0.498, t = 12.395, $p < 0.05$), thereby corroborating H1. Furthermore, the data suggest that Identification also exerts a positive effect on National Belonging (ß = 0.156, t = 3.476, $p < 0.05$), offering support for H2. Similarly, the findings demonstrate that Comparison positively contributes to National Belonging (ß = 0.300, t = 7.329, $p < 0.05$), affirming H3.

6 Discussion

The evaluation of the structural model's quality is contingent upon the determination coefficients and the significance of path coefficients (beta values). A higher adjusted value signifies an enhanced ability to clarify the influence of endogenous variables on exogenous variables, thus reinforcing the structural equation model, in line with the research conducted by Joe F. Hair and colleagues in 2011. Consequently, the analysis serves to affirm the validity of all the proposed research hypotheses, underscoring that the relationships under examination receive substantial support from the dataset [18, 19]. In terms of the impact of variables on National Belonging, the results can be outlined as follows: the variable associated with "Categorization" exerts a substantial and favorable influence on National Belonging (ß = 0.498, t = 12.395, $p < 0.05$), indicating that the concept of categorization plays a significant role in shaping individuals' sense of national belonging, thereby corroborating Hypothesis (H1). Similarly, "Identification" has a positive effect on "National Belonging" (ß = 0.156, t = 3.476, $p < 0.05$), implying that how individuals affiliate with specific groups or categories contributes to their sense of national belonging, providing support for Hypothesis (H2). Additionally, the act of "Comparison" is shown to positively contribute to "National Belonging" (ß = 0.300, t = 7.329, $p < 0.05$), indicating that evaluating oneself or one's group in comparison to others is another factor influencing

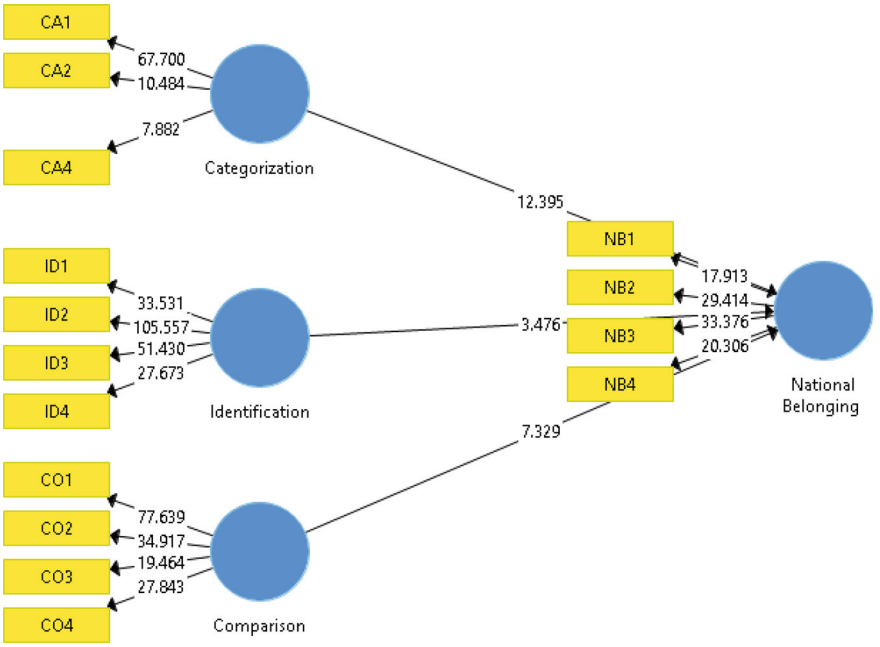

Fig. 2 Evaluation of the structural model

Table 3 Hypothesis testing

	Original sample (O)	Sample mean (M)	Standard deviation (STDEV)	T statistics (|O/STDEV|)	*P* values
Categorization → national belonging	0.498	0.499	0.040	12.395	0.000
Comparison → national belonging	0.300	0.299	0.041	7.329	0.000
Identification → national belonging	0.156	0.160	0.045	3.476	0.001

an individual's sense of national belonging, affirming Hypothesis (H3). In summary, the SEM analysis underscores the significance of these factors in shaping individuals' sense of national belonging, aligning with the study's hypotheses and underscoring the importance of these variables in comprehending how individuals develop a sense of national belonging, particularly within the framework of the Social Identity Theory perspective. This paper imparts valuable insights into the factors that impact national identity and belonging, particularly within an educational context [12, 14, 32].

6.1 Implications and the Future of National Identity Studies

The pivotal role in shaping the national identity and cultivating a feeling of affiliation among individuals is played by courses in national education [29]. This underscores the importance of developing successful educational approaches that encourage a favorable and encompassing national identity [10]. Educators and policymakers ought to explore the integration of techniques that utilize categorization, identification, and comparison principles to nurture a robust feeling of national allegiance [22]. The study's affirmation of Social Identity Theory's impact on national belonging underscores its practical significance in comprehending and improving national identity. Scholars and practitioners can apply these findings to develop programs that strengthen national cohesion. Policymakers can use these insights to guide the creation of inclusive national education curricula and policies, fostering a global mindset while honoring cultural diversity. The paper establishes a foundation for evidence-based policy formulation, highlighting the importance of cultural integration in advancing national identity [15, 22]. Policymakers and educators should explore methods to enhance the effectiveness and inclusivity of the cultural integration process. In the contemporary global context, these results hold significance for countries navigating the alignment of robust national identities with principles of global citizenship. The paper suggests an approach that promotes both national belonging and intercultural understanding, fostering global collaboration. Furthermore, it lays the groundwork for future research in education, psychology, and social identity, prompting investigation into the prolonged impacts of national education courses on identity and unexplored variables beyond the study's scope. In brief, this paper bears profound implications for educational strategies, policy formulation, and a deeper comprehension of the formation of national identity. It imparts invaluable insights into the intricate mechanisms of national belonging and establishes a strong basis for prospective research and well-informed decision-making in the realm of national education and identity [11, 15, 25].

7 Conclusion

The study underscores the significant impact of national education courses and Social Identity Theory on shaping individuals' national identity and sense of belonging. The results imply potential improvements in educational practices and policy formulation, highlighting the value of evidence-based approaches. Additionally, the research enhances our comprehension of the mechanisms influencing national identity, laying the groundwork for future studies in education, psychology, and social identity. In conclusion, it aids informed decision-making in national education, promoting a unified and inclusive national belonging tailored to our progressively globalized world.

The Principle of Publicity in Criminal Trials: Legal Perspectives and Technological Integration

Lubna Ahmed Kreishan

Abstract Openness is one of the basic principles of the criminal process, ensuring the transparency of the justice system. This article will explore the role of technology in integrating process transparency into the legal framework. In particular, technological progress in digital tools and platforms to facilitate the open conduct of hearings and public access to trial information will be assessed. Current practices will be analyzed to identify how the principle of public access to trials in criminal law works and the impact of technology in increasing the transparency of procedures. Moreover, the article will focus on measures and protocols guaranteeing the right to public participation and the consequences of violating the transparency of the process. By incorporating technology into the analysis of the criminal justice process, this article will report on the potential of digital innovations to enhance the transparency of judicial processes.

Keywords Transparency · Criminal trials · Legal guarantees · Open court sessions · Publicity of criminal trial

1 Introduction

According to the transparency of trials, court cases are held in public, and people can come to observe and participate in the trial. One of the aims of making trials open is to make sure that all participants have a possibility to testify about their innocence, whereas the audience is a direct witness to justice not being miscarried and judges not treating any person with prejudice. Transparency itself helps society believe in just decisions of courts and advocates human rights principles and democratic ideas on how state powers should be organized [1].

The concept of trial transparency refers to the fact that court proceedings and decisions about guilt or innocence should be open and accessible to everyone, with

any member of the public allowed in court and audiovisual recording permitted. Furthermore, this term implies informing accused individuals, attorneys, and other concerned parties about the hearing schedule, which ensures their active involvement in the judicial procedure allowing them to defend their legal rights. Transparency in criminal trials is an idea of legal principle through which court proceedings and verdicts in criminal cases are conducted openly, publicly, and in a non-secret manner. The purpose of such a system is to safeguard the transparency of the justice procedure as well as the protection of the rights of both accused and victims. Transparency manifests itself by the involvement of spectators during court sessions, giving advance notice to lawyers and other interested parties about the trial schedule, as well as public announcements about judicial resolutions.

Trial transparency is important due to its contribution to the judicial system in establishing justice and protecting human rights. By having open trials, everyone can watch for any irregularities or human rights abuses, and if there are some, take actions against them and be sure that they will be taken. Moreover, transparency improves public trust towards the courts and their administration of justice and promotes citizen engagement with trials as well as compliance with laws. Trial transparency is a basic right and fundamental principle within the legal system, in which it ensures visibility of the trial process, building confidence and trust in judiciary services, allowing defendants and victims their right to be heard and to take part effectively. In addition, transparency facilitates responsibility for actions thus precluding chances of manipulating justice; as a result strengthening the rule of law in society and making possible freedom of speech and people's right to information access [1].

2 Principles of Trial Transparency in Criminal Law

The pillars of trial transparency derive from some basic tenets. In the first place, these involve the public's right to witness courtroom proceedings and check if the system is fair enough. Secondly, they provide for the defendant's right to be defended by a counsel as well as his/her participation in the process of evidence taking. One aspect of judicial transparency and accountability is the practice of releasing judgments, which contributes to the access of information by the public and trust towards the court. Another approach is documenting hearings with audiovisual materials in order to maintain strictness and fairness in the legal process; also preserving the interest of all parties.

2.1 Legal Foundations of Trial Transparency

The question of the influence of trial transparency on defendants' rights is quite difficult, since these rights have been violated in several respects. Defendants should be given an opportunity to present their evidence and arguments openly during court

hearings in order to satisfy the principle of equality arms between prosecution and defendant. Moreover, it is necessary to provide the defendant with the right to openly cross-examine witnesses and experts for confirming their honesty and objectivity in relation to the evidence against them. In addition, the defendant must possess information about all stages of a case from documents to its results; these guarantees are provided for due trial transparency in their specific application as follows.

Right of the Public to Attend and Participate in the Trial

One of the most essential elements of trial transparency in criminal law is the public's right to attend and participate in the proceedings. Members of the public are usually allowed to be present during court hearings unless there are special circumstances linked to fairness or safety and protection of state secrets. Furthermore, everyone who wants to do so can take part in a trial by hearing, giving evidence and testimony, as well as providing any available evidence within legal limitations. These conditions are subject to specific legal regulations and penalties provided for by the criminal law.

Right of the Defendant to Know the Charges against Them

One of the basic rights of the accused is the right to know the basis of the accusation against him. This right falls within the principles of public process. This means that, immediately after arrest, the accused must be made aware of all the charges against him in detail and must be given a sufficient opportunity to become fully familiar with the charges and the evidence supporting them. In this way, the basis for an effective and fair defense will be prepared, and it will also be a valuable measure to protect against violation of the accused's rights during the proceedings [2].

Right of the Defendant to Defense and Presentation of Evidence

In criminal law, the presence of defense and evidence are fundamental rights of a suspect and are linked to justice, which means the greatest possible transparency at the trial stage. An accused who is presumed innocent has the right to present any evidence or explanations, testimony and views he has, or to seek assistance from a lawyer for this purpose. In addition, the accused must be given the opportunity to testify to prove his innocence or, if necessary, justify his act. These rights help make the justice system more democratic and maintain the rights of defendants during trial.

Right of the Defendant to Question Witnesses and Experts

The law grants the accused, in the ordinary course of the trial, the right to question witnesses and experts in order to establish the truth and facts that would support the accused's defense. This right is clearly reflected in the legal precedent set out in Jordan's penal codes to regulate this issue as a result of its judiciary's efforts to bring fairness and equalize the scales in favor of the parties to criminal proceedings. This strengthens one of the required principles of justice—transparency of the process—and guarantees a legally binding final judgment based on proven evidence [3].

3 Guidelines for Trial Transparency

The Transparency of Trials Laws are the articles and principles that regulate and guide the rights and obligations of participants regarding the publication, openness, and publicity of hearings. These articles contribute to increasing opportunities for fairness, justice and human rights to learn about legal issues and to participate in a fair trial before the courts. These articles are: the right of the public to be present at the trial, the accused's right to defense, judgments and recording of trials.

Right of the Public to Attend

There is a law that gives the public the right to follow criminal trials, ensuring that judicial measures are transparent and fair. Apart from the media, anyone could participate in all hearings and debates on a given case in the session hall. Attendance rules are specified in the internal regulations. These provisions list and describe the procedure and the obligations of the person authorized to be an observer of the hearing [2].

Right of the Defendant to Full Knowledge of the Charges

The right of the defendant to have access to complete information about their charges is one of their fundamental rights in the process of a criminal trial. This entitlement encompasses the knowledge of details and nature of crimes laid against them and also evidence adduced before the court as well, which helps them to mount a proper defense and counter any weaknesses in the case presented by the prosecution. To ensure that the trial is fair, information should be provided to the defendant with clarity and completeness thus preserving the right to fair defense.

Right of the Defendant to Defense

As per the law of Jordan, one of the defendant's fundamental rights is the right to defend him/herself in a trial, and this right is key for ensuring justice in criminal cases. The accused right to defense includes seeking a legal expert, introducing all defenses they consider necessary, questioning prosecution witnesses and witnesses, providing evidence or testimonies that deny the charges made against them. Also, it should be noted that every defendant should have an equal chance of defending themselves with all legal means available to them.

Right of the Lawyer to Defend Their Client Publicly

The basic right of a lawyer is that he/she must argue publicly in support of his/her client in criminal cases. To guarantee the openness and effectiveness of judicial work it is necessary to provide a lawyer's right to open action, as well as a meaningful defense. It is counted as one of the chief basic guarantees required for achieving justice and for safeguarding the rights of the accused. During the trial, the attorney has to have the ability to provide effective means of defense and express their opinions freely. The lawyer's right helps maintain parity between parties; besides, an individual

under investigation should be provided with an equitable opportunity to defend him/herself [3].

Right of the Press to Cover Court Sessions

An important right the press enjoys during criminal trial proceedings is the ability to cover court sessions. The role of the press in informing the public and providing an objective description of courtroom proceedings is critical and crucial. Achieving this right requires striking a balance between the press's freedom to obtain information and an individual's right to a fair trial, while taking into account the protection of confidential data as well. Exercising this media freedom guarantees the open work of the judiciary system where defendants' rights and the public have access to justice-related information [4].

Publication of Judicial Judgments

According to Jordanian laws, all judicial judgments are required to be public and recorded as part of the case's archive. Judicial judgments are released and published immediately after issuance to be appropriate and within reach of the general public. They are supposed to have information about the case, the decree reached by the court, reasons for such a decision, as well as any form of punishment that could have been applied to the accused person. The publishing of judicial judgments is among various procedures used to enhance transparency and accountability in the Jordanian justice system.

Documentation of Court Sessions

In the light of transparency regulations in Jordanian law, it is obligatory to ensure that court proceedings are properly and completely documented. This recording process includes documenting conversations, testimonies, and evidence produced during the hearing. Court sessions are recorded so that a reliable account of everything that transpires during the trial can be kept for subsequent use if necessary, such as an appeal or review of judgments. Documenting court sessions is an essential factor in upholding the rights of parties involved in legal cases.

The concept of transparency in criminal trials in Jordan is regulated through the control and oversight of the judiciary authority. These bodies are mainly represented by criminal courts, where court hearings take place in a public atmosphere and can be attended by anyone. The judge assumes the position of the leader of the trial process who must ensure its transparency at every step. Additionally, the prosecution authorities have an essential function as they ensure transparency by conducting public prosecution to represent society in a trial and providing necessary evidence against the defendant [4].

4 Exceptions to Public Trials in Law

In Jordan, there are certain circumstances in which the public trial principle is not followed, and exceptions can be made to this rule. A few of these situations include when some matters must be heard in full secrecy so that they cannot be brought up for discussions during public trial sessions. These would be security cases, national defense cases, and military matters. Furthermore, some instances involving domestic violence and children or victims of abuse are out of bounds to safeguard their confidentiality and treat such cases privately within four walls without any publicity.

4.1 Exceptions to Publicity

Some cases in Jordanian law are exempted from the principle of public trials, including:

- State Security Protection: The exceptions include security cases, national defense cases, and military matters. In these circumstances, court proceedings are carried out under strict confidentiality so as not to compromise the interests of these matters or national security. These cases follow unique protocols outlined by Jordanian legislation.
- Justice Interest Protection: The protection of justice interest in Jordanian law is aimed at fairness and ensures that the law is administered properly. Consequently, certain cases under trial are out of the public eye because it would be against the interest of justice. These exemptions are about trials that may hinder the gathering of evidence or put witnesses or parties at risk. Appropriate actions in this matter should be performed according to guidelines provided by Jordanian laws and judicial authorities.
- Children and Victims' Privacy Protection: In Jordan, special attention is given by the law to ensuring that the rights of children and victims are protected during trial. Consequently, publicity is kept at bay when there are cases of domestic violence, child abuse, or victims. Such cases are handled privately and in secret chambers with restricted access by the public aiming to secure the safety and privacy of these innocent people. This increases the chance for children and victims to tell their testimonies without unnecessary external pressure and threats [5, 6].

Finally, it is also necessary to clarify the transparency of the process, that is, especially now when issues regarding confidentiality and veracity during the process can be highlighted: perhaps there are issues in the sense that how can veracity or the assurance of confidentiality during or after trial process or both, how it would best be done, and so on; most importantly, it is important that all information submitted to the hearing is treated with the utmost confidentiality and is consistent with the rights of all interested parties, including the right to hear cases that concern fairness and the development of objectivity in looking at questions of truth [7].

- **Confidentiality and Trustworthiness Issues in Trials**

In addition to confidentiality and credibility, hearing procedures must also be understood as a fundamental element of judicial "dignity" requiring transparency. It is important for Jordanian judges, lawyers and investigators to maintain the secrecy of their duties. All information related to the examination should be retained to ensure the protection of the confidentiality of all persons participating in the examination, and in particular to prevent the disclosure of confidential information in a way that would enable it to be recognized and disrupt the course of the hearing.

- **Secret Investigations and Their Impact on Trial Transparency**

The secret investigations may be a hindrance to the fairness and openness of the trial in Jordanian criminal law. Investigators might choose to pursue covert operations to uncover crimes and gather evidence. Nevertheless, it is important that these secret investigations do not interfere with the rights of the defendant nor undermine the soundness of the judicial procedure. The ability to strike a balance between conducting secret investigations and maintaining transparency during the trial is necessary to preserve the principles of justice as well as equality before the law.

- **Balancing Trial Transparency and Protecting the Privacy of Parties**

Among other challenges to establishing a culture of process transparency in Jordanian criminal law, a key challenge is striking a balance between the right to process transparency and the right to privacy. Parties attending the trial have the right to their privacy, reputation, and dignity that should be safeguarded. However, on the other hand, the general public has a right to information on how the trial is being conducted and proceedings taken therein. Therefore, mechanisms and legal frameworks ought to be put in place to ensure an equilibrium between these conflicting rights so that no party gets prejudiced and justice is not jeopardized either [7–9].

4.2 Impact of Trial Transparency on the Justice System

One of the key considerations in relation to trial transparency is safeguarding the interests of society. Transparency is an ingredient in guaranteeing that the process is fair, free from bias, and balanced so that it can be trusted by the public; as such, individuals can have a chance to take part in, see, and ascertain if justice is reached. On one hand, transparency establishes confidence in the judicial system and on the other hand ensures everyone's right to information relating to legal affairs, including access to legal documents. In addition, transparency serves as a tool in preventing manipulation or corruption in judicial proceedings since any forms of violations or abuses might be discovered by witnesses' presence and public monitoring over the judicial process. Some of the impacts that emerge in the Jordanian judicial system following trial transparency benefit the justice system. To illustrate, it creates awareness and trust in the judiciary as everyone, including the general public and the

media, can be in a position to follow proceedings hence ensuring the fair delivery of justice. Moreover, transparency at the trial level protects the rights of the accused and victims equally, enabling them to present their defense or decide their fate in public view. Moreover, it helps limit the scope for perverting the administration of justice while putting pressure on the rule of law.

Enhancing Transparency and Confidence in the Judiciary

Taking steps to increase transparency in processes supports efforts to increase the openness and credibility of the Jordanian judicial system. Indeed, if trials are open to the public and the media, transparency and the rule of law will be preserved by making open justice one of the main goals of public trials. More importantly, the public can better monitor judges' decisions and thus ensure their credibility. This strengthens confidence in the Court's judgments because the outcome of the legal process appears to be consistent with the rule of law. Maintaining transparency increases the credibility of court decisions and serves society's interest in preserving their right as citizens to seek justice. Therefore, the judicial process must also be transparent, not opaque, to ensure public participation, observation and the ability to verify the legality of the judicial process. This allows for transparency that will help avoid attempts at impunity or manipulation of the process by the interests of the parties, because there are witnesses who know exactly what is happening and observers themselves who would gain confidence in the justice system if they could be a fly on the wall in court when justice will be meted out. After all, transparency also means that everyone must have access to legal information and the right to be an observer to see how the justice process is carried out (or not). Transparency in the administration of justice [8].

Protecting the Rights of the Accused and the Victims

This is considered to be one of the important ways to protect the rights of the accused and the victim in the justice system. This includes the ability to demonstrate an open and honest legal defense, where the defendant or his or her lawyer can openly argue in court and defend his or her rights and allegations, while the victim can be present in the courtroom to testify during the hearing and file a motion to assert your rights. To guarantee these entitlements, it should be ensured that all participants receive equal due justice for a fair trial. In trials, maintaining a balance between transparency and safeguarding privacy is a complicated issue. In spite of the huge value that transparency has in safeguarding public interest, it is crucial to accord rights and privacy of those involved in a trial. The judiciary, therefore, needs to set up the requisite safeguards that protect an individual's right to privacy, which may include not revealing personal or private information about someone without their consent. There must be a fine line between openness and an individual's protection so as not to let anyone be slandered or negatively thought about unjustly [9].

Reducing Opportunities for Justice Manipulation

To a considerable degree, the Jordanian system of judiciary is less open to abuse of trial visibility, as public participation and media scrutiny are factors that hinder

manipulation or undue influence on judges, thus making it hard for any party to subvert the judicial process. In this way, the principle of legal responsibility becomes more solid due to the fact that the implementation of justice will not depend on any manipulation or bypassing [10].

Transparency forms a foundation that ensures the trustworthiness of judicial processes. Public visibility and observation of trials make the judiciary answerable to society, thereby discouraging any potential misappropriation or diversion from the right course and establishing public confidence in the system. Transparency also makes judges accountable and subject to oversight. Furthermore, members of the public can attend proceedings, learn about case details, which helps in promoting transparency and laying down the basis for a fair and independent judicial system.

When it comes to the trial transparency law in Jordan, you can find very strict punishments that convicted individuals might face. These penalties are criminal as well as disciplinary and involve imprisonment, financial penalties, and possibly even being stripped of their professional rights should they go against the rules of a specific justice system. All these penalties are to maintain trial transparency and to ensure there is a fair and transparent judicial system in Jordan.

On the other hand, it should be mentioned that the adoption of trial transparency within the Jordanian legal system is an initiative that has faced many problems. One of the challenges is exerting pressure by public opinion; media coverage and people's reactions may interfere with court proceedings and judgments. Furthermore, it must be ensured that the lives and safety of witnesses as well as judges are protected in order for there to be trial transparency [11].

It is necessary to establish efficient procedures and mechanisms that ensure the safety of witnesses and judges so as to prevent any harm from threats or manipulation on trial fairness. Meanwhile, another significant challenge in ensuring open trials is the provision of all essential resources—the building and maintenance of well-equipped facilities, robust infrastructure, and properly trained staff capable of ensuring appropriate conditions for holding a trial respecting its transparency requirements [12].

5 Conclusion

To conclude, it is evident that our research serves as a crucial reminder about the significance of trial transparency in helping to establish justice and prevent injustice and corruption. Transparency allows trials to be watched by the public, media, and NGOs, which will help hold the judiciary system accountable for law enforcement. Further, transparency promotes trust in the judiciary system and enables parties involved, such as accused persons, victims, and also members of the public, to be part of the trial proceedings with a quest for discovering the truth. The right to trial transparency is one of the basic principles of criminal law that aims at ensuring fair and just trial proceedings for everyone concerned.

5.1 Results

- The study has made it clear how trial transparency is essential for the fair and transparent rights of the accused in criminal trial processes.
- Of all the factors influencing the degree of transparency of the process, the greatest influence is exerted by the provisions of the judiciary and the constitution, which determine whether the process should be treated as transparent and fair or not. Judicial legislation determines whether there should be standards and principles to be followed in public proceedings. Meanwhile, constitutional law protects the right of citizens to openly witness a court hearing. Legal culture and social phenomena in society are also very important to make the process transparent.
- Similarly, technology and electronic messaging influence the openness of processes. Recent developments such as live webcasting of court sessions can be quite beneficial in increasing public engagement and increasing levels of transparency and fairness.

5.2 Recommendations

To enhance trial transparency in Jordanian law, several important points should be considered:

- Transparency is considered a key factor in ensuring a fair process—all processes should be made public. One way this could be achieved is by breaking down complex legal terminologies and organizing workshops where members of the public can learn about open trials.
- To make sure that trial transparency is in place and respected, judges and lawyers need to be provided with training on how to conduct public hearings in a manner that balances the rights of privacy and security with the interests of involved parties by developing necessary skills.
- The improvement of the media's role in trial transparency is vital. Journalists should be given easy access to the courtrooms and also accurate information about the cases so that they can report on judicial sessions truthfully and effectively.
- It is crucial that trial transparency becomes an issue of public concern. The population needs to be informed about the significance of open hearings in the Jordanian legal system. The promotion of awareness of the functionality of courts and the importance of justice through transparent proceedings can help to generate trust towards the judicial system and enable justice, thereby leading to justice, therefore via building educational programs and media campaigns that point out the value of open trials as well as their impact on promoting equality and justice in society.
- To train judges and lawyers on ensuring trial transparency, this includes imparting to them the requisite set of skills and knowledge they would need to plan for and

manage court sessions that concern cases related to criminal actions. Judicial discipline can be improved as a result of these trainings, while justice may also prevail in the courts; thus establishing a more trustworthy Jordanian judicial system

- The issue of empowering the media to deliver more transparent court processes is important. In Jordanian law, the media has a key role in the promotion of trial transparency. One way to make it possible is by expanding the media's involvement through covering all judicial sessions fairly and impartially in detail. Furthermore, cooperation among journalists and judges should be developed so that judges are able to provide necessary information for objective reports about any case. The balanced relation between courts and media may ensure fairness and impartiality in the Jordanian justice system.

The Impact of Job Benefits on Employee Performance: An Empirical Study

Khaled Alzeaideen and Mohammed Nayef Ahmed Al-Zawahreh

Abstract This research aims at investigating the effect of job benefits on employee performance. The approach used was descriptive-analytical, and its data were collected through questionnaires distributed to a sample of employees amounting to 10,283. Five hundred electronic questionnaires were distributed, with a return of 418 questionnaires, out of which 410 were valid. In this study, both material and moral job benefits were evaluated concerning their impact on job performance; the data were then analyzed using the SPSS statistical package. According to these authors, the results found a positive impact of job benefits on employee effort. This study recommends that effective material and moral reward and incentive systems be developed with an emphasis on transparency and fairness in distribution plus boosting the training and qualification of employees by fostering job commitment and job satisfaction through effective communication that recognizes efforts made.

Keywords Job benefits · Employee performance · Employee effort · Incentives

1 Introduction

In the public and private sectors, employee performance is strongly influenced by job benefits, which include financial rewards such as salary bonuses, social benefits such as insurance, and development opportunities that include promotion, transfer, and listening to employee needs [3]. This will make employees feel more engaged in their work and work harder, leading to higher productivity and lower turnover [7].

The impact of employee benefits on employee efficiency cannot be overestimated, as they have a positive impact on the level of employee satisfaction and loyalty to the organization [9]. These benefits include various forms of rewards, including extrinsic incentives such as bonuses and cash benefits, and intrinsic incentives such as social and cultural rewards such as country club membership, promotions and transfers that increase employee morale and career development [5]. These benefits are crucial in determining the level of productivity and quality of work produced, hence the need to provide such benefits to attract and retain highly talented employees in organizations [10].

The aim of this study is to investigate and evaluate the impact of work (employment) benefits on employee motivation and performance improvement, especially of new hires in Zarqa Province. The study also aims to examine how job benefits influence various aspects of job performance, such as productivity, job satisfaction, and organizational loyalty [6]. Additionally, the study will examine how these benefits contribute to reducing turnover rates, a significant challenge faced by numerous public institutions [8]. Through the analysis of data collected from employees in Zarqa municipalities, this research aims to provide valuable recommendations for enhancing job performance through the implementation of effective job benefits policies. The anticipated findings will not only contribute to the theoretical understanding of the significance of job benefits in municipal work environments but also offer practical insights to policymakers and managers for developing efficient human resource management strategies and administrative practices [4].

1.1 Study Problem and Questions

The study seeks to understand the impact of job benefits and their role in affecting employees by answering the main question: Is there an effect of job benefits, in their combined dimensions (material rewards and incentives/non-material rewards and incentives), on employee performance, specifically employee effort, in Zarqa municipalities? The study will address the following sub-questions:

- Is there an effect of material rewards and incentives on employee effort in Zarqa municipalities?
- Is there an effect of non-material rewards and incentives on employee effort in Zarqa municipalities?

1.2 Importance of the Study

- The study holds scientific importance due to the significant role played by the targeted institutions and their influence on the community.
- The experience of Zarqa municipalities can be transferred to other institutions and municipalities to enhance the development of advanced job benefits systems. This

will effectively encourage the strengthening of these elements, ultimately leading to the achievement of the organization's strategic goals and the promotion of comprehensive local development.

1.3 Study Objectives

The study aims to test the effect of job benefits on employee performance in Zarqa municipalities. Based on this, the study aims to achieve the following objectives:

- To clarify the effect of material rewards and incentives on employee effort in Zarqa municipalities.
- To clarify the effect of non-material rewards and incentives on employee effort in Zarqa municipalities.

1.4 Operational Definitions

First: Job Benefits

Organizations provide their employees with a number of benefits to motivate them to work, improve their satisfaction and increase productivity. These benefits are not only related to their salaries, but also to training and other career development opportunities [9]. The main objective of this study is to investigate the different employee benefits provided in 3 municipalities of Zarqa Province. According to this study, benefits provided by organizations are defined as financial and moral rewards, promotions, training, and other incentives.

Second: Employee Performance

Job performance is measured by how efficiently and effectively employees perform their jobs, and simply put, what the employee does and how well he or she does it. For the purposes of this study, employee performance in municipalities is measured by a number of variables that reflect morale and employees' vigor and enthusiasm for their work.

2 Related Work

In their study titled "The Impact of Incentive Policies on Employee Performance in Companies: A Case Study of a Telecommunications Company in Chad (2018–2022)," Adam et al. [1] sought to investigate how incentive policies affect employee performance in telecommunications companies in Chad over the period 2018–2022. They used the research methodology used and collected data using a questionnaire.

The study's results revealed a significant correlation between incentives and improved employee performance, highlighting the potential for moral incentives to positively impact performance in telecommunications companies [2]. The study's core recommendation highlights the importance of fairness in the distribution of moral and material incentives among employees, as well as the importance of providing training and development opportunities to increase employee performance. By highlighting the importance of motivational policies in improving employee performance and job satisfaction in business organizations, this study can serve as a valuable source.

In their research titled "The Effect of Incentives on Employee Performance," Midoni et al. [11] conducted a study in the state of Adrar to explore the impact of incentives on employee performance. The study utilized a descriptive analytical approach and involved a sample of 75 employees. Data collection was carried out through interviews and questionnaires, and analysis was performed using SPSS28 software. The findings revealed that both financial and moral incentives had a positive influence on employee performance at the state headquarters. The study emphasizes the significance of enhancing financial and moral incentives within the work environment to enhance employee performance. By providing specific recommendations, this study can contribute to the improvement of incentive effectiveness and overall institutional performance in the municipalities of Zarqa Governorate.

The study titled "The Role of Incentive and Reward Systems on Employee Performance in Saudi Primary, Secondary and Tertiary Industrial Sectors: The Mediating Effect of Employee Job Satisfaction" (2023) examined employees' voluntary and involuntary motivation in terms of their performance. The study used a structural equation modeling (SEM) approach on a sample of 216 full-time employees of the Eastern Province of the Kingdom from various public and municipal sectors covering primary, secondary and tertiary industrial sectors. One of the main findings of this study was that incentives and rewards can positively influence employee job satisfaction and, consequently, their performance. This study recommended that local cultural factors should be taken into account when designing incentives and rewards in Saudi Arabia. Overall, the study reveals the impact of incentives and rewards on city employee performance and highlights the importance of employee job satisfaction.

In a research study conducted by Zebua and Chakim [12], titled "Effect of Human Resources Quality, Performance Evaluation, and Incentives on Employee Productivity at Raharja High School." A sample of 30 randomly selected employees from Raharja High School in Cicokul, Tangerang, was used for this study. The survey method, along with path analysis technique, was employed to analyze the relationships between variables and determine the direct or indirect effects of independent variables on the dependent variable. Data analysis was performed using Smart PLS 3.0 software. The findings revealed that the quality of human resources has a positive influence on employee productivity, with a path coefficient of 0.145. Additionally, the quality of human resources positively affects incentives, with a path coefficient of 0.121. It was also observed that incentives have a positive impact on productivity, with a path coefficient of 0.784. However, performance evaluation does not exhibit a positive effect on employee productivity, as indicated by a path coefficient of -0.103. Therefore, it can be concluded that most assumptions in this study, except for one, do

not demonstrate a positive impact. Based on the data analysis results, it is evident that the quality of human resources directly influences employee productivity at Raharja High School.

3 Study Methodology and Procedures

3.1 Study Methodology

In this applied study focusing on the employees of the municipalities of Zarqa Governorate, a descriptive-analytical approach was utilized to examine the influence of job benefits on employee performance.

3.2 Study Population and Sample

All individuals employed within the Zarqa Governorate municipalities make up the study population. The study sample encompasses various positions, including managers, department heads, assistant managers, and employees, resulting in a total of 410 electronically collected questionnaires. The personal and job-related variables are presented in Table 1.

3.3 Data Collection Sources

The primary goal of data collection is to obtain information about the phenomenon under study. The information sources in this study were:

- Secondary Sources: These included books and previous studies, as well as scientific websites that focus on the current study's topic.
- Primary Sources: These included a questionnaire that was developed and tailored to suit the nature of the study. The questions were formulated to represent each dimension of the study to enable measurement.

3.4 Study Instrument

To facilitate the investigation into the correlation between job benefits and employee performance, a questionnaire was created for the employees of Zarqa municipalities. This questionnaire, which consisted of 26 questions encompassing both personal

Table 1 Distribution of the study sample according to personal and job-related variables

Variable	Response	Frequency	Percentage (%)
Gender	Male	265	64.6
	Female	145	35.4
	Total	410	100
Age group	Less than 32 years	126	30.7
	32 - less than 42	130	31.7
	42 - less than 52	115	28
	52 years and above	39	9.5
	Total	410	100
Monthly income	Less than 500 JOD	166	40.5
	500 - less than 750	148	36.1
	750 - less than 1000	69	16.8
	1000 JOD and above	27	6.6
	Total	410	100
Educational level	High school or below	68	16.6
	Intermediate Diploma	51	12.4
	Bachelor's Degree	174	42.4
	Postgraduate	117	28.5
	Total	410	100
Job title	Manager	47	11.5
	Department Head	99	24.1
	Assistant Manager	83	20.2
	Employee	181	44.1
	Total	410	100
Years of service	Less than 5 years	72	17.6
	5–less than 15	141	34.4
	15–less than 25	143	34.9

	Total	410	100

and job-related factors, was developed using insights from previous studies on the subject matter.

3.5 Validity and Reliability of the Study Instrument

Face Validity

The questionnaire's face validity is determined by the extent to which its items are aligned with the intended purpose of measurement and their appropriate distribution. The instrument's validity is contingent upon how well the items accurately represent the variable being measured. To ensure the questionnaire's validity, a group of reviewers from Jordanian universities were presented with the study instrument. Their feedback, modifications, and observations regarding the questionnaire items and content were taken into account and incorporated.

Reliability of the Study Instrument

The presence of reliability is of utmost importance when it comes to a test or measurement instrument. Put simply, an instrument is considered reliable if it consistently produces identical results when administered multiple times to the same individuals in identical conditions. To determine reliability, the Cronbach's Alpha Coefficient was utilized to calculate the reliability coefficient. A statistically acceptable result is achieved if the coefficient surpasses 70%.

Table 2 shows that all reliability coefficients were greater than 70%, indicating that the study instrument is reliable.

To determine the level of agreement among employees of Zarqa municipalities regarding job benefits and their impact on performance, the following formula was used:

$$\text{Period length} = (5-1)/3 = 1.33$$

The level of relative importance was determined based on the arithmetic mean, according to three levels as follows (Table 3).

Table 2 Internal consistency reliability coefficient

Variable	Number of items	Reliability coefficient (Cronbach's alpha) (%)
Financial rewards and incentives	5	85.2
Moral rewards and incentives	5	84.0
Job benefits	**10**	**88.4**
Employee effort	5	87.7
Employee performance	**5**	**87.7**

Table 3 Level of relative importance for questionnaire items

Importance level	Low	Medium	High
Arithmetic mean	1–less than 2.33	2.33–less than 3.66	3.66–5.00

3.6 Descriptive Statistics for Study Variables

The following section provides an analysis of the study tool's dimensions, including their respective levels and significance. Extracted data such as arithmetic means, standard deviations, and level of importance have been presented in Table 4.

Descriptive Statistics for the Independent Variable (Job Benefits)

The independent variable (job benefits) was measured through two dimensions: (material rewards and incentives; and moral rewards and incentives) in the municipalities of Zarqa Governorate. Below is an analysis of the responses of the sample members to the items measuring these dimensions:

Based on the data presented in the table, there is a significant level of concurrence as evidenced by the arithmetic means, which range from 3.888 to 3.949. Among the dimensions assessed, the highest average score of 3.949 was achieved by the dimension related to material rewards and incentives, closely followed by the dimension associated with moral rewards and incentives, which obtained an average score of 3.888. Overall, the independent variable of job benefits, as perceived by employees in Zarqa Governorate municipalities, received a high average score of 3.919, indicating a strong consensus.

To illustrate the level of job benefits in Zarqa Governorate municipalities for each dimension separately, the researcher extracted the arithmetic means and standard deviations for each dimension as shown in Table 5.

Based on the data presented in the table, it is evident that the first dimension, which focuses on material rewards and incentives, holds significant importance. The overall arithmetic mean for this dimension is 3.949, with a standard deviation of 0.703. Among the specific items in this dimension, "Do material rewards affect the effort exerted by employees in your municipality?" stands out with the highest arithmetic mean of 4.090 and a standard deviation of 0.869, indicating its high relative importance. On the other hand, "Do financial rewards encourage employees to exert more effort to achieve the municipality's goals?" has the lowest arithmetic mean of 3.890 and a standard deviation of 0.898, also demonstrating its high relative importance. These findings lead to the conclusion that implementing a system of material

Table 4 Arithmetic means and standard deviations for the dimensions of (job benefits)

Rank	No.	Dimension	Arithmetic mean	Standard deviation	Relative importance
1	1	Material rewards and incentives	3.949	0.703	High
2	2	Moral rewards and incentives	3.888	0.725	High
Job benefits in Zarqa governorate municipalities			3.919		High

Table 5 Arithmetic means and standard deviations for the dimension of (Material rewards and incentives)

Rank	No.	Statement	Arithmetic mean	Standard deviation	Relative importance
1	1	Do material rewards affect the effort exerted by employees in your municipality?	4.090	0.869	High
2	2	Do financial rewards play an effective role in improving employees' perception of their role in your municipality?	3.940	0.850	High
5	3	Do financial rewards encourage employees to exert more effort to achieve the municipality's goals?	3.890	0.898	High
3	4	Do material rewards affect the overall satisfaction of employees in the municipality?	3.920	0.840	High
4	5	Is the distribution of financial rewards fair among employees in your municipality?	3.900	0.969	High
Material rewards and incentives			3.949		High

rewards and incentives can enhance employee performance in the municipalities of Zarqa Governorate (Table 6).

According to the data presented in the table, the second dimension, which focuses on moral rewards and incentives, was deemed highly significant, as indicated by its overall arithmetic mean of 3.888 and standard deviation of 0.725. Among the specific items, "Do moral rewards encourage innovation and creativity among employees in the municipality?" received the highest arithmetic mean of 3.930 and a standard deviation of 0.936, signifying its strong relative importance. On the other hand, "Do moral rewards affect team spirit and cooperation?" obtained the lowest arithmetic mean of 3.830 and a standard deviation of 0.949, also with high relative importance. From these findings, it can be inferred that the implementation of a moral rewards and

Table 6 Arithmetic means and standard deviations for the dimension of (Moral rewards and incentives)

Rank	No.	Statement	Arithmetic mean	Standard deviation	Relative importance
5	1	Do moral rewards affect team spirit and cooperation?	3.830	0.949	High
1	2	Do moral rewards encourage innovation and creativity among employees in the municipality?	3.930	0.936	High
3	3	Do moral rewards affect the overall satisfaction of employees in the municipality?	3.910	0.891	High
2	4	Is there a balance in the distribution of moral rewards between the administrative and field sections in the municipality?	3.920	0.915	High
4	5	Does teamwork and cooperation enhance the chances of obtaining moral rewards in the municipality?	3.840	0.949	High
Moral rewards and incentives			3.888		High

incentives system in the municipalities of Zarqa Governorate effectively motivates employees to engage in innovative and cooperative efforts, thereby enhancing the quality of services provided by these municipalities.

3.7 Descriptive Statistics for the Dependent Variable (Employee Performance)

The dependent variable (employee performance) was measured through the dimension of (employee effort) in the municipalities of Zarqa Governorate. Below is an analysis of the responses of the sample members to the items measuring this dimension (Table 7).

Table 7 Arithmetic means and standard deviations for the dimension of (Employee performance)

Rank	No.	Dimension	Arithmetic mean	Standard deviation	Relative importance
1	1	Employee effort	3.953	0.700	High
Employee performance in Zarqa governorate municipalities			3.953		High

According to the data presented in the table, employees in Zarqa Governorate municipalities rated the arithmetic mean for the dependent variable (employee performance/employee effort) as (3.953), indicating a strong consensus among them.

To illustrate the level of employee performance in Zarqa Governorate municipalities for each dimension separately, the researcher extracted the arithmetic means and standard deviations for each dimension as shown in Table 8.

According to the data presented in the table, the dimension of the dependent variable (employee effort) was found to be highly significant, as indicated by its overall arithmetic mean of 3.953 and a standard deviation of 0.700. Among the statements considered, "Does recognizing efforts play an effective role in motivating employees to increase their effort?" had the highest arithmetic mean of 4.010 and a standard deviation of 0.805, demonstrating its strong influence. On the other hand, "Do employees in the municipality put in a clear effort?" had the lowest arithmetic mean of 3.830 and a standard deviation of 0.895, highlighting its importance as well. Therefore, it can be inferred that when the higher authorities in Zarqa Governorate municipalities acknowledge and appreciate the efforts of their employees, it leads to higher job satisfaction and serves as a motivating factor for them to exert more effort in carrying out their tasks.

3.8 Normal Distribution Test

To determine if the study data follows a normal distribution, a test known as the normal distribution test is conducted. This test involves examining the Skewness coefficient, which should fall within the range of (±1.96), as well as analyzing the Kurtosis coefficient, which should have values between (±3).

Based on the test data indicated in Table 9, it is clear that the data distribution was normal as no values fell outside the range of (±1.96) in the Skewness test and did not exceed the Kurtosis test values of (±3).

3.9 Multicollinearity Test

The purpose of this assessment is to evaluate whether there is a linear connection between the independent variables in a multiple linear regression model. Its objective

Table 8 Arithmetic means and standard deviations for the dimension of (Employee effort)

Rank	No.	Statement	Arithmetic mean	Standard deviation	Relative importance
5	1	Do employees in the municipality put in a clear effort?	3.830	0.895	High
4	2	Does an effective rewards system encourage increased effort among employees in the municipality?	3.960	0.878	High
1	3	Does recognizing efforts play an effective role in motivating employees to increase their effort?	4.010	0.805	High
2	4	Does administrative support affect employees' readiness to put in extra effort on a specific project?	3.990	0.872	High
3	5	Is there a relationship between overall employee satisfaction and their willingness to put in extra effort in their tasks?	3.970	0.820	High
Employee effort			3.953		High

Table 9 Normal distribution test for study variables

Variables	Skewness	Kurtosis
Material rewards and incentives	− 0.75	0.965
Moral rewards and incentives	− 0.396	− 0.201
Employee effort	− 0.398	− 0.093

is to gauge the strength of this relationship and its impact on the model's ability to distinguish the individual effects of each variable on the dependent variable. The presence of multicollinearity can distort coefficient estimates and compromise the accuracy and dependability of the findings.

The study employed two tests to assess the relationship between variables. Firstly, the correlation matrix test was utilized, which sets a limit of 80% for the correlation

Table 10 Multicollinearity test

Variables	Material rewards and incentives	Moral rewards and incentives	Employee effort	Employee role perception	VIF	Tolerance
Material rewards and incentives	1				1.508	0.663
Moral rewards and incentives	0.580**	1			1.508	0.663
Employee effort	0.428**	0.548**	1			

value between any two variables. Secondly, the Variance Inflation Factor (VIF) test was conducted, which requires the VIF value to be greater than 1 and less than 10, while the tolerance values should fall within the range of 0.1 to 1. The outcomes of these tests are presented in Table 10.

Based on the data presented in the table, it can be observed that the correlation coefficient between the variables' dimensions falls within the range of 0.428–0.548. This range, which is below 80%, suggests the absence of any multicollinearity concerns in the study's data. Furthermore, the table reveals that all VIF values were above 1 but below 10, while the tolerance values ranged from 0.1 to 1. These findings indicate that there are no issues of multicollinearity among the independent variables in the study.

4 Results

1. There is a statistically significant positive effect of professional privileges through (material rewards and incentives) on employee effort in the municipalities of Zarqa Province. This means that as employee motivation increases through material rewards and incentives, the effort put into completing the required tasks increases.
2. There is a statistically significant positive effect of job privileges through (rewards and moral incentives) on employee effort in the municipalities of Zarqa Province. This means that as employees' motivation increases through rewards and moral incentives, the effort they put in increases thanks to recognition from municipalities.

4.1 Recommendations

Based on the results of the study, the following recommendations can be made:

- The study recommends that municipalities in Zarqa Province improve and improve standards for distributing material and moral rewards and incentives in a way that ensures transparency and fairness, which increases employee satisfaction and motivates them to achieve exceptional performance.
- Promote a culture of innovation and creativity in the workplace in municipalities, providing employees with the necessary support to bring forward new ideas and proposals that contribute to the development of services and improved performance.
- Improve the work environment and provide appropriate conditions that encourage positive interactions among employees through effective human resource management and fostering team spirit and cooperation.
- Engage municipal employees in the development and improvement of their municipalities' compensation and incentives policies, offering suggestions and feedback that could improve the work environment.

The Legal Frameworks for Patent Protection in the Digital Technology Era: An Analytical Study in Light of International Agreements

Omar Al Makhzoumi and Jaber Al-Ghayathin

Abstract This study explores the legal frameworks for patent protection amidst the developments in digital technology, examining the role of international agreements in enhancing global protection for inventors' rights. The study focuses on analyzing the scope of legal protection granted to patents and the impact of the granting state's borders on the cross-border protection of inventions. It also highlights the role of prominent international agreements such as the Paris Convention, the Patent Cooperation Treaty (PCT), and the TRIPS Agreement in providing an integrated framework for global patent protection. The study employed a descriptive-analytical approach to gather data from various sources, including legal texts and academic articles, while analyzing the effectiveness of these agreements in providing comprehensive international protection. The results indicated that effective protection requires patent registration in each country where the inventor seeks protection and that international agreements provide the essential principles needed, such as the right of priority and national treatment, without nullifying previous provisions but rather reinforcing them. The study recommends the need to raise awareness of the importance of international patent registration and to simplify the registration procedures to reduce costs and time. It also called for updating local legislation in member states to align with international principles and enhancing support for developing countries to ensure their ability to effectively protect their inventions within the international framework.

Keywords Patent protection · Digital technology · International agreements · Paris convention · Patent cooperation treaty · TRIPS agreement · Scope of protection · Patent registration

1 Introduction

The scope of legal protection for patent rights is limited to the borders of the granting state [1]. Accordingly, patent protection does not extend beyond the territory of the state in which the patent is registered, in line with the principle of state territoriality. Consequently, the scope of patent protection is confined to the granting state and does not apply to any other country in the world unless the patent owner expresses a desire to protect their invention in another country. In this case, they must register their invention in the countries where they wish to protect it [2]. From this standpoint, the idea of international protection for inventors' and innovators' rights began to emerge, leading to the establishment of international agreements aimed at providing protection for the registered rights of inventors in all member states of these agreements [3]. The first agreement concluded for this purpose was the Paris Convention for the Protection of Industrial Property, held on March 20, 1883, which has been amended several times, with the latest revision on October 2, 1979. Many countries around the world have joined this agreement, including Jordan, which acceded in 1972 [4], while Egypt joined the agreement in 1950. The member states of this agreement established an international union office in Bern, Switzerland, with the aim of implementing the provisions of this agreement, and it was later moved to Geneva [5]. The agreement includes three fundamental principles for the international protection of industrial property: (1) The right of priority or precedence, (2) The principle of equality between the nationals of the union countries and citizens, and (3) The principle of patent exploitation. Several other international agreements have been concluded to protect industrial property at both the international and Arab levels.

Based on the above, this study seeks to analyse the available legal frameworks for patent protection in light of technological developments in the digital age. It also aims to assess the effectiveness of major international agreements such as the Paris Convention for the PCT, and the TRIPS Agreement in providing effective cross-border protection for inventors' and innovators' rights. The study will examine how these agreements contribute to overcoming the limitations of territorial protection and provide a comprehensive international legal framework, as well as identify current challenges and opportunities to enhance patent protection in the global digital context.

1.1 Objectives of the Study

- Analyze the scope of legal protection for patents.
- Examine the extent to which the legal protection of patents is limited to the territory of the granting state and how this affects the international protection of inventions.
- Review the most important international agreements aimed at protecting the rights of inventors and innovators, with a focus on the Paris Convention, the PCT, and the TRIPS Agreement.

- Analyze the fundamental principles of patent protection in international agreements, such as the principle of priority, national treatment, and the independence of patents.
- Assess the effectiveness of these agreements in protecting inventors' rights and providing the necessary international protection.

1.2 Study Methodology

The study adopted a descriptive-analytical approach to analyze the subject of patent protection. Through this approach, data was collected from various sources such as legal texts and international agreements, along with a review of previous literature and scholarly articles related to patent protection. After gathering the data, the analytical method was applied to examine and interpret the information. The descriptive analysis included providing an accurate description of the concepts and principles of patent protection and determining the impact of international agreements on legal protection.

2 Legal Protection of Patent Rights Established by the Convention of 1883

The Paris Convention is considered the first agreement concluded to protect the rights of creators and inventors. This convention resulted in three fundamental principles for protecting the rights of innovators and creators, which will be discussed in three sections.

2.1 Principle of Priority and Precedence

Article 4(A) (1) of the Paris Convention states, "Any person who has duly filed an application for a patent of invention, or for the registration of a utility model, or for the registration of an industrial design, in one of the countries of the Union, shall enjoy, for the purpose of filing in the other countries, a right of priority during the periods hereinafter fixed…" [6]. Based on this provision, anyone who has filed an application for the registration of an invention in one of the Union countries, meaning the member states of the Paris Convention, enjoys a 12-month period in which they can seek protection in any other Union country. Subsequent applications are then treated as if they had been filed on the same date as the original application [4, 7]. Therefore, any subsequent application for the same invention in any Union country by someone other than the original applicant is considered void, and a patent cannot be granted for it, as the invention lacks the novelty required for patent protection

[8]. The right of priority excludes any application that has the status of a valid national application under the internal laws of each Union country or under bilateral or multilateral treaties concluded between Union countries.

But what is a valid national filing? Article 4(A) (3) of the same convention defines "a valid national filing as any filing that is sufficient to establish the date on which the application was filed in the country concerned, whatever may be the subsequent fate of the application" [6]. Furthermore, Article 4(B) of the Paris Convention states that any subsequent filing in any other Union country, made before the expiration of the priority period, or any acts performed during this period, particularly filing another application, publishing the invention, or exploiting it, or offering copies of the invention or model for sale, or using the mark, shall not give rise to any rights in favour of third parties or any right of personal possession. Third parties retain the rights they acquired before the date of the first application, which is the basis for the right of priority according to the internal law of each Union country [9].

From this text, it is clear that filing a patent application, the issuance of a patent, or the publication or announcement of the invention does not deprive it of the element of novelty, without which a patent cannot be granted [5, 10]. Comparative legislation has adopted the provisions of this convention, allowing any application that includes the right of priority to be filed at an earlier date in any Union country, provided that the registration is filed within a period not exceeding twelve months, starting from the day following the filing of the first application [11].

According to Article 4 of the Paris Convention, the following conditions must be met to claim the right of priority:

1. The application must be filed in one of the Union countries.
2. The filing must be properly made, and the subject matter of the previous and subsequent applications must be the same.
3. The right of priority arises if the first filing was made in a Union member state.

The purpose of priority is to provide protection for inventors' rights, which might otherwise diminish international protection for the invention. The member states of this convention are considered as one state, and the filing of a patent application in any of the member states applies to all Union countries, provided that the patent application is submitted within the priority period, which is a maximum of 12 months from the date of the original application [12].

Principle of National Treatment Among Union Nationals

This principle means that each member state of the convention grants citizens of the contracting states the same protection it provides to its own citizens. This protection, which is related to the protection of inventors and creators, must also be granted to the nationals of Union countries. Furthermore, nationals of non-member countries of this convention are also entitled to protection if they reside in a state that has joined the convention and own an industrial or commercial establishment there [13].

But what is meant by "nationals of the Union"? Any person who holds the nationality of one of the member states of the Paris Convention or resides in one of the member states and has real industrial or commercial establishments in any of the

Union countries, even if they belong to a state that is not a party to the convention [14]. Article 2 of the convention states: "Nationals of any country of the Union shall, as regards the protection of industrial property, enjoy in all the countries of the Union the advantages that their respective laws now grant, or may hereafter grant, to nationals; all without prejudice to the rights specially provided for by this Convention. Consequently, they shall have the same protection as nationals and the same legal remedy against any infringement of their rights, provided they comply with the conditions and formalities imposed upon nationals. However, no requirement as to domicile or establishment in the country where protection is claimed may be imposed upon nationals of countries of the Union for the enjoyment of any industrial property rights" [15]. The article further explicitly reserves to each country of the Union the right to make its own provisions regarding judicial and administrative procedures, as well as jurisdiction, including the appointment of an agent or a chosen domicile, which may be required by industrial property laws [12].

This article makes it clear that all nationals of Union countries enjoy the same protection that the state grants or may grant in the future to its own citizens with respect to industrial property protection. Accordingly, the Convention equalizes all Union countries in matters related to industrial property protection [5, 16]. All nationals of member states are treated as nationals within the territory of any member state of the convention [17]. Article 3 of the same convention states: "Nationals of countries outside the Union who are domiciled or have real and effective industrial or commercial establishments in the territory of one of the countries of the Union shall be treated as nationals of the countries of the Union" [13].

Based on this article, the Convention equates certain individuals who are not nationals of Union countries with citizens of the member states of the convention, provided that the person resides in a Union country and has an industrial or commercial establishment that is genuine and effective [6].

Principle of Patent Independence

This principle means that a patent granted in one of the Union states is independent of patents granted in other states. The granting of a protection document in one state does not obligate other states to grant the same protection [13]. Article 4 of the Convention states: "Patents applied for in the various countries of the Union by nationals of Union countries shall be independent of the patents obtained for the same invention in other countries, whether members of the Union or not" [6]. According to this provision, if a Jordanian national obtains a protection certificate in accordance with Jordanian patent law and then submits an application for a patent within the priority period in Chad, each of the patents will be independent of the other. In other words, the protection period for the patent under Jordanian patent law may expire before the protection period under Chadian law, meaning that each patent is independent of the other according to this principle. The application of this principle, the principle of patent independence, "leads to illogical results in practice, especially since these results do not align with the interests of developing countries. This becomes evident in cases where a judicial decision is issued declaring the patent invalid due to the lack of substantive conditions for the invention, whether in terms of the novelty of

the invention or the inability of that invention to be applied industrially outside the territory of the state. However, we find that this patent remains valid and effective, and its owner has the right to financially exploit it throughout the protection period, despite the issuance of a judgment declaring its invalidity for any reason related to the invalidity of the invention outside the territory of that state" [5, 18].

1. **Compulsory Licenses**: The Convention affirms the granting of compulsory licenses in cases where the invention is not exploited by its owner, under fair conditions that take into account the rights of the inventor [13]. Article 5(2) of the Paris Convention states: "Each country of the Union shall have the right to take legislative measures providing for the grant of compulsory licenses to prevent the abuses which might result from the exercise of the exclusive rights conferred by the patent, for example, failure to work" [19]. According to this article, each Union state has the right to grant compulsory licenses but only in two cases:

– **First**: The patent owner's abuse of their right subject to the patent.
– **Second**: The inventor's failure to exploit their invention subject to the patent.

In these two cases, the Convention permits the granting of compulsory licenses for the exploitation of the invention subject to the patent. However, a compulsory license cannot be requested based on non-exploitation or insufficient exploitation before four years have passed from the filing date of the patent application or at least three years from the date of granting the patent, with the obligation to apply the longer of these periods. However, the compulsory license will be refused if the patent owner demonstrates that they ceased exploiting their invention for legitimate reasons [6].

1. **Use of Patent Subject Means on Vessels of Other Union States**: The Convention allows the use of patented means on ships belonging to other Union states, whether in the hull of the ship, its machinery, equipment, or other additional parts, when these ships temporarily or accidentally enter the waters of the mentioned states, provided that the use of these means is limited to the needs of the ship.

This provision makes it clear that the use of a patent on means of transport is not considered an infringement of the patent owner's rights, provided that such use is on vessels of Union states and is limited to the needs of the ship only.

Or the exploitation of patented means in the manufacture or operation of aircraft or land vehicles belonging to other Union states, or their spare parts, when these vehicles temporarily or accidentally enter Union states, is not considered an infringement of the patent owner's rights [20].

1. **No Infringement on the Right of the Contracting State to Conclude Special Agreements**: Each member state of the Convention has the right to conclude its own separate agreements, independent of Union states, provided that such agreements do not conflict with the provisions of the Convention [13, 21].

2. **Temporary Protection under the Convention:** Article 11 of the Convention states: "The countries of the Union shall, in accordance with their domestic legislation, grant temporary protection to patentable inventions that are exhibited at officially recognized international exhibitions held within the territory of any of them. Such temporary protection does not result in the extension of the time periods provided for in Article 4. The authorities of each country may, in case of a subsequent claim to the right of priority, provide that the period shall commence from the date of introduction of the product into the exhibition. Each country may require such documents as it deems necessary to prove the identity of the exhibited item and the date of its introduction" [22]. Accordingly, certain conditions must be met when displaying the invention at international exhibitions [4, 21]:

- The exhibition must be official.
- The exhibition must be recognized and held within the territory of a Union member state.
- The invention must be registered before the start of the exhibition.

In conclusion, the Convention has established essential provisions and general principles that are binding on all Union member states. Membership in the 1883 The Convention is open to all countries, and accession documents must be deposited with the Director General of the World Intellectual Property Organization. It is noteworthy that the Convention began with eleven countries in 1883, and since then, the number of member states has gradually increased to 140 countries worldwide as of January 1, 1996. Consequently, the 1883 Paris Convention did not establish criminal protection for the rights of inventors and creators; rather, it set forth general provisions without imposing obligations on member states to enact criminal sanctions for the protection of industrial property.

The Convention was designed to regulate industrial property without obligating member states to impose sanctions in cases of infringement on industrial property rights. The purpose of the Convention is to regulate relations in the fields of trade and industry, promote fair commercial practices, and encourage nascent industries. This is the primary goal of the Convention, and thus, it did not impose criminal sanctions on the rights of inventors. Article 10 of the Convention states: "The countries of the Union are bound to assure to nationals of the other countries of the Union effective protection against unfair competition." The article further clarifies the acts that are considered unfair competition [23].

3 Protection of Patent Rights Under the TRIPS Agreement

The TRIPS Agreement offers patent protection for inventions across all technological fields, irrespective of the invention's country of origin or the location of production [24]. Comprising 73 articles, the agreement features both general and detailed provisions. Its overarching goals include the liberalization of international trade by effectively safeguarding intellectual property rights while ensuring that the

enforcement measures for these rights do not obstruct legitimate trade. Building upon the core principles established in the Convention and the Berne Convention for the Protection of Literary and Artistic Works, the TRIPS Agreement incorporates nearly all key provisions from these two conventions. Concluded in 1994 and taking effect on January 1, 1996, it references these earlier agreements directly. This signifies that the TRIPS Agreement does not nullify or supersede prior international agreements concerning intellectual property rights; instead, it bolsters their significance. The intention of the TRIPS Agreement was not to establish uniform substantive rules for intellectual property protection. To put it differently, the regulations set forth by this agreement signify the least amount of protection that member states are obligated to offer. Therefore, any member state can implement domestic laws that grant greater protection for inventions than what is stipulated by the TRIPS Agreement [25].

The TRIPS Agreement has led to a set of fundamental principles designed to ensure effective protection of industrial property rights. These principles include:

- The principle of national treatment.
- The principle of most-favored-nation treatment.
- The limits of protection.

The agreement outlines the conditions that must be met to obtain a patent, the rights conferred by the patent to its owner, the cases in which a patent may not be granted, and the conditions that must be met for an invention to be patented, as stipulated in Article 27 of the agreement, "Patents shall be available for any inventions, whether products or processes, in all fields of technology, provided that they are new, involve an inventive step, and are capable of industrial application" [26]. According to this provision, an invention must meet three basic requirements to enjoy legal protection:

- "The invention must be new.
- The invention must involve an inventive step.
- The invention must be capable of industrial application."

Regarding the situations in which patents cannot be granted, this agreement specifies that such cases include inventions whose commercial use within the territories of member states is essential for safeguarding public order, morality, public health, or the environment, as long as this exclusion is not merely due to a legal ban on such exploitation. Furthermore, countries within the agreement may also choose to exclude from patentability diagnostic, therapeutic, and surgical procedures for the treatment of humans or animals, along with plants and animals excluding microorganisms, as well as essentially biological methods for producing plants or animals, apart from non-biological and microbiological processes. Nonetheless, it is required that member states offer protection for plant varieties, either through patents or through a sui generis system specifically tailored for these varieties.

The Rights Granted to the Patent Owner According to the TRIPS Agreement

Article 28 of the TRIPS Agreement states, "A patent shall confer on its owner several rights. If the subject matter of a patent is a product, the patent owner shall have the right to prevent third parties not having the owner's consent from the acts of:

1. Making, using, offering for sale, selling, or importing that product for these purposes.
2. If the subject matter of the patent is a process, the patent owner shall have the right to prevent third parties not having the owner's consent from the act of using the process, and from the acts of using, offering for sale, selling, or importing the product obtained directly by that process for these purposes. Patent owners also have the right to assign, transfer, or license the patent to others".

Conditions for Filing a Patent Application According to the TRIPS Agreement

The applicant for a patent is required to disclose the invention in a clear and complete manner sufficient for a person skilled in the field to carry out the invention. The applicant must disclose the best method known to the inventor for carrying out the invention at the date of filing the application or at the priority date of the application when priority is claimed. Additionally, the applicant must disclose information on related applications filed in foreign countries or patents granted to them in those countries [27].

Exceptions to Patent Rights According to the TRIPS Agreement

The States Parties to this Convention may provide for limited exceptions to the exclusive rights conferred by a patent, provided that such exceptions do not unreasonably conflict with a normal exploitation of the patent and do not unreasonably prejudice the legitimate interests of the patent holder, pursuant to which the legitimate interests of third parties must be taken into account [28].

Article 31 of the TRIPS Agreement specifies the circumstances under which a patent owner's rights can be used without their consent. These are limited to specific situations outlined in this article, including when the law of any member country permits other uses of the patented subject matter without the authorization of the patent owner, including use by the government or third parties authorized by the government. Member countries must adhere to the procedures specified in Article 31 of the agreement [29].

Accordingly, what protection does this agreement provide for patent rights? And what are the fundamental principles that have resulted from this agreement?

We will answer these questions in the following three sections.

3.1 Legal Protection of Patents

After clarifying the conditions required under the TRIPS Agreement for the protection of patent rights, the cases where patents cannot be granted, the rights conferred to patent holders by this agreement, and the exceptions to patent rights, the following question arises:

What is the duration of patent protection under this agreement?

Article 33 of the TRIPS Agreement states, "The term of protection granted shall not end before the expiration of a period of twenty years counted from the filing date of the patent application" [30]. According to this provision, the duration of patent protection under this agreement is twenty years, starting from the filing date of the patent application, not from the date the patent is granted [31].

Article 34 of the agreement addresses the burden of proof in patent infringement cases involving industrial processes:

"For civil procedures regarding the infringement of the patent holder's rights referred to in paragraph 1(b) of Article 28, if the subject of the patent is a manufacturing process, the court has the authority to order the defendant to prove that the process used to manufacture a similar product differs from the process covered by the patent. Consequently, member states must provide that in at least one of the following situations, any similar product obtained by the patented manufacturing process shall be considered as a new product" [32]. According to this text, the agreement allows the court, if the patent subject is a manufacturing process, to order the defendant to prove that the process used to manufacture a similar product is different from the patented process. If the defendant proves that the process used for the similar product is different from the patented process, the defendant is not liable. For an infringement of the patent holder's rights under Article 28 of the TRIPS Agreement to occur, the following conditions must be met:

- Production must occur without the consent of the patent holder, unless proven otherwise.
- The product obtained using the patented manufacturing process must be a new product.
- There must be a significant probability that the similar product was manufactured using this process, and the patent holder has been unable to determine the actual process used despite reasonable efforts.
- Any member country has the freedom to stipulate that the burden of proof mentioned in paragraph (1) rests on the person accused of patent infringement only if the conditions mentioned in subparagraph (a) and (b) are met. Article 34(3) also considers the legitimate interests of defendants regarding the protection of their trade and industrial secrets while providing evidence to prove differences [33].

3.2 The Principle of National Treatment

Article 3 of the TRIPS Agreement provides that: "With regard to the protection of intellectual property rights, each Member State shall accord to nationals of other Member States treatment no less favorable than that accorded to its own nationals" [34]. The Convention therefore establishes equality between all nationals of the Member States and requires all Member States to provide to nationals of other Member States the same level of protection as they accord to their own citizens. This principle ensures equality between persons from different Member States and

nationals of the Member States themselves with regard to the beneficiaries of such protection, the means of obtaining such protection, its system and duration. However, the application of this principle is subject to the exceptions provided for in the agreements adopted through the TRIPS Agreement, such as the Paris Convention as revised in 1967 [35].

3.3 The Most-Favored-Nation Principle

In general, the TRIPS Agreement obliges all member countries not to discriminate between the nationals of other member states. This means that every member state must treat its own nationals and the nationals of other member states equally regarding intellectual property rights. This principle complements the previous principle of national treatment, which mandates that member states provide no less favorable treatment to nationals of other member countries compared to their own citizens regarding intellectual property protection. Without the Most-Favored-Nation Principle, the principle of national treatment would be meaningless as there would be a discrepancy in the legal protection of intellectual property due to differences in the relationships between countries and their treatment of each other [35, 36]. Article 4 of the TRIPS Agreement states, "In respect of the protection of intellectual property, any advantage, favor, privilege, or immunity granted by a member to the nationals of any other country shall be accorded immediately and unconditionally to the nationals of all other member countries, except that any advantage, favor, privilege, or immunity granted by a member shall not be extended to other members if it is provided for in a bilateral agreement" [37]. Under this provision, the TRIPS Agreement requires member states to grant immediately and unconditionally to nationals of all other member states any advantage, benefit, privilege or immunity enjoyed by nationals of one-member state. However, there are exceptions to such benefits, benefits, privileges or immunities granted by member states.

In summary, the TRIPS Agreement clarifies the rights of inventors concerning their patents, specifies cases where patents cannot be granted, and instances where the right may be exploited without the patent holder's consent. The agreement provides protection for inventions, whether they concern a final product or a process, in all technological fields, provided that the inventions are new, involve an inventive step, and are capable of industrial application. Once these conditions are met, a patent is granted [38].

A patent grants the holder the associated rights regardless of the invention's location or technological field, whether the products are imported or domestic. However, this protection is subject to exceptions, as member countries can exclude inventions that contravene public order, morality, or cause harm to life, human health, animal health, plant health, or the environment. Additionally, member countries may exclude the granting of patents for diagnostic, therapeutic, and surgical methods for treating humans or animals, or for plants [39]. The duration of patent protection is twenty

years, starting from the date of filing the patent application [40]. Notably, the agreement does not define a patent but clarifies the conditions required for an invention to be eligible for patent protection. It is worth mentioning that all member countries of this agreement have incorporated a twenty-year protection period starting from the patent application date into their national legislation.

4 Conclusion

This study highlights the significant challenges faced in patent protection in the digital technology era, where the scope of legal protection is confined to the boundaries of the granting state. Despite the efforts made through international agreements such as the Paris Convention, the PCT, and the TRIPS Agreement, there remains a pressing need to enhance and develop legal frameworks to keep pace with rapid technological advancements. Achieving effective protection requires adopting comprehensive international strategies that ensure the rights of inventors and innovators in a holistic and flexible manner, thus contributing to the global promotion and support of innovation.

4.1 Findings

The study has led to the following findings:

- Patent protection is limited to the borders of the granting country and does not automatically extend to other countries, necessitating the registration of the invention in the countries where the inventor seeks protection.
- International agreements such as the Paris Convention, the PCT, and the TRIPS Agreement provide a framework for protecting inventors' rights on a global level, ensuring the application of fundamental principles such as priority and precedence, national treatment, and the independence of patents.
- There is an overlap between the provisions in various agreements, with the TRIPS Agreement committed to reinforcing the provisions of the Paris and Berne Conventions without abolishing them.

4.2 Recommendations

This study recommends the following:

- Increasing awareness among inventors and innovators about the importance of international patent registration and how to leverage international agreements to expand the protection of their inventions.

- Simplifying and accelerating the patent registration process in different countries to reduce costs and time required for obtaining effective international protection.
- Member countries of international agreements should review and update their national legislation to ensure alignment with international principles established in agreements such as the Paris Convention, the PCT, and the TRIPS Agreement.
- Enhancing support for developing countries in the field of patent protection, providing technical assistance and training to ensure their ability to effectively protect their inventions within the international framework.

Technological Innovations in Automated Fund Garnishment and Distribution Procedures

Ahmed Awad Al-bnian

Abstract This study explores the role of technological innovations in enhancing the automation of fund garnishment and distribution processes in debt recovery. The focus is on how modern digital solutions can optimize the allocation of funds obtained from the sale of a debtor's assets through public auctions. The research investigates how automated systems can manage the distribution of execution earnings among creditors—both secured and unsecured—based on established legal guidelines and creditor priorities. It highlights the importance of technological tools in addressing challenges such as creditor competition and the proportional allocation of limited funds when the proceeds are insufficient to fully satisfy all claims. By integrating advanced technologies, such as automated legal compliance systems and digital asset management platforms, the study proposes improvements to the traditional methods of fund distribution. These innovations are expected to increase accuracy, efficiency, and fairness in handling garnished funds, ensuring that judicial expenses are prioritized and remaining funds are allocated proportionally among creditors. The findings suggest that adopting comprehensive technological solutions could significantly enhance the management of fund garnishment procedures and support the development of more effective legal provisions for creditor claims.

1 Introduction

The 2007 Execution Law lays out the regulation of distributing execution garnishing funds in Articles 108 to 113. What is interesting about this legal framework is that it emphasizes essential principles to consider, rather than specifying detailed creditor entitlements or rankings. The Civil Law handles such determinations, adding a fascinating layer to the Execution Law.

The allocation of auction garnishing funds among secured creditors is an undertaking of the Execution Department. This is a pivotal role within the broader legal framework involving careful orchestration. A seamless execution process is facilitated through adherence to specific stipulations enshrined in the Execution Law. This application of distribution ensures that each creditor receives a proportion that equals their outstanding debt, in a meticulous manner.

The Execution Department carries the weighty responsibility of orchestrating the allocation of garnishing funds resulting from a debtor's public auction, among secured creditors. With immaculate attention to detail and adherence to specific stipulations enshrined in the Execution Law, this intricate application of distribution ensures that each creditor receives a proportion that equates to their outstanding debt. This crucial task plays a pivotal role within the broader legal framework, facilitating a seamless execution process.

Amidst the intricate legal terrain, it is essential to tread lightly and prioritize cautious disbursement of funds, taking into account the multifaceted nature of execution processes. The priority remains to provide secure creditors with satisfactory treatment while balancing various legal frameworks and financial limitations. Safeguarding the interests of all parties is integral to upholding the system's integrity, a key objective that we keep at the forefront of our consciousness every step of the way.

1.1 Problem of the Study

When execution proceedings yield copious garnishing funds, it is evident there were no impediments during the process, leading to the thorough appeasement of secured creditors. In a positive situation like this, the orderly dispersal of execution garnishing funds follows legal protocols, granting each creditor their rightful share based on their individual debts. The challenge becomes far more intricate when execution proceedings fail to yield adequate revenue to meet the cumulative demands of all creditors. This is especially manifest in situations where various categories of creditors are involved, including ordinary creditors, privileged parties with explicit rights as per current legislation, and fellow privileged parties with equivalent hierarchical ranks. The inadequacy of the execution garnishing funds is at the heart of this challenge, as it hinders the complete liquidation of debts owed to this diverse group of creditors. A problem surfaces when funds for settlement are limited and fail to address

all the creditors' claims. This issue intensifies particularly when dealing with ordinary creditors, privileged creditors with specified legal rights, or privileged creditors sharing similar rank hierarchies. The scarcity of financial resources heightens the requirement for a considerate and fair distribution of limited funds among creditors. This calls for a detailed study of the complex legal hierarchies and entitlements, making the resolution process more complicated. The intricacies of dealing with creditors possessing unique legal privileges, along with those without, compounded by the sharing of rank, highlight the difficulty of achieving a just and agreeable resolution within the confines of a limited budget. Essentially, the execution process demands more complexity and subtle legal considerations when faced with financial constraints that prevent meeting all creditor demands.

1.2 Significance of the Study

In regard to the pursuit of legal resolutions addressing competition between creditors for debts, the topic at hand holds great importance. The significance of this matter is emphasized by both practical implications and the need for competent handling within the legal framework. The intricate dynamics involved in navigating creditor competition demands a comprehensive comprehension of legal intricacies and the development of skillful solutions to achieve fair and efficient resolutions in execution proceedings.

1.3 Methodology of the Study

The methodological approach utilized in this investigation incorporates both descriptive and analytical methods, with each method serving a unique yet complementary purpose. Descriptively, the study delves deeply into legal provisions while also examining the viewpoints expressed by legal experts. This aspect of the methodology endeavors to provide an all-encompassing and meticulous depiction of the complex legal terrain in question. Concurrently, an analytical approach is emphasized, with the goal of illuminating the frequently convoluted and multifarious passages within the Execution Law. Through a comprehensive investigation that carefully dissects and examines the language used in the statutes, this analysis aims to unravel the subtleties and nuances of the legal structure. Taking a two-fold approach, the research strives not just to present a detailed overview of the current legal provisions and academic perspectives but also to encourage a more nuanced comprehension of the intricate language found in the Execution Law.

1.4 Study Plan

Amidst a careful demarcation of the overarching topic, the thematic study is split into two discernible parts, each dealing with unique features. The inaugural fragment entails a comprehensive exploration of the bulk principles regulating the distribution of execution garnishing funds. Herein, a panoramic roadmap of the general rules governing the allocation of these garnishing funds is meticulously presented, laying a foundational framework for the rest of the discussion. Diving deeper, the second part takes a closer look at the complex dynamics surrounding the allocation of execution garnishing funds. With particular emphasis on the nuanced privileges afforded to select creditors, this examination delves into the intricate legal framework, hierarchical entitlements, and specific allocation methods that comprise the highly intricate landscape of execution distribution. The deliberate division of this topic into two sections forms a comprehensive and methodical approach that allows for an in-depth understanding of both the broad principles and highly specific details that define the distribution of execution garnishing funds, especially in regard to the rights held by privileged creditors.

2 General Rules for Distributing Garnishing Funds

An idea put forth by Al-Qudah back in 2010, centers around the principle of parity. This fundamental concept is integral in ensuring that all creditors are on level ground during the process of realizing their rights, which are derived from the assets of the debtor. The principle is adamant that, in the best-case scenario where the debt amounts to enough to pay off all creditors, entitlements ought to be distributed in an egalitarian manner. In 2012, Al-Aboudi shared a perspective that bolsters the notion of equality amongst creditors' rights. This viewpoint emphasized that such a balance can only be achieved if the cumulated debts are sizeable enough to pay off all creditors' demands. The legal framework that guides debt settlement focuses on impartiality and fairness as essential principles that accentuate the importance of even-handed distribution amongst creditors, based on the debtor's assets.

2.1 Multiple Creditors

The 2009 studies of Shushari have established a hierarchical system for debt satisfaction, which operates on a nuanced landscape. This system distinguishes between ordinary and secured debts, granting the latter priority in terms of financial claims satisfaction. After secured debt holders have settled their debts, ordinary debt holders move onto the terrain, acquiring a lower status in the debt satisfaction hierarchy compared to their privileged peers.

Al-Kilani's analysis highlights the hierarchical nature of secured debts, which requires meticulous consideration in their distribution (2022). To tackle this, Article 111 of the Execution Law outlines a structured approach for debt distribution when the garnishing funds from the sale are insufficient to cover all outstanding debts. The law mandates a sequential process, with priority given to holders of secured debt who are paid based on the ranks of their privileges. As per the legal provision, the satisfaction of these debts takes precedence over other outstanding debts. In the context of execution proceedings, the satisfaction of debts is governed by established legal principles. Accordingly, if all debts hold an equal rank of privilege and there are not enough funds to cover all of them, an equitable pro rata division takes place among the debt holders. When the available funds exceed the secured debts, the surplus gets distributed pro rata among ordinary debt holders. This article's meticulous delineation ensures a structured and unbiased allocation of funds, adhering to the aforementioned legal principles.

2.2 Payment of Execution Expenses

Guard fees, expert fees, newspaper announcements, and various other disbursements are just some of the expenses that fall under the spectrum of expenditures covered by Article 108/A of the Execution Law. This crucial provision unravels the complexities of fund disbursement in the execution process and emphasizes that the executor is bound by law to allot specific amounts from the funds collected through execution in order to recompense the creditor for incurred expenses. These expenses may include costs linked with seizure and sale, among other things.

The recognition of judicial expenses as privileged rights comes from Civil Law Article 1432. This means that disbursed amounts have the right to be reimbursed from the garnishing funds generated through the execution process. It is a smart move because it serves two purposes: first, as an incentive for creditors to keep pursuing debtor assets and collecting debts. And second, it emphasizes the importance of that privilege. The lawmaker's foresight shines through with the provision that aims to prevent creditors from abandoning the execution process due to pressure from other privileged creditors. This helps sustain momentum in the debt collection process and reduces the risk of withdrawal by creditors facing competition from their counterparts. Overall, it is a preemptive measure designed to maintain debt collection efforts.

2.3 Priority in Seizure Does not Confer Privilege

Granting priority in a seizure does not grant any privilege to the creditor, as clearly indicated in Article 113 of the Execution Law. The article entails that in the case of competing creditors, the holder of the seizure has no advantage over the others.

Additionally, if an execution document is issued based on an oral or written acknowledgment, an oath, or a later-dated written acknowledgment that comes after the legal reasons initially stated in the execution document, subsequent creditors cannot participate in any seizure.

Intervention in distribution of execution garnishing funds is allowed for other creditors when a seizure is imposed on the debtor's property. Exclusive rights to the property of the debtor are not granted to the creditor who initiated the seizure [1].

The legislator's foresight is highlighted in Article 109/D, which outlines that proceedings already taken cannot be affected by seizures made after the specified deadline in paragraph (b).. As such, any excess amounts are solely distributed among creditors who have requested seizure. The intention behind this provision is to safeguard the auction process from being manipulated by the debtor. Allowing participation from all creditors would have made room for the debtor to introduce non-existent creditors and skew the distribution of execution garnishing funds. This shrewd move by the legislator was aimed at preventing any conspiracy or deceitful actions from the debtor [2].

3 How to Distribute the Executed Garnishing Funds and Secured Rights

In the world of executions, determining who gets what is a complex process overseen by the execution department. The person in charge of the execution team is responsible for making crucial decisions regarding secured rights in line with a strict hierarchy that involves civil law, execution law, and other specialized statutes. Back in 1991, Abu Al-Wafa provided some valuable insights into how this process should work. Essentially, the head of execution meticulously follows the various legal frameworks to ensure that stakeholders are identified, and their entitlements are established. This approach is based on Abu Al-Wafa's ideas, which stress the importance of a methodical and legally sound approach to allocating privilege rights amidst the intricate web of execution proceedings.

3.1 How to Distribute the Executed Garnishing Funds?

Meticulously arranged stages are involved in the complex journey of distributing garnishing funds from an execution, each contributing to the overall coherence and efficiency of the process. The conscientious preparation of a provisional distribution list marks the beginning of this comprehensive journey, characterized by the scrupulous compilation and arrangement of all relevant details. This initial phase serves as the fundamental guide for the following stages, guaranteeing the distribution procedure unfolds with exactness and precision.

Promoting an equitable and informed participation in the subsequent stages of distribution is pivotal and requires conscientious efforts beyond the preparatory phase. This involves disseminating information to all relevant parties through a formal notification mechanism, which underscores the commitment to transparency. Adherence to procedural protocols fosters clarity and cooperation among involved stakeholders, creating an ideal environment.

The final distribution list, which marks the end of the process, emerges as the garnishing funds are allocated among the entitled parties. This ensures that the distribution of resources aligns with the established legal framework in a just and equitable manner. Al-Hajjar explained the multifaceted procedural nuances involved in this process which highlights the regulated and systematic approach that underscores the commitment to legal precision and due process in executing garnishing funds (2003).

Preparation of the Distribution List

The Execution Law's Article 109 prescribes that the head must determine if there is a need to create a temporary allocation inventory, which should comply with Article 108 of said law, and then inform the pertinent individuals. If notified, the parties have an allotted seven days for submitting a written petition to the department if they object to the provisional list. The head must then process the pleadings expeditiously. If the parties fail to object, the head shall create a definitive distribution list that discloses each creditor's allotment.

When sifting through Article 109, one can discern that the chief executive constructs a preliminary schedule for segregating execution earnings, subtracting expenses expended for the execution and legal proceedings. On top of that, debt priority is assigned, with preference given to noteworthy debtors–if they exist–in the hierarchy as detailed by legal protocols. The next course of action for the chief executive is to forward notification to the debtor, covetous debtors, and those with a covetous notification, the latter of whom will receive valid notification for exactly one week until the day after the notification is provided. Submitting a memorandum to the head of execution is the right of those who receive notices within the legal period. Once received, objections to the provisional list will be promptly considered and resolved [3]. A final distribution list indicating the share of each secured creditor will be issued by the head of execution once the objection period has expired [1].

Distribution of Executed Garnishing Funds

The debts of secured creditors are a factor in determining the distinctions according to the final distribution list. The adequacy of garnishing funds to settle debts must also be taken into account.

- The initial factor to consider is whether the collected funds are enough to satisfy the debts owed to secured creditors. Assuming this is the case, the execution department will distribute the funds accordingly to settle any debts owed and give any additional funds back to the debtor—unless there is an issue with seizure. Article 110 of the Execution Law outlines that creditors shall receive what is

rightfully due to them through execution, with the remaining balance given to the debtor.

All secured creditors' rights are settled by insufficiency of garnishing funds, with judicial expenses taking priority in the event of a shortfall. After this, proportional distribution occurs among creditors where funds are available. Where debts are mixed, priority is given to secured debts with advanced ranks, followed by secured debts based on rank. Finally, any remaining funds are distributed proportionally among regular debts [1].

3.2 Secured Rights

Among creditors, there are different ranks and degrees that determine how the collected amounts are divided. Regular creditors and creditors with granted secured rights by law fall into two categories [4].

As determined by law, privilege affords the holder the ability to satisfy their right from the debtor's funds without interference from other creditors. These privileges come in two forms: general and specific. A general privilege applies to all of the debtor's funds, with examples including the state's right to collect income tax, alimony, and labor rights. Conversely, a specific privilege applies to certain debtor assets, like those under a security mortgage. In the hierarchy of rank, a specific privilege outranks a general privilege [1]. Provisions for distributing the garnishing funds of the Execution Law are documented to pay off both privileged and regular debts. Article 111 of the Execution Law mandates that if there is not enough money to fully compensate the debts, preference is given to privileged creditors according to their level of privilege. In cases where the privileged creditors are ranked similarly and available funds cannot cover their debts, they will receive proportional distribution. If there happens to be surplus funds beyond the secured debts, regular creditors will be granted proportional compensation.

Among secured creditors, the division of the proportional implies an equitable distribution. If the garnishing funds from execution do not meet all the debts, each creditor is awarded a fraction proportionate to their debt-to-total-debt ratio [5]. This process ensures no preferential treatment and that creditors share the loss evenly. Regular and even privileged creditors use the proportional division method if they are in the same rank.

The distribution of the executed garnishing funds among secured creditors is determined by the ranking distribution, which takes into account the order, degree, and privilege of the debt. The privilege of the debt determines which creditor will be favored over others, with some debts being more privileged than others based on their priority under the law. While there can be multiple secured debts, the strength of their privilege varies depending on the extent of priority granted by the law [2].

4 Conclusion

Ensuring that creditors rightfully receive their due is the main goal when handling a debtor's assets. This involves collecting funds from a public auction of assets, which ultimately satisfies creditors' rights. However, real-life scenarios sometimes result in not enough funds to cover all outstanding debts. In these cases, a regulated and intricate process, headed by the execution leader's carefully crafted list, is used to distribute the garnishing funds. Amidst the meticulous considerations regarding hierarchical ranking and privileges as delineated by the Execution Law, a comprehensive list has been created to determine the allocation of shares among secured creditors. This approach was not important, as the head of execution has emphasized the significance of adopting a meticulous approach in ensuring an impartial distribution of garnishing funds. This approach underscores the team's devotion to upholding legal precision and procedural fairness within the execution framework.

This study has yielded several results and recommendations:

4.1 Results

1. From the debtor's funds, creditors have equal rights in fulfilling their obligations. This principle stands firm and true.
2. In the event of competing regular debts and secured debt s, priority in debt satisfaction is granted to the latter.

Placing a line does not bestow any privilege upon its holder as a priority factor.

3. General or specific, privilege allows the holder to establish their right to priority and access to the debtor's funds. This entitlement ensures advancement towards satisfying said right.
4. Among secured creditors, if the money received from the execution is not enough to pay off debts, first, the judicial expenses take the lead. After that, any remaining funds will be divided among them proportionally.
5. Leaving the prioritization of privileges to special laws and civil law, not all privileged rights were specified in the Execution Law by the legislator.

4.2 Recommendations

The way we advise Jordan's policymakers is to urge a holistic approach to improving the laws regarding executions. In particular, we propose the scrupulous recognition of all special privileges mandated by the Execution Law while detailing the order of precedence for each right. This suggestion is critical in removing any doubts or misunderstandings that could impact the judgment calls of the execution chief and those who have outstanding debts. Fortifying legal clarity and coherence is the

broader objective that aligns with the proposed legislative refinement. By consolidating the spectrum of privileged rights, execution proceedings can be transformed, and a more efficient distribution of garnishing funds can be fostered. This will bring seamless operations and enhance the efficacy and equity of the proceedings. The current scenario requires a unified approach since there are several laws that serve as a reference point for determining privileged rights' hierarchical standing. The proposed approach is in line with the need for a streamlined approach to execution proceedings.

The Role of Gamification Technology in Enhancing Cognitive Development in Educational Settings

Adnan Hassan Alsarayreh

Abstract The present study is on gamification technology and its role in enhancing cognitive development when implemented in educational settings. With the emergence of adaptive learning into contemporary educational environments, this paper discusses the potentials of such technologies to help bring up all rounded individuals. As much as it presents a solution to the current memorization approach used, there are also challenges that come with it especially in ensuring intrinsic motivation among learners. This research shall use a qualitative approach through descriptive and analytical reasons for reviewing related literature on the impact created by gamification towards cognitive development which is further explained in upcoming sections. Results exposed positive behavioral long-term effects while enhancing cognitive growth factors due to gamified applications. One of the recommendations at the end of this paper is giving out a proposed framework design for integrating gamification fully into course content with an emphasis laid down regarding ongoing research and refinement to maximize its use.

Keywords Gamification technology · Cognitive development · Educational settings · Adaptive learning · Virtual learning · Immersive game-based learning · Intrinsic motivation

1 Introduction

The successful establishment of various educational environments can be linked to the adoption of contemporary technology. Specifically, key elements for developing well-rounded individuals include adaptive learning, gamification techniques, and the application of virtual or immersive game-based learning. Many of these strategies

are being promoted as enhancements to the mechanistic methods characteristic of early behaviorist teaching. As a result, certain systems are perceived as providing automatic feedback on students' responses to educational authorities, while others are tailored specifically for the individual learner. However, it is important to recognize that gamified systems may lead to unintended long-term behavioral effects, such as creating learners who are extrinsically motivated and do not appreciate the educational tool for its own sake. Clearly, challenges arise in maintaining a delicate balance. In the quest for an optimal instructional framework, this paper emphasizes the crucial role that gamification elements play in cognitive development [1].

The individual's cognitive behavior development is widely recognized as a crucial process for achieving success in academic, social, and personal realms. This chapter aims to thoroughly analyze the cognitive growth of learners alongside the components of gamification technology. Additionally, the text will be enriched with numerous examples that highlight how gamification software facilitates cognitive development. The article wraps up by proposing a framework that outlines the benefits of gamification technology within this framework [2].

1.1 Significance of the Study

The merger of modern technology with educational contexts is viewed more than ever to be central in the formation of an all-around individual. As adaptive learning, gamification techniques, and immersive game-based learning grow stronger in their applications, they offer significant improvements over the traditional mechanistic ways based on early behaviorist teaching. While these methods provide valuable opportunities for cognitive development, they also pose challenges in terms of enhancing intrinsic motivation among learners. This study has some importance in understanding the balance needed to apply gamification technology effectively. The role of gamified design in developing cognition thus adds a little more knowledge to how such technological innovations should be exploited not only to ensure academic success but also in creating a complete learner. The findings of the study seek to offer those in the education sector and policymakers an understanding of the advantages and possible disadvantages of gamified systems through a later proposed model that will promote cognitive development and deter unsought behavioral outcomes.

1.2 Methodology

This research is going to take a qualitative approach to capturing the role that gamification technology plays in enhancing cognitive development through educational contexts. The study will make use of a descriptive approach, reviewing and synthesizing already existing literature so that it provides a full understanding of the subject's current landscape and theoretical underpinning. An analytical approach

helps critically examine these findings from the literature, helping identify patterns, themes, and key insights. This combination of descriptive and analytical methods would help explore effectively how gamification impacts cognitive development, thus generating highly informed results and discussions.

1.3 Understanding Cognitive Development in Educational Settings

Cognitive development typically pertains to the exploration of how skills related to knowledge acquisition, retention, and processing progress over time. The foundational contributions of Jean Piaget in this area remain vital for comprehending the scientific understanding of these processes, having led to the creation of numerous theories and models. Concepts linked to this field portray individuals as units of information, focusing specifically on functionality—namely, how information is memorized and retrieved, as well as the efficiency of these processes [3]. The "cognitive" dimension of an individual aids in various tasks, including the mastery of known skills or languages, solving mathematical problems, and grasping the relationships and patterns present in certain professional domains [4]. Understanding one's cognitive structure provides valuable insights into the ease or difficulty of learning a concept, thereby assisting in the reconfiguration of teaching approaches, particularly within educational settings.

Cognitive models and research in instructional technology characterize human minds as systems for acquiring information, aiming to simulate mental processes through computers or to enhance instructional environments that align more closely with human cognition. In contrast, cognitive development theories emphasize the significance of social and contextual constructs, where sociocultural factors play a crucial role in academic growth. Learning is significantly influenced by various episodes that typically create ecosystems. Broadly speaking, the degree to which individuals can internalize knowledge and what they learn is determined by the processes involved in cognitive development. This branch of education integrates the teaching-learning process into people's lives, highlighting the importance of cognitive development [5].

1.4 Gamification Technology: Definition and Concepts

The concept of gamification technology is not entirely foreign to the fields of nonformal learning and entertainment. Nevertheless, its integration into educational frameworks introduces a fresh aspect to learning environments [6]. Given the interrelatedness of technological advancements, it is essential to comprehend the potential impacts this new technology may have on the evolution of education and system

development. Gamification involves applying game mechanics to non-game contexts or applications. By game-mechanizing educational systems, participant engagement is fostered, and the user experience is significantly enhanced. Within the realm of education, this approach emphasizes the participant, the process, and the content—such as a specific subject. It holds the promise of consistent, progressive improvements in cognitive abilities as a benefit of user involvement in e-learning facilitated by gamification techniques [7].

Conversely, the concepts of gamification for educational purposes remain in a testing phase, necessitating additional research to evaluate their effectiveness in authentic learning environments [8]. This study aims to elucidate the connections among the fundamental elements of gamification, theories of learning psychology, and strategies for cognitive skill development. In its broadest sense, gamification technology refers to the integration of game-like features into various systems. This can be interpreted as transforming existing systems or contexts into game-oriented formats tailored for the intended audience. Although the core idea remains consistent, it can be expressed using various terms, such as playful design, serious games, non-formal learning, and most frequently, gamification.

2 Theoretical Frameworks for Cognitive Development and Gamification

The study of cognitive development focuses on the evolution of mental processes, including understanding, knowledge, perception, reasoning, and judgment, all of which are essential to the teaching and learning process. Various theories and conceptual frameworks have emerged within the domain of cognitive development. Psychological theories have explored the core mechanisms behind cognitive processes, such as initiation, attention, rehearsal, and grouping [9]. A straightforward yet fundamental question has driven cognitive psychology and its theories of cognitive development: "What are the essential processes involved in learning and development?" In essence, this inquiry seeks to identify the moment when the overall process of cognitive development begins during the journey of growth.

When innovative teaching processes are utilized in markets that integrate knowledge from both global and local sources, these markets can facilitate the development of skills that equip students with specialized knowledge and distinct training to engage in international markets. Gamification serves as a multidisciplinary strategy, drawing heavily from education, where it functions as an active teaching technique and a social technology that aids in foreign language instruction. Research in e-learning and educational technology has explored the relationship between cognitive processes and elements of gamification; however, these investigations did not adopt a psychological or cognitive framework, and there is a scarcity of work focused on consumer psychology [9].

The chosen games, including Development, Tetris, Snake, the Alphabot, ASIMOs Play, border crossings, costs for my country, and Federal CAFE, are all excellent options. Beyond mere enjoyment and play, each game enhances mental functions through the challenges it presents and the demands it imposes. The field of cognitive psychology emerges from games designed to equip individuals for real-life situations, academic environments, and professional settings. Therefore, an individual who struggles to engage in the specific cognitive tasks expected by the end of their school years may be facing an issue related to cognitive development. This reflects a broader acknowledgment that the understanding of activity perception in a positive context has become more prevalent due to the adjustments associated with the evolution of positivism in psychology, which focuses on the integration of psychological functions.

Cognitive function pertains to how the processes and structures that influence thinking, perception, and understanding impact learning within an educational context, and the reverse is also true. My reasoning, akin to that of an engineer, scientist, or student, alongside various educational tools linked to attention, particularly theoretical insights regarding the evolution of human perception in cognitive psychology, will be elucidated from the outset [9].

The term gamification merges the ideas of gaming and games, referring to a teaching design that seeks to foster an enjoyable and motivating atmosphere, encouraging learners to engage actively in their motivation and to retain information over an extended period. This study aimed to explore cognitive psychology from a fresh angle as an instructional tool, highlighting the experience of gameful training while maintaining the principles of cognitive psychology. By selecting cognitive psychology as an independent theme, we intended to consider the semantics of the subject matter and offer a potential viewpoint [10]. Our focus on this independent theme was to provide a new perspective on the theoretical framework of gamification by generating innovative and distinct alternatives.

2.1 Empirical Evidence on the Impact of Gamification on Cognitive Development

A study conducted by Saleem et al. [11] demonstrated that students experienced greater benefits in surface-level learning from gamified formative assessment compared to traditional text feedback [11]. Conversely, the type of feedback impacted students employing surface, strategic, and deep learning approaches. Specifically, in gamified assessment scenarios, those with the lowest formal examination scores saw improvements from text feedback, while such an effect was absent in non-gamified conditions.

In a comprehensive field experiment, Moseikina et al. [12] explored the circumstances under which educational gamification positively impacts academic performance, utilizing data from a digital learning platform in China. Their findings

revealed that when courses included gamification services, students exhibited enhanced academic performance [12].

In order to define the population relevant to their research, Turan et al. [13] performed a systematic review encompassing 32 studies on online gamification. Their findings revealed that online gamification positively impacted academic performance in 81% of the instances examined [13].

In a study conducted by Tsay et al. [14], a double-blinded experiment was utilized to assess the individual effects of various gamification elements—such as dynamic leaderboards, punctuality tracks, customized avatar design, and endowment frequency—on student engagement, learning, and exam performance within a face-to-face course involving 365 students [14]. The findings revealed that students demonstrated a 42% increase in engagement when they partially implemented either dynamic leaderboards, punctuality tracks, or customized avatar design, compared to those who did not utilize these strategies. Consequently, instructors can attain comparable levels of student engagement with 64% less effort by incorporating any one of these gamification features. In particular, incentivized students exhibited a 28% higher engagement rate than their non-incentivized counterparts when they were subjected to a weekly principal along with the endowment principle, which was applied approximately each time they interacted with leaderboards and about a quarter of the time during the fix-the-picture task [15].

2.2 Design Principles for Effective Gamification in Education

The principles of learning psychology and motivation indicate that effective gamification design must engage both the cognitive and emotional systems of players while also accounting for individual variations in cognitive development. Insights gained from ten years of experience in designing and applying gamification have led to the identification of essential design principles and guidelines for creating and implementing gamified systems within learning environments [16]. In the following sections, we demonstrate how these insights can guide the design and practical application of technology-driven gamified systems in formal educational settings to promote cognitive development.

Incorporating instructional or educational games, commonly referred to as "edugames," into mainstream education ought to align with established theoretical frameworks and rely on evidence derived from sound design and empirical evaluation when selecting features for inclusion in games and gamified concepts. These insights offer several principles and guidelines for crafting effective gamification systems, as well as educational or serious games in a broader sense, which can foster cognitive development within an educational framework [17]. This encompasses the idea of integrating change through diverse gameplay experiences aimed at redirecting cognitive processes in innovative ways. Additionally, it involves providing progressively escalating challenges to maintain an appropriate balance of 'learning support' and

'learning challenge' at the intended level. Lastly, principles of training and testing can be utilized to improve retention.

3 Challenges and Limitations of Implementing Gamification in Educational Settings

Numerous challenges and constraints exist: (1) The necessity of resources when implementing gamification technology in educational settings, along with other practical concerns such as possible maladaptive effects. (2) The foundational theories have limitations, emphasizing behavioral dimensions of learning instead of the cognitive processes essential to Marx's theory of learning and the learning trails. (3) Bernstein's critique addresses these educational technologies and cognitive education, highlighting the practical and ethical dilemmas of automatically modifying the learning experience to support children's learning from an external perspective. (4) Various issues arise regarding the potential educational benefits of both social and serious games, as well as game-based learning. (5) Methodological challenges and threats to validity and reliability emerge in research related to yiGame and similar initiatives [18].

Currently, several research initiatives are proposing methods for incorporating cognition- and motivation-driven gamification into educational settings, distinguishing it from mere entertainment. In Moodle, the use of badges can cause students to become overly focused on the points they have accumulated or whether they have met certain predetermined criteria, resulting in a disconnect from their actual learning objectives. Additionally, the foundational approach of yiGame sets it apart from other recent efforts aimed at enhancing mathematical cognitive growth through gamification principles [19].

3.1 Successful Gamification Implementation

A survey carried out by RealityClaim among 1336 teachers highlighted various successful implementations of gamification in educational settings. Al-Tarawneh [5] compiled 28 strategies and best practices for gamified lessons, which were recommended by 21 expert educators on social media [14]. Additionally, it features examples of gamification, including the use of educational escape rooms within classrooms.

A prevalent digital tool utilized in gamifying escape rooms is Google Forms. In 2013, gamification specialist Michael Matera developed a six-week mission unit for his seventh-grade American history class, transforming the classroom into an escape-the-room puzzle game that provided students with an immersive learning experience [12]. This included activities such as deciphering ciphers, transmitting Morse code,

utilizing invisible ink, unlocking padlocks, and more. The gaming adventure unfolded within sector cells, endocytic gears, and cytoplasm. Even during the pandemic, Dr. Lunstrum's 7th and 8th-grade classes at Ira Harbison School engaged with the Paideia Mission game, achieving 100% student engagement and time on task [20]. On April 1, 2020, Kristy Griffin adapted the Paideia Mission game for online use amid school closures, stating, "Our game was an option for optional learning, and students were eager to try it. Overall, this was a very effective game. I had several parents email me and thank me for providing this engaging and educational option for their children while I was out of town" [11].

The 2021 School Survey from RealityClaim's Surviving the Great Shift reveals that 1336 educators rated their job equity as "excellent" or "good." Additionally, 1,338 educators expressed "strongly agree" or "agree" regarding the classroom actions and strategies necessary to turn this into a reality. Consequently, nearly 100% of our sample of gamified teachers, ranging from 2 to 21 million, is committed to this methodology [21]. Our analysis included a variety of escape-room experiences implemented within classrooms. In our review of best practices for gamification, we discovered a limited number of shorter articles and blog posts discussing personal lessons and the integration of escape room strategies. These contributions offer valuable suggestions and strategies that can assist educators and school board officials in adapting and implementing the concept within their schools as they deem appropriate [22].

3.2 Future Trends

Currently, a significant trend in the field of educational gamification involves a growing body of research examining how gamification impacts cognitive development across various knowledge areas and among a wide range of user demographics. Innovations in game components, independent games, and interactive media showcase parallel advancements, including a geometry teaching system based on gaming, a game that converts mental effort into in-game currency to aid reasoning, a mobile app designed to adjust autonomic arousal to alleviate test anxiety, and a game that detects changes in cognitive state and modifies gameplay to enhance fluid intelligence. These innovations are being transformed into practical tools and applications accessible to schools, families, and individuals facing mental health challenges. Future inquiries and advancements in gamification, game-based learning, and place-based education present further opportunities for the creation of gamification technologies. Nonetheless, it is crucial to assess how well these applications align with user needs and to enhance the breadth and quality of evidence that informs design improvements [14].

In the near future, we will witness the integration of neuroadaptive gaming along with biometric and neural metrics research into educational settings. Prototypes of computational systems that adapt to fluctuating cognitive demands during gameplay are already under development. One such system translates current theories

on promoting healthy cognition through customized gDDI game design into a real-time adaptive cognitive training framework utilizing autonomous AI. Within this framework, neural state data can guide the choice of pre-designed, custom, or spontaneously created levels of cognitive skill difficulty [13]. For instance, Neurable, a mid-sized tech startup backed by venture capital, has created a neuroadaptive virtual reality gaming experience that tailors engaging experiences directly applicable to its consumer base—neurologically-controlled VR games. The surge in popularity of these gaming technologies is reflected in the Oculus Quest, which was recognized as the publication's 'top consumer tech' product. Additionally, Epic Games, the creators of Fortnite, have ventured into the neuroscience-gaming arena by acquiring FMCG biometric companies. These advancements indicate a strong interest from both commercial and scientific sectors in neuroadaptive gamification technologies, which aim to leverage the capabilities of neurocognitive systems to enhance the learning experience [23].

4 Conclusion

This chapter presents a summary of recent studies regarding the application of gamification technology to boost cognitive development within educational environments. It details different methods for gamifying learning experiences, examines the cognitive processes that support the gamified learning approach, and offers a comprehensive review of earlier research outcomes. Finally, it suggests ways to incorporate gamification models into educational course design focused on enhancing cognitive development. Considering the potential benefits of gamification technology in enhancing learning, several factors must be addressed by educators, policy-makers, and researchers. To begin with, it is essential to investigate and refine gamified educational practices to assess their effectiveness and expand the possibilities of infrastructure for their development. Drawing from practical experiences, these insights will provide practitioners with a supportive framework for applying theoretical concepts. Furthermore, a significant amount of related research needs to be completed promptly to thoroughly validate the findings regarding experience- or biography-based training education. Additionally, further rigorous research validation is necessary to understand the effects of gamification technology on cognitive development within technology-supported educational settings. This study also includes conclusions and implications for practical application.

Legal and Administrative Analysis of the Role of Foreign Technology Companies in Supporting Economic Development Through Digital Transformation

Yasar Alhiniti and Khalif Saleh Dhiab Amoush

Abstract With a specific focus on the role of digital transformation, this study sought to examine the operations of foreign companies and their economic influence on host countries. To achieve this, a descriptive-analytical methodology is employed, which involved reviewing the legal and regulatory frameworks governing these companies' activities and exploring the challenges and opportunities they encounter in the digital age. The study also assesses the impact of these companies on the national economy, considering factors such as job creation, workforce training, and the transfer of technical and managerial expertise, with a particular emphasis on digital innovations and technological advancements. In conclusion, the study unveils several key findings that underscore the positive effect of foreign companies, bolstered by digital transformation, in supporting the national economy and fostering an investment-friendly environment. Building on these findings, the study put forth a range of recommendations aimed at enhancing policies and procedures related to the operations of foreign companies, incorporating digital strategies to further augment their contribution to sustainable economic development.

1 Introduction

Commercial enterprises have the potential to operate beyond the confines of their home country, engaging in economic endeavors across various nations by establishing representative offices and branches. The objective behind this expansion is to optimize business operations and generate profits. However, it is important to note that these branches and representative offices are perceived as foreign entities by the countries in which they operate. To ensure proper regulation of the activities of these foreign companies, nations have implemented legal frameworks to govern their operations within their borders. These regulations are rooted in the principles of upholding sovereignty, protecting national interests, and safeguarding local businesses.

Foreign companies play a vital and substantial role in promoting the economic growth of the host country. Their active participation brings valuable resources, both in terms of materials and human capital, thereby becoming a major source of revenue through tax collection. This, in turn, bolsters and fortifies the national economy. Moreover, these companies contribute to the inflow of foreign currency and the maintenance of a reserve of foreign currency within the country. By employing a significant number of local workers, they also help alleviate unemployment, while simultaneously transferring and localizing technology through their expertise in technical and managerial aspects. Additionally, these companies play a crucial role in the development of the country's infrastructure, provide alternatives to imports, and generate higher export revenues.

In order to navigate the intricate legal and economic challenges posed by foreign companies, the Jordanian legislator, like other legal systems, has dedicated a section of the Companies Law No. (22) of 1997 to address this issue. Chapter Twelve of the law specifically regulates this matter, drawing a clear distinction between two categories of companies. The first category, referred to as operating foreign companies, is comprehensively addressed in Sections (240–244), while the second category, non-operating foreign companies, is specifically covered in Chapter Two, Sections (245–251).

Operating foreign companies have been acknowledged by the Jordanian legislature as legitimate entities, enabling them to engage in business activities and carry out projects. These companies possess rights that are derived from both domestic and international laws, while also bearing responsibilities that align with the interests of the host nation. This research will initially explore the definition of operating foreign companies and distinguish them from other comparable entities in the initial segment. Subsequently, the second section will delve into the guidelines governing the registration of operating foreign companies and the frameworks established for their supervision.

1.1 Study Objectives

This study aims to achieve the following objectives:

- Analyze the nature of the operations of foreign companies.
- Assess the economic impact of these companies.
- Examine the legal and regulatory frameworks related to the operations of foreign companies.
- Explore the challenges and opportunities faced by foreign companies.
- Provide recommendations to enhance policies and procedures supporting the business environment.

1.2 Study Methodology

To accomplish its goals, the study utilizes a descriptive-analytical methodology. The descriptive-analytical approach is commonly employed in social and human studies, with the aim of accurately depicting the phenomenon being examined and subsequently analyzing it to uncover influential factors and connections between various variables. This methodology was selected due to its appropriateness for the study's nature and objectives, as it allows for a thorough comprehension of the operations of foreign companies and the regulatory frameworks that govern them.

2 Concept of the Operating Foreign Company and Its Distinction from Similar Companies

In the usual course of affairs, it is not within the purview of lawmakers to establish definitions, as that responsibility falls to legal doctrine. However, there exists an exception to this norm, as demonstrated by the legislator's act of defining the operating foreign company in Article (240/A) of the Jordanian Companies Law No. (22) of 1997. This decision was made with the intention of removing any uncertainties or conflicts that may arise in the absence of a clear definition.

In the researcher's perspective, it would have been more favorable if the legislator had entrusted the definition of an operating foreign company to legal doctrine. This is particularly important considering that the Companies Law No. 22 of 1997 does not originally offer a precise definition for such a company.

2.1 Concept of the Operating Foreign Company

Given the absence of a specific definition of a company in the Jordanian Companies Law No. 22 of 1997, the legislator made a prudent decision to delegate this task to legal doctrine. Consequently, the researcher will commence by providing a comprehensive definition of the term "company." Following this, the researcher will proceed to elucidate the definition of an operating foreign company, as outlined in both Jordanian and Egyptian laws. The subsequent section will center around the examination of the characteristics of the activities undertaken by operating foreign companies.

2.2 Definition of the Operating Foreign Company

In Article (582) of the Jordanian Civil Code No. (43) of 1976, the lawmaker provided a definition for a company as part of the general regulations pertaining to companies. According to this definition, a company is a contractual agreement in which two or more individuals commit to contributing either financial resources or labor towards a specific project. The purpose of this contribution is to invest in the said project and distribute any resulting profits or losses among the participants [1].

The definition presented here aligns with the one given by the Egyptian lawmaker in Article (505) of the Egyptian Civil Code No. (131) of 1948. According to this definition, a company is described as a contractual agreement in which two or more individuals agree to contribute financially or through labor to a specific venture. The purpose of this collaboration is to collectively share any profits or losses that may arise from the project.

The definition provided in Article (1832) of the French Civil Code diverges from this definition, as it characterizes a company as "a contract between two or more individuals who unite their resources with the aim of distributing any resulting profits among them." However, a valid criticism of this definition is that it solely focuses on the sharing of profits and fails to acknowledge the equally important aspect of sharing losses [1].

The legislative delineation of what constitutes an operating foreign company was initially outlined in Article 2 of the Foreign Companies Registration Law No. (58) of 1985. This law defines a foreign company as any company that has not been registered in Jordan but has established a base of operations within Jordan in accordance with the aforementioned legislation.

In Article (240/A) of the Jordanian Companies Law, the Jordanian legislator offered a concise description of an operating foreign company. According to this definition, an operating foreign company is a company or entity that is registered outside of Jordan and has its headquarters situated in a different country with non-Jordanian nationality. The intention behind this definition was to establish a unified

legal term that encompasses all relevant aspects, rather than delving into the specific interpretation of each individual word. [1]

One criticism of this definition is that it merely states the company as "company," without providing any additional insight. It would have been more suitable to exclude the term "company" from the start of the definition. Furthermore, the inclusion of "entity" in the definition, despite the distinct disparity between "entity" and "company" and the absence of a clear link between them, raises doubts regarding the legislator's intent. In Jordan, there are numerous local and international entities, both official and unofficial [2].

It is important to note that the term "entity" should not be confused with "company" as they have distinct meanings and are not related to each other. The High Court of Justice made this clear in its ruling on the Jordanian Bar Association, highlighting that the association is an independent body created by law to safeguard the rights of lawyers. The association possesses legal authority over its members and advocates for their interests within the legal profession [3].

It is important to highlight that the Jordanian Civil Code No. (43) of 1976, specifically in Article (50), makes a clear distinction between entities and companies by providing separate definitions for each. Section (2) of the code mentions entities, specifically referring to "religious entities and sects," while Section (4) addresses "commercial and civil companies" as companies. This demonstrates that these terms have distinct meanings, which differs from how they are treated as a single legal term and entity under the Companies Law.

It is important to acknowledge that a commercial company is set apart from an entity based on its unique substantive and formal components [4]. These components are essential for classifying a company as such, and they are not found in an entity. This indicates that there is no valid reason for the legislator to refer to the operating foreign company as an "entity" [5].

The legislator's definition of an operating foreign company in Jordan is a broad definition that encompasses both operating and non-operating foreign companies. However, to clearly differentiate it from the non-operating foreign company, which is not allowed to conduct any commercial activities in Jordan, it would have been more suitable to include the phrase "and engages in commercial activities in Jordan" to further specify the definition [6].

Furthermore, the inclusion of the phrase "and its nationality is considered non-Jordanian" by the legislator is redundant, as the definition already clearly states that the company is registered outside of Jordan and has its headquarters in another country. This addition is therefore unnecessary [7]. In contrast, the Egyptian legislator took a different approach in addressing the activities, branches, and offices of foreign companies in Egypt through the Egyptian Companies Law No. (159) of 1981. Specifically, this is outlined in Chapter Six, Articles (165–172), which serves to safeguard public interest and regulate the operations of these companies under government supervision [8].

The definition of an operating foreign company in Egypt is outlined in Article (165). According to this definition, an operating foreign company is one that does not have its management or principal place of business in Egypt, but has a center for

conducting business within the country. This center can take the form of a branch, a manufacturing house, an administrative office, or any other similar establishment [9]. Unlike Arab and Western scholars who have provided specific definitions, Jordanian scholars have not explicitly defined an operating foreign company. However, some scholars define it as a company that has its principal place of management abroad and may either conduct all or part of its activities in Egypt through an agency, branch, or other means [10].

A different academic interpretation characterizes it as "an entity that possesses foreign citizenship," without making a distinction between an active or inactive foreign corporation. This particular definition is constrained in its reliance on the company's nationality, neglecting to specify its constituent components [10].

The Jordanian judiciary has a specific perspective on how to define foreign companies that operate within the country. They are referred to as operating foreign resident companies or companies with a branch in Jordan. According to a decision made by the Amman Court of Appeal, an operating foreign company in Jordan is defined as a company that is registered outside of Jordan and has its headquarters in another country with non-Jordanian nationality. This definition is crucial in understanding the context of the lawsuit between the appellant and the appellee, as it contradicts the interpretation made by the court of first instance [11].

According to a ruling made by the Jordanian Court of Cassation, it was declared that any foreign company that is registered in Jordan under the Companies Law possesses legal status. Therefore, the focus of the dispute lies solely on the issue of naming and not on whether the company is registered as a branch or a resident in Jordan. Another decision from the same court highlighted the scenario where an appeal is filed against a branch of a company located in Jordan, which is managed by the headquarters in Beirut. Additionally, it mentioned that the fuels handled by the branch are stored there, and the Jordanian branch incurs expenses for administration and storage.

According to the researcher, the Egyptian legislator demonstrated a higher level of precision compared to the Jordanian legislator when it comes to defining operating foreign companies. In order to be considered an operating foreign company in Egypt, the company must have a branch within the country for conducting business, setting it apart from non-operating foreign companies. Unlike the Jordanian legislator, the Egyptian legislator did not include entities within these companies, suggesting that "entity" and "company" are distinct legal terms. Additionally, the Egyptian definition does not explicitly mention the non-Egyptian nationality of these companies, as the Jordanian legislator does. This omission is based on the understanding that if a company does not have its main management or center of activity in Egypt, its non-Egyptian status is implied.

Drawing from the information provided, the researcher proposes a definition for an operating foreign company: "An operating foreign company is an entity that is established outside of Jordan, with its primary management located in another country. This company possesses legal personality and engages in commercial activities within Jordan through its branch or representative offices".

3 Nature of Activities Conducted by Operating Foreign Companies

The attainment of economic growth and prosperity in nations necessitates the presence of various fundamental elements, encompassing both economic and social aspects. Capital, technical knowledge, and scientific expertise emerge as prominent factors that play a vital role in the economic advancement of countries.

In order to promote economic growth, developing nations strive to attract foreign investments through the provision of exemptions and special privileges. One form of investment comes in the form of foreign companies, which not only contribute to the national economy of the host country but also generate employment opportunities to combat poverty and unemployment. Moreover, these companies play a vital role in training the local workforce, imparting valuable technical and managerial expertise that ultimately benefits the economies of these nations [12].

The nature of operations carried out by foreign companies operating in Jordan is defined in Article (240) of the Jordanian Companies Law No. (22) of 1997. These companies are classified into two categories based on the duration of their operations: those with a limited duration and those with permanent operations. In order to operate legally, these companies are required to obtain a work permit from the appropriate authority and comply with the registration procedures outlined in the Jordanian Companies Law. It is essential that their activities align with their stated purpose and do not contravene any laws or public order.

Foreign companies that are in operation aim to broaden their economic and business endeavors by seeking out secure investment climates and engaging in their operations. These companies may also choose to invest in developing nations where the cost of infrastructure is more affordable in comparison to other countries, and where labor expenses are lower, thus allowing for the utilization of practical and scientific knowledge.

Similar to other laws, the Jordanian legislature has implemented regulations to govern the operations of these companies, ensuring that they are not left unchecked. Instead, restrictions and guidelines have been put in place to safeguard the economy, national businesses, and the principle of state sovereignty over its territory. The legislation outlines the specific activities that these companies are permitted to engage in, as well as those that are prohibited. It is mandatory for these companies to acquire the required work permit from the appropriate authorities and adhere to the prescribed legal registration procedures.

Article (240/A) of the Jordanian Companies Law No. (22) of 1997 addresses the nature of activities conducted by operating foreign companies in Jordan, categorizing them into two types:

- The first category encompasses temporary foreign companies that are contracted to perform specific tasks within a limited timeframe. These companies are granted contracts and their registration remains valid until the completion of the assigned tasks, unless they secure new contracts during the course of their initial agreement. In such instances, their registration is extended until all their commitments are

fulfilled, at which point the company is deregistered and its assets are liquidated. Typically, these foreign companies establish contractual partnerships either with public or private entities to carry out the assigned projects under the terms of the contract. They typically establish a branch in the contracting state to facilitate the execution of the contracted work (the location specified in the contract), and the company ceases to exist once all the tasks are completed.

- There is another category of companies that are based in foreign countries but have established a permanent presence within the state by fulfilling the criteria for obtaining the essential work authorization from the competent governing bodies, which is contingent upon the nature of their operations. These companies function independently within the state and do not have any formal agreements with local entities. They have the option to operate through a branch that represents and acts on behalf of the company.

The researcher will address the nature of the activities of operating foreign companies as follows.

3.1 Foreign Companies Operating for a Limited Duration

Article (240/A) of the Jordanian Companies Law No. (22) of 1997 specifically addresses the presence of foreign companies of this nature. The legislation outlines two distinct categories based on their activities. The first category encompasses companies that operate for a limited duration, typically those awarded tenders to undertake specific projects within Jordan. Registration for these companies expires upon the completion of their assigned tasks, unless they secure new contracts, in which case their registration is extended to accommodate the new projects. Once all their work in Jordan is finished and their rights and obligations have been settled, their registration is officially revoked.

It is evident from the preceding passage that this particular company is granted contracts within Jordan and carries them out within a designated timeframe. Once these projects are finished, their registration comes to an end unless they secure new contracts. In such instances, their registration is extended until they fulfill their new responsibilities, at which point they are deregistered and their rights and obligations are settled. In essence, these companies have a defined objective for which they were registered, and once that objective is accomplished, the company must cease to exist [13].

For a foreign company to be classified as operating temporarily, it must fulfill two requirements. The first is the successful acquisition of tenders, and the second is the timely completion of said tenders [14].

It is important to acknowledge that the legislator has placed restrictions on the operations of these companies, limiting them to participating in tenders only. However, these companies are still able to engage in contractual relationships with other entities and enter into new work agreements for projects and activities that

extend beyond tenders. The legislator explicitly addressed this limitation in the same text by stating, "unless they secure new contracts," which indicates that the legislator did not confine their activities solely to tenders. If that were the case, the text would have clearly stated, "unless they obtain new tenders." Government departments and ministries have the authority to issue tenders for specific projects or directly select a contractor, whether it be for the purchase or sale of supplies, the execution of public works, or the provision of services. This is outlined in Article (20) of the Government Works Regulation No. (17) of 1986, which states, "Works or technical services may be executed through negotiation and assignment according to the authorities specified in Article (21) of this regulation" [15].

The legislation in question does not impose any restrictions on foreign companies operating in Jordan, limiting their activities to tender processes alone. On the contrary, it provides them with the freedom to engage in contractual agreements across various sectors. This was confirmed by the Jordanian Court of Cassation in its ruling, which stated, "The first defendant, a foreign company operating as a branch and registered under number (954) with the Registrar of Companies, intends to carry out the Atarat Direct Burn Oil Shale Power Plant project in the Atarat area of the Giza District. The project involves the design, supply, and installation of a power generation plant that utilizes direct oil shale burning" [16].

It has been affirmed through another ruling that the foreign corporation conducting operations within Jordan possesses the ability to engage in contractual agreements with entities across diverse industries. The ruling states, "The accused party is an American foreign company that is actively operating within Jordan. It is officially registered with the Ministry of Industry and Trade—Companies Control Department, and holds the registration number (774). The company's objectives encompass the successful execution of multiple development initiatives within the healthcare sector, specifically for the Ministry of Health. These projects are funded by USAID and include the collaborative efforts of the Ministry of Health, such as the Local Health Systems Sustainability Project and the Integrated Health Care Project" [17].

In a similar vein, another ruling highlighted, "The initial defendant is an organization officially registered with the Registrar of Companies in the Register of Foreign Companies that operates within Jordan. It holds the national establishment number (200154403) and specializes in the planning and implementation of the second and third stages of the Aqaba Port" [18]. It is clear that the judgments made by the Jordanian Court of Cassation are in accordance with the legislative permission granted to foreign companies operating within Jordan for a specific period of time to engage in contractual agreements across a wide range of industries, not solely limited to tenders.

The researcher believes that the legislator was not precise in defining the foreign company operating for a limited duration as outlined in Article (240/A) of the Jordanian Companies Law No. 22 of 1997 for the following reasons [19]:

1. **Error in the Legal Expression**: There was an error made by the legislator when describing the activities of the foreign company operating under Article (240/A) of the Jordanian Companies Law No. 22 of 1997. The error occurred when the

legislator mixed up two different types of companies: One based on the nature of their work and the other based on their duration of operation. The legislator used different expressions to convey the same meaning, which is the nature of the company's work. However, upon closer examination, it becomes clear that there is a significant difference between these expressions. The expression used actually refers to the duration of the activities rather than the nature of the company's work. Therefore, it would have been more appropriate to replace the term "nature of its work" in the text with the phrase "divided based on its duration into companies operating for a limited period and companies operating permanently."

2. **Terminology Precision**: To enhance accuracy, it would have been preferable for the legislator to employ the phrase "companies with a limited duration of operation" rather than "companies operating for a limited duration." The terminology utilized in the former text implies that the company itself possesses a restricted lifespan.
3. **Correction of Error**: The lawmaker acknowledged a mistake within the initial provisions of Article (240/A) in the Jordanian Companies Law No. 22 of 1997. This mistake pertained to the limitations imposed on foreign companies operating temporarily in the country, restricting their activities solely to participating in tenders. However, the lawmaker rectified this error within the same article by granting these foreign companies the freedom to undertake projects beyond tenders. This was explicitly stated as "unless it obtains new contracts," thereby enabling them to enter into contracts and carry out projects with both state institutions and the private sector.

The proposed recommendation from the researcher is to modify Article (240/A) of the Jordanian Companies Law No. 22 of 1997. The suggested amendment would entail a rephrasing of the article to state, "… classified according to their operational timeframe into two categories: 1- Companies with a finite duration of operation, which encompass entities engaged in contractual agreements for a specific period, concluding their registration upon the fulfillment of said activities unless they secure additional contracts…".

3.2 Foreign Companies Operating in Jordan on a Permanent Basis

According to Article (240/A) of the Jordanian Companies Law No. 22 of 1997, the legislator has established a specific category of company. This category is divided into two types based on the nature of their operations. The second type consists of companies that operate within Jordan on a permanent basis and hold a license from the appropriate competent authorities [20].

When considering the presence of a foreign company operating within Jordan for a specific duration, there are two prerequisites that must be met. Firstly, the company

must successfully secure tenders, and secondly, it must operate within a defined timeframe. On the other hand, a foreign company that operates permanently engages in enduring contractual arrangements with individuals and entities, either through long-term agreements or by continuously conducting business within Jordan without formal contractual obligations [19].

The state has two options when it comes to partnering with a foreign company that operates within Jordan on a long-term basis. They can either initiate a tender process where multiple foreign companies compete for the contract, or they can opt for direct selection. An example of this is the Disi Water Conveyance Project, where the government chose to partner with the Gamma Turkish Company. The state relies on these companies for their expertise, competence, equipment, and financial resources, which may not be readily available within the country. It is worth noting that once these projects are completed, the involvement of these companies typically comes to an end, as seen with the Abdoun Bridge Project.

There are two types of contracts that should be emphasized when discussing tenders awarded to foreign companies with an indefinite duration of operation. The first type involves the establishment of a permanent contractual relationship between the foreign company and either the state and its institutions or the private sector, with both parties benefiting from the arrangement. In cases where the state lacks the necessary financing, expertise, equipment, and competencies to undertake major projects, it seeks assistance from foreign companies that possess these resources. These contracts, known as "concession contracts" [21], are commonly associated with the extraction of oil and minerals in developing countries that have natural resources but lack the means to exploit them. Through these contracts, specialized foreign companies are contracted to handle the extraction, production, and distribution processes, ensuring mutual benefit for all parties involved. In addition to concession contracts, public and private works contracts are also utilized to carry out major projects that the state and its institutions are unable to undertake on their own.

In the second scenario, foreign companies choose to establish a permanent presence in Jordan without engaging in contractual arrangements with other entities. These companies view Jordan as an attractive investment destination, thanks to its cost-effective labor, well-developed infrastructure, affordable raw materials, and the lack of local competitors that can match their resources and skills in large-scale projects. This drives them to establish a permanent branch within Jordan, allowing them to carry out their operations without the need for contractual agreements with external parties [22].

It is important to acknowledge that foreign companies that wish to operate in Jordan must obtain a work authorization and register it by the Companies Regulatory Official operating in Jordan. It is crucial for these companies to conduct their activities on a permanent basis, rather than temporarily, in order to avoid mandatory liquidation as outlined in Article (266/A) of the Jordanian Companies Law. This article states that a request for compulsory liquidation can be made to the court by a civil attorney general, auditor, or their representative. The court has the authority to decide on liquidation in certain circumstances, including if the company has ceased its operations for a year without a valid or legitimate reason [22].

According to the researcher, the factor that sets apart a foreign company operating temporarily from one operating indefinitely is the element of time. When a company's operations have a predetermined end date, it falls under the category of operating for a limited period. On the other hand, if there is no specified end date, it is classified as a foreign company operating permanently [23].

In Egypt, there is no distinction made by the law between temporary and permanent foreign companies. Instead, foreign companies are required to refrain from engaging in any activities within Egypt until they establish a branch in accordance with the Commercial Register Law and inform the Companies Authority by providing the necessary branch registration documents. Failure to adhere to the registration procedures outlined by law can result in the administrative closure of a company's branch, as stated in Article (309) of the Executive Regulations of the Egyptian Companies Law [24]. This article states that no foreign company is permitted to carry out any activities in Egypt until it establishes a branch in accordance with the Commercial Register Law. The company must then notify the General Companies Administration by submitting a copy of the registration documents to be recorded in a special register specifically created for this purpose. If a foreign company's branch in Egypt fails to follow the procedures outlined in the aforementioned paragraph, it may face administrative closure [25].

By acknowledging the legal identity of foreign corporations, the Jordanian legislature bestows upon them the privilege to partake in any trade-related endeavors within Jordan. This is based on the fundamental principle of freedom in engaging in commercial activities and ensuring equal treatment with domestic enterprises. However, it is crucial for these foreign companies to complete the requisite registration procedures and acquire the necessary permits. Once these formalities are fulfilled, the company is endowed with legal capacity, enabling it to carry out all lawful transactions within Jordan, as long as they align with the company's intended objectives and adhere to the laws and public order of the country [26].

4 Conclusion

The significance of foreign companies in bolstering the economy of Jordan and facilitating its economic progress is underscored by this study. Through the provision of technical and scientific knowledge and the generation of employment opportunities, these companies actively contribute to economic expansion and the mitigation of unemployment rates. Nevertheless, it is imperative to establish a regulatory framework that strikes a harmonious balance between the interests of foreign companies and the national interests, safeguarding the national economy and fortifying its long-term viability. The findings of this study underscore the necessity of revisiting and revising economic policies and legislation pertaining to foreign companies to ensure optimal benefits for both the host nation and investors.

4.1 Results

The study concludes the following results:

- The contribution of foreign companies operating within the country to the national economy is significant, as they bring in capital, technical knowledge, and scientific expertise.
- The involvement of international corporations in generating employment opportunities plays a crucial role in combating high rates of unemployment and poverty.
- By offering training programs to the local workforce, these companies contribute to the development of technical and managerial skills within the country.
- In Jordan, foreign companies are required to adhere to stringent laws and regulations that govern their operations and ensure that they are aligned with their intended purpose.
- There are two primary categories of foreign companies: those that operate temporarily and those that operate permanently, each having its own distinct registration requirements and procedures.
- Permanently operating foreign companies play a crucial role in contributing to significant projects and possess the capacity to establish enduring contractual partnerships with both government entities and the private sector.

4.2 Recommendations

Based on the results, the study recommends the following:

- Provide greater incentives and guarantees to attract foreign companies to invest in the country, focusing on providing adequate infrastructure and simplifying legal and administrative procedures.
- Update and develop laws and regulations for foreign companies to provide greater transparency and flexibility in line with global economic developments.
- Strengthen cooperation between foreign companies and local companies by encouraging strategic partnerships and the transfer of technology and knowledge.
- Increase training programs for the local workforce in partnership with foreign companies to ensure they acquire the necessary skills and expertise.
- Strengthen monitoring of foreign companies' compliance with local laws and regulations to ensure they do not violate the law and protect the domestic economy.

The Difference Between Motion Verbs Behavior in English and Arabic

Wafa Abu Hatab, Wala'a Abuzir, and Mohammed Al-Badawi

Abstract This research paper investigates the differences in the behavior of motion verbs in English and Arabic, employing dictionaries and the novel "Eighty Days Around the World" as data sources. The study adopts Talmy's theoretical framework, providing a comprehensive understanding of how these two languages encode and express motion events. The analysis reveals distinct lexicalization patterns, with English emphasizing specific motion verbs and manner of motion, while Arabic relies more on general verbs and the path or direction of movement. Dictionaries are therefore a valuable resource that can enable the identification and categorization of motion verbs in both languages. The textual analysis of "Eighty Days Around the World" further contributes contextual examples on how motion events are expressed in English and Arabic narratives. The results help to reveal syntactic features of motion verbs, reflecting the typological distinctions between the two languages. It is this light that the research will add value to cross-linguistic studies and open more doors for exploration into the complexities of English and Arabic motion verb behavior.

1 Introduction

Language is the most important tool for human communication through which the reflections of cultural subtleties and cognitive activities are expressed. A major language from Semitic and another from Indo-European, with their distinct linguistic and cultural backgrounds (such as Arabic and English), offer an excellent opportunity to study the variations and subtleties of language expression. This research paper seeks to shed light on the differences between Arabic and English, considering their various linguistic structures and cultural settings.

English, which is a member of the Indo-European family of languages, is considered the major global language of communication. It has a predominantly analytic structure—meaning it depends on word order, auxiliary verbs, and prepositions to convey meaning. In turn, the Arabic language (belonging to the Semitic language family) has greater morphology and is more synthetic—it has complex verb conjugations, noun declensions and sentences.

Language is intriguing because it deals with several aspects of human life—including how we describe and think about events that happen around us, and how objects and entities move in space. Motion verbs are used to capture these dynamic events. Movement verbs are linguistic tools that people use to express and conceptualize various parameters of movement, including manner, path, and direction.

Their findings indicate that the study of motion verbs not only sheds light on the operation of language, but also on the interdependence of language, cognition, and knowledge of spatial relationality. Comparing how motor events are encoded and expressed using verbs in different languages can reveal how speakers of these languages perceive and conceptualize dynamic situations [8].

Like other areas of linguistics, verbs of motion are a popular playground for researchers seeking to elucidate the semantic and syntactic properties of verbs of motion. As the mosaic of motion verb behavior gradually emerged from the study of languages with extremely diverse patterns and structures, insights and hypotheses began to accumulate, and theoretical frameworks began to take shape, such as Leonard Talmy's seminal work on linguistic coding and event conceptualization motor skills [7].

Some movement verbs are simple, e.g. walk, run, walk. Others are more complex, such as flying, swimming, walking. The types of semantic information encoded in motion verbs allow for more detailed cross-linguistic distinctions of speed, force, and manner. In English, for example, verbs such as walk, run, or crawl signal specific manners of motion. Prepositions or adverbs are used to signal path or direction of motion. For example: walk across the street, run towards the lake.

The diversity of surface motion verb behavior is also contributed by the syntactic structures used to express motion events. Different languages have different strategies in integrating motion verbs into sentences—varying word orders, use of case marking, or presence of auxiliary verbs—and these choices impact speakers' and listeners' understandings and interpretations of motion events as well [12].

Understanding the functioning of motion verbs is not only interesting for linguists but also holds some implications that are practical in other fields, as well. For example, correct translation of motion events from one language to another requires an in-depth understanding of the semantic and syntactic properties of motion verbs in both the concerned languages. Knowledge on how learners acquire and process motion verb structures could be of use in devising language teaching methodologies. When people talk about motion in their language, effective cross-cultural communication relies on understanding the languages of others [2].

In sum, motion verbs are tools of language that allow us to express and perceive the dynamicity of motion events. The investigation into how they behave provides a rather interesting way to delve into that complex relationship between language, cognition, and spatial representation. Gaining some useful information on how syntactic behavior concerning such verbs of motion in different languages could mirror and mold our cognition of motion would be great. Such a study also has its practical implications for improving practice of translation as well as methodologies for teaching a foreign language based on intercultural analysis in cognitive aspects of linguistic phenomena, thus ensuring more precise and culturally sensitive communication between individuals representing different linguo-cultural spheres [2].

1.1 Objective of the Study

By addressing these research questions, this study aims to contribute to our understanding of the linguistic and cognitive aspects of motion verb behavior in English and Arabic. By identifying and analyzing the differences in lexicalization patterns and syntactic structures, we can gain insights into the distinct ways in which motion events are conceptualized and expressed in these languages.

1.2 Statement of the Problem

The representation of motion events in language is a topic that has attracted much linguistic and cognitive interest. How different languages encode and express these events is an important source of information about the interplay between language, culture, and cognition. An investigation into the behavior of motion verbs in English and Arabic would help reveal some of the particular challenges and variations that may be involved in expressing motion events in these two languages.

Although the lexical and syntactic differences between English and other languages have been the subject of much research, there is little in the way of a discussion, within the literature, on English and Arabic—research study specific behavior of motion verbs in both these languages. This research paper aims to address this gap by examining the following research questions:

1. How do motion verbs in English and Arabic differ in terms of lexicalization patterns?
2. What are the syntactic structures employed in English and Arabic to represent motion events?

In addressing these research questions, therefore, the current study aims to make a novel contribution to our understanding of the linguistic and cognitive factors involved in the behavior of motion verbs in English and Arabic. In doing so, in terms of differences in lexicalization patterns and syntactic structures, we can gain some insights into the different manners through which motion events are conceptualized and expressed in these languages.

2 Literature Review

"Toward a Cognitive Semantics: Concept Structuring Systems, Vol. II" is a book written by Talmy in which a comprehensive framework for cognitive semantics and concept structuring systems is offered. Talmy investigates how different languages express the structuring and conceptualization of events, particularly motion events, in great detail. It is a book that will interest many researchers involved in the areas of cognitive linguistics and event representation.

In his study "The Many Ways to Search for a Frog: Linguistic Typology and the Expression of Motion Events," [20] provides a broad and detailed analysis of how motion events are encoded and conceptualized in different languages. The languages, both verb- and satellite-framed, were considered in the paper sample to reveal any possible cross-linguistic variations in expressing path and manner information.

One important strength of this study is its coverage across many languages, which will provide a good overall picture of how motion verbs behave. The use of both qualitative and quantitative analysis as research methodology would certainly enhance the credibility of the findings. More importantly, it helps to bring out clearly the close relationship between language and cognition by narrowing down from general linguistic analysis to specific cognitive processes involved.

Though it is a great study, one possible limitation could be that the sample size of languages is quite small, therefore not fully representing global linguistic diversity. Moreover, the study should have gone deep into how much cultural and contextual factors influence motion verb behavior. To sum up, [20] work is referred to as an important landmark in the description of diversity in motion verb behavior. The study provides informative evidence in the field of linguistic typology about the complicated relationship of language, culture, and cognition.

In her 2015 study, "Motion Events in Arabic and English: A Comparative Study," Al-Obaidi presents interesting findings on how motion events are expressed in Arabic compared to English. An analysis of the semantic and syntactic properties of motion verbs in both languages is presented. The paper gives a full-fledged, detailed

exploration of cognitive and linguistic factors conditioning expressions of motion events.

In his paper, "The Lexicalization of Motion Verbs in Arabic and English: A Comparative Study," [10] centers on the lexicalization patterns of motion verbs in Arabic and English. It presents findings from a contrastive analysis that investigated the specific lexical items and their associated meanings concerning motion events in each language. The results contribute evidence on the lexical options particular to each language and the fine semantic distinctions they can make in expressing motion events.

In his study, "Motion Events in Arabic: A Comparative Analysis of Two Dialects," Alqurashi presents a comparative analysis of motion event expressions in two Arabic dialects. It investigates how far the variation in semantic and syntactic features is possible within Arabic dialects by putting specific emphasis on the dialectal differences in the behavior of motion verbs. The study enhances the understanding of the intra-regional variations within Arabic.

In his paper "A Corpus-Based Analysis of Motion Verbs in English and Arabic," [18] takes a corpus-based approach to the use of motion verbs in English and Arabic. It identifies and compares, based on a large dataset, the collocations, syntactic patterns, and semantic features underlining such verbs of motion in both languages. This is very informative on how patterns of use of verbs of motion can be so variable.

They do contribute, however, to our understanding of how motion verbs behave in Arabic and English. The methodology used in these studies varies from comparative analysis to corpus-based analysis and dialectal analysis, but they all aim to uncover the subtleties and intricacies of motion event expression. These studies thus represent an important resource for further research in the areas of comparative linguistics and cross-cultural communication.

In his paper, "The Categorization of Motion Events in Arabic and English: A Contrastive Study," [6] delves deep into an extensive analysis of how different Arabic is from English in the categorization of motion events. The contrastive study explores the specific ways in which the two languages, Arabic and English, categorize and conceptualize such events.

To identify and compare the semantic and syntactic features associated with motion event categorization, the study bases its findings on a fine-grained analysis of data from both languages. Al-Rubaii's analysis contributes significantly to identifying those cognitive and cultural factors that influence the categorization of motion events in Arabic and English. Its major strength lies in the detailed contrastive analysis that makes a systematic comparison of the strategies each language uses in their categorization possible. Another strength of this study is that by focusing on both semantic and syntactic aspects, it provides an in-depth understanding of differences and similarities in motion event categorization.

However, the study would benefit from having a larger sample and discussing explicitly the influences of culture and context on motion event categorization in Arabic and in English. It should also have gone deeper into the exploration of the cognitive mechanisms that underlie these categorization processes, thus giving more theoretical weight to the study.

Overall, this study by Al-Rubaii [6] helps in understanding the categorization of motion events in Arabic and English, bringing into focus the linguistic and cognitive factors that mold these typology systems. Its contrastive methodology and minute analysis of the two languages give valuable inspiration for future work in comparative linguistics and cognitive semantics.

In their paper, "Motion Events in Arabic: A Corpus-Based Study of English-Arabic Translation," [4] discuss motion events in Arabic from a corpus-based analysis of English-Arabic translations. The primary objective of this paper is to investigate the challenges and employed strategies in translating motion events from English into Arabic.

The researchers take up a corpus-based methodology, where a large dataset of translated texts is analyzed to detect patterns and variations in the translation of motion events. In their paper, they analyze and discuss the semantic and syntactic choices that translators opt for when rendering motion events in Arabic. This is, indeed, one of the strengths found in this study, where it could carry out an analysis based on a large corpus of translated texts to give an account of the patterns and strategies in translation. More importantly, it ensures reliability and validity by basing its findings on a large dataset of translated texts, thus providing a strong basis for the analysis.

The study, however, could be more explicit about the translation process and what challenges, specifically in translating motion events, were encountered. Additionally, it would greatly improve the insights of this study if the impact of cultural and linguistic factors on translation choices were to be more deeply explored.

Overall, the study by Al-Kubaisy and Al-Rufaie [4] adds to our knowledge of motion events in Arabic translation. The corpus-based analysis is informative about the difficulties and ways of solving them that translators have to experience, thus showing how challenging it may be to translate motion events from English into Arabic.

In his paper "A Comparative Study of Motion Verbs in English and Arabic: A Cognitive Approach," [14] presents important findings on the similarities and differences in the behavior of motion verbs between English and Arabic. The study takes a cognitive approach to exploring how these two languages, English and Arabic, conceptualize and express events of motion.

The study uses a comparative methodology in analyzing motion verb behavior based on principles derived from cognitive linguistics. By looking at the different semantic and syntactic patterns of motion verbs between English and Arabic, this paper sheds light on the different cognitive structures that underlie their use. A significant strong point of this study is the perspective it takes from a cognitive point of view, thus enriching this analysis by exploring how language and cognition are related in the domain of motion verbs. This approach also enables a more holistic understanding of the underlying conceptualization processes in both languages.

However, it could be helpful for the study to have a larger sample size and to further investigate contextual and cultural factors that might influence how motion verb behaviors are. It may also be valuable to discuss more explicitly the limitations and generalizability of the findings for the impact of this study.

Alqahtani's [14] study overall contributes to our understanding of motion verb behavior in English and Arabic, from a cognitive perspective, how similar and different these languages are. Therefore, this study can be taken as a good reference for future researchers in the field of comparative linguistics and cognitive semantics.

Al-Bokhary's [3] "A Corpus-Based Analysis of Motion Verbs in English and Arabic: A Contrastive Study" contributes to a better understanding of the behavior of motion verbs in both languages through contrastive analysis, focusing on English and Arabic. The study applies a corpus-based methodology to investigate patterns of use and semantic distinctions concerning motion verbs in both languages.

In this paper, Al-Bokhary uses corpus linguistics methods to explore a large dataset and identify the specific contexts and collocations in which motion verbs are used in English and Arabic. The study can shed light on what syntactic and semantic features characterize the behavior of these verbs in each language.

One strength of the study is its use of corpus linguistics, which allows for a com-prehensive and data-driven examination of motion verb behavior. The study's reliance on a large and diverse corpus enhances the reliability and generalizability of the findings. However, the study could benefit from a more explicit theoretical frame-work and a deeper exploration of the underlying cognitive and cultural factors that may influence the usage of motion verbs in English and Arabic. Additionally, a discussion of the limitations and potential biases of the chosen corpora would strengthen the study's validity. One strength this paper has is in the use of corpus linguistics that allows investigating motion verb behavior comprehensively and based on data. More specifically, this study could have been further improved by more clearly explicating its theoretical framework and delving more deeply into what these observed tendencies might suggest about either underlying cognitive or cultural factors driving variation in how speakers of English or Arabic deploy such motion verbs. This paper would also have been strengthened by a discussion regarding limitations and potential biases in its choice of corpora.

Al-Bokhary's [3] study is, on the whole, a very useful contribution to the contrastive analysis of motion verbs in English and Arabic. The author's corpus-based approach helps us see how far we can go with a description of use and meaning distinctions for these verbs and allows us to have a base to start further research in comparative linguistics based on this foundation.

The four research papers differ in their specific focus, approaches, and methodologies. Alqahtani [14] adopts a cognitive approach to examine the differences in motion verb behavior between English and Arabic. In contrast, Al-Bokhary [3] takes a corpus-based approach, analyzing a large dataset to compare motion verb usage in both languages. Al-Rubaii [6] focuses on the categorization of motion events in Arabic and English through a contrastive analysis, while [4] explore motion events in Arabic specifically in the context of English-Arabic translation. Each study provides unique insights into the complexities of motion verb behavior, employing distinct methodologies to uncover the similarities and differences between English and Arabic.

Bohnemeyer and Pederson [17] make a contribution to the understanding of event representation and language specificity in their chapter "Event Representation and

Language Specificity." They investigate how language and general cognition might be influenced by language-specific structures for conceptualization and expression of events. The paper provides some insight into the intricate relationship between language and cognition in the domain of event representation.

Al-Badawi [1] worked on the grammaticalization of the motion verb "Rah" in Syrian Arabic. Jarad studied this verb in Classical/slandered Arabic in Syrian and other Arabic dialects. In addition to compare the using of it with the verb "go" which they are equal in meaning. He studied the motion verb under its grammaticalization use. He studied the motion verb in the changes of using such as under semantic, syntactic and phonological.

Alqurashi [15] investigates motion verb behavior in English and Arabic in their article, "Motion Verbs in English and Arabic: A Comparative Study." The study employs a comparative analysis to examine the similarities and differences in motion verb usage between the two languages. The research provides insights into the syntactic and semantic aspects of motion verb behavior and contributes to the field of comparative linguistics.

Ghoneim [19] explores the semantics of motion verbs in English and Arabic in their study, "The Semantics of Motion Verbs in English and Arabic: A Comparative Study." Through an analysis of lexical and conceptual structures, the research highlights the semantic distinctions and commonalities in motion verb usage. The study enriches our understanding of the semantic systems of English and Arabic and their implications for cross-linguistic communication.

In their paper "A Comparative Study of Motion Verb Behavior in English and Arabic: A Cognitive Linguistics Perspective)," Al-Wahshi discusses issues related to the behavior of motion verbs in English and Arabic from the cognitive linguistics point of view. The research explores the cognitive structures and conceptualization of motion events in these two languages, thereby revealing the commonalities and variations in their motion verb behavior. It also contributes to understanding the nature of the cognitive processes underlying the expression of motion events.

In their paper "Motion Events in Arabic: A Typological Perspective," [13] take a closer look at the typological features and patterns of expressing motion events in Arabic, thus adding a lot of specifics about what the language-specific features are. This is what makes a great contribution to typology as a field and enriches our understanding of how motion event encoding can be done in Arabic.

Overall, these studies make valuable contributions to our understanding of how motion events are expressed in different languages, coming from various perspectives (linguistic typology, cognitive linguistics, semantics, typology) and thus providing richer insights into the complexities and variations of the behavior of motion verbs, which inform language-specific structuring and cognitive processes involved in event representation.

The previous studies worked on motion verbs in English and Arabic languages, in [5] studied the Persian and English motion verbs. The researcher used Fillmore theory of the semantics frame and Talmy theory in manner frame. This study aimed to see if there is similarities and differences between both languages or not. 30 verbs were collected and compared in both languages under the manner and semantic frames.

The study found that Persian and English motion verbs are completely different in use. Alqurashi [16] and Al-Rubaii [6] in their research worked on the motion verbs in Jordanian Arabic semantic structure by using the theoretical framework of Talmy. They made a contrastive study by looking at the morion verbs in the lexicalization pattern in Arabic and the counterpart of each word in English. Riziq and Hamdan collected 50 samples of motion verbs by native speakers and each verb used in a sentence. After collecting Arabic data they compare it with English to reveal that both languages use the motion verbs frequently and there is no difference of using these verbs between both languages. In addition, their study did not support Talmy's theoretical framework.

Al-Wahshi [11] studied motion verbs in Arabic to their counterpart in English by collecting data from encyclopedia, English dictionaries and Al-Mu'jam Al-Waseet, etc.… the data were analyzed in two ways, first by looking at semantic component and second on the direction of motion. They put each motion verbs in different sentence to help them to analyse and compare both languages with each other. The researchers in their analysis focused on Talmy's components for motion. The result in this study share the same result in [5, 14] that the two languages show no difference in the way of expressing motion verbs.

Al-Tarawneh [9] worked on short stories to make a contrastive study between English and Arabic motion verbs to show the differences and similarity between both languages. The researchers worked on a hypothesis that there is no similarity and no differences between motion verbs in the two languages, which this research will work on it to see if it is validated or not. The researchers classified motion verbs by analyzing the data and by using qualitative descriptive method. This study reveals that the two languages motion verbs appear or express in the same way but the one difference is that in Arabic motion verbs have many names for the same verb while in English there is not. So, according to this findings the hypothesis rejected.

As we see the previous studies all share the same findings that there is a similarity between motion verbs in English and Arabic, while that last studies showed one difference between them.

3 Theoretical Framework

In this study, the researcher will use Talmy's theory known as the "Talmy's Typology," is a framework proposed by Leonard Talmy, a cognitive linguist, to categorize and describe the relationship between language, perception, and thought. While Talmy's theory primarily focuses on the relationship between syntax and semantics, it does touch upon some aspects of syntactic structure as well.

Talmy focuses on the typology and conceptualization of motion events by examining how different languages encode motion through lexical and syntactic means. Syntax is concerned with sentence form and organization. Syntax investigates how motion verbs interact with other language factors to generate grammatical sentences in the setting of motion verbs. On the other hands, Lexical semantics is concerned

with the meaning and interpretation of individual words, particularly motion verbs. It studies how the semantics of a verb affects its role in expressing motion events.

According to Talmy, syntactic structure in languages can be classified into two main typological categories: Verb-framed and Satellite-framed languages. This classification is based on how different languages encode motion events.

First structure is Verb-framed languages: In verb-framed languages, such as English, the main information regarding motion is encoded in the verb. These languages tend to have a relatively simple syntax for encoding motion events. Second syntactic structure is Satellite-framed languages: In satellite-framed languages, such as Spanish or German, the main information regarding motion is encoded in particles or adverbs, often called "satellites."

To discuss if this language comes under verb framed or surface structure Talmy mentioned the lexicalization patterns of motion events. According to Talmy, languages differ in how they lexicalize motion events. In particular, he focuses on two main types of lexicalization patterns: manner of motion and path of motion.

3. Manner of motion: This type of lexicalization emphasizes the manner or style of how an entity moves. Languages that primarily focus on manner of motion tend to have a wide range of verbs that specifically describe different ways of moving. These verbs are often specific and precise, reflecting the finer details of motion.
4. Path of motion: This type of lexicalization emphasizes the path or trajectory along which an entity moves. Languages that focus on path of motion tend to have a rich inventory of spatial particles or prepositions that indicate the direction or location of motion. The verbs themselves may be more general and less specific about the manner of motion.

In verb-framed languages (such as English), the main information about motion is encoded in the verb itself. The path of motion is typically expressed as a separate prepositional phrase. The manner of motion and path are often distinct and can be separated grammatically. Example: “He walked into the room.” Here, “walked” represents the manner of motion, and “into the room” expresses the path. In satellite-framed languages (such as Spanish), the path of motion and the manner of motion are often expressed together within the verb, while additional particles or adverbs (satellites) provide further information. The path and the manner of motion are typically combined into a single verb.

4 Methodology

This section includes the research strategies, the methodology and the instrument the researcher used in the study. In addition, this section studied the sample of the study, as well as the instruments, data collection, and analysis. Finally, it shows the steps taken to accomplish the study’s objectives. Also, the instrument used to address the three main research questions:

5. How lexical semantic and syntactic structures show in English and Arabic motion verbs?
6. In which way motion verbs differ in English and Arabic languages?

4.1 Data Collection, Procedures and Instruments

The data for this study collected in two ways: first the researcher read the Around the World in Eighty Days novel to collect the sentences that used motion verbs in both languages. The researcher collected 14 Arabic and 14 English sentences include motion verbs. The second way is, using lexicology encyclopedia to refer to the origin, the specific meaning, and the use of motion in each language. Such as, Long man dictionary for English words, and Almujam Al-waset for English words. The third way is to see how these words used in dictionaries.

4.2 Data Analysis

The researcher limited this research by collecting 14 motion verbs. The data were analyzed by using the qualitative instruments. This method used to show the difference between motion verbs in each language, and the structure of using motion verbs in English and Arabic sentences.

After collecting the data the researcher translated English sentences into Arabic and gives the meaning of each verb in the sentence. For Arabic sentences she gave the English Transcription for each sentence then the meaning of the verbs.

5 Finding and Discussion

In this section, the researcher will present the finding of the current investigation, particularly to show the finding of syntactic and semantic structure of the motion verbs. In addition to show the differences of English motion verbs and their counterpart in Arabic. Finally, the researcher will discuss the finding of qualitative then to unpack each question and present the main findings based on the approach the researcher used during the research stages.

5.1 Findings

See Tables 1, 2, 3 and 4.

Table 1 The findings of motion verbs in English

No.	Expression	Main motion verb	Syntactic structure
1	A young man came in	Came	Manner: came Path: IN
2	I left France	Left	Manner and path: left
3	I come to England	Come	Manner: come Path: to England
4	Left the house	Left	Manner and path: left
5	He got up and went into the reading room	Got and Went	Manner: get up Path: went into
6	Run in a direct way	Run	Manner: run Path: in a direct line
7	Passepartout wandered with his hands in his pockets	Wandered	Manner: wandered Path: with his hands in his pockets
8	The pilot walked away a little distance	Walked	Manner: walked Path: away a little distance
9	Bands of monkeys skipped about in the trees	Skipped	Manner: skipped Path: in the trees
10	We are travelling so quickly	Travelling	Manner: so quickly Path: travelling
11	We left London	Left	Manner: left
12	They walked along	Walked	Manner: walked Path: along

6 Discussion

The researcher found 12 sentences used motion verbs in the Eighty days around the world Novel in both languages. These expressions are counterpart for each other. As mentioned the finding will be discussed based on Talmy's theory.

According to Talmy's theory we are going to discuss the findings by looking to Verbs Framed and Satellite-framed languages with the lexicalization of sentence structure.

As we see the way the same sentence translated into Arabic counterpart is differ from the English in the same Novel. In addition the way each dictionary used the same motion verb in the sentences completely differ.

Starting by the first English sentence" A young man came in" here the main verb is "Came" this verb act as a motion verb which shows the manner of the lexicalization and the path shows in the rest of the sentence by the preposition "in". Paying attention to the rest of the findings all the sentences the Manner found in the main verb and the path in the rest of the sentence.

In addition to the examples from the dictionary, "He came into the room and shut the door" here also the manner shows in the motion verb came and the path of the verb the way he came shows in "into the room."

Table 2 The findings of motion verbs frequency in Arabic

No.	Expression	Main motion verb	Transcription
1	دخل شاب	Dakhala	Dakhala shab
2	غادرت فرنسا	Ghadartu	Ghadirtu Faransa
3	أتيت الى انجلترا	Ataytu	Ataytu ila Injlitra
4	غادر البيت	Ghadar	Ghadar al-bayt
5	نهض ودخل غرفة القراءة	Nahatha and dakhala	Nahatha wadakhala ghurfat al-qira'ah
6	ركض بطريقة مباشرة	Rakad	Rakad bi tariqah mubashirah
7	تجول بصدر رحب مع يديه في جيبيه	Tajawwal	Tajawwal bi sadri rahabin ma yadayhi fi jaybayhi
8	سار الطيار بعيداً لمسافة قليلة	Sara	Sara al-tayyir ba'idan lilmasafah qaleelah
9	تجمعات من القرود تقفز هنا وهناك في الأشجار	Tuqaffuz	Tajma'at min al-qarud tuqaffuz huna wa huna fi al-ashjar
10	نحن نسافر بسرعة كبيرة	Nusafir	Nahnu nusafir bi sur'ah kabeerah
11	غادرنا لندن	Ghadarna	Ghadarna London
12	ساروا على طول	Saru	Sarau'ala tul

This findings agree with the previous studies mentioned that all English motion verbs come under the Verb framed structure, the verb structure took the motion as a manner and the rest show the path.

We can see the difference by looking to the same motion verb in Arabic language. The way both languages differ in using the same verb. Such as, "Dakhala shab" here the manner and the path showed in the verb. Also, in dictionary example " الفَصْلَ دَخَلَ الطَّالِبُ"" the motion verb consists of the manner and the path. And the word " "الفَصْلَ"" is additional information for the sentence.

As we can see there is no a prepositional phrase as English language sentences. Which the prepositional phrase includes the path and the motion includes the manner.

Table 3 The finding of motion verb in dictionaries English Oxford dictionaries

No.	Motion verb	Meaning	Example
1	Came	To move to or towards a person or place	He came into the room and shut the door
2	Left	To go away from a person or a place	She left the house by walking down the driveway around 8 this morning
3	Get Went	Get something to receive something To move or travel from one place to another	She got into the car and drove along the winding road He went up the stairs cautiously, taking one step at a time
4	Run	To move using your legs, going faster than when you walk	She ran down the street swiftly, trying to catch the bus
5	Wandered	To walk slowly around or to a place	They wandered through the dense forest, getting lost in its enchanting beauty
6	Walked	To move or go somewhere by putting one foot in front of the other on the ground	They walked along the scenic trail, enjoying the tranquility of the surrounding nature
7	Skipped	To move forwards lightly and quickly making a little jump with each step	She skipped joyfully down the path, her laughter echoing through the meadow
8	Travel	To go from one place to another, especially over a long distance	They are travelling across Europe, exploring different cities and immersing themselves in new cultures

6.1 Discussion of the Research Questions

1. How do motion verbs in English and Arabic differ in terms of lexicalization patterns?

By comparing the result of this study with the previous studies we can see that all languages differ from each other in using the same motion verb in the sentences. Not just English and Arabic languages differ from each other. In using English motion verb the path should be found in the prepositional phrase while the manner shows in the main motion verb. According to Talmy's theory the case of English motion verbs consider Verbs framed.

By contrast the Arabic used the manner and path in the motion verb and if there is any additional information in the sentence they don't consider as a path. Referring to Talmy's theory this case considers satellite framed structure.

So, to conclude the Motion verbs in English and Arabic differ in terms of lexicalization patterns. Fist, Verb Diversity: English tends to have a larger inventory of motion verbs compared to Arabic. English has a wide range of specific motion verbs, such as "walk," "run," "swim," "fly," and so on, each with a distinct meaning related to a specific type of motion. In contrast, Arabic often relies on more general verbs like "go" ((يذهب)) or "come" ((يأتي)) to express various types of motion. Second, Manner

Table 4 Almaany dictionary

No.	Motion verb	Example
1	Dakhala	دَخَلَ الطَّالِبُ الفَصْلَ
2	Ghadartu	غادَرْتُ المنزلَ صباحًا
3	Ataytu	أَتَيْتُ إلى الحَديقَةِ لِلتَنَزُّهِ
4	Ghadar	غَادَرَ الرَّجلُ المَنْزِلَ وَذَهَبَ إِلَى العَمَلِ
5	Nahatha & dakhala	نَهَضَ الطِفْلُ مِنَ الأَرِيكَةِ وَذَهَبَ إِلَى الغُرْفَةِ
6	Rakad	ركض الطفل في الحديقة
7	Tajawwal	تجَوَّلْتُ في السوق القديمة
8	Sara	سار الرجل على طول الشارع
9	Tuqaffuz	تَقَفَّزَتِ الفتاةُ فوق الحواجز
10	Nusafir	نَسَافِرُ إلى باريس في عطلة الصيف
11	Ghadarna	غادَرْنَا المدينة في الصباح الباكر
12	Saraw	في رحلتهم الطويلة، ساروا عبر الصحراء

versus Path: English motion verbs often prioritize manner of motion, focusing on how an action is performed. For example, "walk" emphasizes the manner of moving on foot. Arabic, on the other hand, tends to focus more on the path or direction of motion. It places greater emphasis on the destination or goal, rather than the specific manner of motion.

2. What are the syntactic structures employed in English and Arabic to represent motion events?

In both English and Arabic, various syntactic structures are employed to represent motion events. Here are some common syntactic structures used in each language:

In English, Simple Verb Phrases: English often uses simple verb phrases to express motion events, such as "run," "walk," or "jump." For example, "He runs to the park." Prepositional Phrases: English frequently employs prepositional phrases to indicate the path or manner of motion. For instance, "She walked across the bridge." In

addition to, Phrasal Verbs: English utilizes phrasal verbs, consisting of a verb and a particle, to express motion events. Examples include "set off," "take off," or "come in." For example, "The plane took off from the runway."

In Arabic, Verb-Subject-Object (VSO) Structure: Arabic commonly employs a Verb-Subject-Object structure to express motion events. For instance, " المدرسة ذهب الولد إلى" (The boy went to school). Verb-Object-Subject (VOS) Structure: Arabic also uses a Verb-Object-Subject structure to represent motion events. For example, " اللاعب الكرة رمى" (The player threw the ball). Prepositional Phrases: Arabic employs prepositional phrases to indicate the path or manner of motion, similar to English. For example, " سافر بالطائرة إلى الخارج" (He traveled by plane abroad). And finally, the Verb-Adverb Structure: Arabic uses verb-adverb structures to express motion events, where an adverb modifies the verb. For instance, " سبق بسرعة إلى النهاية" (He hurried quickly to the finish line).

7 Conclusion

In conclusion, this research paper explored the differences in the behavior of motion verbs in English and Arabic, utilizing dictionaries and the novel "Eighty Days Around the World" as data sources. The study adopted Talmy's theoretical framework, which provided a valuable lens to examine how these two languages encode and express motion events. Through the analysis, several notable distinctions emerged.

Firstly, the lexicalization patterns of motion verbs in English and Arabic were found to differ significantly. English exhibited a broader range of specific motion verbs, emphasizing manner of motion, while Arabic relied more on general verbs with a focus on the path or direction of movement. This distinction highlighted the different semantic preferences and linguistic strategies employed in the two languages.

Furthermore, the usage of dictionaries as a resource allowed for the identification and categorization of motion verbs in both English and Arabic. This comprehensive examination shed light on the nuances and subtle variations within the lexicon of motion verbs in each language. By examining multiple dictionaries, a more comprehensive understanding of the semantic and syntactic characteristics of these verbs was achieved.

Additionally, the analysis of "Eighty Days Around the World" as a literary text provided rich contextual examples of motion verb usage in both languages. This real-world data supported the findings from the dictionaries and allowed for a deeper exploration of how motion events are expressed and represented in English and Arabic narratives.

Overall, this research paper contributes to the existing body of knowledge by highlighting the differences in motion verb behavior between English and Arabic. The application of Talmy's theoretical framework proved instrumental in analyzing and understanding these distinctions. The use of dictionaries and literary texts as data sources enhanced the robustness of the study's findings. Further research in this area

can explore additional linguistic features and incorporate a broader range of texts to deepen our understanding of motion verb behavior in English and Arabic.

Technological Influences on Radicalization and Strategies for Mitigating Violence

Aladdin Tarawneh and Alhareth Alhalalmeh

Abstract The path to radicalization is a gradual process, a series of gradual steps that involve acceptance of extremist views—and what constitutes an extremist view is, of course, a matter of debate. Radicalization often involves the reckless acceptance of violence as a means to achieve social goal, and this process is non-linear. This study adopts an analytical-descriptive approach that uses insights obtained from qualitative analysis of primary data to examine the sources and mechanisms of radicalization, its impact on violence, and the causes and consequences of these manifestations of human behavior. Of particular interest is how individuals use digital platforms, online forums and social media to spread extremist ideologies and engage in radicalization. Our analysis shows that radicalization is a long-term process that begins with a gradual shift towards extremist ideologies and ends with acts of violence. Our analysis of the role of technology in this process shows that social media has become an integral part of radicalization, and this knowledge is crucial in developing countermeasures to mitigate the effects of radicalization.

Keywords Radicalization · Technology · Causes of radicalization · Violence · Social media

1 Introduction

There is no commonly agreed definition of radicalization, much like the constant discussions surrounding the meaning of terrorism by authors such as [5, 9] [20: 874] defines radicalization as the basic process of people turning toward extremism.

Its fundamental meaning is individuals gravitating towards violent acts based on extremist views.

Progressing towards terrorism requires a person to hold extremist views, but defining what qualifies as such views is vague. Should opposing societal values make one an extremist or does it require a coherent and recognized ideology? Must it support violence or relate to religion? The answers to these questions remain important yet unresolved, as declaring someone has radicalized connotes that they are on the dangerous path to terrorism. More than just indicating the shift towards a type of wrongdoing, it instigates an increase in the reactions from the establishment, various implications and nuances. It also suggests that an individual has advanced beyond the limit of lawful expressions or a stance of civic rebellion (even if it involves violence) to a point where it becomes ethically untenable. Significant social change must be condoned or encouraged by extremist views in order to justify state intervention that involves violence.

The UK's relationship between violence, extremism, and free speech is still blurry, even though it's clear that supporting ideas that go against the core values of a society, when there is no risk of harm, is important for a healthy democracy that upholds freedom of expression. This line may seem obvious, but it's not always that straightforward. Continues to target non-violent ideas, the Prevent strategy, according to the [2, 17]. Confusion arises when the terms 'radical' and 'extreme' are used to express non-terroristic ideologies and frameworks [21]. A person may present drastic proposals to change tax policies or resort to an 'extreme' regimen of diet and exercise. In some instances, such as with women's suffrage, certain thoughts were deemed 'radical' in a specific cultural moment but ultimately succeeded in fighting discrimination and promoting more equal treatment.

Radicalization can be either 'cognitive', where one adopts extremist beliefs, or 'behavioral', where one engages in extremist actions [21]. A critical question is whether radicalization occurs from adopting extremist views or from engaging in criminal conduct, such as terrorism. While public policy focuses on extremist behavior, the formation of extremist beliefs is still of paramount importance. Terrorism-related crimes exist in Western nations, which encompass activities from terrorist group recruitment to obtaining documents about terrorism [3]. However, the more critical matter at hand for CVE policy is the management of individuals susceptible to such actions, most notably minors who cannot be held accountable for legal violations. Beyond that, implementing primary prevention techniques through CVE programs can reduce risk of radicalization among a broader populace [13].

In effectively summarizing the fundamental essence of radicalization, Hafez and Mullins pinpoint how the process (1) gradually occurs through exposure to an extremist belief system, that (2) paves the way for violence despite it not being entirely inevitable (2015). Radicalization encompasses the acceptance of an extreme worldview (one that is not accepted by the broader society) that deems violence legitimate as a means to bring about sociopolitical transformation [11: 960].

Due to the intricate nature of current reports on radicalization, scholars have not reached consensus on how to craft a model for it. Nonetheless, certain elements are consistent across several models. Primarily, every model involves an individual who

adopts extremist views through self-identification with them. Additionally, connections to terrorist organizations or networks externally are significant contributors to this progression. Individuals' progression towards violence may be obtained through gradation models, even though the process does not follow a straightforward path. Upon reaching the end of this progression, it is feasible that an individual may opt to perpetrate a violent deed.

2 Methodology

Our focus is on using qualitative research methods to adopt an analytical descriptive approach that will help us identify the origins of radicalization and violence. To do this, we delve into verses with the intention of uncovering subtleties, themes, and contextual intricacies. Our ultimate objective is to shed light on the root causes of radicalization and promote awareness by offering nuanced insights. With our meticulous examination of the issue, we seek to offer a comprehensive view of the causes of radicalization, which will foster broader understanding of this complex case.

3 Roots of Radicalization

Despite significant research efforts, the why of individual radicalization cannot be pinpointed to a particular psychological profile [15]. Rather, the reasons are diverse and complex [4]. To better comprehend these various reasons, they are categorised into a framework encompassing technological, economic, social, ideological and psychological factors. Although the models above outline the process of radicalization, they do not delve into the multifaceted motivations driving this phenomenon [18].

Rather than competing alternatives, these factors contribute to piecing together the larger picture of radicalization as noted by [11].

Among the various reasons for radicalization, pure types do not exist. Ideology, and psychological factors frequently intersect. For instance, an extremist ideology may hinge on grievances, prompting an individual to resort to violent actions caused by feelings of anger or frustration [19]. While these categories provide a useful framework to grasp the primary causes of radicalization, they don't tell the whole story. Governments' national CVE policies are one way to evaluate how they understand radicalization.

3.1 Ideology

Ideological beliefs can deeply impact a person's perspectives and actions. These convictions can stem from various sources, such as religion, culture, or personal experiences. They often shape one's understanding of right and wrong, as well as their approach to problem-solving and decision-making. Sometimes, ideological differences can lead to conflicts and misunderstandings, but they can also foster diversity and creativity. It is essential to recognize and respect others' ideological differences, while also critically examining and challenging our own beliefs. Ultimately, the ability to navigate ideological diversity can contribute to personal growth and societal progress.

An extremist ideology is the root of terrorism—a statement that may appear self-evident or 'tautological' as per Guhl's observation. Violent pursuits are enabled by cognitive radicalization that follows the adoption of extremist notions.

Erroneous interpretations of Islam are often used to encourage violent attacks by terrorist groups. Many specific notions support this, such as the idea that Western societies are morally bankrupt. The promotion of the idea that the West is at war with Muslims and the acceptance of jihad and martyrdom as legitimate means are also common.

The concept of defending their faith is fundamental to Muslims, forming a significant part of their ideology. This ideology encompasses a comprehensive narrative about the one's position and the world living in it, and it often demonizes those who oppose it, justifying violence against them. By promising the possibility of heroic redemption, it encourages individuals to make sacrifices. In the opinion of [21: 880], terrorism is irrational when viewed outside the lens of these assumptions, rendering the behavior incomprehensible. Hoffman [14: 82] contends that religion is the foremost factor influencing terrorist activity.

3.2 Psychological

Psychological factors play a part in the radicalization process, despite the lack of a clear medical or psychological explanation. A prevalent trait is the quest for significance, particularly in individuals lacking self-esteem or a strong sense of identity. Such people are inclined to align themselves with social causes to feel valued and validated by others, contributing to their sense of belonging, worth, and purpose. Engaging in combat by travelling to Syria is considered by [24] as a way of becoming radicalized. The narrative of Islamic State, portraying it as a place where young men can seek personal fulfilment and come of age, is a major draw for many.

Terrorist behavior cannot be solely attributed to a search for identity, as many individuals lacking self-confidence do not engage in such activities. Nevertheless, this factor, along with group dynamics, appears to be crucial in the recruitment of young members by terrorist groups, such as Islamic State, worldwide [9].

3.3 Social

Various studies [8, 11, 19] have highlighted the importance of social relationships in the context of radicalisation. This is true not just for Islamist terrorism, but also left-wing and right-wing terrorism, gang activity, and cult membership. Radicalisation is a "group phenomenon," as explained by [6: 27], where new members are encouraged to adopt the group ideology by friends, family, and other members. The studies of Maskaliūnaite, [19] clarify that the influence exerted on potential members varies from gentle persuasion to forceful coercion.

In 2015, Christmann mentioned that a range of techniques, like group polarization, peer pressure, group bonding, and isolation, make the process more accessible (2012: 27).

Influence on the radicalization of young recruits is largely influenced by the psychological yearning for a sense of meaning and purpose. Groups can capitalize on this aspiration and utilize it to their advantage. Psychological fulfillment is an important pursuit satisfied through group participation [16]. Moreover, groups can exacerbate the repercussions of leaving once someone has joined. Even if someone loses confidence in the group's ideology, approaches, or methods, departing from the group may be challenging. Leaving extremist groups can be accompanied by a flood of emotions such as guilt, anxiety, and loyalty [11]. There is a chance of retribution from the group or the state for departing, which can also be unnerving. Regardless, extricating oneself from such ideologies comes with a heavy price, be it psychological, emotional, or physical [11: 965].

3.4 Economic

Terrorist attacks are often carried out by individuals who are not economically disadvantaged or lacking education [25]. As a result, it cannot be assumed that those with low socio-economic status are at an increased risk of becoming terrorists. Moreover, studies conducted by [22] have disproved the idea that poverty-stricken countries experience more terrorism.

The connection between socio-economic disadvantage and radicalization can be attributed to the exasperating realization of injustice. 'Relative deprivation' theory posits that when a person discovers that others have better living conditions or societal prestige, and views these differences as unfair, they are inclined towards extreme views [6]. Christmann proposes that this sense of relative deprivation can be felt either as an individual, a group or on an international level (2012).

Relevance of economic disparity is intertwined with fostering an environment for radicalization, especially when coupled with personal experiences of discrimination. A 2015 analysis by Hafez and Mullins (p. 962) reveals that Muslim enclaves in Europe frequently encounter a sense of isolation and bias, often leading to an increase in criminal activities within these communities.

Amidst various studies that have been conducted, a significant link has been found between extremism and minority discrimination. In Europe and the US, over 2500 Muslims took part in a study which revealed a strong connection between Muslims' perceived discrimination and the belief that suicide bombing is justified. Similarly, in a study of 172 countries, it was discovered that economic discrimination against minority groups could lead to an escalated risk of terrorism [22].

3.5 Technological

From around the globe, young fighters have been successfully recruited by Islamic State through its use of technology. Posting slick propaganda clips on Twitter, YouTube and Facebook has been crucial to its radicalization efforts. As a result, technology is now recognized as a significant contributing factor to the issue. Using the best method for attracting young people, Al-Tarawneh [3] suggests that this tactic addresses the targeted recruits directly through the medium that resonates most with these individuals.

Without the Internet, Islamic State would not have been able to reach so far and wide. But the connection between online viewing of extremist content and radicalization is not clearly understood. It seems that more often than not, people are first radicalized through group networks and social circles, and only then do they turn to extremist material online. Through merely being exposed to extremist content online and lacking any human interaction, self-radicalization becomes less frequent [26]. Conway maintains that there is "not yet established evidence that links the consumption and networking around violent extremist online material to the acceptance of extremist ideology or participation in terrorism and violent extremism" [7: 77].

4 Violence Counter-Measures Policies

As a gradual process, the adoption of extremist ideology is accurately represented in the policies of different countries. The core nature of radicalization is captured by these policies. In 2007, the Netherlands' action plan had a broader definition of radicalization which included the "willingness to strive for far-reaching changes in society (possibly in an undemocratic manner), to support such changes or persuade others to accept them" (Al-Tarawneh, 20: 5). However, the current definition is much more limited. This difference could have significant implications, potentially leading to legitimate forms of dissent such as industrial action or political protest being falsely grouped in with dangerous radicalization. The Ministry of Security and Justice [20: 33] defined radicalization as an 'attitude', but this oversimplified the process by failing to recognize its gradual and complex nature. The definition implied that a mere change in perspective would lead to radicalization, which is far from the truth.

Targeting the extremism's core nature and linking it to the potential for violent action, these policies hold true throughout all countries except the UK. Australia hones in on violent extremism, where individuals or groups believe that terror, fear, and violence are justified to fulfil political, ideological, or social change, and then proceed to act on these beliefs [1]. Meanwhile, Sweden defines violent ideology as the acceptance of violence and possibly committing ideologically motivated crimes. The adoption of this violent ideology is deemed to be the point where individuals become extreme. Rather than targeting violent extremism specifically, Denmark's approach focuses on addressing extremism that seeks to legitimize violence according to their government's definition [10: 7]. Meanwhile, in the Netherlands, extremism is now connected to…

As per the Ministry of Security and Justice, performing illegal actions and going against the law is equivalent to showing aggression (2014: 31). Furthermore, these techniques are targeted towards behavioral transformation, and the possibility of carrying out a violent act is not negligible.

In the latest review of CONTEST by the Home Office in 2018, the once combative language targeting terrorism's cultural and ideological threat has been significantly toned down. The revised document places a greater emphasis on the threat posed by right-wing extremism while highlighting the efficacy of a multi-agency approach and public–private partnerships. Meanwhile, the Prevent strand reverts back to the objective of fortifying community resilience against extremist influences, albeit with a continuing emphasis on ideology being a potent factor in radicalization, albeit with less recognition given to other factors [2]. The al-Qaeda and Islamic State ideologies are still the subject of much attention. Present-day Prevent and Counter-Extremism techniques are based on the initiatives issued by the Home Office in 2011 and 2015.

Across the board, positive features can be found, though they vary significantly in nature. Contrary to popular belief, research has shown that ideology and technology are not the main catalysts for radicalization. Rather, social networks and psychology have been identified as the primary motivators, yet government policy has yet to fully embrace these findings. In the Netherlands, terrorism has been linked to integration issues, despite the absence of empirical evidence to support this claim [23]. In terms of accurately defining the root causes of radicalization, there is certainly room for improvement. Interestingly, despite a lack of evidence to support the claim, Australia often associates prior criminal behavior with the process of radicalization.

5 Conclusion

The view on radicalization seems to vary from person to person, no clear model seems to exist, and its causes are intricate and multifarious. Nevertheless, there are enough recurring themes featured in the literature to form some overall notions. Radicalization is not a swift process, but rather a gradual one, whereby an individual becomes more connected and committed to an extremist ideology that can lead to violent actions. Extremist viewpoints are ones that advocate the use of violence

to affect political or religious change. External groups and networks are crucial in influencing this progression.

Embarking on this process involves complex reasons that cannot be attributed to an economic profile or singular psychological. Those lacking self-esteem and a solid sense of self could be convinced, twisted, or forced into extremist beliefs by terrorist organizations, particularly among youth. Where there are political grievances (such as concerns over Western intervention in the Middle East), economic inequality (particularly when coupled with minority discrimination) plays a significant role. Radicalization concerns are exacerbated with technology, which enables terrorist organizations to spread their message worldwide and connect directly with younger people.

The Role of Intellectual Capital in Achieving Competitive Advantage: An Empirical Study of Pharmaceutical Manufacturing Companies

Majid Abdul-Mahdi Masadeh, Marah Masadeh, and Farah Masadeh

Abstract The objective of the study is to explore how "intellectual capital," which consists of three components—human capital, structural capital, and relational capital—contributes to attaining "competitive advantage," characterized by its elements of "superior quality, superior efficiency, superior responsiveness, and superior innovation" within the pharmaceutical manufacturing industry. This research will be approached from the viewpoint of all employees working in pharmaceutical manufacturing firms, including managers, their assistants, department heads, and staff members. Employing a descriptive-analytical methodology, the study utilized a questionnaire as the primary instrument for assessing the study variables. Employees from Dar Al Dawa, Hayat Pharmaceutical Industries Co., and Philadelphia Pharmaceuticals, all of which are listed on the Stock Exchange, were the focus of the study. The total population consisted of 1168 employees, while the sample comprised 303 individuals. Data analysis and hypothesis testing were carried out using the Statistical Package for the Social Sciences (SPSS) software. The study concluded with several findings, the most significant being that the dimensions of intellectual capital play a role in achieving competitive advantage. Furthermore, the strongest influence on competitive advantage within companies is attributed to structural capital. The research also provided several recommendations, with the most crucial being the imperative for pharmaceutical firms to implement policies and strategies aimed at fostering intellectual capital and creating a specialized customer management department to improve communication, gather feedback, and comprehend evolving needs.

Keywords Intellectual capital · Human capital · Structural capital · Relational capital · Competitive advantage · Superior quality · Superior efficiency · Pharmaceutical manufacturing · SPSS · Customer management

1 Introduction

In a global economy that relies on knowledge and human skills, there is an increasing worldwide recognition of intellectual capital, its cognitive aspects, and the considerable value it generates. This recognition arises from evaluating the present conditions of economic institutions, prompting companies to pursue intellectual assets, talents, and innovative concepts within their workforce. They then identify these resources and make suitable investments in them to boost profits and improve their competitive edge and strategic position [11].

Human assets associated with information, knowledge, and intellectual property, including patents, trademarks, and structural elements tied to organizational frameworks and processes, make up intellectual capital [6]. Additionally, it encompasses the quality of relationships between the company and its partners. The unique creative talents of employees are a manifestation of intellectual capital, allowing them to generate novel ideas or refine and implement existing ones to gain a competitive edge [9].

In light of changes within the competitive landscape, businesses in multiple industries must improve their competitive edge to fortify their standing in the market [7]. Research conducted across diverse productive and service sectors has underscored the significance of intellectual capital in enhancing a company's competitive advantage. Among the key assets that can bolster this advantage are knowledge and advanced skills that foster innovation, as earlier studies have pointed to a transition from an information economy to one driven by knowledge and intelligent thinking. This transition ensures reliable financial resources for project funding [11].

1.1 Research Problem and Questions

The pharmaceutical industry is experiencing ongoing dynamic transformations driven by its global accessibility. As a result, pharmaceutical manufacturing firms in Jordan are working to enhance their market shares in comparison to both local and international competitors. In pursuit of this goal, these companies have endeavored to advance their material capabilities and fundamental competencies by emphasizing intellectual capital, leading to numerous achievements on local, regional, and global scales. However, a review of the literature for this study reveals a lack of research that addresses the relationship between intellectual capital and competitive advantage within the critically important sector of Jordanian pharmaceutical manufacturing.

Jordanian pharmaceutical firms were quick to acknowledge the importance of developing exceptional intellectual capital to implement their diverse competitive strategies and secure an edge by meeting the needs of human, structural, and relational capital.

Based on the above, the research problem involves the following questions:

- What role can intellectual capital play in achieving the competitive advantage of Jordanian pharmaceutical manufacturing companies?
- What are the key practices these companies adopt concerning their intellectual capital?
- What are the practical aspects of competitive advantage that they rely on to maintain their target markets?
- Have they been able to achieve the competitive advantage derived from employing intellectual capital?

1.2 Significance of the Study

The significance of this study can be divided into two types:

- **Academic Significance**: The present study holds significant academic value as it seeks to investigate the characteristics of intellectual capital and the elements that contribute to competitive advantage in Jordanian pharmaceutical manufacturing firms, positioning itself as a model for developing nations. Furthermore, it aids in establishing a knowledge foundation for researchers and individuals keen on examining this topic from the viewpoint of employees in a critical industry.
- **Practical Significance**: The importance of this study lies in the need to emphasize intellectual capital and its contribution to gaining a competitive edge. The researchers seek to present a collection of findings and suggestions that may aid these companies in reaching their objectives. To the best of the researcher's knowledge, this study is among the rare ones that integrate intellectual capital with competitive advantage within Jordan's pharmaceutical manufacturing sector. More specifically, the practical significance of this study can be summarized as follows:

1. Supporting the management team of Jordanian pharmaceutical companies in assessing their intellectual capital and recognizing its importance as a key element in creating value and achieving sustainable competitive advantage.
2. Identifying competitive advantage in the Jordanian pharmaceutical sector.
3. Understanding the relationship between the application of intellectual capital dimensions and enhancing the competitive position of the Jordanian pharmaceutical sector.
4. Providing recommendations to assist in the development of programs and plans that can help increase intellectual capital in these companies.
5. Offering a greater opportunity to assess the true state of your intellectual capital, recognize its strengths and weaknesses and help in its development.

1.3 Research Objectives

This study seeks to fulfil the following objectives:

- To determine the extent to which dimensions of intellectual capital—namely human capital, structural capital and relational capital—are present in Jordanian pharmaceutical companies.
- Uncovering the Level of Competitive Advantage in Jordanian Pharmaceutical Companies.
- Understanding the role of intellectual capital and its components in achieving competitive advantage in Jordanian pharmaceutical companies.
- Pinpointing the most crucial dimensions of intellectual capital in Jordanian pharmaceutical companies.
- Presenting proposals to help Jordanian pharmaceutical companies increase their intellectual capital and develop competitive advantage based on the study results.

2 Literature Review

2.1 Intellectual Capital

Concept of "Intellectual Capital"

Intellectual Capital (IC) signifies the true capital of organizations and has evolved to include all available physical, financial, moral, cultural, and intellectual resources. Academics and practitioners have offered various interpretations of intellectual capital. Cabrilo [9] articulates that IC comprises "a set of skills available in the company that possesses extensive knowledge, enabling it to become global by responding to beneficiary requirements and opportunities offered by technology." Farhati [10] describes it as the overarching framework within which knowledge management serves as the driving force, highlighting the possession of knowledge alongside the application of expertise, skills, technologies, relationships, and tools necessary for the company to realize its strategies. According to Boon et al. [8], it is the intellectual assets that encompass "knowledge, information, intellectual property, and experience" utilized to generate wealth, emphasizing that the management and assessment of IC have become crucial elements for contemporary companies. Kianto et al. [15] view it as a collection of informational resources consisting of two categories of knowledge: explicit knowledge, which can be easily articulated or documented and shared with others, and tacit knowledge, rooted in personal experiences and principles applied in the growth of the company. According to Hejazi et al. [14], it is regarded as "a distinctive ability that sets the company apart from its rivals, accomplished through the amalgamation of different skills and contributing to the enhancement of value.

Importance of Intellectual Capital

The significance of intellectual capital has notably risen within companies, serving as a key catalyst for innovation and creativity. Effectively managing this vital component is essential for optimal investment and preservation. Managing intellectual capital as

a strategic asset involves several steps, beginning with the investment in knowledge as a primary force to enhance value [2]. Following this is the alignment of revenues with intellectual assets to create advantages, which includes developing strategies to invest in and leverage these assets, ultimately aiming to boost the productivity of intellectual capital and explore new methods of measurement. Furthermore, Al-Anzi and Saleh [3] emphasized that intellectual capital holds significant prestige for certain entities, favoring them above others, as it pertains to the establishment of intelligent companies, successful investments, high returns, and serves as a strategic resource and competitive tool in the knowledge economy. Focusing on intellectual capital brings a multitude of benefits, such as enhanced creative capabilities, attracting stakeholders and fostering their loyalty, increasing competition by accelerating the introduction of new products, decreasing the time between innovations, lowering costs, facilitating competitive pricing, and "improving productivity and enhancing competitive ability".

2.2 Competitive Advantage

Concept of Competitive Advantage

There is no consensus among researchers in economics and management regarding a single definition of competitive advantage. While economists interpret competitiveness as "national competition" and advocate for macro-level analytical approaches, management researchers argue that the focus should be on micro-level tools that examine the competitive advantages each company encounters in relation to its rivals [18].

Competitive advantage refers to "a collection of skills, techniques, technologies, or unique resources that enable a company to deliver value and benefits to customers that surpass those provided by competitors, highlighting the company's uniqueness and distinction from the viewpoint of the beneficiaries, who recognize this superiority and difference, as it offers them greater benefits and values than other competitors". Additionally, it is described as "an element of a company's advantage or superiority attained through the adoption of a particular competitive strategy" [17].

A company achieves competitive advantage when it can execute its activities more efficiently and at a lower cost than its rivals by optimizing resources or showcasing its skills in a way that customers perceive as offering greater value [5]. According to [4–7], this advantage is characterized by the company's capacity to operate in ways that competitors cannot currently or will not be able to replicate in the future, utilizing its internal strengths. Al-Harthy [4], Al-Kameem [5] offer a more precise definition, asserting that competitive advantage is realized when a company identifies new and more effective methods compared to those employed by competitors, concentrating on its core creativity, and successfully implements this discovery during the innovation process.

Importance of Competitive Advantage

Quaye and Mensah [16] see the importance of competitive advantage as follows:

- Creating value for customers that meets their needs and ensures their loyalty, supporting the company and improving its reputation and image in their minds.
- Achieving strategic distinction from competitors in the goods and services offered to customers, with the potential for distinction in resources, competencies, and strategies in a highly competitive environment.
- Attaining a market share that ensures high profitability for the company's survival and continuity.
- Ensuring the company's survival and continuity by achieving higher profits.

Elements of Competitive Advantage

The essential elements of competitive advantage include:

1. **Quality**: It refers to the attributes and specifications inherent in a specific product that fulfill the requirements of both current and potential beneficiaries, serving as a crucial component for the success of businesses and a vital element in competition within both domestic and global markets. It is described as a collection of factors or traits that must be included in a product or service to satisfy market demands (Al-Ameen 2018). Furthermore, it provides a means for companies to differentiate themselves, enhancing their separation from rivals [12].
2. **Resources**: The availability of company resources and capabilities enables it to consistently provide competitive service to customers [13].
3. **Cost Elements**: The "cost elements" are crucial factors employed by the company, including:
   - "Economies of scale," where the company covers its usual costs.
   - "Marketing costs," which are costs borne by the product from its departure from the factory until it reaches distribution channels and is presented to the consumer.
   - "Product design," which enhances production efficiency through continuous monitoring.
   - "Experience," which is considered a source of competitive advantage [4].
4. **Knowledge Management**: It has become a vital and effective element, forming a source of increased competitive advantage, resulting from individuals' experiences and what they rely on in performing their work [2, 17, 18].

Dimensions of Achieving Competitive Advantage

These represent the traits that a company selects and emphasizes in its approach to providing products and addressing market needs in order to attain a competitive edge. This is accomplished by optimally utilizing technical, material, financial, and organizational resources, in conjunction with the skills, expertise, and knowledge that empower the company to formulate and execute competitive strategies [1].

- **Perceived Value to the Beneficiary**: The exploitation of diverse capabilities that increase the worth of goods and services is essential for establishing and

attaining a competitive edge. The notion of value encompasses aspects such as price, quality, satisfaction with products or services, and after-sales support, all of which contribute to the beneficiary feeling they have gained greater value from their interactions with the company. This perception fosters repeat business and strengthens that competitive advantage. Furthermore, effectively managing "intellectual capital" is vital in bolstering the perceived value for the beneficiary, serving as "a fundamental pillar for achieving competitive advantage by focusing on its components and providing the competencies that meet those needs [11, 13, 14]".

- **Excellence**: Achieving a competitive advantage hinges on providing a service that is not easily replicated or imitated, while making the most of available resources and capabilities. Significant contributors to excellence encompass "organizational capabilities, intellectual capital, and financial resources" [1].

3 Study Methodology and Procedures

3.1 Study Methodology

The descriptive-analytical method was utilized by the researchers, recognized as the most appropriate strategy for the study's nature. This methodology facilitated an examination of both the theoretical and quantitative dimensions of the research. Initially, the phenomenon and the problem under investigation were theoretically outlined, succeeded by an extensive quantitative analysis of the data gathered from the sample. This approach proved crucial for evaluating the hypotheses and extracting the main findings.

3.2 Study Population

This study's population comprises employees from pharmaceutical companies in Jordan that are listed on the Amman Stock Exchange. Included among these companies are "Dar Al Dawa," "Hayat Pharmaceutical Industries Co.," and "Philadelphia Pharmaceutical Industries Co." Approximately 1168 employees make up the study population, with their data collected via the Human Resources department of each respective company.

3.3 Reliability

Reliability pertains to the consistency of measurements obtained each time they are Table 1 assessed. A measuring instrument that yields inconsistent outcomes upon

Table 1 Cronbach's Alpha reliability coefficients

Variable	Number of items	Item numbers	Cronbach's Alpha
Human capital	10	1–10	0.842
Structural capital management	10	11–20	0.855
Relational capital management	10	21–30	0.847
Superior quality	5	31–35	0.803
Superior efficiency	5	36–40	0.802
Superior innovation	5	41–45	0.829
Superior responsiveness	5	50–56	0.803
Overall Performance	50	–	0.943

repeated use cannot be deemed reliable [1]. Quantitative assessment of reliability is conducted through reliability coefficients, which range from 0 to 1. Typically, a Cronbach's alpha coefficient below 0.4 signifies low reliability, while a coefficient falling between 0.4 and 0.7 is regarded as moderate. A coefficient exceeding 0.7 is interpreted as high, suggesting that the reliability of the survey items should not be below 0.7. The Cronbach's alpha coefficients for the variables in this study are displayed in Table 7.

The Cronbach's alpha coefficients for the items, as illustrated in Table 1, vary from 0.803 to 0.855, all surpassing the reliability benchmark of 0.7. This demonstrates that every item is considered reliable, with "Structural Capital Management" identified as the most dependable variable, boasting a coefficient of 0.855, whereas "Superior Efficiency" recorded the lowest reliability at a coefficient of 0.802. Overall, the reliability of the items is impressively high, achieving a coefficient of 0.943.

3.4 Dimensions of the Dependent Variable: Competitive Advantage

The measurement of competitive advantage was conducted across four dimensions: superior quality, superior efficiency, superior innovation, and superior responsiveness. The opinions of the sample members were evaluated using "arithmetic means and standard deviations" for the items related to the dimensions of the dependent variable. To gauge how companies attain and maintain a competitive advantage from the viewpoint of the study sample, the analysis depended on the "arithmetic means" of the dimensions associated with the "competitive advantage" variable. Table 2 presents the results.

Table 2 clearly shows that "superior efficiency" holds the highest arithmetic mean among the dimensions of competitive advantage, registering a value of 3.66. In contrast, "superior responsiveness" has the lowest value at 3.34. Both dimensions fall within the medium relative importance category. Additionally, the competitive

Table 2 Arithmetic means of the dimensions of the dependent variable

Variables	Rank	Arithmetic mean	Relative importance
1. Superior quality	2	3.57	Medium
2. Superior efficiency	1	3.66	Medium
3. Superior innovation	3	3.42	Medium
4. Superior responsiveness	4	3.34	Medium
Competitive advantage		3.49	Medium

Table 3 Variance inflation factor (VIF) and tolerance

Variable	VIF	Tolerance
Human capital	2.487	0.402
Structural capital	3.863	0.259
Relational capital	2.473	0.404

advantage variable achieved a medium relative importance as well, with a value of 3.49, signifying that sample members perceive its level as medium.

To confirm that the variables were unaffected by this phenomenon, the tests for the "Tolerance" coefficient and "Variance Inflation Factor (VIF)" were employed. The results are depicted in Table 3.

In order to confirm that the independent variables are not affected by "multicollinearity," the VIF must remain below 10, while the Tolerance should exceed 0.1. The table clearly shows that the VIFs for the independent variables fall below 10 and that the Tolerance coefficients are above 0.1, demonstrating that multicollinearity is absent in the data [17].

Once it was established that the data adhered to a normal distribution and was devoid of "multicollinearity," several linear regression analyses were conducted to evaluate the hypotheses.

4 Hypothesis Testing in the Study

4.1 Testing the First Main Hypothesis

- **HO1**: "There is no statistically significant role at the significance level ($\alpha \leq 0.05$) for intellectual capital, as represented by its dimensions (human capital, structural capital, and relational capital), in achieving competitive advantage, as represented by its dimensions (quality, innovation, responsiveness, and efficiency), in Jordanian pharmaceutical manufacturing companies."

To test this hypothesis, "multiple linear regression analysis" was used. The main hypothesis was tested at a significance level of ($\alpha \leq 0.05$), as shown in Table 4.

Table 4 Results of multiple linear regression analysis for testing the first main hypothesis

Dependent variable	R	R^2	F-calculated	Degrees of freedom	Significance level (Sig)	Independent variable	B value	t value	Significance level (Sig)
Competitive advantage	0.876	0.767	327.512	3	0.000	Intellectual capital	0.114	2.528	0.012
				299		Structural capital	0.423	8.104	0.000
				302		Relational capital	0.379	8.978	0.000

Table 5 Results of stepwise linear regression for the first main hypothesis

Model	R	R^2	F-calculated	Significance level (Sig)
1	Structural capital	0.835	0.698	694.366
2	Structural capital, relational capital	0.873	0.762	479.457
3	Structural capital, relational capital, human capital	0.876	0.767	327.512

- **F-Calculated versus F-Table Value**: The calculated F value (327.512) is higher than the table value (2.61), confirming the significance of the regression model used in the analysis.
- **Significance Level**: The significance level for F (0.000) is lower than the threshold set by the study (0.05), resulting in the rejection of the primary hypothesis and the endorsement of the alternative: Intellectual capital, through its dimensions (human capital, structural capital, and relational capital), plays a statistically significant role at the significance level ($\alpha \leq 0.05$) in attaining competitive advantage, which is defined by its dimensions (quality, innovation, responsiveness, and efficiency), within Jordanian pharmaceutical manufacturing firms.
- **Correlation (R Value)**: An R value of 0.876 suggests a robust correlation between the dimensions of the independent variable—namely "human capital, structural capital, and relational capital"—and the dependent variable "competitive advantage," as it exceeds the threshold of 0.5 Table 5.

4.2 Testing the First Sub-hypothesis

- **HO1-1**: "There is no statistically significant role at the significance level ($\alpha \leq 0.05$) for intellectual capital, as represented by its dimensions (human capital, structural capital, and relational capital), on the dimension (superior quality) as one of the competitive advantage dimensions in Jordanian pharmaceutical manufacturing companies."
- Multiple linear regression analysis was used to test the hypothesis at a significance level of ($\alpha \leq 0.05$), as shown in Table 6.

- **F-Calculated versus F-Table Value**: The calculated F value (330.010) is higher than the table value (2.61), confirming the significance of the regression model used.
- **Significance Level**: The significance level chosen for the study (0.05) exceeds the F significance level (0.000), resulting in the rejection of the initial sub-hypothesis and the acceptance of the alternative: At the significance level ($\alpha \leq 0.05$), intellectual capital—encompassing its dimensions of human, structural, and relational capital—plays a statistically significant role in the dimension of superior

Table 6 Results of multiple linear regression analysis for testing the first sub-hypothesis

Dependent variable	R	R^2	F-calculated	Degrees of freedom	Significance level (Sig)	Independent variable	B value	t value	Significance level (Sig)
Superior quality	0.866	0.749	330.010	3	0.000	Intellectual capital	0.196	4.065	0.000
				299		Structural capital	0.308	5.499	0.000
				302		Relational capital	0.499	11.025	0.000

Table 7 Results of multiple linear regression analysis for testing the second sub-hypothesis

Dependent Variable	R	R^2	F-Calculated	Degrees of Freedom	Significance Level (Sig)	Independent Variable	B Value	t Value	Significance Level (Sig)
Superior Efficiency	0.796	0.633	172.061	3	0.000	Intellectual Capital	0.076	1.227	0.221
				299		Structural Capital	0.283	3.965	0.000
				302		Relational Capital	0.540	9.361	0.000

quality, which is considered a competitive advantage in Jordanian pharmaceutical manufacturing firms.

4.3 Testing the Second Sub-Hypothesis

- **HO1-2**: "There is no statistically significant role at the significance level ($\alpha \leq 0.05$) for intellectual capital, as represented by its dimensions (human capital, structural capital, and relational capital), on the dimension (superior efficiency) as one of the competitive advantage dimensions in Jordanian pharmaceutical manufacturing companies."
- Multiple linear regression analysis was used to test the hypothesis at a significance level of ($\alpha \leq 0.05$), as shown in Table 7.

- **F-Calculated versus F-Table Value**: The calculated F value (172.061) is higher than the table value (2.61), confirming the significance of the regression model used.
- **Significance Level**: The significance level chosen for the study (0.05) exceeds the F significance level (0.000), resulting in the rejection of the second sub-hypothesis and the acceptance of the alternative: At the significance level ($\alpha \leq 0.05$), intellectual capital—encompassing its components (human capital, structural capital, and relational capital)—plays a statistically significant role in the dimension of superior efficiency, which is a key aspect of competitive advantage within Jordanian pharmaceutical manufacturing firms.
- **Correlation (R Value)**: The R value of 0.796 indicates a strong correlation between the independent variable's dimensions and the dependent variable "superior efficiency," as it is greater than (0.5).

4.4 Testing the Third Sub-hypothesis

- **HO1-3**: "There is no statistically significant role at the significance level ($\alpha \leq 0.05$) for intellectual capital, as represented by its dimensions (human capital, structural capital, and relational capital), on the dimension (superior innovation) as one of the competitive advantage dimensions in Jordanian pharmaceutical manufacturing companies."
- Multiple linear regression analysis was used to test the hypothesis at a significance level of ($\alpha \leq 0.05$), as shown in Table 8.

- **F-Calculated versus F-Table Value**: The calculated F value (159.224) is higher than the table value (2.61), confirming the significance of the regression model used.

Table 8 Results of multiple linear regression analysis for testing the third sub-hypothesis

Dependent variable	R	R^2	F-calculated	Degrees of freedom	Significance level (Sig)	Independent variable	B value	t value	Significance level (Sig)
Superior innovation	0.784	0.615	159.224	3	0.000	Intellectual capital	0.077	1.174	0.241
				299		Structural capital	0.518	6.817	0.000
				302		Relational capital	0.322	5.233	0.000

- **Significance Level**: The significance level set by the study (0.05) exceeds the F significance level (0.000), resulting in the rejection of the third sub-hypothesis and the acceptance of the alternative: At a significance level ($\alpha \leq 0.05$), intellectual capital—encompassing human, structural, and relational capital—plays a statistically significant role in the dimension of superior innovation, which is considered one of the competitive advantages in Jordanian pharmaceutical manufacturing firms.

4.5 Testing the Fourth Sub-hypothesis

- **HO1-4**: "There is no statistically significant role at the significance level ($\alpha \leq 0.05$) for intellectual capital, as represented by its dimensions (human capital, structural capital, and relational capital), on the dimension (superior responsiveness) as one of the competitive advantage dimensions in Jordanian pharmaceutical manufacturing companies."
- Multiple linear regression analysis was used to test the hypothesis at a significance level of ($\alpha \leq 0.05$), as shown in Table 8.

- **F-Calculated versus F-Table Value**: The calculated F value (114.951) is higher than the table value (2.61), confirming the significance of the regression model used Table 9.
- **Significance Level**: The significance level chosen for the study (0.05) exceeds the F significance level (0.000), resulting in the dismissal of the fourth sub-hypothesis and the endorsement of the alternative: "At the significance level ($\alpha \leq 0.05$), intellectual capital—encompassing its components of human capital, structural capital, and relational capital—plays a statistically significant role in the dimension of superior responsiveness, which is considered a competitive advantage in Jordanian pharmaceutical manufacturing firms.
- **Correlation (R Value)**: From the R value, it can be concluded that there is a correlation between the "independent variables" and the "dependent variable". The results indicated that the correlation coefficient is 0.775, which indicates a strong relationship between the independent variable and the dependent variable higher responsiveness as it is greater than 0.5.
- The results confirmed that there is an explanatory power of the dimensions of the independent variable combined: human capital, structural capital and relational capital and the dependent variable higher responsiveness of 60.0%, as shown by the value of the coefficient of determination, $R2 = 0.600$.

Table 9 Results of multiple linear regression analysis for testing the fourth sub-hypothesis

Dependent variable	R	R^2	F-calculated	Degrees of freedom	Significance level (Sig)	Independent variable	B value	t value	Significance level (Sig)
Superior responsiveness	0.775	0.600	149.807	3	0.000	Intellectual capital	0.102	1.582	1.582
				299		Structural capital	0.498	6.681	0.000
				302		Relational capital	0.222	3.458	0.001

5 Results

The achievement of competitive advantage is significantly influenced by structural capital, human capital, and relational capital. Findings indicate a statistically significant relationship between intellectual capital and competitive advantage, highlighting its crucial role; any alterations in this capital will yield a considerable and positive impact. Furthermore, intellectual capital accounts for an impressive 76.7% of the explanatory power in attaining competitive advantage. Additionally, the enhancement of these dimensions positively affects performance. Among the various components of intellectual capital, structural capital exhibits the highest explanatory power for boosting competitive advantage. The results of this study are consistent with those from multiple other research efforts, including [4, 5, 12], and they also corroborate [16, 18] findings, which emphasize the significant influence of intellectual capital dimensions on enhancing competitive capabilities, among other factors.

6 Recommendations

- Pharmaceutical companies should adopt methods and strategies aimed at developing intellectual capital in all its dimensions, based on a comprehensive analysis of all aspects of the enterprise and engaging employee participation.
- Creation of a dedicated customer relationship management department to improve communication with customers, collect opinions on the company's products and identify changes in their needs.
- Engage a group of researchers and experts in pharmaceutical and marketing to conduct scientific research on medicinal products and study market changes to improve the company's ability to seize opportunities.
- Adopt a transparency policy that allows employees to access company policies and provide input into future strategies.
- Create a system of financial and moral incentives that will stimulate employee creativity and provide all the necessary technological tools.
- Increase the skills and capabilities of your employees so that they can perform their tasks efficiently and with high quality.
- Review the company's activities on an ongoing basis, analyze costs and waste in the production process, and eliminate activities that increase production costs.

Modern Technology as a Tool for Copyright Protection: Evaluating the Effectiveness of Digital Solutions in the Electronic Environment

Omar Al Makhzoumi and Jaber Al-Ghayathin

Abstract This research investigates copyright and electronic works within the digital landscape, shedding light on the legal framework and the challenges encountered in their protection. Several key objectives guide this study, such as analyzing the laws and regulations pertinent to copyright protection, pinpointing legal gaps and obstacles faced by these rights, assessing the efficacy of existing legislation, and comparing international laws that govern the safeguarding of digital works in today's digital era. Utilizing a descriptive-analytical methodology, the study aims to clarify and define copyright rights in the digital environment while evaluating how the legal system and technological mechanisms contribute to their protection, focusing on both the distinguishing features of available safeguards and the deficiencies impacting them. The research culminates in significant findings concerning the current legislation's effectiveness and its capability to offer sufficient protection for electronic works, while also identifying various gaps and challenges that require attention. Ultimately, the study presents a series of recommendations aimed at bolstering the protection of copyright holders and refining the legislation related to electronic works.

Keywords Copyright · Electronic works · Digital environment · Legal protection · Legal system

1 Introduction

The Ottoman Copyright Law, established in 1910, was the initial copyright protection legislation recognized in Arab nations. Until fairly recently, several Arab countries, especially Iraq and Jordan, continued to implement this law. Jordan is regarded as one of the pioneering Arab nations to safeguard copyright through distinct legal measures. In addition to the Ottoman Copyright Law, Jordan incorporated certain copyright protection elements within its civil and penal legislation [1].

Copyright refers to a legal concept that defines the entitlements given to creators concerning their artistic and literary creations. This entitlement consists of two dimensions: moral and economic. The moral aspect is known as the author's right, whereas the economic aspect is termed literary property or exploitation rights. Unlike tangible property, copyright inherently encompasses a range of conflicting traits, and this internal conflict within a singular right fuels the ongoing discussions regarding its essence.

The advancement of modern communication has led to a global reach for literary and artistic creations, thanks to their widespread use around the world. Such creations transcend the borders of their countries of origin, turning nations into collaborators in intellectual production. Consequently, safeguarding these rights has become a collective duty for all nations. The ramifications of intellectual property rights, particularly regarding copyright on the Internet, which is marked by its worldwide scope and the ease with which information can be disseminated and accessed, have contributed to the infringement of copyright in the digital realm. In certain legal frameworks, these infringements are treated as criminal offenses rather than simple violations. This reality underscores the necessity for international regulations concerning copyright protection, supported by various treaties and agreements, alongside numerous national laws designed to uphold these rights within a global context for effective safeguarding.

1.1 Research Problem

The challenge of legally safeguarding digital creations under intellectual property regulations is a significant consequence of the information explosion phenomenon. This issue extends the ongoing debate between advocates and detractors of such rights protection, which has evolved with the transition to electronic publishing. This transition depends on electronic computers, now the primary information source in our contemporary world. The swift advancements in processing, storing, and distributing information via electronic publishing technologies have prompted the need to find methods for protecting digital works as a crucial result of these innovations. To tackle major concerns that prevent authors from fully exercising their rights and to maintain their ability to publish, intellectual property legislation has been enacted. This has emerged as a vital tool for safeguarding the content within information networks

and motivates authors to share and disseminate their original works. Consequently, this study seeks to elucidate the protective measures for intellectual property rights established by international agreements regarding digital works and assess whether existing copyright laws sufficiently protect rights holders amid current technological progress.

1.2 Research Questions

The study aims to answer the following questions:

- What are the legal measures that ensure the protection of copyright in the digital environment?
- What are the procedural and substantive protection measures for copyright?
- How can the legal deposit of works contribute to the protection of copyright?
- What are the regulations governing the process of legal deposit, and which authorities are responsible for it?
- What precautionary measures can be taken to protect copyright from infringements?

1.3 Study Objectives

The current study aims to:

- Analyze the legal framework that protects copyright and digital works.
- Identify the legal gaps and challenges to copyright protection in the digital environment.
- Assess the effectiveness of current legislation and its ability to provide adequate protection for digital works.
- Compare international laws regarding copyright protection and digital works.
- Provide legal recommendations to increase protection for copyright owners and improve legislation on digital works.

1.4 Study Methodology

A descriptive-analytical methodology will be utilized by the researchers to clarify and emphasize copyright within the digital landscape, along with the protective measures that have been put in place. This approach will evaluate how the legal framework and technological tools contribute to safeguarding these rights in the digital realm by analyzing the unique characteristics of the protection as well as the deficiencies that impact it.

2 Copyright in the Digital Environment and Its Legal Protection

The aim of offering legal safeguards for intellectual creations is to foster creativity and intellectual output, guarantee that creators gain from their endeavors, and inspire them to generate additional works. This legal protection employs various methods to deter copyright infringement, which vary in nature, application techniques, and processes, highlighting the multitude of infringement types that impact both the moral and economic rights of authors.

Numerous laws create mechanisms to safeguard copyright, encompassing both procedural and substantive protection strategies. The legal deposit system for works exemplifies procedural protection measures, providing evidence of an author's ownership of their created work by adhering to particular procedures and conditions set forth by law. Moreover, a range of precautionary measures is designed to avert infringement and lessen any resulting damages.

Substantive protection measures include [2]:

- **Civil Protection**: This aims to restore the situation to its original state if possible or to compensate the author for material or moral damage.
- **Criminal Protection**: This targets criminal penalties for those who infringe on copyright rights.

3 Scope of Procedural Protection for Copyright

One of the most efficient approaches to tackle copyright infringements is procedural protection, thanks to its straightforwardness and quick execution. The main objective is to protect rights and resolve any possible violations to uphold their integrity prior to any court disputes. Serious repercussions for copyright arise from infringements on original creations, be they literary, artistic, or scientific, which can result in rights holders being stripped of their rights and compensation for their efforts. Such outcomes may cause a downturn in creative production and promote a tendency toward imitation, highlighting the necessity for legislative action to implement robust protective measures.

Included among these measures are the legal deposit of works and additional precautionary mechanisms that necessitate temporary actions to prevent damage until the issue can be presented in court. The subsequent sections will provide clarification on this: the initial section will focus on the legal deposit of works, while the following section will address precautionary measures.

4 Legal Deposit of Works

Numerous laws outline copyright-related conditions that mandate the submission of works to a specific deposit center or authority designated by the lawmaker. Certain legislations regard this as a fundamental formal requirement necessary for ensuring protection for the work.

The purpose of legal deposit is to gather, protect, and ensure the preservation of intellectual works against loss and deterioration over time. It plays a vital role in the creation and distribution of national bibliographies, while also making the deposited works accessible to the public through various channels such as presentation, notification, or distribution. Furthermore, legal deposit enhances the national library by incorporating all intellectual output published within the nation and supports the exchange of publications with other countries. It serves as an efficient method for substantiating authors' rights, especially moral rights. In instances where disputes arise regarding the authorship of an idea, the copies stored with the appropriate authorities can be referenced to establish the publication date of each claim [2].

The value of the deposit requirement varies among different legislations. Some laws impose penalties for failing to comply, which may include denial of protection, reduced protection, or even monetary fines—an aspect that some scholars find objectionable and unusual. It is essential that protection is guaranteed regardless of whether a deposit has been made; the deposit should serve solely as proof rather than a prerequisite for protection. According to Article 5 of the Berne Convention, protection arises from the mere existence of a work that demonstrates intellectual creativity: "The enjoyment and exercise of these rights shall not be subject to any formalities. Such enjoyment and exercise shall be independent of the existence of protection in the country of origin of the work. Consequently, the scope of protection and the means of redress available to the author for the protection of their rights are governed by the legislation of the country where protection is sought, irrespective of the provisions of this Convention" [3]. Therefore, creation itself establishes protection, which does not rely on deposit; the deposit functions merely as a method for preserving and tracking the work, not as a condition for protection [4].

Legal deposit refers to the requirement for rights holders—be they authors, publishers, printers, or in certain cases, distributors—to submit one or more copies of their published works to an official authority or a legally designated national or private library [2, 5]. A key aspect of legal deposit is that it does not serve as a condition for the protection of the work; thus, neglecting to make a deposit does not undermine the rights of the author as outlined by law, although it may lead to the depositor facing liability for failing to comply. While most relevant laws mandate some form of legal deposit, the absence of such a deposit does not impact the author's rights nor does it hinder their ability to substantiate those rights through alternative forms of evidence [6].

Multiple laws tackle the topic of legal deposit and its stipulations in their copyright frameworks. The Egyptian Intellectual Property Law, Algerian Copyright Law, Iraqi Copyright Law, and Jordanian Copyright Law all contain elements related to legal

deposit. Specifically, Article 2 of the Jordanian Copyright Law No. 22 of 1992, along with its amendments, describes deposit as: "Submission of the original copy of the work to the center and assigning it a deposit number according to the provisions of this law" [7].

The obligation of legal deposit is enforced by the Algerian legislator for anyone producing intellectual or artistic works intended for the public, necessitating that authors submit free copies to designated institutions. It is made clear by Algerian legislation that the purpose of legal deposit is preservation and does not infringe upon the rights of authors or their deposited creations. With the advent of modern technology, a new method of deposit has emerged, allowing works to be submitted electronically to the website of the deposit authority, which features an archival server for storage and offers immediate acknowledgment of receipt.

Key regulations regarding the legal deposit process are detailed in the Algerian Order No. 96–16, which specifies the types of works that must be deposited, the individuals required to comply, and the number of copies mandated, depending on the nature of the work and the institution where the deposit is made [8].

Legal deposit encompasses only those works that are produced in multiple copies through printing, copying, or various reproduction techniques, enabling public access to them, whether at no cost or for a fee, and regardless of whether they are sold, rented, or distributed in other ways. However, it does not include works that appear in newspapers and periodicals unless they are published independently.

According to Article 57 of the Jordanian Copyright Law No. 22 of 1992, the Legal Deposit System No. 4 of 1994 outlines the types of works that must be deposited legally, which encompass photographic images, maps, posters, illustrative images, and various other creations. However, it does not apply to commercial advertisements, annual reports, price lists, postcards, invitations, certificates, patents, and election materials, among others [9].

The quantity of copies needed for deposit differs depending on the specific work and applicable law, with requirements spanning from one to five copies. For example, in 2006, French legislation decreased the number of copies mandated for book deposit to two for publishers and one for printers, down from four.

The laws differ in identifying the authority tasked with receiving deposited copies. For instance, the National Library and Documents House is mentioned in Iraqi law, while Jordanian law points to the National Library. In Bahrain, the Copyright Protection Office is referenced, and Sudanese law designates the Registrar's Office [9]. According to Algerian Order No. 96–16, the National Library of Algeria and the Algerian Cinema Center are recognized as qualified institutions, with the potential to designate additional specialized institutions based on the objectives and conditions outlined in the order [6].

Depositors are required to provide the necessary number of copies to the appropriate authority or authorized administrative entity based on the work's type and nature, in accordance with the library's regulations. In the case of translated works, it is mandatory for both the translator and the publisher to deposit copies [1].

5 Provisional Measures

Provisional measures serve as a swift and straightforward approach to tackling infringements of authors' rights. These measures, made available by the Jordanian legislator for authors to utilize, aim to stop the publication of the work and prevent any exploitation by the infringer. This is accomplished through the seizure of the work, the materials involved in its reproduction, and the profits generated from its unauthorized use [10].

Provisional measures are actions taken to respond to violations that have already taken place, focusing on evaluating the damage to implement necessary steps for its mitigation and management. These actions are characterized as temporary and are generally managed by summary courts, as their necessity ends once the substantive court starts to exercise its protective authority. When a judge issues a provisional order, the evaluation is based on a simple presumption of the evident circumstances, providing protection to those who are perceived to initially possess the right to request such measures [11].

The rise of technological innovations has influenced every facet of life and given rise to new types of violations of authors' rights that were previously unheard of, resulting in a greater reliance on provisional or temporary measures. This situation is particularly pronounced as traditional protective strategies have become less effective for authors or victims seeking to halt these illicit activities, largely due to the intangible characteristics of these offenses and the capacity to remotely eliminate evidence.

According to Article 144, paragraph 1, of Algerian Order 03–05 concerning copyright and neighboring rights, it is stated that "The damaged rights holder may request that the judicial authority take measures to prevent imminent harm to their rights or to stop the observed harm and obtain compensation for the damages incurred." This clause empowers judicial authorities to implement urgent provisional measures to safeguard the infringed rights, as standard legal procedures may be inadequate due to the time needed to reach a judgment on the issue, which the author may not possess.

According to Jordanian law, the provisional seizure requested by the author is intended to halt the publication of the infringing material and to place it in the custody of the court through confiscation. This action aims to prevent additional violations of the protected work and to stop the infringer from distributing or selling the pirated copies to the public. Such unauthorized activities can lead to both material and moral harm to the author [12].

A primary goal of the author's seizure, conducted as a temporary measure, is to stop the distribution of the pirated work and halt its publication, thereby preventing any infringement on the author's rights from the moment of seizure. This action also seeks to protect the work from potential damage, as the pirated material in the infringer's possession could suffer deterioration due to extended legal battles or might be passed on to others, resulting in harm through usage. Furthermore, it serves to restrict the infringer from disposing of the pirated work while also providing physical evidence of the infringement to substantiate the violation of the author's

moral rights. Additionally, if the court decides on compensation for the harm inflicted upon the author, it includes measures against the pirated work and the tools involved in its creation. This entails executing against these items, selling them, and using the proceeds to recover the amount of damages incurred. Article 47/A of the Jordanian Copyright Law outlines this process, empowering the court to seize works and ensure compensation for the author.

The aim of a seizure as a temporary measure is to prevent damage arising from the violation of the author's rights, with the methods of prevention differing based on the nature of the work, until substantive legal actions are pursued. This may involve a directive from the appropriate court mandating the infringer to stop the infringement if it has been proven to have occurred or is likely to occur, or to avert its occurrence by stopping the reproduction, publication, display, or distribution of the work.

The legislator guaranteed that provisional protection measures are available in different forms tailored to the specific nature of the infringed work and the type of infringement that has occurred. According to Article 147 of Order 03–05, it is stated that: "Upon request from the rights holder or their representative, the president of the appropriate judicial authority may order the following precautionary measures":

- Stopping any ongoing production processes aimed at illegally reproducing a protected work or performance or placing unauthorized copies on the market, in violation of copyright and related rights.
- Confiscation, even outside normal business hours, of counterfeit materials and proceeds from the illegal use of works or performances [13].
- Confiscation of equipment used mainly for the production of counterfeit materials. The president of the competent judicial authority may also order the establishment of security by the plaintiff.

Prior to making a decision to halt the infringement on the work or any of its components, the judge is required to evaluate all relevant circumstances, the gravity of the request, and whether it rests on factual and reasonable grounds. This necessity arises from the potential harm such an action could inflict on the defendant by obstructing the publication of the work. Therefore, the judge's discretionary authority demands careful thought and caution, ensuring that the order is founded on reasonable and factual bases.

Measures of this nature apply to works that are publicly accessible through publication, as the methods of infringement differ based on how the work is distributed. This distribution can occur through publication, public performance, or electronic broadcasting via the Internet, which serves as a means for disseminating digital works. The Jordanian legislator has made it clear that seizing copies of counterfeit works, along with the materials and tools employed for unauthorized reproduction, is permissible. Additionally, the court may order the confiscation of copies of the work or any images derived from it, as well as the materials utilized in its creation and the revenues generated from illegal exploitation. This is outlined in Article 47(c) of the Jordanian Copyright Law: "The court may rule to confiscate copies of the work or images taken from it, and the materials used in its production and sale, as far as necessary to compensate the author for the damage caused, instead of destroying those

copies and images or altering their features or destroying those materials" [12, 14]. Consequently, the seizure extends beyond the original creation to encompass reproductions and images, implying that everything generated by others from the original work or its copies—including books, magazines, newspapers, models, sculptures, films, musical recordings, and drawings—is included. However, an author or their descendants cannot demand the seizure of a work if the author has published solely one copy for personal use.

In terms of architectural content, it is prohibited to confiscate works associated with structures, including any carvings, drawings, decorations, and innovative geometric forms integrated into buildings, as such actions would inflict considerable damage on the infringer and contradict public interest considerations. Furthermore, the unauthorized application of designs and drawings on buildings enhances their monetary worth and imposes substantial costs on their owners, representing a form of national wealth that contributes to urban development. The architectural creator, whose designs and drawings have been unlawfully used, can solely pursue compensation for this infringement to safeguard their rights, as articulated in Article 47 of the Jordanian Copyright Law: "In no case shall buildings and what appears on them or in them from carvings, drawings, decorations, and geometric forms be subject to seizure… for the purpose of protecting the rights of the architectural author whose designs have been used for construction and whose drawings have been used illegally, provided this does not affect their right to fair compensation for such infringement" [12, 15]. While the seizure of architectural works is not permitted to uphold the rights of the architectural author, it is allowable if the author has personally executed the works and the agreed payment has not been fulfilled by the owners; in those instances, any portion may be confiscated and sold to settle the debt [16].

In the context of architectural designs found in brochures and books, seizure is allowed since these are classified as manuscripts or maps and do not qualify as architectural works, which pertain to tangible representations seen on buildings, including geometric forms and decorative elements, rather than what is printed in publications [2, 17]. Seizure extends beyond the original creation to encompass copies and images of the work as well. This includes any reproductions or visuals derived from the original through unauthorized methods such as printing, photographing, recording, drawing, or similar techniques. Nevertheless, an author or their heirs cannot demand the seizure of a work that the author has published for personal use [18].

The Internet presents challenges related to infringements that can be hard to identify and therefore prevent, primarily due to its global reach, which complicates efforts by courts or emergency judges to halt such violations in certain situations. This issue stems from the difficulty in regulating or controlling unregistered websites and pages. Nevertheless, in instances where infringement is imminent, similar to traditional works, this also applies to digital works disseminated online. The nature of the network poses a constant threat to published materials. Consequently, infringements are perpetually regarded as imminent [19], highlighting the need for innovative strategies to avert such violations that could impact digital works amid the expanding landscape of digital information exchange on the Internet. A crucial method employed is encryption, which utilizes a sophisticated mathematical algorithm enabling someone

with a secret key to convert readable text into an unreadable format and back again. This technique relies on the secret key to decode and revert the text to its original form. Another approach, referred to as electronic watermarking, seeks to identify unauthorized reproductions by embedding a subtle mark on the image or page that requires protection. This identifier indicates the violation and assists in tracking the origin of the unauthorized reproduction and its unlawful possessor [20].

Legislators from both Algeria and Jordan have designated the appropriate judicial authority responsible for such actions. Should the author or their heirs decide to seek an injunction from the court, they are required to provide all necessary supporting documents. The initial request must take the form of a lawsuit, incorporating the components typical of a standard lawsuit petition. Additionally, it should offer a thorough and detailed account of the work in question, clarifying whether it is a book, audiovisual piece, database, computer program, painting, or another type of protected work, while differentiating it from others. For instance, if the work is identified as a computer program, the description must outline its type and features, given the diverse and intricate nature of computer programs. In general, a comprehensive description of the work is essential for its clear identification and definition [21].

The legislator in Jordan has made it clear that only the copyright owner or their heirs or successors are eligible to submit a request for precautionary protection measures to the appropriate court. This requirement exists because moral rights are intrinsically tied to the author's identity and can only be exercised by the author or, in certain instances after the author's passing, by their heirs. Nonetheless, multiple claimants may be involved in this request, particularly in situations where a joint work includes several contributors, regardless of whether their shares can be divided.

Furthermore, a natural or legal entity may possess the right to seek precautionary measures through the appropriate court regarding the initial dispute in order to safeguard intellectual property rights. Consequently, if there is a genuine infringement on the rights of the author (or their heirs) a formal written application must be filed with the relevant court to implement the protective measures outlined by law. This application must contain a comprehensive description of the work, performance, recording, or program that has been infringed. Additionally, it should be supported by an adequate financial guarantee to avert misuse and to ensure compensation for any possible damage to the defendant, should the claimant's case prove to be unjustified [22].

This petition deviates from the standard procedures for initiating lawsuits, which typically involve case registration and hearing scheduling. Instead, it is founded on the request of the involved parties and a directive from the appropriate court. It may be submitted at any stage (before, during, or after the lawsuit) to establish the author's rights regarding the infringement of their work. The opposing party's presence is not necessary, as the purpose of this order is to catch the opponent off guard with a precautionary seizure before they can conceal their assets.

Should the emergency judge in the primary court determine that the applicant is the legitimate owner whose rights have been violated or are at risk of violation, they are required to issue an order for a comprehensive inventory of the tools and equipment involved in the commission of the offense. In instances where a website

suffers an attack resulting in alterations or modifications to the published content that harm the author's reputation and standing, or when there is unauthorized interaction such as the addition of audio, images, or specific formats to the online work against the author's wishes, or linking the work to pages with inappropriate language or imagery, or placing the work in a political context that contradicts the author's views, the author or their heirs may petition the court to halt the copying and distribution of the program or database. This would be followed by additional actions, including the seizure of the works and initiating a primary lawsuit to ascertain penalties and compensation [23].

Considering the aforementioned precautionary measures, it becomes evident that the procedures designed to safeguard the author's rights are fairly straightforward to execute in both traditional publishing and the electronic distribution of digital materials on disks and CDs. The challenge arises, however, when attempting to enforce these measures on works disseminated via the Internet, as they are susceptible to numerous forms of infringement.

6 Conclusion

Safeguarding authors' rights in the digital realm poses a multifaceted challenge that necessitates a unified approach combining legal and technological strategies. This study has illustrated that while current legislation is significant, it demands ongoing refinement to keep up with the swift changes in the digital landscape and to effectively protect authors' rights. Analyzing the existing laws and mechanisms has revealed critical gaps that require urgent attention to guarantee thorough and complete protection. We trust that this study has offered valuable insights to aid policymakers and stakeholders in the domain of intellectual property rights in strengthening the legal and technological framework to ensure the safeguarding of authors' rights in the digital era.

6.1 Results

The study has concluded the following results:

- The legal methods for safeguarding authors' rights encompass both procedural and substantive protections, creating a thorough framework for deterrence and security.
- The legal deposit of publications serves as a valuable method for safeguarding and asserting rights, although its implementation and stipulations differ across various jurisdictions.
- Temporary measures are crucial instruments for tackling infringements of authors' rights because of their efficiency and ease of implementation.

- Laws differ regarding the terms and worth of legal deposits, with some asserting that protection must be ensured at all times, irrespective of the deposit made.
- Authors are afforded legal protection through a combination of criminal penalties and civil actions designed to remedy damages and provide compensation.

6.2 Recommendations

This study recommends the following:

- Raising the awareness of creators and authors about the importance of protecting their rights and using available legal procedures.
- Harmonizing copyright and legal deposit legislation to make it more comprehensive and compatible between countries.
- Developing and improving provisional measures to make them more effective in combating digital copyright infringements.
- Encouraging the use of modern technologies in the legal deposit process, such as electronic signatures and online deposits.
- Strengthening criminal and administrative penalties for copyright infringers to ensure better protection of intellectual property rights.

Technology Transfer Contracts: From Definition to Legal Nature

Yasar Alhiniti and Ali Awda Allah Mohammed Al-Khazaleh

Abstract The objective of this research is to examine the legal nature of contracts pertaining to technology transfer and conduct a comparative analysis of the relevant legislation. Employing a descriptive-analytical approach, the study gathered information from diverse legal sources, including domestic and international laws as well as scholarly studies. It entailed scrutinizing legal texts and scholarly viewpoints to ascertain the legal character of technology transfer contracts. To conduct analysis of legislations and examine judicial and arbitral decisions concerning these contracts, the comparative method was employed. The findings of the study revealed notable disparities in the legal treatment of technology transfer contracts. Indeed, many legislations exhibit greater specificity and precision, thereby bolstering the protection of the parties involved, whereas the legal framework in some countries encounter challenges in providing an equivalent level of protection and regulation. Consequently, the study recommended the harmonization of technology transfer legislation to foster legal integration that facilitates and regulates such processes. Furthermore, it proposed the development of more comprehensive and detailed regulations and legislation to fortify legal safeguards for the weaker parties in technology transfer contracts.

1 Introduction

The term "technology" emerged in the mid-twentieth century and is characterized by its ambiguous and imprecise nature. It has become a significant focus for governments, both nationally and internationally, in developing countries, as it serves as a source of economic and military power. Scholars and researchers have taken a keen interest in technology, particularly in relation to technology transfer contracts. Due to its novelty and lack of clarity, there are multiple definitions of technology. One definition describes it as the knowledge and scientific methods needed to transform production elements into products [1]. From a legal standpoint, technology is defined as a collection of information on how to apply a scientific theory or invention, commonly referred to as Know-How [2].

Given the immense significance of technology transfer agreements on a global scale, it is vital to recognize their relevance to both developed and developing nations. These contracts hold immense value, particularly for the latter, and are considered to be among the most critical international agreements. Going beyond mere trade, technology transfer contracts have far-reaching implications for economic, industrial, production, and service-related aspects. The objectives pursued by both the exporter and the importer determine the extent to which these contracts impact various facets of society.

To ensure the regulation and preservation of the contracting parties' interests and national economies, certain countries have implemented legislative frameworks for technology transfer. Egypt, Mexico, India, and Brazil are examples of countries that have established such frameworks. Conversely, there are countries like Jordan that have chosen not to regulate technology transfer extensively, with only a few provisions mentioned in their laws. Specific aspects of technology transfer are addressed in Jordan's Unfair Competition and Trade Secrets Law, while general rules pertaining to these contracts are outlined in the Jordanian Civil Code.

The focal point for legal professionals involved in technology transfer lies in the legal aspects of the transfer itself, including the regulations governing the process and the legal obligations imposed on both the exporter and the importer. The legislator plays a pivotal role in organizing the contract that facilitates the transfer of technology [3].

1.1 Study Objectives

This study aims to achieve the following objectives:

- To analyze the legal characterization of technology transfer contracts.
- To examine the impact of national sovereignty on the characterization of contracts.
- To evaluate the protection of the weaker party in contracts.
- To provide recommendations for enhancing and harmonizing legal frameworks related to technology transfer contracts at both international and local levels.

1.2 Methodology

To conduct this study, a descriptive-analytical methodology was employed, which involved gathering information from various legal sources such as national and international legislation, as well as doctrinal studies. In addition, legal texts and doctrinal opinions were carefully examined to ascertain the legal nature of technology transfer contracts and to compare different interpretations of these contracts. Furthermore, a comparative approach was taken to assess how technology transfer contracts are handled in Egypt, Jordan, and Iraq, by examining their respective national legislations, judicial rulings, and arbitration decisions. To ensure a thorough analysis, data were collected from primary and secondary legal sources, including legislative texts, judicial rulings, arbitration decisions, and academic studies.

2 Concept of Technology Transfer Contracts

The allure of technology is undeniable for all nations, particularly those in the process of development, as it plays a pivotal role in attaining economic growth objectives. Technology has evolved from being a mere objective to becoming a tool for achieving holistic progress. Advanced technology offers solutions to numerous challenges encountered by developing countries, including bridging the technological and scientific divide that separates them from more developed nations. Moreover, the transfer of technology and the establishment of industrial ventures bolster the economies of these nations, effectively tackling one of the primary predicaments faced by developing countries: unemployment, which continues to be a pressing issue for many nations in the developing world.

The concept of technology transfer is not rigidly defined, as it can be interpreted differently depending on one's viewpoint. For example, when considering the confidentiality and distribution of technology, there are both proprietary and public technologies. The method of transfer can also be categorized as either horizontal or vertical, and the level of transfer can be classified as national or international. Furthermore, technology can be deemed either appropriate or inappropriate [4].

The significance of technology transfer agreements is closely tied to the objectives that drive the decision to enter into such contracts. Certain nations seek to foster and enhance their scientific research endeavors, as well as establish cutting-edge research facilities, by means of technology transfer. Their ultimate aim is to establish a foothold in the global technology market and effectively compete with the products and services they provide.

The contract acts as a mechanism to ensure a fair distribution of rights and responsibilities between both parties, serving as the legal tool to accomplish the objectives that nations pursue through the transfer of technology.

3 Technology Transfer Contracts and Their Legal Nature

The primary means of facilitating trade is through the use of contracts, which serve as a manifestation of the parties' mutual agreement. Not only do contracts establish legally binding obligations between the parties involved, but they also extend their influence to third parties. In the realm of technology transfer, contracts play a crucial role in facilitating the exchange of technology between developed and developing nations. This process is carried out through a contractual relationship between the exporter and the importer [5].

3.1 Definition of Technology Transfer Contract

Legal scholars and legislation offer differing definitions of technology transfer contracts, lacking a universally applicable comprehensive definition [6]. This discrepancy may stem from the ambiguous nature of the term "technology" and the relatively recent emergence of this contract type, which encompasses intangible aspects not found in traditional contracts.

In terms of legislation, there is a lack of a dedicated legal framework in Jordanian laws concerning technology transfer contracts. As a result, there is no specific definition provided for this concept. It is important to note that it is not the responsibility of the legislator to provide definitions; instead, legal scholars are tasked with offering definitions for any given term.

In Egypt, the definition of technology transfer contracts has been established by the legislator in the form of legal texts, particularly in the new Egyptian Commercial Law No. (17) of 1999. According to this law, a technology transfer contract is an agreement where the technology provider agrees to transfer technical information to the technology importer in exchange. This information is intended for the specific purpose of utilizing a particular technical method in the production or development of a specific product, as well as for the installation or operation of machinery or devices, or for the provision of services. It is important to note that technology transfer goes beyond the mere sale, purchase, leasing, or renting of goods, or the sale of trademarks or trade names, or the licensing for their use, unless these activities are part of or related to a technology contract. This definition provides clarity and specificity to the concept of technology transfer in Egypt [7].

Based on the preceding text, it is evident that a technology transfer contract involves an arrangement whereby the provider agrees to impart technical expertise to the importer for the purpose of producing goods and services. It is important to note that the exchange or acquisition of goods and services, as well as the leasing or renting of trademarks and trade names, or their licensing, does not qualify as technology transfer unless it is explicitly included in a technology transfer contract or a separate contract connected to it [8].

Article (78) of the Palestinian Draft Commercial Law No. (2) of 2014 provides a comprehensive definition of a technology transfer contract. According to this article, such a contract involves the transfer of advanced information from the provider to the importer in exchange for compensation. This information is intended to be used for a specific technical purpose, such as the production or development of a particular product, the installation or operation of machinery or devices, or the provision of services. It is important to note that modern knowledge transfer goes beyond simple transactions involving the sale, purchase, lease, or rental of goods, as well as the sale of trademarks or trade names. These activities only fall under the scope of a technology transfer contract if they are directly connected to or inseparable from the transfer of technology itself [9].

The definition provided by the Palestinian legislator closely resembles that of the Egyptian legislator, with a slight variation in the use of terminology. Instead of using the term "technology," the Palestinian legislator opts for "modern knowledge." This choice is deliberate, as "modern knowledge" encompasses a broader range and is more inclusive than technology alone. It encompasses continuous education, embracing innovations and inventions, and preparing individuals to enhance their capabilities in receiving and interacting with information. This is crucial for fostering further innovation, creativity, and engagement with the revolution in information and communication technology, as well as scientific research [10]. By emphasizing the distinction between technology and modern knowledge, the definition highlights that the latter encompasses not only knowledge itself but also innovation and the preparation of the workforce to comprehend and develop research findings. On the other hand, technology is defined as a collection of information relating to an innovative method for applying a scientific theory or invention [11]. The researcher asserts that the use of "modern knowledge" in Article 78 by the Palestinian legislator is more precise and comprehensive compared to the term "technology" employed by the Egyptian legislator in the Egyptian Commercial Law.

In regards to legislation in Jordan, there is currently no specific legal framework in place for technology transfer contracts and the disputes that may arise from them. The absence of regulation in national legislation is not due to oversight or deficiency on the part of the Jordanian legislator, but rather a result of limited resources and capabilities in the country. The prioritization of economic openness, which is deemed more important than creating legislation for technology transfer contracts, also plays a role. Additionally, the potential risks associated with establishing a law to regulate these contracts are taken into consideration. Investors and technology exporters, in order to safeguard their interests, typically review the laws and regulations of the country they are entering into a contract with. This approach, however, does not align with Jordan's economic policy, which focuses on attracting foreign investments through incentives and exemptions. The legislative focus has primarily been on creating a legal framework to protect intellectual property rights, with technology transfer contracts briefly mentioned in Article 9 of the Unfair Competition and Trade Secrets Law No. 15 of 2000.

Within the "International Technology Transfer Code" of the International Code of Conduct, a highly regarded international entity in the realm of technology, the

definition of technology transfer can be found in Sect. 2.1 in Chap. 1. This definition states that technology transfer involves the transmission of systematic knowledge for the purpose of product creation, practical application, or expertise provision. It explicitly excludes transactions that solely involve the sale or lease of goods. However, this definition has not been without its critics. Some argue that technology transfer should focus on the transfer of systematic knowledge itself, rather than the act of transferring the knowledge. Furthermore, it fails to distinguish between the transfer of knowledge and the recipient's ability to effectively utilize it. In this definition, technology is treated as a physical commodity, with the provider's responsibility ending once the technology is delivered to the importer. There is no commitment to assist the importer in assimilating the knowledge and achieving the desired outcome.

Various definitions of technology transfer contracts have been put forth in legal theory. One such definition states that these contracts involve an agreement where the provider of technology agrees to transfer technical information to the recipient in exchange for compensation. This information is intended for use in a specific technical process, such as the production or development of a particular product, the installation or operation of machinery or devices, or the provision of services [12].

One alternative interpretation is as follows: "A legally binding agreement where one party (referred to as the provider) commits to transferring technical knowledge to another party (known as the recipient). This knowledge is characterized by its confidential and innovative nature, and is intended to be exchanged and utilized for the specific purpose outlined in the contract. In return, the recipient agrees to provide compensation as agreed upon. This contract can exist independently or as part of a larger series of interconnected agreements" [13].

A technology transfer contract is commonly understood as an arrangement between two parties, namely the provider and the recipient, wherein the provider agrees to transfer their owned or possessed technology to the recipient in exchange for a predetermined fee [14]. In this context, the researcher defines a technology transfer contract as a mutually beneficial agreement between a provider and an importer. The provider receives compensation for sharing their knowledge, expertise, equipment, and any other resources deemed valuable for production, scientific research, or development, as outlined in the terms of the contract.

3.2 Legal Nature of Technology Transfer Contracts

Once the legislative and doctrinal aspects of technology transfer contracts have been elucidated, the focus shifts to the legal characterization of these contracts. There is an ongoing doctrinal debate surrounding the nature and classification of these contracts, specifically in terms of assigning them to a particular legal framework that defines their nature, the rights and obligations they entail, the governing law, and the applicable judicial system for resolving disputes [15].

In the realm of international transactions, technology transfer contracts are akin to other contractual agreements that arise from the mutual consent of two parties with

the intention of producing legal consequences. However, they possess a unique characteristic in comparison to other contracts which is the differing legal positions of the parties involved. Some perceive these contracts as international agreements, thereby subject to the principles of public international law [16]. In certain circumstances, they have been treated as administrative contracts, thus being subject to administrative law. In certain jurisdictions, technology transfer contracts are governed by private law, as exemplified in Jordanian legislation. Additionally, due to the widespread nature of technology transfer contracts on an international scale, coupled with their competitive and monopolistic nature, exporting countries often hold superior economic and financial positions in comparison to developing nations. This advantageous situation grants them the ability to draft contracts and establish conditions, leading some to classify technology transfer contracts as contracts of adhesion [17].

In order to provide further clarity, it is necessary to outline the viewpoints and rationales behind each approach mentioned earlier in regards to the classification of technology transfer contracts. The perspective that perceives technology transfer contracts as international agreements asserts that these contracts should be subject to public international law. Supporters of this perspective prioritize the international nature of these contracts in order to safeguard the interests of foreign companies that enter into agreements with countries. By treating any disputes between a foreign company and the contracting state as international disputes, the position of the company is fortified and international accountability is established [18].

Advocates of this viewpoint additionally advocate for the exemption of technology transfer contracts from the purview of national legislation in the contracting state. Their rationale is that the state, being a participant in the contract, would possess a more advantageous position in comparison to the company or individual involved. By applying international law, the weaker party is afforded protection. Conversely, if the law of the contracting state takes precedence, it has the potential to unilaterally modify or terminate the contract, thereby infringing upon the rights of the contracting companies [19].

There has been scrutiny regarding the classification of technology transfer contracts as international agreements. Some argue that international agreements strictly apply to agreements between entities recognized under international law, whereas technology transfer contracts involve a state as the recipient and a party governed by domestic law, be it an individual or a company. Consequently, technology transfer contracts are not regarded as international agreements because one side of the contract lacks sovereignty [20].

The validity of these criticisms has been confirmed by considering the fact that technology transfer contracts do not fall under the purview of public international law and are not considered international agreements. This viewpoint has been supported by international rulings issued by international courts or arbitration. For example, in a landmark ruling in 1952 concerning the nationalization of the Anglo-Iranian Oil Company by Iran, the International Court of Justice declared its lack of jurisdiction over the UK's request to invalidate the Iranian nationalization law, which was made on May 26, 1951. The court's reasoning was based on the fact that the concession agreement signed in 1933 between Iran and the British company did not qualify

as an international agreement, as there was no contractual relationship between the Iranian government and the British government. Instead, it was merely a concession agreement between the Iranian government and a foreign company, with the British government not being a party to the contract [21].

According to the researcher, it is not accurate to categorize a technology transfer contract as an international agreement since the parties involved are not exclusively states or governments. In some cases, the exporter could be a company while the importer is a state, or both parties may be companies. Furthermore, even if one of the parties represents a state or government, they may be compelled to accept the terms dictated by the exporter because of their reliance on the technology being transferred. In contrast, international agreements are typically governed by the principle of state sovereignty, which prohibits one state from succumbing to the demands of another [22].

The classification of technology transfer contracts as administrative contracts, thereby aligning them with the principles of administrative law [23], is predicated on the presence of a party possessing sovereign status, a cornerstone of contemporary international law. Sovereignty denotes the absolute and perpetual control exerted by a state over its territory and natural resources. Technology transfer contracts, often referred to as technological development contracts, are categorized as development contracts due to their shared objective of promoting the public interest. Similar to administrative contracts, these agreements involve the participation of the state or one of its public entities, which exercises its authority either directly or indirectly. This criterion serves as a crucial determinant in distinguishing administrative contracts [24].

The nature of technology transfer contracts has been a topic of discussion in international commercial dealings. It has been observed that these contracts cannot be categorized as administrative contracts, as there are certain factors that distinguish them. Interestingly, many countries, including those in the Anglo-American system, do not make a clear distinction between administrative contracts and civil contracts. This lack of distinction leads to legal inconsistencies and instability in commercial transactions. Additionally, the absence of an international administrative court further complicates matters, as there is no designated authority to resolve disputes related to technology transfer contracts [25].

In order to promote economic development and attract investment, many countries offer incentives and exemptions to investors who bring in valuable technology. However, these measures limit the public authority's control and jurisdiction over the entry of such technology into their territories. This contradicts the principles of administrative contracts, where public authority typically holds absolute jurisdiction. As a result, arbitration rulings have rejected the classification of technology transfer contracts as administrative contracts.

Regarding the dispute between Saudi Arabia and the Arabian American Oil Company (Aramco), the arbitration panel determined that the contract should not be categorized as an administrative contract. This decision was based on the fact that Saudi law, which is based on Islamic law, does not acknowledge the concepts of public law and administrative law as they are understood in French law. Instead, the

Aramco concession was deemed an unspecified contract that cannot be classified as a conventional contract [26].

The instability of technology transfer contracts can be attributed to the application of administrative contract rules. Various international legislations grant the contracting administration the unilateral right to terminate the contract in the interest of the public. For example, Jordanian legislation, specifically Article (/102b), allows for contract termination if it is deemed necessary for the public interest. Similarly, Egyptian legislation, as outlined in the Government Contracts Law No. 182 of 2018, states in Article 25 that the administration has the unilateral right to terminate the contract. This creates an environment where foreign contracting parties face instability and lack of protection, resulting in unequal legal positions within the contract. Their only recourse is to seek compensation. Furthermore, this approach restricts technology importation to states and public authorities, limiting the involvement of private individuals and institutions. Consequently, the flow of technology to developing countries, which is a goal these countries strive for, is hindered and diminished [25, 27].

Based on the decisions made in international commercial arbitration, certain scholars categorize technology transfer contracts as private law contracts. These contracts are also seen as adhering to the principle of international freedom of contract, which is derived from the principle of autonomy of will.

In the realm of legal provisions, technology transfer contracts can be categorized as named contracts due to their specific mention and regulation in the law. This can be observed in Egyptian law, where the Egyptian Commercial Law No. 17 of 1999 explicitly outlines a legal framework for technology transfer contracts. On the other hand, Jordanian law does not have any specific regulations for technology transfer contracts, classifying them as unnamed contracts. The differentiation between named and unnamed contracts is based on their legal treatment, with unnamed contracts emerging from a combination of preexisting contractual agreements [28].

The Egyptian legislator has taken a consistent approach in regulating technology transfer contracts, treating them as an integral part of commercial contracts and giving them considerable importance. These contracts are subject to the general rules of Egyptian law, but specific provisions have also been put in place to address contemporary developments [12, 29].

Alternatively, there are those who perceive technology transfer contracts as adhesion contracts. In legal terms, an adhesion contract refers to an agreement where the accepting party is obligated to adhere to predetermined terms established by the offering party, without any opportunity for negotiation or alteration. This type of contract is particularly noteworthy because the adhering party is essentially bound to accept the contract in its entirety, devoid of any ability to engage in discussions or make modifications to its provisions [18, 30].

The legislators in Jordan and Egypt share a common understanding of adhesion contracts. Both Article 104 of the Jordanian Civil Code No. 14 of 1976 and Article 100 of the Egyptian Civil Code of June 16, 1948 stipulate that in adhesion contracts, acceptance is restricted to simply agreeing to pre-established terms set by the party making the offer, without the opportunity for negotiation [31, 32].

It is evident from these definitions that an adhesion contract encompasses two key elements. Firstly, one party establishes the terms of the contract and presents them to the other party. Secondly, the party imposing the terms (known as the adherent) does not permit any negotiation or modification of these terms. Instead, they must be accepted as they are, resulting in either the completion or rejection of the contract. Adhesion contracts are also referred to as "contracts in which the acceptor agrees to predetermined terms established by the offeror, without the opportunity for discussion, regarding a product or service with a legal or practical monopoly or limited competition" [15, 33].

The issue of whether technology transfer contracts can be classified as adhesion contracts is a subject of debate. Supporters of this viewpoint assert that the characteristics of adhesion contracts closely align with the common practice of entering into technology transfer agreements. In such cases, the importing state may find itself with limited alternatives and must make a binary decision of either fully accepting the contract or completely rejecting it [5, 34].

In terms of legality, the exporter of technology, regardless of whether it is a private entity or a state, possesses significant influence due to its exclusive legal control over the technology. This control allows the exporter to exert authority over the importing party, which has limited options due to the monopoly held by technologically advanced states [35, 36]. On the other hand, critics argue that technology transfer contracts should not be classified as adhesion contracts, as previously described. Despite the economic, industrial, and financial power of the technology owner, which creates economic and industrial dependence for developing countries, the sovereign authority of the importing state maintains a balance in the contract, counteracting the exporter's economic, financial, and industrial power. This distinction separates technology transfer contracts from adhesion contracts [37].

The broad technology market and fierce competition among developed nations vying for a greater portion of the technology consumption market during global economic downturns lead the researcher to reject the notion that technology transfer contracts are adhesion contracts. Developing countries have various avenues to obtain technology, and some have implemented legal measures, like Egypt and Iraq, to safeguard against adhesion. Additionally, the limited scope for negotiating specific contract terms further supports the argument that technology transfer contracts should not be classified as adhesion contracts [4, 38].

According to Egyptian Commercial Law No. 17 of 1999, specifically Article 87, disputes arising from technology transfer contracts mentioned in Article 72 of the same law fall under the jurisdiction of Egyptian courts. These disputes can be resolved either through amicable settlement or arbitration conducted within Egypt, in accordance with Egyptian law. It is important to note that regardless of the circumstances, the resolution of the dispute must adhere to Egyptian law, rendering any agreement to the contrary null and void [11, 39].

The researcher highlights that Article 87, which mandates arbitration in Egypt and the application of Egyptian law to disputes, supersedes the principle of party autonomy in selecting the place of arbitration and the applicable law, as outlined in the UNCITRAL Model Law on International Commercial Arbitration. The UNCITRAL

Model Law states in Article 1(20) that "the parties are free to agree on the place of arbitration…" and in Article 1(28) that "the arbitral tribunal shall decide the dispute in accordance with the rules of law chosen by the parties as applicable to the substance of the dispute" [40]. It appears that the Egyptian legislator has deviated from international arbitration law in order to safeguard the interests of the importer in technology transfer agreements, particularly in the case of developing countries, and to protect the national economy. By applying domestic law to contracts involving developed nations, the Egyptian legislator seeks to uphold national sovereignty and independence, rejecting the use of foreign law in dispute resolution, which is a departure from past practices [8, 41].

In line with the researcher's viewpoint, the Iraqi Civil Code, specifically Article 2/167, affirms that "in cases where a contract is entered into through adhesion or includes unfair terms, the court has the authority to alter any provision." This illustrates how importing nations exert their sovereign authority and enforce regulations that work in their favor when dealing with prominent technology corporations that engage in adhesion contracts or include abusive clauses [42].

To summarize, technology transfer contracts possess unique characteristics that differentiate them from other types of contracts. These contracts focus on the subject matter, obligations, and performance criteria necessary for the importer to obtain the transferred technology, as well as the knowledge and expertise associated with it. In return, the exporter receives compensation. Although these contracts may take on different forms and appearances, their fundamental nature remains unchanged.

4 Conclusion

Upon reaching the end of this study, it becomes apparent that a comprehensive examination of diverse legal and legislative viewpoints is necessary in order to ascertain the legal categorization of technology transfer contracts. The analysis reveals that these contracts do not neatly fit into a specific legal framework; their classification as administrative contracts, international agreements, or private contracts is contingent upon the specific context and elements they encompass.

4.1 Findings

The study has led to the following findings:

1. The categorization of technology transfer contracts within the legal framework is subject to considerable diversity. Certain academics perceive them as international agreements, whereas others regard them as administrative contracts or adhesion contracts.

2. When it comes to agreements involving a governing entity, like states or governments, these contracts are commonly referred to as administrative contracts because of the significance of state sovereignty in these arrangements. This is apparent in situations where states seek to safeguard their national interests by enforcing their laws on these specific contracts.
3. Due to the lack of specific legal regulations in certain national legislations, technology transfer contracts are occasionally categorized as either unnamed contracts or adhesion contracts.
4. The legislative measures implemented in countries like Egypt and Iraq indicate a growing inclination towards safeguarding the interests of the more vulnerable party involved in a technology transfer agreement, be it a state or a private entity.

4.2 Recommendations

1. The development of a comprehensive global legal framework for governing technology transfer contracts is necessary to establish clear rights and obligations for all parties involved and minimize discrepancies in legal interpretations across different countries.
2. In order to safeguard the interests of states during technology transfer agreements, it is imperative to strengthen national legislations.
3. To ensure equitable treatment for all parties involved, it is important to promote transparency and fairness in negotiations concerning technology transfer contracts by implementing effective mechanisms for negotiation, mediation, and arbitration.
4. Efforts to enhance international collaboration in technology transfer between developed and developing nations should be intensified.
5. In order to keep up with advancements in technology and its transfer, countries must consistently evaluate and revise their national laws, implementing legislative changes that offer improved protection for domestic parties and facilitate the acquisition of cutting-edge technology.

The Impact of Organizational Justice on Job Engagement Among Employees

Khaled Alzeaideen, Maan Hussein Mansour, and Munther Mohammed Al-Khalaydeh

Abstract The objective of this study was to investigate how various dimensions of organizational justice—namely distributive justice, procedural justice, and interactional justice—affect job engagement dimensions, which include job absorption, job dedication, and job vigor, among employees. This research highlights organizational justice and job engagement as critical variables. Employing a descriptive-analytical approach, the study identified a population of employees, with a target sample consisting of 202 individuals. Out of these, 177 questionnaires were returned and deemed valid for analysis. Appropriate statistical methods were utilized to analyze the data and address the study's inquiries. The findings revealed a statistically significant relationship between the dimensions of organizational justice and those of job engagement. Consequently, the study recommended that effective leadership should be pivotal in fostering organizational justice. Leaders are encouraged to maintain transparency in their decisions and actions while showcasing a firm commitment to justice, as this will likely motivate employees and improve their levels of job engagement.

1 Introduction

Every organization aims to cultivate an optimal work environment that boosts employee satisfaction, commitment, and engagement. Thus, it is essential for organizations to implement effective and dependable management strategies and techniques to guarantee the ongoing involvement of capable human resources in their operational activities [5]. This requirement stems from the significance of human resources in delivering services that satisfy the various needs and demands of institutions. As a result, organizations emphasize the importance of fostering employee job engagement, since the stability of employees in their positions and their proactive involvement in production and service activities are closely linked to their level of engagement [14]. Job engagement serves not only as a driving force for employees within the organization but also plays a vital role in enhancing their energy and consistently improving their performance, allowing them to reach both personal and organizational objectives.

Organizational justice plays a crucial role in shaping the administrative atmosphere and enhancing overall organizational performance. The way employees perceive justice, or the lack thereof, can significantly influence the workplace environment. When justice is absent, it results in a decline in performance across multiple areas [7]. Thus, organizational justice emerges as a vital factor that profoundly impacts the efficiency of employees' job performance and, in turn, the organization's overall effectiveness. Additionally, it is intricately linked to employees' values and social connections, which directly influence their motivation and level of effort [6].

The importance of organizational justice lies in its ability to influence employee job engagement. This engagement indicates how well individuals can and want to immerse themselves in their work environment and make constructive contributions toward the organization's objectives. By fostering organizational justice, it is anticipated that job engagement levels will rise, subsequently enhancing overall performance and increasing job satisfaction among employees.

1.1 Research Problem and Questions

The increasing focus on job engagement among researchers stems from its vital role in boosting organizational performance, particularly regarding its interplay with other influential factors within the workplace. Studies, such as those conducted by Al-Majali and Hamdan [4], demonstrate that job engagement improves employees' analytical and innovative problem-solving skills, while [20] emphasizes its significant contribution to helping employees recognize the value of their roles, thus enhancing both individual and collective performance. Recognizing human resources as one of the most crucial assets within organizations, it is essential to foster a

supportive and equitable work environment for their ongoing growth and development, highlighting the significance of organizational justice as a key management element, as pointed out by Zaidia [25]. However, despite this interest, a notable research gap exists in assessing the effects of organizational justice on various factors across different industries, as detailed by Obaidat and Abu Zaid [19].

The urgency of addressing the problem presented in this study arises from the critical need to investigate how organizational justice influences job engagement within Jordan's Ministry of Youth. To the researchers' knowledge, no previous studies have examined these variables in this specific context. The researchers considers job engagement to be a key factor in boosting organizational performance while also enhancing employee satisfaction and commitment [2]. The relationship between job engagement and organizational justice plays a vital role in fostering a supportive work environment that elevates both individual and collective performance, as well as enhances the analytical and creative abilities of employees. Nonetheless, there exists a research gap concerning this relationship within the public sector in Jordan. This study seeks to bridge that gap by assessing the impact of organizational justice on job engagement, thereby contributing to the improvement of administrative performance and the attainment of organizational, humanitarian, and community objectives. Consequently, the primary research question is: Does organizational justice, along with its dimensions (distributive justice, procedural justice, and interactional justice), influence job engagement and its dimensions (job absorption, job dedication, and job vigor) among employees of the Ministry of Youth in Jordan?

1.2 Study Model

To achieve the purpose of the study, the researchers developed a study model that illustrates the relationship between the independent variable and the dependent variable, as shown in Fig. 1.

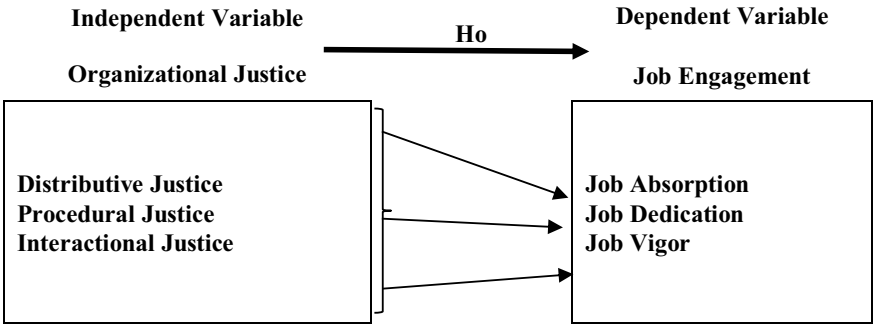

Fig. 1 Study model. *Source* Al-Harthi and Al-Othman [3], Niehoff and Moorman [18], Al-Majali and Hamdan [4], Schaufeli et al. [23]

1.3 Study Hypothesis

- **Main Hypothesis 1 (H0)**: "There is no statistically significant effect at the significance level ($\alpha \leq 0.05$) of organizational justice with its combined dimensions (distributive justice, procedural justice, and interactional justice) on job engagement with its combined dimensions (job absorption, job dedication, and job vigor) in the Ministry of Youth, Jordan."

2 Literature Review

2.1 Organizational Justice

Organizational justice encompasses a variety of definitions, all of which typically align with the broader concept of justice. To gain a comprehensive understanding of organizational justice, it is crucial to examine the diverse definitions offered by scholars in this area. According to Zayer and Benabdelhadi [26], it is characterized as a behavioral concept that pertains to self-perceptions of justice regarding compensation, decision-making processes, and interpersonal relationships within the organization, while also serving as a social system that reflects individuals' views on justice in social and economic interactions within the organization. Mahmood et al. [15] described it as the perception of fairness within the organization, which includes the distribution of resources, rewards, opportunities, as well as the procedures and interactions involved in decision-making. Shalaby et al. [24] introduced a concept related to the feeling of fair and equitable treatment within the workplace, highlighting employees' perceptions of their treatment by the organization. The principle of justice plays a vital role in human interactions, as its realization fosters individuals' feelings of fairness and equality across various sectors—be it educational, industrial, or cooperative—thus contributing to a cohesive and stable environment. The implementation of justice within employment sectors is essential, resulting in numerous beneficial outcomes such as increased productivity and quality of output, lower turnover rates, and a subsequent decrease in recruitment and training expenses while channeling expertise toward meeting organizational objectives. To reach the productivity levels of departed employees, organizations must allocate extra time, effort, and resources to recruit, qualify, and train replacements. This approach not only boosts employee morale but also fosters a high degree of job satisfaction [1].

2.2 Dimensions of Organizational Justice

Organizational justice is an extensive managerial concept utilized in various types of organizations at all times. While some research may occasionally view it as a unidimensional idea, investigations into organizational justice, particularly during the early twentieth century, regarded it as a multidimensional framework. For example, Colquitt et al. [11] noted that justice research seldom addresses more than one dimension of justice simultaneously and proposed that incorporating multiple dimensions within individual studies could enhance the explanation of outcome variance. Likewise, Aryee et al. [8] indicated that to fully grasp the social exchange foundation of workplace dynamics and employee behavior, it is essential to examine all three dimensions of organizational justice concurrently. This methodology has remained prevalent in the categorization of organizational justice in later and current research. Numerous studies suggest that organizational justice is comprised of three primary forms. The first is distributive justice, which pertains to how individuals perceive the outcomes of decisions. In contrast, procedural and interactional justice focus on perceptions regarding the processes involved in making and executing these decisions. Procedural justice relates to employees' views on the fairness of the procedures utilized in decision-making, whereas interactional justice concerns perceptions of the fairness in the personal treatment employees receive during the execution of these decisions.

This research employs a multidimensional framework for examining organizational justice, encompassing distributive, procedural, and interactional justice. The researcher contends that a thorough understanding of employees' perceptions and responses to their treatment within the organization necessitates an extensive analysis of outcomes, processes, and the interactions associated with those processes. By categorizing justice into these three dimensions, a clearer understanding emerges regarding the impact of organizational policies and practices on employee behavior and satisfaction. This approach ultimately strengthens the validity and reliability of research findings in uncovering the internal dynamics of organizational justice.

2.3 Concept of Job Engagement

Job engagement signifies the degree of enthusiasm and commitment an employee exhibits towards their role and the organization they are part of. Employees who are engaged dedicate remarkable effort to fulfill the organization's objectives, aiding in its success, advancement, and sustainability. Generally, an engaged employee begins their day with excitement and is motivated by a profound desire to perform at their best, actively engaging and focusing on both small and large details in their work setting [4]. When such behavior is met with management's support, recognition, encouragement, and rewards, the employee showcases loyalty and commitment that benefits the organization. Typically, an engaged employee is more productive and

stands out, giving considerable attention to their tasks and the organization's performance and accomplishments, feeling that their contributions enhance the quality of the organization's output and that they are part of something greater than merely earning a paycheck. Key characteristics of an engaged employee include a strong belief in the significance of their organization, an ongoing desire to make improvements, collaboration and respect for peers and leaders, a positive outlook towards the organization, and a sense of pride and admiration for it. Employees have confidence in the excellence of the organization's products and services, perceive that the culture within the organization allows them to excel, act with selflessness, and aim to be effective team members, often going above and beyond the basic job requirements [12]. According to Bilal et al. [10], job engagement is characterized as a psychological condition that motivates employees and propels them to contribute towards both individual and organizational objectives, significantly influencing employee performance and outcomes at both personal and organizational levels. This engagement is marked by absorption, commitment, enthusiasm, energy, dedication, and passion for work, signifying a psychological state in which employees are genuinely invested in the organization's success and committed to delivering high-quality results that exceed job expectations. It embodies personal fulfillment and a sense of inspiration and validation derived from work, alongside a feeling of belonging within the organization [22].

2.4 Dimensions of Job Engagement

Job engagement encompasses a multifaceted psychological experience characterized by three fundamental elements: vigor, which indicates elevated energy levels and the capacity to work diligently and persistently while embracing challenges; dedication, which denotes the deep involvement of an individual in their work, accompanied by feelings of belonging, inspiration, and pride in their responsibilities; and absorption, which signifies an individual's intense concentration on their tasks, often leading them to lose track of time and struggle to disconnect from work. When examining the facets of job engagement, various dimensions can be utilized that collectively create a holistic psychological state with a significant impact on employee performance. Vigor within the workplace illustrates the enthusiasm and energy an individual invests in their job. Those who experience vitality and vigor in their work are likely to perceive their capability to meet job demands effectively and engage positively with colleagues, showcasing a strong readiness to dedicate time and effort to their tasks [16].

Dedication represents a psychological condition that encompasses both feelings of energy and happiness. This emotional state, known as "positive affect," signifies a robust sense of well-being. When we picture enthusiastic employees, we imagine them being actively engaged rather than merely involved; this aspect seeks to inspire feelings of significance, enthusiasm, and pride in their work, with employees perceiving their roles as both challenging and motivating [16].

Absorption is characterized by researchers as a state of complete immersion and joy in one's work, where time seems to vanish and maintaining focus on tasks becomes challenging [20]. This indicates that when employees experience absorption, they are profoundly engaged in their work, finding it difficult to detach from their responsibilities as time accelerates. According to Loerbroks et al. [13], absorption entails a thorough concentration on work and total involvement in it. Individuals exhibiting absorption demonstrate a strong interest in their tasks, struggling to disengage from their job responsibilities. This suggests that absorption reflects a person's passion for their work and commitment to it, representing a form of self-dedication marked by joyful focus and engagement in work activities.

2.5 Previous Studies

The research conducted by [19] sought to investigate the influence of management by walking around on employees' views regarding organizational justice within the Jordanian Ministry of Education. It examined how different aspects of management by walking around—such as enhancing communication, revealing truths, fostering motivation, promoting development, encouraging creativity, and providing feedback—impact organizational justice. Utilizing a descriptive analytical methodology, the study distributed a questionnaire to 229 employees across various directorates within the Jordanian Ministry of Education. The findings indicated that management by walking around has a positive effect on organizational justice overall. The researchers suggested ongoing training and development for managers and department heads, highlighting the necessity of equipping them with the essential tools to effectively implement walking around and improve organizational justice.

Memon et al. [17] explored how organizational justice influences employee turnover in commercial banks. Their investigation focused on the connection between organizational justice and the rate of employee turnover. Utilizing a descriptive analytical methodology, the researchers distributed a questionnaire to 200 employees from various commercial banking institutions. This questionnaire addressed numerous variables associated with both organizational justice and employee turnover. The primary findings revealed that organizational justice positively affects the reduction of employee turnover, suggesting that a robust system of justice can motivate employees to remain with their organizations rather than pursue external opportunities. Among the recommendations were the enhancement of organizational justice practices within banks to lower turnover rates and boost job stability, alongside the necessity of training and developing leaders and managers to grasp and implement organizational justice principles, thereby fostering a fair and equitable workplace.

The research conducted by Baher and Alkhadher [9] sought to explore the connections among three facets of organizational justice—procedural, interactional, and distributive—and their effects on five aspects of organizational citizenship behavior within government entities in Kuwait. A total of 573 employees from nine various

government ministries in Kuwait participated in the study through the distribution of questionnaires. The results indicated that employees' views on interactional justice positively influence their perceptions of both procedural and distributive justice. Furthermore, the findings demonstrated that interactional justice has an indirect effect on all dimensions of organizational citizenship behavior via employees' perceptions of distributive justice. The study suggested that managers in public organizations should focus on enhancing interactional justice levels, as this can lead to improved perceptions of both distributive and procedural justice, ultimately fostering greater expressions of civic virtue, sportsmanship, altruism, kindness, and overall employee behavior.

Roberts [21] investigated the impact of employee age on job engagement levels, set against a backdrop of growing interest in generational interactions within modern workplaces. The research sought to evaluate the correlation between age and various aspects of job engagement, including vigor, dedication, and absorption. Utilizing a quantitative approach, the study involved 181 participants who completed the Utrecht Work Engagement Scale (UWES), which assesses job engagement along with demographic information. Findings revealed that employees aged over 50 exhibited considerably higher job engagement levels than their younger counterparts, particularly in terms of dedication and absorption. This study underscored the significance of recognizing age's influence on job engagement to enhance human capital management strategies in organizations. HR professionals can leverage these findings to craft employee engagement initiatives that capitalize on the dedication and skills of older workers.

3 Methodology

3.1 Study Population and Sample

The study population was chosen by the researchers to be the Jordanian Ministry of Youth and Sports, which functions as a government service institution. The research question, target population, and employed statistical methods all influence the determination of an appropriate sample size. Consequently, it is essential to select a representative sample size for the study design, as this choice has a direct impact on the accuracy of the results and their generalizability.

In this research, the entire workforce at the Ministry of Youth and Sports center in Jordan constitutes the target population. This implies that every individual in the study population was included as part of the research sample. A comprehensive sampling method is regarded as appropriate for fulfilling the research aims and ensuring accurate and reliable data analysis. Based on information gathered by the researcher, the total number of employees at the Ministry of Youth and Sports center in Jordan stood at 202 in 2024. Following the distribution of questionnaires in both electronic and paper formats, the researcher successfully collected 177 valid responses out

of 202, yielding a response rate of 88%, which is considered significantly high in comparison to similar studies. Although 182 questionnaires were initially retrieved, a thorough review revealed that 5 were invalid for analysis due to issues such as multiple responses, lack of seriousness from participants, or a considerable amount of missing data.

3.2 Reliability of the Study Tool

Table 1 displays the internal consistency coefficients for each study variable, determined through Cronbach's alpha test. The findings indicate that the internal consistency coefficients for the variable dimensions fall between 0.770 and 0.861. Specifically, the coefficient for the independent variable was 0.81, while it was 0.868 for the dependent variable, and 0.833 for the overall questionnaire. Such values are deemed to reflect strong reliability in social and human research.

4 Testing the Hypotheses

In order to tackle the primary research question—what effect does organizational justice, encompassing its dimensions of distributive justice, interactional justice, and procedural justice, have on job engagement, which includes absorption, dedication, and vigor, among employees at the Jordanian Ministry of Youth? The researchers

Table 1 Internal consistency coefficients for each study variable using Cronbach's Alpha test

Sections	Variable	Dimensions	Cronbach's Alpha	Number of items
1–5	Organizational justice	Distributive justice	0.770	5
6–10		Interactional justice	0.702	5
11–15		Procedural justice	0.758	5
1–15		Organizational justice overall	0.81	15
16–20	Job engagement	Absorption	0.770	5
21–25		Dedication	0.806	5
26–30		Vigor	0.861	5
16–30		Job engagement overall	0.868	15
1–30		Overall questionnaire	0.833	30

performed a multiple linear regression analysis to evaluate how the independent variable, organizational justice, influences the dependent variable, job engagement.

4.1 Testing the Main Hypothesis

In this study, the null hypothesis (H0) asserts that there is no statistically significant impact at a significance level ($\alpha \leq 0.05$) of organizational justice—comprised of its dimensions: distributive justice, interactional justice, and procedural justice—on job engagement, which includes absorption, dedication, and vigor, within the Ministry of Youth—Jordan. To evaluate this hypothesis, the researchers conducted a multiple linear regression analysis to forecast changes in the dependent variable due to variations in the dimensions of the independent variable. The researchers also aggregated the dimensions of the dependent variable into a singular measure (job engagement) by computing their arithmetic mean Table 2.

According to the table, the Pearson correlation coefficient (R) between the independent variable's combined dimensions and job engagement, the dependent variable, is 0.713. The coefficient of determination (R2) stands at 0.508, suggesting that the combined aspects of organizational justice—namely distributive, interactional, and procedural—account for 51% of the variance observed in job engagement. The ANOVA analysis reveals a substantial F value of 59.477 alongside a significance level (sig) of 0.000, which is below 0.01. This supports the acceptance of the alternative hypothesis, confirming that the regression is statistically significant and that the dimensions of the independent variable have a notable impact on the dependent variable.

The findings indicate that every aspect of organizational justice—distributive, interactional, and procedural—exerts a positive and significant influence, achieving statistical significance at the ($\alpha \leq 0.05$) threshold. The unstandardized B values demonstrate that distributive justice has a minimal impact (0.108) on job engagement, ranking it as the least influential among the dimensions. Interactional justice also shows a weak effect (0.191) on job engagement, whereas procedural justice presents

Table 2 Results of multiple linear regression analysis for testing the main hypothesis

Varables		Coefficients			Model summery		ANOVA	
Dependent variable	Independent varable	B	T value	Significance t	R	R^2	F value	F significance
Job engagement	Distributive justice	0.124	2.298	0.023	0.713	0.508	59.477	0.000
	Interactional justice	0.187	2.769	0.006				
	Procedural justice	0.325	4.412	0.000				

a moderate effect (0.324) on job engagement. Consequently, the null hypothesis (H0) is dismissed, and the alternative hypothesis (H1) is affirmed, asserting that organizational justice, through its combined dimensions (distributive, interactional, procedural), significantly affects job engagement, which encompasses its dimensions (absorption, dedication, vigor) within the Ministry of Youth—Jordan.

5 Discussion of Results and Recommendations

Research Question: What is the impact of organizational justice with its combined dimensions (distributive justice, procedural justice, and interactional justice) on employee engagement with its dimensions (job absorption, job dedication, and job vitality) among employees of the Ministry of Youth in Jordan?

To tackle the aforementioned question, the researchers introduced the null hypothesis, which asserted: "There is no statistically significant effect at a significance level of ($\alpha \leq 0.05$) of organizational justice, encompassing its combined dimensions (distributive justice, procedural justice, interactional justice), on employee engagement, which includes its combined dimensions (job absorption, job dedication, job vitality) within the Ministry of Youth, Jordan." However, this hypothesis was dismissed following the results of the data analysis, leading to the acceptance of the alternative hypothesis that states, "There is a statistically significant effect at a significance level of ($\alpha \leq 0.05$) of organizational justice, along with its combined dimensions (distributive justice, procedural justice, interactional justice), on employee engagement, which comprises its combined dimensions (job absorption, job dedication, job vitality) in the Ministry of Youth, Jordan." The statistical analysis that supports the alternative hypothesis underscores the vital role of organizational justice in fostering employee engagement.

5.1 Analysis of Results

1. **Organizational Justice as a Significant Factor**: The findings suggest that enhancing employee engagement is significantly influenced by organizational justice, with its various dimensions—distributive, procedural, and interactional—exerting a substantial effect on job absorption, job dedication, and job vitality. Employees who recognize fairness in distribution, interactions, and procedures experience heightened satisfaction and a stronger commitment to their organization.
2. **Positive Impact of Justice on Engagement**: Positive participation and diminished conflicts within the workplace are fostered by organizational justice, leading to a productive and cohesive environment. This concept is particularly vital in the public sector, especially within the Ministry of Youth, given the

significant role these institutions have in delivering public services and facilitating social development. The effectiveness of these functions is heavily reliant on employee engagement and satisfaction, underscoring the significance of organizational justice not just as an element of job satisfaction, but also as a critical factor in attaining both organizational and national objectives.

3. **Organizational Justice as a Key Element of Engagement**: Enhancing elements of organizational justice, including distributive, procedural, and interactional justice, boosts employees' feelings of involvement in their positions and in the organization overall.

5.2 Recommendations

1. **Enhancing Transparency and Accountability**: It is very important to improve the transparency of public sector organizational procedures (procedural fairness). Administrative procedures should be clear and organized to increase employee confidence in administrative activities, including penalties and rewards. Organizational justice increases employees' sense of justice, which leads to greater commitment and work effort.
2. **Training Managers and Department Heads**: It is recommended to provide continuous training for managers and department heads in the application and promotion of organizational justice principles. This will help them understand the positive impact of equity on various factors that are important to employees. Employees who feel that they are getting the development they need are more likely to perform better and be more motivated.
3. **Facilitating Employee Engagement**: Organizations, including youth departments, should improve opportunities and opportunities for employee participation, especially in decision-making processes that affect them. Providing them with necessary materials and information can promote their participation in work.

The Impact of Implementing Tax Awareness Policies on Tax Taxpayers' Compliance: An Analytical Study

Mohyedin Hamza, Majed Almarie, Nasri Alwekhyan, Khaled Jbair, and Ahmad Obeid

Abstract The objective of this study is to investigate tax awareness and its influence on enhancing compliance among taxpayers. To fulfill the aims of the research, a questionnaire was developed, comprising two primary sections, drawing from prior studies and the theoretical framework. This questionnaire was then disseminated to the sample, which included all taxpayers of income and sales taxes spanning the industrial, commercial, and service sectors. Various suitable statistical methods were employed to analyze the data collected from the questionnaire using the Statistical Package for the Social Sciences (SPSS). Findings revealed that the independent variables—both individually and collectively—namely the taxpayer's awareness and comprehension of the financial repercussions of breaching tax laws, as well as their understanding of the financial effects on the state's resources due to non-compliance with tax obligations, positively influenced the enhancement of tax compliance among taxpayers. The study concludes with several recommendations, emphasizing the necessity of promoting tax awareness among taxpayers, educating them on the significance of taxes, organizing academic seminars and conferences to elevate awareness regarding tax payments, and prioritizing the development of diverse academic and research initiatives. Furthermore, employing social media platforms (including Facebook, Twitter, and others) to share tax regulations and calculating practices.

1 Introduction

For financial policymakers in both developed and developing nations, achieving and sustaining high levels of tax compliance stands as a primary objective. The overarching aim of all tax administrations is to boost tax revenues that support the state's treasury. Indeed, tax revenues in Jordan account for over covering 50% of public expenditure coverage (General Budget Department, Jordan). Tax compliance presents a significant concern for tax authorities and policymakers, as non-compliance threatens the state's capacity to secure the financial resources necessary to meet its expenses [9]. Development and welfare rely on the contributions of the state, institutions, and individuals alike. Naturally, the execution of these programs demands resources and funding. Taxes serve as a vital source through which the state delivers its services and initiatives, embodying participation, citizenship, and equity in accessing services, projects, and programs.

As noted by Adimasu and Daare [2], the primary concern related to tax compliance is tax awareness. Consequently, this research seeks to investigate how the implementation of tax awareness policies influences taxpayer compliance in Jordan. Taxes are crucial for maintaining the budget of any government, as one of the key reasons for taxation is to provide financial resources for managing the economy and redistributing funds. A low rate of tax compliance can impede the government's capacity to fulfill its fundamental objectives, as it struggles to finance its treasury with the required resources. The focus of this study centers on how tax awareness policies can improve and enhance tax compliance.

The study's problem revolves around the main research question: "What is the impact of implementing tax awareness policies on tax compliance?" This leads to the following sub-questions:

1. What is the level of tax awareness among taxpayers in Jordan?
2. What is the level of tax compliance among taxpayers in Jordan?
3. Is there an impact of implementing tax awareness policies on the tax compliance of taxpayers in Jordan?

1.1 Study Objectives

The main objective of the study is to understand tax awareness and its effect on increasing compliance among taxpayers in Jordan. The main objective is divided into the following sub-objectives:

1. To identify the level of tax awareness among taxpayers in Jordan.
2. To determine the level of tax compliance among taxpayers in Jordan.
3. Explaining the impact of tax awareness policy implementation on taxpayer compliance in Jordan.

4. Providing recommendations based on the results to the relevant authorities to help improve and increase tax awareness and tax compliance among taxpayers in Jordan.

1.2 Study Hypotheses

Based on the study problem and questions, the following main hypothesis has been formulated:

- Main Hypothesis (H0): "There is no statistically significant effect of tax awareness on improving and increasing compliance among taxpayers."

The following sub-hypotheses are derived:

- (H01): "There is no statistically significant effect of taxpayers' awareness and understanding of the financial consequences of violating tax laws."
- (H02): "There is no statistically significant effect of taxpayers' awareness and understanding of the financial impact of non-compliance on the state's financial resources."

2 Theoretical Framework

Certain individuals perceive taxes as a financial imposition by the state on personal income, lacking any direct benefits for the taxpayer, with the intention of promoting public welfare. Conversely, others regard taxes as a collective financial contribution from taxpayers to support the state's treasury, which is essential for covering public expenses and serving the community. Taxes are also viewed as a mandatory obligation mandated by the state, which taxpayers must meet without expecting anything in return, thereby allowing the state to fulfill its responsibilities to the community [16].

According to Alwan [6], taxes are defined as "a monetary deduction imposed by public authorities on natural and legal persons according to their tax capacities, in a final and uncompensated manner, to cover public burdens and achieve state intervention." Key features of taxes include their compulsory nature, the requirement that payments be made only in cash, and their imposition by public authorities based on established legislative guidelines, collected from taxpayers without any compensation. Furthermore, taxes are gathered to attain public objectives and are levied on taxpayers in accordance with their financial capacity [4].

On August 16, 2004, the Income and Sales Tax Department was formed as a unified entity following its administrative merger, as stipulated by the Law Amending the Income Tax Law and the General Sales Tax Law, which was published in the Official Gazette, Issue No. (4672) on the same date. The Income Tax Department has its origins dating back to 1951 and functioned under Law No. (50) of 1950. Since its inception, tax legislation has seen numerous revisions aimed at adapting to economic

and social changes, with significant amendments enacted in 2018 through Law No. (34) of 2018. Prior to the merger, the Income and Sales Tax Department was recognized as one of the prominent national public sector departments, having achieved fourth place for the Income Tax Department and sixth place for the General Sales Tax Department in the King Abdullah II Center for Excellence in Government Performance and Transparency. Raising tax awareness is essential for motivating individuals to meet their tax responsibilities and evade legal repercussions. Tax awareness is characterized as "the sum of the taxpayer's ideas and concepts about the importance of taxes and how to fulfill them" [12].

Enhancing awareness about taxes is crucial, and this duty primarily rests with governments. However, it is equally the obligation of every citizen. As noted by Rawia [15], taxes serve as one of the key instruments of fiscal policy for governments. A fair and well-organized tax system, which encompasses effective tax regulations, is essential to fulfill governmental goals. Simultaneously, taxpayers need to embrace this tax framework and refrain from evasion or avoidance, as such actions adversely affect government finances [3]. It has been observed that taxpayers have yet to reach a mindset where they regard tax compliance as a moral obligation, making it understandable that they may struggle with adhering to tax responsibilities.

The researchers assert that tax compliance encompasses the taxpayer's commitment to following tax laws and regulations, which includes registering for taxes, timely filing of tax returns, accurately reporting income and expenses, legally claiming exemptions, and meeting financial responsibilities as outlined in their tax return.

Several studies have addressed this topic, including:

- The study conducted by Abbas [1], titled "The Impact of Tax Awareness on Reducing Tax Evasion: A Field Study Applied to Income Tax Payers in Tulkarm City," revealed a statistically significant correlation between tax awareness and the incidence of tax evasion.
- The primary conclusion drawn from the field study conducted by Khushnaw and Yabeh [13], titled "Analysis and Measurement of the Impact of Legislation and Tax Awareness on Trust between Taxpayers and the Tax Administration in the General Tax Directorate of the Kurdistan Region," indicates that trust between taxpayers and the tax administration is significantly and positively influenced by tax awareness. However, this trust is often undermined by skepticism stemming from complicated procedures, bureaucracy, and a lack of clarity, which in turn fosters financial and administrative corruption.
- The study conducted by Al-Sudairi and Al-Mas [5], titled "Tax Evasion and Its Relationship with Tax Awareness," revealed a significant understanding among accountants and auditors in Saudi Arabia regarding the concept and significance of tax awareness. They assert that tax awareness encompasses not only taxpayers but also various sectors of the state and the broader community.
- The study by Bojuwon and Obid [8], titled "Quality of Tax Services: The Mediating Effect of Ease of Use of the Online Tax System," emphasized a beneficial connection between the quality of tax services and the online tax system. It also

noted that taxpayers' comprehension of how to effectively utilize the tax system correlates with heightened tax compliance and revenue generation.
- The study by Mukasa [14], titled "Tax Knowledge, Perceived Tax Fairness, and Tax Compliance in Uganda," revealed a causal link between tax knowledge and perceived tax fairness with tax compliance. This suggests that enhancing taxpayers' understanding and their views on the fairness of taxes will lead to improved compliance with tax regulations.

3 Study Methodology

This research represents an empirical study utilizing a descriptive-analytical method. Information was gathered using a questionnaire divided into two sections: the initial section focused on collecting general information regarding the study sample, whereas the latter section assessed the effect of tax awareness policies on tax compliance in Jordan. The second part was divided into three sections:

- The first section explores taxpayers' awareness and understanding of the financial consequences of violating tax laws, consisting of 10 items.
- The second section investigates taxpayers' awareness of the financial impact on the state's resources due to non-compliance with taxes, also consisting of 10 items.
- The third section deals with data related to tax compliance, with 10 items.

A study population comprising all income and sales tax payers from the industrial, commercial, and service sectors in Jordan, amounting to 14,115 taxpayers (as per the records of the Income and Sales Tax Department, 2024), received a total of 708 distributed questionnaires. The data gathered was analyzed utilizing the Statistical Package for Social Science (SPSS) software.

4 The Result

4.1 Results of Descriptive Statistics for Demographic Variables of the Study Sample

- **Sample Distribution by Size**: 24% of the study sample were low-income taxpayers, 38.8% were average-income taxpayers, and 37.2% were high-income taxpayers.
- **Sample Distribution by Respondent Nature**: 37.1% of the study sample were natural nature, while 62.9% were of legal nature.
- **Sample Distribution by Sector**: 34.6% of the study sample were from the service sector, 43.6% from the commercial sector, and 21.8% from the industrial sector.

4.2 Results Related to the First Research Question

What is the level of tax awareness among taxpayers in Jordan? The findings reveal that taxpayers in Jordan exhibit a strong mean level of tax awareness, achieving an average score of 4.07 and a standard deviation of 0.48. This average surpasses the test standard of 3 on a scale of 5.

4.3 Results Related to the Second Research Question

To what extent are taxpayers aware of the financial impact on the state's resources due to their non-compliance with taxes? The results show a high mean level of awareness and understanding among taxpayers regarding the financial impact on the state's resources due to tax non-compliance.

4.4 Results Related to the Third Research Question

What is the level of tax compliance among taxpayers in Jordan? The results indicate a high mean level of tax compliance among taxpayers in Jordan.

4.5 Normal Distribution Test (Kolmogorov–Smirnov Test)

A Kolmogorov–Smirnov test was performed to assess if the data conformed to a normal distribution, and it was determined that the data did not adhere to this distribution. In response to this finding, a robust standard error method was employed, as suggested by Gujarati & Porter (2010). With 596 observations for the quantitative variables in the study, which exceeds the advised statistical threshold of 30, the application of multiple regression analysis was deemed appropriate.

4.6 Model Validation Test

The Variance Inflation Factor (VIF) test was employed in the study to assess multicollinearity among the variables. The results indicated that there was no multicollinearity present, as evidenced by the VIF values for tax awareness, which were both 1.142.

4.7 Hypothesis Testing

- **Null Hypothesis (H0)**: "There is no statistically significant effect of tax awareness on improving and increasing tax compliance among taxpayers in Jordan at a significance level of ($0.05 \geq \alpha$)".

In order to evaluate this hypothesis, the researchers employed multiple linear regression analysis to assess how tax awareness influences the enhancement and increase of tax compliance among taxpayers in Jordan. The computed F value was found to be 220.637, in contrast to the tabulated value of 2.39. Since the calculated value surpasses the tabulated value, the null hypothesis is rejected, and the alternative hypothesis is accepted, asserting that "there is a statistically significant effect of tax awareness on improving and increasing tax compliance among taxpayers in Jordan".

4.8 Sub-Hypothesis Testing

Sub-Hypothesis 1

- **Null Hypothesis (HO-1)**: "There is no statistically significant effect of taxpayers' awareness and understanding of the financial consequences of violating tax laws on improving and increasing tax compliance among taxpayers in Jordan at a significance level of ($0.05 \geq \alpha$)".

In order to evaluate this hypothesis, a simple linear regression analysis was conducted. The T-value obtained was 14.29, in contrast to the tabulated value of 2. As a result, the null hypothesis is rejected, leading to the acceptance of the alternative hypothesis, which asserts: "Taxpayers' awareness and understanding of the financial repercussions of violating tax laws has an effect on enhancing and boosting tax compliance among taxpayers in Jordan.

Sub-Hypothesis 2

- **Null Hypothesis (HO-2)**: "There is no statistically significant effect of taxpayers' awareness and understanding of the financial impact on state resources due to non-compliance with taxes on improving and increasing tax compliance among taxpayers in Jordan at a significance level of ($0.05 \geq \alpha$)".

In order to evaluate this hypothesis, a simple linear regression analysis was conducted. The computed T-value came to 6.352, in contrast to the tabulated value of 2. As a result, the null hypothesis is dismissed, while the alternative hypothesis is embraced, which asserts: "There is a statistically significant effect of taxpayers' awareness and understanding of the financial implications on state resources due to tax non-compliance on enhancing and boosting tax compliance among taxpayers in Jordan".

5 Results and Recommendations

The study reveals, through statistical analysis of the collected data aimed at fulfilling its objectives and addressing its issues, that tax awareness is essential for the effectiveness of tax policy in the fight against tax evasion. It is vital for each citizen to recognize that their tax contributions play a significant role in the development, growth, and prosperity of their community. The key factors influencing the enhancement and rise of tax compliance among taxpayers in Jordan include:

– **Awareness of Financial Impact on State Resources**: Understanding the financial impact on state resources due to non-compliance with taxes.
– **Awareness of Legal Consequences**: Understanding the financial consequences of violating tax laws.

Efforts need to concentrate on raising tax awareness among citizens and informing them about the significance of taxes as a means for the government to carry out projects and offer services that serve the public good. This can be achieved through various means, including:

- **Educational Campaigns**: Employing auditory, visual, and written formats to clarify tax laws, regulations, and procedures. Arranging targeted seminars to elucidate the details of tax laws, methods of calculation, collection procedures, and penalties associated with evasion.
- **Public Engagement**: Conducting educational and informative conferences for taxpayers to demonstrate the significance of tax revenues for public finances, the effects of the state's financial condition on economic stability, and the proper methods for calculating taxes.
- **Media Utilization**: Utilizing online platforms, graphic design, and videos to clarify tax laws and regulations. Offering digital tools and models for tax calculations while leveraging social media and various media channels to engage a broad audience of taxpayers, thus reducing the chances for exploitation and bribery.

Enhancing Accuracy in Digital Fingerprint Analysis: AI Comparative Study

Drishti Rajesh Kumar Sachan, Hemraj Shobharam Lamkuche, Kothrikalan Sehore, Maram Y. Al-Safarini, and Asma Sbaih

Abstract The strong influence of technology on our lives reveals information about our online activity and preferences through digital fingerprinting. Understanding their components uses, and advantages are necessary for successfully navigating the digital universe. Approaches like deep learning are employed to find out which algorithm is the best for digital fingerprint analysis. ML algorithms have been used for a long time to make the existence of human civilization easier and more efficient. In this study, we trained techniques and classifiers such as neural networks (NN), support vector machines (SVM), Gaussian Naive Bayes classifier, K-nearest neighbors (KNN), Principal Component Analysis(PCA), Logistic Regression, Neural network, and Random Forest Classifier, and Decision Tree. We learned a method for understanding datasets and implemented several classifiers for analysis with this work. Algorithms used in digital fingerprinting are also discussed based on these techniques.

1 Introduction

Fingerprints have fascinated people for centuries, serving as unique identifiers. Now, in the digital age, fingerprints have a digital counterpart, leaving behind data trails [1]. These digital fingerprints can be analyzed by complex algorithms and machine learning models to identify patterns. As technology evolves, digital fingerprinting will become more intricate, incorporating data from wearable and smart home technologies [2]. While concerns about privacy invasion are valid, digital fingerprints can be leveraged for positive purposes like fighting crime [3]. It's crucial to find a balance between utilizing digital fingerprints and protecting individual privacy through transparency, ethical standards, and effective data protection.

2 Digital Fingerprints

In the digital world, digital fingerprints uniquely identify individuals through their online behavior and device attributes. They offer insights into our virtual activities and interests, making it crucial to understand and navigate these traces safely.

A. Components of Digital Fingerprint

In the digital world, our online activities leave behind persistent traces that form a detailed picture of our virtual identities. These remnants influence how we are targeted and assessed online. Understanding the impact and potential biases in these electronic footprints is essential for navigating the digital realm responsibly. The data we leave behind—such as browsing history and geo tags—shapes perceptions even when we're not present. Examining these elements reveals the unseen effects of our digital presence [4].

B. Network Characteristics

In the vast digital world, our every click and scroll leaves a trace, forming a portrait of our virtual identity. Here's a look at key network characteristics related to our digital fingerprint:

- IP Address: Acts as a location beacon. Dynamic IPs offer more anonymity, while static IPs provide precise location details.
- Device Fingerprints: Unique to each device, created through graphics card details, WebGL performance, and other device-specific traits.
- Network Routing Patterns: Data packets' travel paths reveal connections and affiliations, potentially identifying geographic proximity.

- Anonymity: Tools like VPNs and mesh networks obscure your online trail, while decentralized protocols challenge fingerprinting by distributing data.
- Privacy and Security: Balancing user privacy with identification needs requires careful data collection and robust anonymization techniques.
- Evolving Fingerprinting: As fingerprinting methods advance, so do anonymization tools, creating an ongoing balance between identification and privacy. Staying informed on these changes is crucial for maintaining privacy while ensuring security.

C. Browser and Device Attributes

Browsers and devices subtly disclose personal information through their attributes. Browser plugins and extensions reveal online habits and preferences, such as attitudes towards ads and security concerns [5, 6]. The operating system and device model indicate tech-savviness and spending capability. Font choices and language preferences reflect personal tastes and cultural background. While these details enhance personalization and security, protecting user privacy through strong anonymization and transparency is crucial [7]. As technology evolves, so do these attributes, making continuous and responsible handling essential.

D. Web and App Interactions

Our digital fingerprints, shaped by interactions with websites, apps, and search queries, reveal much about us. Websites visited and the time spent on them create profiles indicating interests and engagement levels [8]. App usage reflects preferences and habits, though tracking raises ethical issues. Search queries offer insights into our knowledge and emotional states, with varying effectiveness of anonymous search options. Balancing personalization with privacy is crucial, requiring opt-in mechanisms and transparency. As digital engagement evolves with new technologies, fingerprinting methods must adapt to maintain accuracy and respect for privacy [9].

E. Behavioral Patterns

Our online actions, like clicks and searches, leave behind a pattern. These patterns are like the pieces of a puzzle, telling us about our habits, daily routines, and feelings. Let's look closer at these interesting clues and see what we can learn.

(1) Mouse Movements and Clicks

Think of mouse movements like a dance. Your clicks are the beat. Careful, slower clicks might show you're being thoughtful or unsure. Quick scrolling may tell us you're in a hurry or want to absorb a lot of information fast. Checking these actions can give us clues about whether you're right or left-handed, how long you pay attention, and your feelings [7]. But remember, things like the mouse sensitivity or the layout of a webpage can change these actions. That's why we need to be careful when we analyze this info.

(2) Keystroke Dynamics

Your typing style is as unique as a fingerprint. This includes your speed, pause times, error rates, and more. This can also help identify your mood! Fast typing might mean you're excited or frustrated. Making errors often might mean you're stressed or tired [10]. But watch out! Using typing patterns in harmful ways can be a big problem. That's why it's so important to keep all data private and safe.

(3) Temporal Activity Patterns

Your online behaviors show a lot about your day-to-day life. This can include the websites you visit and when. It might also show your work hours, travel plans, or even when you sleep! This information can give helpful clues about your lifestyle B.

(4) Understanding vs. Intrusion

Studying behaviors is super handy to figure out what users like and make their experience better. But you gotta be careful, there's a thin line between helpful info and spying on people. Being sure to ask people if it's okay, making user data anonymous when it should be, and letting users be in charge are key to being fair in this area [11].

3 The Algorithms and Classifiers

A. Neural Network (NN)

A Neural Network (NN) is a computational model inspired by the human brain, consisting of interconnected layers that process data in stages. Used in applications like handwriting recognition and weather forecasting, NNs are known for their ability to train on large datasets and recognize patterns. Their depth, or number of hidden layers, plays a key role in their functionality [12].

B. Principal Component Analysis

Principal Component Analysis (PCA) reduces dimensionality by identifying the most informative features in large datasets. It finds the characteristics that contribute most to variability, creating principal components that capture significant patterns. By prioritizing features based on the variance they explain and combining them into uncorrelated components, PCA simplifies the data while retaining essential information, making it easier to analyze.

C. Logistic Regression

For categorization and predictive analytics, this kind of statistical model—also referred to as the logit model—is frequently employed. Logistic regression uses a dataset of independent variables to estimate the likelihood of an event occurring, such as voting or not. Because the result is a probability, the dependent variable has a range of 0 to 1. A logit transformation is performed to the odds in logistic regression,

which are the likelihood of success divided by the probability of failure [13, 14]. This logistic function is sometimes referred to as the log odds or the natural logarithm of odds. It is expressed by the following formulas:

will serve as a provider and n + 1 nodes that will serve as contributors for all information.

$$h\vartheta(x) = g\left(\vartheta^T\right) = \frac{1}{1+e^{-x}}$$

$$g(x) = \frac{1}{1+e^{-x}}$$

Fundamentally, logistic regression creates a link between the probability domain and the world of independent variables. The method creates a sigmoid curve, sometimes referred to as the logistic function, given a series of data points with known "yes" or "no" labels (such as a spam email or credit card fraud). The values of the independent variables are elegantly mapped to the likelihood that the event (such as the email being spam) would occur by this curve. The algorithm finds the ideal parameters that define the curve by optimizing the chance of seeing the real labels. This enables it to anticipate the probabilities for new data points with accuracy [15].

Although logistic regression excels in binary classification, it has a broad family that meets a range of purposes. Let's examine a few of its variations:

(1) Multinomial Logistic Regression: This technique ex- tends the sigmoid curve into many curves, each of which represents the likelihood of a different class when there are more than two potential outcomes.
(2) Penalized Logistic Regression: In certain cases, noisy or superfluous characteristics may be present in the data. In order to counter this, methods like as L1 and L2 regularization penalize the model's complexity in favor of simpler curves that have higher generalization to unknown data.
(3) Mixed-effects logistic regression uses random effects to account for these nested relationships in order to provide more accurate predictions within these groups when working with data that naturally has hierarchical patterns [12].

D. Support Vector Machines (SVM)

Support Support Vector Machines (SVMs) are supervised learning algorithms used for classification and regression. They work by finding the optimal hyperplane that separates different classes with the largest margin, enhancing classification confidence and reducing overfitting [11]. SVMs are effective for complex data and offer high accuracy in various applications.

Although SVMs are inherently supervised, some techniques adapt them for unsupervised learning:

Spectral Clustering with SVM Kernels: Uses SVM kernels to create a similarity matrix, which spectral clustering then uses to find data clusters [16].

Semi-Supervised Learning: Combines a small amount of labeled data with a larger set of unlabeled data. The SVM is trained on labeled data and then refines its predictions on unlabeled data [17, 18].

One-Class SVMs: Used for anomaly detection, these SVMs identify outliers by defining a boundary around normal data points.

Understanding both linear and nonlinear SVM approaches helps in selecting the best method for your specific data and task [19].

Understanding the line that makes the best use of space between classes is key. It boosts the chances of translating well to unseen data. There are two categories in SVM:

(1) Linear SVMs: Linear SVMs operate in a linearly sep- arable space, meaning a perfect hyperplane can completely separate the data points belonging to different classes. The optimal hyperplane maximizes the margin by minimizing the distance between itself and the closest data points of each class, called support vectors [20]. Mathematically, this translates to

(1) Objective Function: Minimize:

$$\frac{1}{2}\|w\|^2$$

Subject to:

$$y_i * \left(w^T * x_i + b\right) >= 1$$

for all i

- w and b are the parameters of the hyperplane: w—direction vector, b—bias term.
- x_i and y_i are the $i(th)$ data point and its corresponding class label.

(2) Lagrange Duality: Due to the quadratic objective func- tion, SVMs are often solved using Lagrange duality, which converts the constrained optimization problem into an unconstrained dual problem.

(1) Non-Linear SVMs: Real-world data is rarely perfectly linearly separable. For such cases, SVMs employ a kernel trick that projects the data into a higher-dimensional feature space where linear separation becomes possible. Common kernels include:

- Gaussian kernel: $K\left(x_i, x_j\right) = \exp\left(-\text{ gamma} * \left\|x_i - x_j\right\|^2\right)$
- Polynomial kernel: The Polynomial kernel takes an ad-ditional parameter, 'degree' that controls the model's complexity and computational cost of the transformation $K\left(x_i, x_j\right) = \left(x^T * x_j + c\right)^d$

The choice of kernel and its parameters significantly impacts the performance of the non-linear SVM.

E. K-Nearest Neighbors (KNN)

K-Nearest Neighbours (KNN) is a basic yet effective machine-learning technique that may be used for classification and regression problems. It is a non-parametric,

supervised learning classifier, which uses proximity to make classifications or predictions about the grouping of an individual data point. It works by identifying the K closest neighbors to a new data point and then predicting the label of the new data point based on the labels of the K nearest neighbors [21].

It is a non-parametric method, which means it makes no assumptions about the data distribution. As a result, it is a flexible approach that can be used to a wide range of data formats [22]. During training, KNN does not learn a model. It simply saves the training data and utilizes it to generate predictions during testing. As a result, KNN is a relatively efficient method to train and use. KNN has symmetrical names.

(a) Memory-Based Reasoning
(b) Example-Based Reasoning
(c) Instance-Based Learning
(d) Case-Based Reasoning and
(e) Lazy Learning.

To assess any machine learning algorithm, we generally consider three critical aspects:

(1) Ease to interpret output
(2) Calculation time
(3) Predictive Power

KNN is found by using two techniques

(1) Equlidian Distance: Measures the ”straight-line” dis- tance between two points in a multi-dimensional space.

$$d_{\text{euclidean}}(x, y) = \sum_{i=1}^{\text{n}} (x_i - y_i)^2$$

(1) Manhattan Distance: Measures the sum of the absolute

differences between corresponding coordinates of two points.

$$d_{\text{manhattan}}\,(x, y) = \sum_{i=1}^{p} |x_i - y_i|$$

F. Gaussian Naive Bayes classifier

Using Bayes' Theorem as its foundation, naive Bayes classifiers are a group of classification algorithms. It's not just one algorithm; rather, it's a family of algorithms that are united by a single premise. Each set of traits being categorized is distinct from the others [23, 24]. In most real-world scenarios, the assumptions made by Naive Bayes are incorrect. The independence assumption is never true, even though it frequently functions effectively in real life. At this point, understanding the Bayes theorem is crucial. Bayes' Theorem [25].The Bayes Theorem calculates an event's

likelihood based on the likelihood of an earlier occurrence. The following equation represents Bayes' theorem mathematically:

$$P(C|X) = \frac{P(X|C) * P(C)}{P(X)}$$

where A and B are events and $P(B) \neq 0$.

- Basically, we are trying to find the probability of event A, given that event B is true. Event B is also termed as evidence.
- P(A) is the priori of A (the prior probability, i.e. Probability of event before evidence is seen). The evidence is an attribute value of an unknown instance(here, it is event B).
- $P(A|B)$ is a posteriori probability of B, i.e. probability of event after evidence is seen.

C. Decision tree classifier

For Decision trees classify and predict by using a tree structure where each node tests an attribute, branches represent outcomes, and leaves indicate class labels. The tree is built by recursively partitioning the data until further splitting is ineffective or all data points in a subset have the same label [26]. To classify an instance, you follow the tree from the root to a leaf, which provides the classification result.

H. Random Forest Classifier

Random Forest, An algorithm for supervised learning. An ensemble of decision trees that have typically been trained using the "bagging" technique makes up the "forest" it creates [27].

The bagging method's general tenet is that the total outcome is increased by combining many learning models [28]. The ability of Random Forest to handle both classification and regression problems—problems that comprise the bulk of existing machine learning systems—is one of its main advantages. Moreover, it withstands the overfitting that decision trees exhibit [29–31].

Random forests are based on the idea of ensemble learning, in which several models work together to provide better results. Instead of depending on a single tree, it builds many decision trees, each of which is trained using a different subset of the features and data. Every tree has a vote, and the average of all the projections or the majority vote determines the final prediction [32].

4 Experimental Dataset and Methodology

In the present study, a dataset used was NSL-KDD, it includes data on the digital fingerprint left. The data includes protocol types that are being used and outcomes. The analysis has been performed in the Kagle platform running on (an Intel i7

processor) with 8 GB RAM installed. The data set is taken as input for the feature extractor and classification algorithm. The datasets are passed through a sequence of pre-processing blocks [33].

The main tools that allowed us to work through all the phases of the machine learning process but the deployment were: Scikit-Learn v0.23.1, Tensorflow v2.1.0, Pandas v1.0.5, and Numpy v1.18.5. These supplied us with all the core functionality we needed for handling our dataset, modeling, and evaluating. However, we also made use of some complementary libraries. Concretely, for visualization, we employed Kaggle 1.5.16, and for the transformation of IP-related features, Netaddr v0.8.0.

(1) Different data in the current study singular data set has been used. This dataset was downloaded from the ML repository UCI.
(2) Pre-processing After the gathering of data, the next phase is to perform the preprocessing of the collected data. It is the technique that changes the raw data to an understandable format.
(3) Filtering after preprocessing of data next phase is to filter the data. Removing all the useless data to have a useful set of data.
(4) Normalization it is a stage in which all the values are changed to values between 0 and 1. The reason for standardization is to attract the information to an alternate scale
(5) ML algorithms after normalization, different algorithms were used such as PCA, and logistic regression. KNN, naive Bayes classifier, ANN, SVM, random forest clas- sifier, and decision tree.
(6) Validation In the validation10-fold cross-validation method is used. To create the training and testing sets, all normalized features are randomized before they can be used to train along algorithms PCA, and logistic regression. KNN, naive Bayes classifier, ANN, SVM, random forest classifier, and decision tree are evaluated for three nearest neighbors (k=3) with distance metric as Euclidean. The separation is computed between test information and every case of preparing information.

5 Results

Various criteria are to be considered to find the best algorithms among all the algorithms [34]. The best algorithm is determined by the particular job and the properties of the dataset. Think about the characteristics, goals, and type of data. Interpretability of the algorithms, Decision trees, and other algorithms makes it simpler to understand how decisions are made [35, 36]. This can be important in fields where it's critical to comprehend the assumptions that underlie forecasts. Computational Efficiency is also considered, Taking into account the amount of time and money needed for prediction and training [37]. For example, neural networks can require large amounts of processing [38]. Evaluate the possibility that algorithms may lose their capacity

to generalize after overfitting the training set. Methods like as cross-validation can assist in reducing this risk.

Result			
Classifier/Algorithm	Accuracy	Precesion	Recall
GaussianNaive Bayes classifier	91.80	92.62	89.47
Support Vector Machines	96.22	95.44	96.48
Neural Network	98.97	97.55	98.80
K-Nearest Neighbors	99.05	99.22	98.73
Decision tree classifier	99.99	100	99.98
Random Forest Classifier	99.99	99.98	99.99

The results according to the table were that Principal Component Analysis (PCA): obtained 99.99% recall, near- perfect accuracy, and precision for all measures. This implies remarkable efficacy in diminishing dimensionality and proficiently encapsulating data variation. Similarly impressively performing with 99.99% accuracy, 100% precision, and 99.98% recall is the Decision Tree Classifier. This suggests that it can create decision rules that correctly categorize data points. Random Forest Classifier: 99.99% accuracy, 99.98% precision, and 99.99% recall while maintaining a high degree of performance. Several decision trees are used in this ensemble approach to increase overall resilience.

Among others some of the strong contenders are Neural Network: Demonstrates excellent results with 98.97% accuracy, 97.55% precision, and 98.80% recall. This suggests its adeptness at learning complex patterns and making accurate predictions. K-Nearest Neighbors (KNN): Achieves impressive scores of 99.05% accuracy, 99.22% precision, and 98.73% recall. This indicates its effectiveness in classifying data based on proximity to known data points.

6 Discussion and Summary

Our online activities leave behind digital footprints that subtly reveal hidden information. Analyzing these traces can unlock powerful insights, with algorithms like Principal Component Analysis (PCA), Decision Trees, and Random Forests demonstrating exceptional accuracy, similar to a highly skilled Sherlock Holmes unraveling complexities. Neural Networks and K-Nearest Neighbors also shine with unique capabilities. However, this is just the beginning. The future promises new methods to enhance these techniques, from fine-tuning algorithms to developing specialized fingerprint features. Exploring ensemble methods and deep learning could offer even deeper insights into our digital lives. Remember, each digital trace left behind is being pieced together by machine learning detectives, unraveling the mysteries hidden in your online presence.

Technological Advances in the Legal Framework for Continuous Crimes

Lubna Ahmed Kreishan

Abstract This study examines the evolving legal mechanism governing the regulatory framework and penalties for continuing crimes and the role of technological advances in shaping the legal approach, classification, and prosecution and enforcement of continuing crimes. Continuing offenses are defined as offenses based on ongoing criminal activity where the offense is committed as a continuous act or course of conduct rather than as a single act. They often require a sophisticated monitoring and control mechanism due to their persistent nature. In this context, technological advances such as digital surveillance, data analysis and automated reporting systems have a role to play in effectively combating and prosecuting continuous crime. The study will demonstrate the legal framework governing the regulatory system and penalties imposed for such crimes, the role of technology and how technological tools are used to locate, track and identify criminals and crimes. The implications for the criminal regime and legal procedure, and more specifically how these technologies offer better ways of dealing with ongoing crime, will be discussed next.

Keywords Crimes · Continuous crimes · Criminal act · Criminal result

1 Introduction

The problems of continuities criminal activities are of great significance for the legal system, as they seriously hamper the work of judiciary and law enforcement agencies in identifying and fighting them. The aim of this research is to explain what continuous crimes are and how they affect society. In the course of it, we will deal with their legal foundation and formative elements, also classification along with the penalties attached to these crimes. Besides, it will be discussed what should be done legally for fighting against these crimes and that the role of government or public involvement should not be ignored.

Indeed, the legal framework for continuous crimes plays an essential role as it entails specifying the legal frameworks and procedures that should be in place to effectively fight and bring to book the people responsible for such types of crimes. The establishment of statutes that accurately address and respond to continuous crimes helps the judiciary to ensure fairness in its jurisdiction and guarantee protection of the rights of those affected by this kind of crime. Also, legislation contributes towards monitoring well continuous crimes so as to prevent their high numbers and consequently increase overall safety and stability of people.

2 Nature of Continuous Crimes

The types of crimes which are called 'continuous crimes' can be defined as such types of crimes that are performed and interconnected in a single system, i.e. a series of actions or negligence that form one whole crime, which is active for a certain period. Any of the acts or omissions during this period contributes to the formation of this particular crime. A distinct feature of these types of crimes is that they are determined by their permanent character caused by criminal behavior occurring over a long period of time, as opposed to transitory crimes which develop at the specific moment and are not likely to recur later on. Legal definition and regulation of these crimes are necessary to bring justice and deal with crime effectively.

2.1 Distinguishing Continuous Crimes from Others

Jordan has adopted the concept of continuous crimes, a product of its domestic legislation and related laws to this type of crime. In such cases, that is when a crime endures through time, it is regarded as an ongoing single criminal act that occurs over a duration of time. This kind of crime has been recognized by law [1]. Regarding ongoing offenses, relevant legal provisions involve statutes and legislation that pinpoint the criminal text for this kind of act and set the definite criminal sanctions that should be imposed. One crucial provision is the Jordanian Penal Code which has well-structured chapters addressing continuous crimes with each chapter detailing the legal procedure to be followed in case of its commission.

A continuing offense is a crime that is characterized by a wrongful act or omission such that it is capable of being maintained without regard to the length of time involved in its commission and does not require repeated criminal acts as an interventionist measure. An example of this type of crime would be the offense of hiding stolen goods, where the act of hiding commences at one particular moment and then time introduces itself, leading to the perpetuation of keeping them concealed throughout all subsequent time. The commission of a crime is not deemed to have ceased until time has passed and the perpetration state has concluded. The consummation of a crime is not over just with the act of concealing or possessing, after

the crime has already taken place because the quality of continuity is absent in the offense as an element but rather it is a characterizing trait of the behavior that makes up this offense. The intended continuance legally consists of two types:

1. In a continuous offense, the unlawful act continues to exist over a certain period without the need for a new intervention by the offender. For instance, this type of crime includes erecting a building against zoning laws without consent or even placing signs in areas where it is prohibited. In such circumstances, there are also immediate acts only once and remain an uninterrupted process for life with no additional act by the offender.
2. The renewed perpetration of a crime, which continues with the intervention of the offender in an organized and calculated manner aimed at maintaining the essential material elements of the crime. In this case, for instance, such crimes may be managing a café without registration and license or failing to report a birth or death incident within the legal deadline where the offender's volition retains mastery over them.

In penal law, criminal cases result from such ongoing offenses that combine the material and spiritual elements simultaneously and voluntarily, which determine an offense's quality whether it is time-limited or a continuing act. In continuing acts, both physical and mental elements coincide. This implies that the law is not satisfied with the existence of only the physical element but also there must be an intention on the part of the perpetrator to continue and achieve continuity. If these two elements do not happen concurrently as prescribed by law, and if continuity prevails only in the physical element itself, then we deal with a crime limited in time but yet having continuous effect rather than a continuing act. As a result, time is viewed as one of the most important factors in continuous crimes. After a while, these effects can change or deepen, and their impacts can become larger and have more destructive consequences not only on society but also on individuals. These types of crimes may eventually fade away or evolve into some other persistent form of criminal activity. Failure to timely identify and punish continuous crimes could result in an unending menace to society as well as further criminals' confidence that they would go scot-free for life. The perpetration of crimes can be divided into continuous crimes according to their type and if they are directed at the person or the property of the victim. Continuous crimes are violations of the law that require legal and punitive measures by the competent authorities as follows [2]:

- Physical Continuous Crimes: Continual criminal activities extend over months and can include situations where bodily harm is inflicted over long periods of time. Such crimes may be associated with persistent physical assault, torture, sexual abuse, or repeated damage to body parts. These offenses are unique due to their severe infringement of individual rights and perpetuation; they should therefore be categorized specifically and punished accordingly as their ongoing nature severely affects society.
- Financial Continuous Crimes: These are some ways that offenders use to defraud others and manipulate funds, which are done over a period of time. They may

include crimes like embezzlement, financial fraud, or even money laundering being performed in an ongoing process. These crimes have the suspect repeating them for some time, after they have been performed once before. As such, these crimes should be combated through immediate legal measures so that the offenders can be apprehended and prevented from causing further economic harm.

Some illustrative examples of continuous crimes include [3]:

- Ongoing Fraud: Perpetual delinquency is a specific criminal act that involves resorting to fraudulent and repetitive procedures aimed at controlling cash or wealth over a period of time. It can be through lies and false information that offenders deceive victims into trusting them and investing in lucrative ventures, yet eventually, they are defrauded of their savings. Persistent fraud is not easy to detect as it tends to take place over a longer duration. The outcomes of this felony are profound losses in terms of money on the part of victims as well as distrust, which affects their financial stability.
- Continuous Threat: Continuous threats pose another form of unending violation in which an individual remains constant in menacing and harassing the target for a significant duration. In this case, the offender relies on the fear factor by threatening physical or mental harm or exposing them to risks if they do not comply with his/her demands. Continuous threats can have a huge impact on the life of individuals, affecting their mental health; people can continue experiencing stress and fear indefinitely.
- Continuous Harassment: A form of criminal offense that is related to unending episodes of assault and harassment with no cessation is called continuous harassment. This would involve repeatedly terrorizing or annoying the victim with unwelcome physical acts such as inappropriate touching, sexual assault, or through vulgar language and constant threats. The attacker in this crime would continue to project continuous negative messages at the victim, ensuring he or she is humiliated, mistreated, and that a situation disrupting their daily living patterns is created. Victims of continuous harassment might suffer from serious psychological and emotional consequences which could adversely affect their personal and professional life as well.

2.2 Distinguishing Continuous Crimes from Others

Continuous crimes are criminal acts that continue over some period and involve the offender carrying out successive related actions. Time, act, and intent serve as common elements in these crimes. The crime ends when the offender ceases to commit it, and they often receive punishment for their activities after the completion of the entire crime. Instances of continuous crimes include ongoing scams or threats such as continuous defamation and persistent disturbance. However, transient crimes are single-point occurrences that revolve around specific actions perpetrated by a specific individual.

Some differences between temporary and continuous crimes are that they don't last over a long period of time and the punishments are immediate after the commitment. Examples of temporary crimes include theft, physical assault, and murder. These crimes differ in nature, prescribed penalties, as well as the possibility to stop them by others [4]:

In respect of the key components, both temporal crimes and continuous crimes consist of some elements. Continuous crimes are referred to as criminal activities that occur over a set period while temporary crimes involve criminal activities that occur at a given time or during a specific time frame. These types of crimes have many common key elements such as the temporal element, act element, and intent element [4].

- Temporal Element of the Crime: There is a temporal component that is vital to both continuous and sporadic crimes. In continuous crimes, the criminal activity carries on within a set time period and usually ends when it becomes detected or is halted by legal action. On the other hand, in sporadic crimes, the criminal action takes place at a certain time or shortly thereafter. However, in continuous crime, the temporal element is not just related to abstract time but also involves aspects of consistency and repetition of the act.
- Act Element: Both continuous crimes and temporary crimes share the same basic element called the act of crime. The act refers to the action or behavior that is committed as a part of the crime. In continuous crimes, this act is repetitive over some specific time and nonstop. On the other hand, in temporary crimes, it happens at a certain time, usually within a narrow temporal window. Consequently, both types of crime possess the act element which assists in their demarcation.
- Intent Element: The element of intent is a key component shared by both continuous crimes and single offenses. The intent element refers to the conscious choice or decision to engage in the criminal activity. Whether an offense is recurring or isolated, the offender will invariably have a fixed intent to execute the criminal act. The element of intent is seen as an essential element in establishing the proof for these two classes of crimes. The courts, through scrupulous evaluation of the legal intent, determine whether the act was a continuous one or done at a specific time that helps to arrive at the right classification of the crime.

One of the major distinctions between continuous crimes and temporary crimes is the nature of such crimes. Continuous crimes are those committed continuously over a stretch, whereas temporary crimes occur within a limited period. The typical continuous crimes vary, which are characterized by consistent frauds, threats, and harassment while the temporary ones include theft, physical assault, and murder. In assessing crime, the type of offense is deemed a significant factor in classifying crime as well as in understanding differences between a continuous crime and a temporary crime [5]:

- Nature of the Crime: Differentiation between continuous crimes and temporary crimes is based on the type of crime, which is a main difference between

them. Continuous crimes are committed over an extended period, while temporary crimes occur during specific periods. The nature of continuous crimes differs, and some examples may include relentless fraud, threats, and harassment, while temporary crimes may include theft, physical assault, and murder. In terms of how a crime is classified and the differences between continuous and temporary crimes, the nature of a crime is seen as one vital factor to be taken into consideration.

- Prescribed Penalty: Differences between continuous crimes and temporary crimes also depend on the prescribed penalty. In most cases, if a crime is defined as continuous, the legal punishment is likely to be severe and longer compared to temporary ones. This difference in punishment is well-founded because continuous crimes take place over a longer period of time and are committed more systematically, making them a larger threat to society in general, as well as having prolonged consequences for individual victims. Hence, the variation in the penalty imposed is one of the key factors that differentiate continuous crimes from temporary ones.
- Ability to Stop the Crime: The distinction between continuous and temporary crimes lies in the ease of halting the act. In continuous crimes, it might be hard to put an end to such crimes due to their incessant and unending nature. Conversely, for temporary offenses, law enforcement agents can easily terminate the criminal act as soon as a specific type of crime is over within a specific period. Thus, one of the key differences between continuous and temporary crimes lies in the ability to stop them.

Moreover, temporary and continuing crimes vary with regard to legal action imposed on the individuals responsible. Regarding continuous crimes, individuals might receive penalties of greater lengths as well as higher levels of intensity. For instance, someone who commits a continuous crime may be sentenced to several years or even life in prison depending on how severe the crime is and its sustained effects on society. For temporary offenses, the punishment mostly depends on individual circumstances of each criminal act and their effect on the victim. There are situations whereby the penalty might involve imprisonment, fines, or even monetary compensation for damage inflicted.

3 Legal Provisions Regarding Continuous Crimes

To fight crimes that are currently taking place, it is important to implement laws that can address these issues effectively and eventually put an end to their perpetration. These actions ought to encompass investigation with the aim of obtaining all the pertinent data required for establishing the commission of a present crime as well as recording it accurately. Moreover, proper measures need to be adopted so that prosecution and trial guarantee justice prevails and severe punishment is imposed on criminals in such circumstances. Following the ruling from the courts, it is also essential that penalties must be enforced swiftly and decisively which would certainly contribute towards eradicating such criminal activities from Jordan.

3.1 Legal Procedures for Continuous Crimes

1. Every place where the continuous activity is taking place is referred to as a location for a continuous crime. However, a continuous crime encompasses every location where it occurred, unlike temporary crimes which are confined to a single location.
2. The length or brevity of the duration of a continuous crime affects its legal status. The statute of limitations for a temporary crime begins from the day it was committed according to the Penal Code, whereas for a continuous crime, it starts from the last instance of the ongoing state.
3. Investigation and gathering of evidence during live incidents are amongst the most accurate, objective, and transparency demanding types of work. This should have the formulation of crime-specific units staffed by investigators experienced in this type of crime and who can carry out their duties quickly and effectively. All evidence and materials pertinent to the continuing crime must be documented accurately and fully such as witness statements, documents, technical reports, photographs, or videos. Finally, for a better outcome in collecting and analyzing evidence, it is important to use scientific, current techniques that ensure reliability and accuracy.
4. There are no existing legal proceedings in respect to the prosecution and trial of ongoing offenses which must be systematized and organized as per the rules. This starts from filing a suit and questioning witnesses and suspects. The availability of evidence must be established and legal arguments must be presented to prove that the crimes have been continuing and that the persons named in it are implicated in those crimes. The Prosecution Department and the Courts should ensure close cooperation for the rule of law's observance as well as fair administration of justice. In the framework of the specified legal norms, accused individuals should be given an opportunity to defend themselves and express their opinions. In turn, fairness and impartiality shall govern the conduct of a trial encompassing all relevant evidence and culminate in a just decision from a judge that determines an appropriate penalty for a continuous crime.
5. Following a criminal act, upon completion of the final court verdict to the offenses committed the proscribed penalties must be effectively and expeditiously implemented. The entities responsible for carrying out these punishments such as prisons and other relevant institutions should organize various practical measures to ensure this is possible such as where to house inmates and how to enforce penalty actions among others. It is paramount to guarantee a just and fair treatment of prisoners during their penalty term, respecting all their human rights. For the sake of welfare society has got its deserving part by putting convicts on rehabilitating track which becomes an effort from competent authorities who should apply punishment according to judicial decision and provide the right environment so that they can return to normal society after the term of the penalty comes to an end.

6. The role of technology as a tool in the process of evidence collection is particularly significant when dealing with criminal acts. Electronic devices, computers, smartphones, surveillance cameras, and other new-age technologies can be used to obtain and analyze information that is essential in gathering evidence. The use of technology also helps with physical evidence which provides strong proof towards achieving justice. Furthermore, through technology, the ability to track continuous crimes and identify patterns allows law enforcement agencies to apprehend culprits quickly. However, the implementation of technology needs special training for police officers as well as proper equipment to ensure the efficiency of the investigation.
7. In the investigation of continuous crimes, data and information analysis can be described as indispensable. It includes the study of patterns, connections, and trends related to the continuous crime. Data and information analysis start by establishing the criminality feasibility of a crime, determining its time, and finally understanding its objectives. Advanced forensic analysis implies the use of tools and cutting-edge technologies that help comprehend data. In order to conduct data and information analysis successfully one should possess strong analytical skills as well as proficiency in forensic analysis software and statistics. By using data and information analysis the investigation is more likely to be directed appropriately for precise results [6].
8. In the trial of continuous crimes, legal processes must be followed to guarantee that the trial continues and the perpetrator receives appropriate punishment. The court is assigned as the judicial body tasked with conducting the trial of continuous crimes, it oversees case administration, witnesses examination, and evidence presentation. The goal of a trial of continuous crimes is to make sure the judiciary comes to a fair conclusion on whether or not the crime is still taking place and, if there is proof that it has ceased already, will free the suspect. In this kind of crime, courts should handle them with great sensitivity and accuracy so as not to violate any rights and principles of justice [7].

The role of the court in the ongoing criminal trial is to monitor the course of the case and ensure that the proceedings are conducted fairly and lawfully. The court evaluates the evidence submitted and questions witnesses in order to establish whether or not a crime is still ongoing. Considering both evidence and witness testimony, if it can be established that a crime has terminated, then acquittal may be granted; if, however, it can be established that a crime persists, then an appropriate punishment may be imposed. The court plays a pivotal role in upholding justice and maintaining equilibrium between law and order when dealing with continuous crimes.

Presenting evidence and examining witnesses are vital aspects in the trial of continuing crimes. The parties involved have to put forward physical evidence and testimony showing that the crime is still happening. This will include supplying documents, recordings, and videos which bear on the current crime. Furthermore, persons who have seen or heard such a criminal act are capable of testifying in court

about it. By studying both the evidence and witnesses, the court can determine the status of the crime and whether it continues or has been discontinued.

3.2 Sanctions prescribed by law for continuous crimes

In this regard, it should be mentioned that a continuous crime does not have just a one-off criminal effect, but it can be realized in several points. The first point concerns the influence of such crimes on the sphere of criminal investigations. When a person commits a continuous crime, investigating it becomes quite challenging and prolonged. Detectives should track these offenses for weeks or months, conducting their ongoing research to accumulate evidence and collect information they need in order to find the criminal. This requires the use of specialized investigative resources and methods that are specifically targeted at addressing the nature of continuous crimes so as to make them detectable and identify the culprit with precision.

Impact of Continuous Crimes on Criminal Investigations

Long-term crimes are also critical in affecting criminal investigations. Apart from the complicities and continuing nature of the case, this means that additional resources have to be dedicated and more concerted efforts need to be made to monitor and track such crime and identify its offender. Similarly, these investigations may also need close collaboration and coordination with other institutions involved in the fields of security and justice. Additionally, the investigation of ongoing offenses demands advanced technologies involving highly specialized techniques in data collection and analysis. Investigators must also stay updated with current developments in forensic technology so as to use them properly, thereby increasing the productivity of investigations processes leading to the discovery of more crimes and identification of criminals.

Impact of Continuous Crimes on Penalties

Crimes that occur over an extended period of time may have an impact on the sentencing decision. In such cases, when a perpetrator is convicted of a continuous crime, the punishment is determined based on the duration and progression of the offense. Therefore, continuous crimes can result in more severe penalties being imposed on the offender. The court considers both how long and how deeply a criminal's activities are felt within society. This means that for continuous crimes, which go beyond offenses of a non-continuous kind, higher penalties could be established with a view to discouraging an offender and restoring justice through appropriate compensation according to their continuous nature [8].

The prescribed penalties for continuous crimes in Jordan consist of both criminal penalties and financial penalties. Criminal penalties are designed to punish and deter the perpetration of continuous crimes, where an individual is sentenced with a penalty specific to their offense upon conviction based on the applicable criminal laws in Jordan. On the other hand, financial penalties are part of the prescribed punishment for continuous crimes whereby the offender is required to pay a fine determined as per the rules laid down in Jordan's legal system.

Criminal Penalties

In Jordan, the criminal punishments imposed for crimes in a series are severe and strict, aimed to prevent and deter offenders. Some of the penalties that can be given include suspension of the guilty person for some time or being imprisoned for a period determined by how serious and frequent the offense is, accompanied by fines and other penalties. These are enforced as per laws on criminal law and prosecution in the legal system in Jordan [9].

Financial Penalties

In Jordan, it is common to impose fines as one of the statutory penalties for persistent offenses, which consist of the payment of a fine, determined on the basis of laws in force in the country. Financial penalties seek to discipline and dissuade criminals from the continuation of repetitive crimes; they equally work as instruments of repayment to restore the social harm brought about by such criminal acts. The financial penalties are executed by competent bodies using legal procedures and instructions set by Jordan [10].

Rehabilitation and Reintegration in Cases of Continuous Crimes

In cases when offenses are committed on an ongoing basis, it is necessary to apply not only punishment measures but also rehabilitation and reintegration activities. These latter ones have a goal to influence the offender's behavior so that he/she could start again being a part of society and lead a productive life. Rehabilitation measures may include offering therapy and psychological assistance to criminals that will contribute to quitting the criminal activity. Criminals can also be given educational and training opportunities as these would help them to improve their chances of getting a job after they are released from prison. By providing support for reentry, the goals of rehabilitation and reintegration are decreased recidivism rates and better futures for offenders [11].

With the help of security and legal authorities, prevention of further continuous crimes is the most crucial stage of this process to minimize their repatriation and proliferation. In particular, the security forces should ensure protection and safety in the community by intensifying security presence and consistently following laws. In turn, legal authorities need to be involved in identifying continuous crimes as well as prosecuting criminals. Collaboration should be based on close cooperation between security and legal authorities and constant exchange of information about continuous crimes to enable effective prevention measures.

The prevention of sustained crime relies on security and legal authorities as a part of their role in society. Security authorities contribute to public safety by increasing presence and upholding the law strictly. Intelligence operations help establish patterns of crime, focus efforts towards detection, and prioritize law enforcement intervention. Conversely, the legal authorities actively fight against criminals by instituting judicial processes that ensure punishments and justice are served. All these agencies need to work together with an objective understanding of their roles and responsibilities to achieve common goals in preventing continued crimes.

In respect of international regulation, cooperation between different countries is considered an essential measure against continuous crimes. It is recommended for governments to extend their cooperation with other countries in the areas of

exchange of information and experience, agreements signature, and implementation. Such cooperation may involve mutual training of judges and prosecutors on dealing with continuous crimes and exchange of legal and technological expertise. Additionally, it is imperative that international meetings and conferences be organized to exchange ideas, challenges, and successful experiences in combating continuous crimes. Through strengthening international collaboration, effective strategies can be devised to face these crimes and achieve justice at the global level.

4 Conclusion

A continuous crime is an organized and established offense recognized under the penal law of Jordan. It is a type of crime that involves an act that persists over a period of time regardless of its duration and requires repeated acts from the offender's intention to maintain the state of continuation after he/she has already committed it. The main difference between temporary crime and continuous crime relates to the manner in which the material act establishing the offense is conceived by law, whether the act is positive or negative, commission or omission. Continuous crime refers to those cases in which the criminal state is still persisting over time, whereas temporary is the one that occurs and ends with the act. In this case, the criteria of continuity are determined by repeated and renewed involvement of the criminal's intention with no consideration for either preparatory periods leading up to the commission of an act or subsequent periods in which its effects continue.

4.1 Results and Recommendations

Based on the study's findings, it can be suggested that several findings and recommendations were offered to improve the legal control system of continuous crimes in Jordan. One of them is raising the level of legal awareness among individuals and communities on this type of crime and its legal repercussions. Promoting this information and heightening people's understanding about the significance of reporting as well as collaborating with security agencies for containing these crimes would be quite essential. Another one should be better developing criminal policies regarding continuous crimes, which implies strict legislations and justice when applying punishment against offenders. As far as the enhancement of transnational continuous crime control is concerned, the issue of international collaboration and sharing ideas as well as information with other countries to combat such crimes should be paid attention to. In conclusion, research implies that investigation and evidence-gathering units should be strengthened and all suspects found out should undergo immediate trial after necessary procedural guarantees are provided; for instance, such as the right to a fair trial and defense. Such findings, which have been obtained from a careful scrutiny of reasons given in this article and supported

by legal materials concerning crimes, may contribute significantly to the prevention of these sorts of violations in the future.

A Cross-Linguistic Investigation of Consonant and Vowel Distinctive Features: A Comparative Analysis between English and Arabic Sounds

Wafa Abu Hatab, Wala'a Abuzir and Mohammed Al-Badawi

Abstract This research conducted a comprehensive comparative analysis of distinctive features in vowels and consonants within the phonological systems of English and Arabic. The study explored the key phonetic elements, including length, stress, and tone in vowels, and the variations in manner of articulation across consonants. By using Jakobsson features of system pattern of English for the distinctive features. This study revealed that, English vowels, length serves as a secondary feature influencing vowel quality, with stressed vowels typically longer than unstressed ones. In Arabic, vowel length emerges as a critical distinctive feature, contributing to changes in word meaning. English consonant exhibited diverse manners of articulation, including stops, fricatives, affricates, nasals, and approximants, with variations in place of articulation. In contrast, Arabic consonants encompass stops, fricatives, nasals, and approximants.

1 Introduction

The phonological structures of Arabic and English languages, comprising consonant and vowels, play a role in shaping the spoken language. English language stand in contrast to Arabic languages. The contrast of these languages' phonologies lead to an exploration into the distinctive features that characterize their consonant and vowels. To investigate the features of each language sounds, it is essential to consider the system of distinctive features, a theoretical framework by the linguist Roman Jakobson. In the mid-20th century, Jakobson model has been developed, by providing a systematic way to categorize speech sounds based on binary opposition, speech sounds parameters such as, voicing, place and manner of articulation and others come into the distinctive features of sounds. Applying this framework for phonological analysis allow a comprehensive exploration of the distinctive features within English and Arabic languages [1].

Chapman and Routledge [2], defined the distinctive features as the "smallest units of linguistic structure, from which larger units are built, sometimes seen as the attributes by which phoneme can differ." The basic component as mentioned in their book, first to express how segments contrast with each other. Second, what group of segments formally have in common, thirdly, to model what changes in phonological processes. Finally, in the formulation of constraints in optimality theory [3].

Chomsky and Halle [4] redefined features using principally articulatory definitions, and used them in phonological rules, setting the scene for standard generative phonology.

1.1 Aim of the study

The primary purpose of this study is to conduct a comprehensive cross-linguistic analysis of the distinctive feature in the consonant and vowel system of English and Arabic. In this study the researcher seeks to unravel the features of these two languages according to the Jakobson theory of SPE system of distinctive features. The aim of the study will be reflected in the research questions below:

1. How do distinctive features such as length, stress, and tone manifest in English and Arabic vowels?
2. How do distinctive features related to manner of articulation vary across the consonant systems of English and Arabic languages?

1.2 Significance of the study

This study is significant because it investigates the distinct between Arabic and English sounds. It aims to show the difference between the features of consonant and vowel sounds. Moreover, it is significant to the manner features and prosodic features.

2 Literature reviews

This section should include previous studies related to our topic, under the distinctive features of phonology, but because the researcher did not find any paper related to this topic, she mentioned general research papers studied phonology in different topics.

A study by Al-Mazrouei et al. [5] explored the vowel system of Qatari Arabic, focusing on the acoustical cues of three long and three short monophthongs. The investigation delves into the qualitative differences between long and short vowels, specifically examining the influence of tenseness/laxness on vowels situated in peripheral/non-peripheral tracks within the vowel space. The data, collected from 21 speakers, analyzes acoustic parameters such as F1, F2, and duration across four phonetic contexts: labial, alveolar, uvular, and pharyngeal. The results unveil significant disparities between long and short vowels, positioning long vowels at the periphery of the vowel space, while short vowels exhibit a tendency towards more centralized positions. Additionally, the co-articulatory effect of preceding consonants is highlighted, with short vowels showing a more pronounced influence. Short high vowels /i u/ demonstrate a lowering towards the mid position, short low /a/ experiences fronting, and long low /aː/ undergoes retraction and elevation [6].

Lee and Jongman [7] investigated the three-way laryngeal contrast between voiceless stops in Seoul and South Kyungsang Korean dialects in terms of both acoustic and aerodynamic properties. They recruited 16 Korean-speaking males, half of whom spoke the Seoul dialect and half the Kyungsang dialect, and measured VOT, vowel onset f0, H1-H2, air pressure, and air flow. The influence of the presence or absence of lexical pitch accent on the acoustic and aerodynamic features of these stops was investigated. Their findings show that while Seoul speakers rely on a combination of f0 and VOT to signal the three-way contrast of Korean stops, Kyungsang speakers appear to rely primarily on VOT. Moreover, the presence of lexical pitch accent makes f0 an unreliable acoustic cue for distinguishing the three Korean sounds among Kyungsang speakers. Dialectal differences in VOT as a cue for three-way contrast reflect a transitional hypothesis, as VOT differences between lenis and aspirated stops in Seoul Korean have reportedly become less pronounced over the past 50 years [8].

3 Theoretical framework

Prague school of linguistics refers to a movement that originated in Prague. This movement particularly through the work of Roman Jakobson, had an influence on the development of phonology. Jakobson, a key figure in the Prague school, made a significant contribution to the phonological structure, by introducing the concept of distinctive features. Jakobson proposed a set of binary features that distinguish one phoneme from another. Each feature includes parameters like voicing, place of articulation, manner of articulation, and nasality. [9], mentioned that Jakobson approach was Typological, that concerned with the classification of the sound

systems of different languages to show the way phoneme inventories organized. In addition, Katamba mentioned that there are two aspects of, first Markedness and second, Binarism.

There is seven major classes, but this research will focus on two of them:

- Cavity features, Katamba mentioned that "Cavity features refer to the place of articulation**,** where in the vocal tract the air stream modified." Cavity features consists of four features represented as the following:
- **Coronal-non-coronal:** as mentioned on Katamba book page.44, to produce coronal sounds the blade of the tongue is raised to the front teeth, the alveolar ridge, or the hard palate. While in the non-coronal consonant the blade of the tongue remains in a neutral position.
- **Anterior-non-anterior:** sounds considered anterior, once they are produced with the primary construction which occurring towards the front part of the vocal tract. Which means where the tonne tongue moves towards the front of the mouth. By contrast the non-anterior sounds are produced without the primary construction that occurring towards the front part of the vocal track it.
- **Labial-non-labial:** sounds. Are produced with. The involvement of the lips. Non-labial sounds are those produced without direct involvement of the lips.
- **Distributed-non-distributed:** The term "distributed" refers to sounds where the constriction or articulation is spread over a larger area of the vocal tract. Non-distributed sounds are those where the constriction or articulation is localized to a specific part of the vocal tract, rather than being spread.

4 Methodology

This research aimed to explore the distinctive features of consonant and vowels in Arabic and English languages. The methodology section compresses two sections: data collection, and data analysis.

4.1 Data collection

The researcher collected divers corpus of words in English and Arabic languages. These words come under a specific sound of each language to facilitate the analysis and comparative between both languages. The data have been collected from different sources such as dictionaries. In addition, the researcher transcribed the data and listened the way native speaker pronounces the word depending on their accent.

4.2 Data analysis

In this research the researcher analyzed the data qualitatively by applying Jakobson distinctive features framework, each phoneme has been analyzed systematically based on manner features for consonant sounds and prosodic features for vowel sounds. Qualitative analyses reveal the distribution of distinctive features in both languages.

5 Results

5.1 English vowels

1. Vowel length:

Short vowel: "bit" /bɪt/

"ship" /ʃɪp/ "hop" /hɒp/ "cut" /kʌt/ "pet" /pɛt/

Long vowel: "beat" /biːt/

"sheep" /ʃiːp/ "hope" /hoʊp/ "coot" /kuːt/ "peat" /piːt/

2. Stress

Stressed vowel: "HÓr-rible" /ˈhɒr.ɪ.bl̩/

"REsearch" /rɪˈsɜːrtʃ/ "BLACKbird" /ˈblækˌbɜːrd/ "pick UP" /pɪk ʌp/ "unHAPPY" /ʌnˈhæpi/

Unstressed: "li-BRÁ-ry" /ˈlaɪ.brər.i/

"sofa" /ˈsəʊ.fə/ "candy" /ˈkændi/ "happen" /ˈhæp.ən/ "machine" /məˈʃiːn/

3. Tone:

English language uses pitch for intonation rather than lexical tone.

4. Rising intonation

"Are you coming to the party?" intonation raised at the end.

5. Falling intonation

"I will see you at the meeting." Here the falling intonation at the end indicated statements.

6. Pitch

"He did not say red, he said blue." The pitch emphasized on "red" and "blue" showed contrast between the colors.

5.2 English consonant

1. Coronal-Noncoronal

- Coronal

"time" - [taɪm] - The "t" is a coronal (alveolar) stop.
"dad" - [dæd] - The "d" is another example of a coronal (alveolar) stop.

- Noncoronal:

"cat" - [kæt] - The "c" (pronounced as /k/) is a noncoronal (velar) stop.
"queen" - [kwiːn] - The "q" (pronounced as /kw/) is a noncoronal (velar) stop.
"judge" - [dʒʌdʒ] - The "j" is a noncoronal (palato-alveolar) affricate.

2. Anterior-Nonanterior

Anterior:

"time" - [taɪm] - The "t" is an anterior (alveolar) stop.
"think" - [θɪŋk] - The "θ" is another example of an anterior (interdental) fricative.

Nonanterior:

"cat" - [kæt] - The "c" (pronounced as /k/) is a nonanterior (velar) stop.
"hope" - [hoʊp] - The "h" is a nonanterior (glottal) fricative.
"judge" - [dʒʌdʒ] - The "j" is a nonanterior (palato-alveolar) affricate.

3. Labial-Nonlabial:

Labial:

"bat" - [bæt] - The "b" is a labial (bilabial) stop.
"pencil" - [ˈpɛnsəl] - The "p" is another example of a labial (bilabial) stop.
"mop" - [mɑp] - The "m" is a labial (bilabial) nasal.
"vase" - [veɪs] - The "v" is a labial (labiodental) fricative.
"whale" - [weɪl] - The "w" is a labial (bilabial) approximant.

Nonlabial:

"cat" - [kæt] - The "c" (pronounced as /k/) is a nonlabial (velar) stop.

"think" - [θɪŋk] - The "th" is a nonlabial (interdental) fricative.

"dog" - [dɔg] - The "d" is a nonlabial (alveolar) stop.

"singer" - [ˈsɪŋgər] - The "s" is a nonlabial (alveolar) fricative.

"jazz" - [dʒæz] - The "j" is a nonlabial (palato-alveolar) affricate.

4. Distributed-Nondistributed

- Distributed

"sip" - [sɪp] - The "s" is a distributed (alveolar) fricative.

"measure" - [ˈmɛʒər] - The "ʒ" is a distributed (postalveolar) fricative.

"shoe" - [ʃu] - The "sh" is a distributed (postalveolar) fricative.

"sin" - [sɪn] - The "s" is a distributed (alveolar) fricative.

"ledge" - [lɛdʒ] - The "dʒ" is a distributed (postalveolar) affricate.

- Nondistributed

"hat" - [hæt] - The "h" is a nondistributed (glottal) fricative.

"hot" - [hɑt] - The "h" is a nondistributed (glottal) fricative.

"kick" - [kɪk] - The "k" is a nondistributed (velar) stop.

"loch" - [lɑx] - The "x" is a nondistributed (uvular) fricative.

"cat" - [kæt] - The "k" is a nondistributed (velar) stop.

5.3 Arabic vowels

1. Vowel length

Short Vowel:	"كَتَبَ"	(kataba)	- "he wrote"
Long Vowel	: "كَاتِب"	(kātib)	- "writer"

The lengthening of the vowel in the second example changes the word's meaning.

Short Vowel:	"شَمْس"	(shams)	- "sun"
Long Vowel:	"شِمَال"	(shimāl)	- "north"

Vowel length distinguishes between these two Arabic words.

Short Vowel:	"قِرْد"	(qird)	- "monkey"
Long Vowel:	"قَرَد"	(qarad)	- "ridiculous"

Vowel length contributes to the phonemic contrast.

Short Vowel:	"بَيْت"	(bayt)	- "house"
Long Vowel:	"بَات"	(bāt)	- "he spent the night"

The lengthening of the vowel changes the word's meaning.

Short Vowel:	"دِفْتَر"	(diftar)	- "notebook"
Long Vowel:	"دَفْتَر"	(daftar)	- "register"

Vowel length is distinctive in these two Arabic words.

2. Stress

"مَلِك"	(malik)	- "king"
"كِتَاب"	(kitāb)	- "book"
"قَرْد"	(qird)	- "monkey"
"يُكَتِبُ"	(yukatibu)	- "he writes"
"غَيْر"	(ghayr)	- "other"

3. Unstressed

دَرَسَ	(darasa)	- "he studied"
شِمَس	(shams)	- "sun"
كُتُب	(kutub)	- "books"
بُستَان	(bustān)	- "garden"
مِصْر	(Miṣr)	- "Egypt"

4. Tone

Tone in Arabic show as:

a (Fatha): Pronounced as [æ], as in "كَتَبَ" (kataba) - "he wrote."

i (Kasra): Pronounced as [i], as in "شِمَس" (shams) - "sun."

u (Damma): Pronounced as [u], as in "بُستَان" (bustan) - "garden."

The previous three sounds referred to short Arabic sounds.

ā (Long A): Pronounced as [a:], as in "كِتَّاب" (kitaab) - "book."

ī (Long I): Pronounced as [i:], as in "مِصْر" (Miṣr) - "Egypt."

ū (Long U): Pronounced as [u:], as in "بُستَان" (bustān) - "garden."

Finally, these three sounds refer to long Arabic vowel sounds.

5.4 Arabic consonant

1. Coronal-Noncoronal

- Coronal:

"تمر" (tamr) - [tamr] - The "ت" (taa) is a coronal (alveolar) stop.

"دم" (dam) - [dam] - The "د" (daal) is another example of a coronal (alveolar) stop.

- Noncoronal:

"كتاب" (kitaab) - [kita:b] - The "ك" (kaaf) is a noncoronal (velar) stop.

"قلب" (qalb) - [qalb] - The "ق" (qaaf) is a noncoronal (uvular) stop.

"جمل" (jamal) - [ʒamal] - The "ج" (jeem) is a noncoronal (palato-alveolar) affricate.

2. Anterior-Nonanterior

- Anterior

"تمر" (tamr) - [tamr] - The "ت" (taa) is an anterior (alveolar) stop.

"ثلاثة" (thalaathah) - [θala:θa] - The "ث" (thaa) is another example of an anterior (interdental) fricative.

- Nonanterior:

"كتاب" (kitaab) - [kita:b] - The "ك" (kaaf) is a nonanterior (velar) stop.
"خارج" (kharij) - [χari:dʒ] - The "خ" (khaa) is a nonanterior (uvular) fricative.
"جمل" (jamal) - [ʒamal] - The "ج" (jeem) is a nonanterior (palato-alveolar) affricate.

- Labial-Nonlabial:
  - Labial:

"باب" (baab) - [ba:b] - The "ب" (baa) is a labial (bilabial) stop.
"وقت" (waqt) - [waqt] - The "و" (waaw) is another example of a labial (bilabial) approximant.

- Nonlabial

"تمر" (tamr) - [tamr] - The "ت" (taa) is a nonlabial (alveolar) stop.
"ثلاثة" (thalaathah) - [θala:θa] - The "ث" (thaa) is a nonlabial (interdental) fricative.
"خارج" (kharij) - [χari:dʒ] - The "خ" (khaa) is a nonlabial (uvular) fricative.

3. Distributed-Nondistributed

- Distributed

(Alveolar): "سلام" (salaam)—"peace"
The "س" (seen) represents a distributed (alveolar) fricative.
(Postalveolar): "شجرة" (shajarah)—"tree"
The "ش" (sheen) represents a distributed (postalveolar) fricative.
سماء" (samaa)—"sky"
The "س" (seen) represents a distributed (alveolar) fricative.
(Postalveolar): "شمس" (shams)—"sun"
The "ش" (sheen) represents a distributed (postalveolar) fricative.

- Nondistributed

"كتاب" (kitaab)—"book"
The "ك" (kaaf) represents a nondistributed (velar) stop.
(Uvular): "قلب" (qalb)—"heart"
The "ق" (qaaf) represents a nondistributed (uvular) stop.
"كلمة" (kalimah)—"word"

The "ك" (kaaf) represents a nondistributed (velar) stop.

(Uvular): "قهوة" (qahwah)—"coffee"

The "ق" (qaaf) represents a nondistributed (uvular) stop.

6 Discussion

1. How do distinctive features such as length, stress, and tone manifest in English and Arabic vowels?

The distinctive features of English language are attributed to the various aspects of vowels, which include length, stress, and tone. Unlike languages like Arabic, English does not necessarily depend on vowel duration to communicate lexical meaning. In English, vowel length varies depending on surrounding sounds and stress, but it usually plays a supporting role in word recognition [10–12]. In contrast, stress is an important component of English rhythm. English is a stress-timed language, meaning that stressed syllables appear at regular intervals and have a regular rhythm. Reduced unstressed vowels frequently become more centered and prominent, like the schwa sound /ə/. Interestingly, there is no tonal system in English, therefore vowel pitch changes have no unique connotations.

The phonological system of Arabic is greatly influenced by the unique characteristics of its vowels, such as length, stress, and tone. In Arabic, vowel length is very significant since the difference between short and long vowels can alter a word's meaning. For example, there is a vowel length variation between "كِتَاب" (kitāb—book) and "كِيتَاب" (kītāb—my book). In Arabic, syllable timing is observed, and stress is less noticeable than in English. Syllable structure and vowel length influence stress patterns, suggesting that stress plays a less significant role in identifying word meanings. Arabic lacks tonality, just like English. Arabic relies on vowel length and quality to convey meaning, not pitch fluctuations, which are ineffective for word differentiation. Overall, Arabic's unique vowel characteristics add to the language's linguistic complexity and subtle semantics.

In conclusion, although Arabic and English both use vowels, their applications and meanings are different phonologically. English prioritizes stress for rhythmic patterns, whereas Arabic stresses vowel length more as a crucial component of word distinction. Neither language uses tone in the traditional sense of a tonal language; instead, phonemic differences are made using other elements [13–15].

2. How do distinctive features related to manner of articulation vary across the consonant systems of English and Arabic languages?

The phonological features of Arabic and English are influenced by the different patterns that each language reveals in the area of articulation. In English,

distinguishing between consonants is mostly dependent on articulation style. Numerous ways, such as stops, fricatives, affricates, nasals, and approximants, define the English consonant system. Stops, like /p/, /t/, and /k/, involve closing the vocal tract completely, which temporarily blocks airflow. When airflow is partially impeded, fricatives such as /f/, /s/, and /ʃ/ occur, producing a tumultuous noise. Fricatives and stops are combined in affricates, such /ʧ/ and /ʦ/. Next are noses (/m/ /n/ /ŋ/), which use the nasal passage in their articulation and allow air to flow through the nose. Finally, approximations (/l//ɹ/) involve greater taper than slots but less taper than stops.

Unlike Arabic, the consonant system of Arabic has some unique features in place of articulation. In Arabic, a consonant system similar to English in terms of articulation includes stops, fricatives, nasals and approximate. Consonants include /b/, /t/, /q/ etc. Arabic stops are similar to English stops in terms of articulation, except that they may differ in place of articulation. Fricatives in Arabic include /f/, /s/ and /x/. English does not have /x/, which is a uvular, voiceless uvular. The Arabic consonant system has a unique set of emphatic consonants (/tˤ/, /dˤ/, /sˤ/, /ðˤ/, /zˤ/) in terms of its manner of articulation because it has a constriction of the throat. In addition to hyphens and fricatives, the Arabic consonant system contains certain pharyngeal sounds, including /ħ/ and /ʕ/, representing pharyngeal fricatives in voiceless and voiced forms.

7 Conclusion

To sum up, this research work reviews the differentiation of English and Arabic speech sounds according to Jakobson's theory. The researcher specifies how the data was analyzed in only two characteristics; in two main class features and prosodic features. Future research in the field of phonology could be applied by using more features in two or more English and Arabic languages to show how they differ from each other phonemes.

Distinguishing Between Treasury Stock and Redeemable Shares in Technology Firms: A Legal and Legislative Analysis

Yasar Alhiniti and Dina Aljabari

Abstract The objective of this study is to shed light on the distinctions between treasury stock and redeemable shares in the context of company law, with a focus on the legal, financial, and digital aspects. It examines the similarities and differences in the processes of a company repurchasing its own shares (treasury stock) and redeeming shares, and analyzes the impact of these processes on shareholders and the company's financial position. The study reveals that both processes are exceptional and have significant implications for shareholders, as they involve their exit from the company and affect their financial standing. However, there are notable disparities between the two processes, including the governing laws and regulations, the mechanisms employed, and the impact on shareholder rights. Furthermore, the study explores the role of digital technologies and platforms in facilitating these processes, such as electronic share management systems and digital transaction records. It delves into relevant regulations, such as stock purchase instructions and redeemable shares instructions, and evaluates their effectiveness in safeguarding shareholder rights and ensuring fairness and transparency. The study also provides recommendations for enhancing these regulations and incorporating digital tools to promote company continuity and fairness among shareholders. In conclusion, a comprehensive understanding of the disparities between treasury stock and redeemable shares, coupled with the proper implementation of regulations and digital technologies, contributes to transparency, protection of shareholder rights, and achieving financial equilibrium for companies.

Keywords Treasury stock · Redeemable shares · Company law · Stock purchase instructions · Technology firms · Digital share management · Electronic transactions · Shareholders · Financial impact · Legal frameworks

1 Introduction

Under Article 68(e)(m) of the Companies Law, the Jordanian legislator has authorized private joint-stock companies to repurchase shares that they had previously issued. This provision allows private joint-stock companies to buy back their paid-up and subscribed shares, as long as their articles of association explicitly state this right [1].

The process of repurchasing shares by a company is similar to the process of redeeming shares. When shares are repurchased, they are known as "treasury stock," while shares obtained through redemption are referred to as "redeemable shares." In the Companies Law of Jordan, there is no clear distinction between these two processes, causing confusion in practice. However, the issuance of the Redeemable Shares Instructions for Private Joint-Stock Companies in 2020 introduced regulations to differentiate between repurchasing and redeeming shares. Nevertheless, Article 4(w) of these instructions allows companies to hold on to redeemed shares without specifying the duration, method, or fate of these shares after the holding period, if any [2]. This raises the following questions:

- Does the lack of a specified retention period for redeemed shares affect the company's continuity? Could it harm minority shareholders?
- Was the Jordanian legislator correct in not requiring the company to establish a special fund for redeemed shares? Should these shares be recorded as treasury stock?

In order to address these inquiries, it is essential to provide a clear understanding of treasury stock and differentiate them from redeemable shares, both of which will be thoroughly examined in the initial and subsequent sections of this chapter.

1.1 Study Objectives

This study aims to achieve the following objectives:

- Identify similarities and differences between own shares and exchangeable shares from the point of view of company law.
- Research the financial and administrative implications of share repurchases and redemptions for the company and shareholders.
- Assess the adequacy of the relevant regulations regarding treasury stock and redeemable shares and identify any gaps and weaknesses.
- Provide recommendations to improve the legislative and regulatory framework to protect shareholder rights and increase fairness and transparency in share repurchase and redemption processes.
- Explain the legal and financial implications for shareholders of share repurchases and redemptions.

- Analyze the practical applications and procedures used by companies when repurchasing and redeeming shares and assess their compliance with applicable regulations.
- Increase understanding among companies and investors of the differences between treasury stock and redeemable shares and the importance of following legal procedures to ensure continuity and transparency of financial operations.

1.2 Study Methodology

To thoroughly examine the topic at hand, the study employs a method of comparative analysis. This involves scrutinizing various regulations pertaining to treasury stock and redeemable shares, including the Companies Law, the 2014 Stock Purchase Instructions, and the 2020 Redeemable Shares Instructions. By delving into these legal texts and regulatory decisions, the study aims to identify both the similarities and differences between these two processes. The focus lies on evaluating the financial and legal implications for both the company and its shareholders. In addition to this, the study draws upon existing legal and financial literature to gain insights into how these regulations are implemented in real-world scenarios. Based on the findings, the study puts forth recommendations for enhancing and refining the current legal frameworks. The ultimate goal is to safeguard shareholder rights and promote fairness and transparency in share repurchase and redemption procedures.

2 Concept of Treasury stock

Both public and private joint-stock companies in Jordan have been granted the authority to repurchase their previously issued shares, as addressed by the Jordanian legislator. However, specific regulations regarding the repurchase of "treasury stock" by public joint-stock companies have been established in the 2014 Treasury stock Instructions [3]. It is important to note that these instructions do not apply to the repurchase of shares by private joint-stock companies, unless these companies have listed their shares for trading on the financial market. The listing of shares for trading requires approval from the Securities Commission, in accordance with the conditions and instructions set forth by the commission. If approval is granted for the listing of private joint-stock company shares on the financial market, the repurchase of issued shares by these companies will be subject to the 2014 Treasury stock Instructions, as stated in Article 89(a)(m) of the Companies Law [4–9].

According to the 2014 Treasury stock Instructions in Article 2(a), treasury stock are officially defined by the Jordanian legislator as shares that are initially issued by the company and subsequently repurchased by the same company through the market. An alternative definition provided by certain legal scholars describes treasury stock as

shares acquired by the company, which are not canceled but rather held for potential future sale [10].

According to the researcher, treasury stock are defined as shares that shareholders subscribe to, but the company repurchases and holds in its own name. The purpose behind this repurchasing is to achieve the company's objectives and goals. One possible reason for issuing these treasury stock is to grant them to employees as an incentive to increase productivity and foster loyalty. However, when employees leave the company, the shares are repurchased since their original purpose no longer applies. Another objective of repurchasing shares is to prevent outsiders from becoming shareholders. If a shareholder wants to sell their shares to an outsider, the company may buy them back to maintain control. Additionally, repurchasing shares can be done to reduce profit distribution by decreasing the number of shareholders, as treasury stock do not receive dividends. These are just a few examples of the various goals that a company can achieve through repurchasing its issued shares [11–16].

The preservation of capital stability is of utmost importance, except in the case of a company repurchasing its own shares. During this process, it is crucial that the company does not tamper with its capital. As mentioned earlier, capital serves as the sole assurance for creditors. Furthermore, the legislator has granted permission for private joint-stock companies to repurchase solely the shares they have previously issued, excluding any other securities like bonds [4, 17]. Article 68(e)(m) explicitly limits the company's right to repurchase to shares alone, excluding any other securities issued by the company.

Private joint-stock companies follow a different process for repurchasing shares compared to public joint-stock companies. Unlike public companies, private companies do not need to adhere to the 2014 Treasury stock Instructions since their shares are not traded on the financial market. Instead, private companies can repurchase shares by obtaining a resolution from the extraordinary general assembly, as long as their articles of association grant them the right to do so. Once repurchased, these shares are recorded as treasury stock in the company's name, effectively removing the shareholder while keeping the capital unchanged [19–23].

According to the researcher, it is essential for the Jordanian legislator to clearly mention in Article 68(e)(m) that a company cannot buy back its issued shares unless they are listed on the financial market. This requirement ensures that the 2014 Treasury stock Instructions are applicable, which outline a series of regulations that must be followed during the share repurchase procedure.

It is crucial to implement and enforce controls regarding the company's repurchase of shares, specifically the non-voting treasury stock. The significance of these controls stems from the fact that treasury stock lack the ability to participate in voting or decision-making during general assemblies, which safeguards against any potential negative impact on minority shareholders by preventing their influence on company decisions. This reinforces the need to establish and maintain strict adherence to these controls [24–27].

The legal regulation of a company repurchasing its issued shares is of utmost importance as it has the potential to negatively impact the company, its shareholders, and creditors [28]. Recognizing the significance and potential risks involved, the

2014 Treasury stock Instructions established specific conditions and procedures to ensure that the process is conducted in accordance with the law.

2.1 General Conditions for a Company's Repurchase of Its Shares

2.1.1 Adherence to the Principle of Capital Stability

According to Article 4(b) [3, 29] of the 2014 Treasury stock Instructions, any shares repurchased by a company must be funded using retained earnings and optional reserves. This funding should not impact the company's capital, and the mandatory reserves (legal reserves) must remain untouched to ensure the security of creditors and maintain capital stability. It is important to note that Article 15 [3, 30] of these instructions provides an exemption for companies seeking to repurchase shares for the purpose of reducing their capital, allowing them to bypass the conditions outlined in the instructions. Therefore, the company has the option to finance the repurchase of treasury stock using a portion of its capital or mandatory reserves specifically for capital reduction [31].

2.1.2 Not Compelling Shareholders to Sell Their Shares

As per the 2014 Treasury stock Instructions [3, 32], specifically Article 5(a)(1), it is a fundamental principle of public order that shareholders have the right to retain their position within the company. This signifies that a shareholder cannot be compelled to exit the company through the repurchase of their shares without their explicit consent. The repurchase of shares necessitates the endorsement of the extraordinary general assembly [33].

2.1.3 Observing the Principle of Equality Among Shareholders

In order to maintain fairness and prevent any form of bias towards individual shareholders, Article 6 of the 2014 Treasury stock Instructions [3, 34] stipulates that the repurchase of company shares must be conducted exclusively through the financial market, with private transactions being strictly prohibited. Private transactions, which involve direct negotiations between the company and individual shareholders, can result in disparate compensation amounts for different shareholders. This creates the potential for preferential treatment, undermining the fundamental principle of equality among shareholders [35].

2.2 Formal Conditions for a Company's Repurchase of Its Shares

2.2.1 Issuance of a Purchase Decision by the Company

In accordance with Article 3 of the 2014 Treasury stock Instructions [3, 36], the board of directors of the company is required to make a decision and propose to the general assembly the repurchase of its issued shares. Subsequently, the extraordinary general assembly must approve this recommendation. The Securities Commission must be promptly notified of this decision, no later than the start of the next working day's trading session.

2.2.2 The Company Must Not Be Indebted Through Bonds

As per the guidelines outlined in Article 4(c) of the 2014 Treasury stock Instructions [3, 37], any company seeking to buy back its own shares must not have any outstanding bonds. In the event that the company does have bonds, it is presented with two alternatives: either repay the bonds or seek approval from an extraordinary general assembly to convert the bonds into shares. Furthermore, it is strictly prohibited for the company to fund the share repurchase through borrowing.

2.2.3 The Number of Shares to Be Repurchased Must Not Exceed 10% of the Total Issued Shares

To maintain the company's stability, ensure fair treatment of shareholders, protect minority shareholders from undue influence, and safeguard the interests of creditors, it is necessary to adhere to the guidelines outlined in Article 4(a) of the 2014 Treasury stock Instructions [3, 38]. These instructions stipulate that the repurchase of a company's shares should not exceed 10% of the total issued shares. It would be advisable for the Jordanian legislator to introduce regulations specifically addressing share repurchases by private joint-stock companies or to require these companies to incorporate the conditions and procedures outlined in the 2014 Treasury stock Instructions into their contracts and bylaws. By doing so, the company can ensure compliance with these guidelines when repurchasing its issued shares.

3 Distinguishing Treasury Stock from Redeemable Shares

To differentiate between a company's repurchase of its own shares and the redemption of shares by the company, it is crucial to analyze and understand the similarities and differences between treasury stock and redeemable shares.

Similarities between the Company's Repurchase of Its Shares (Treasury stock) and the Redemption of Shares (Redeemable Shares)

1. **Exceptional Transactions**: Both share repurchase and share redemption are exceptional transactions.
2. **Application to Company Shares**: Both processes apply to the company's shares during their lifecycle.
3. **Impact on Shareholder Status**: Both processes affect the shareholder's status by causing their exit from the company.
4. **Funding Sources**: The funding for these transactions is derived from profits and reserves, excluding capital or mandatory reserves. However, it should be noted that there is an exception when it comes to funding share redemption from capital, which is subject to certain conditions and limitations.

Fundamental Differences between the Company's Repurchase of Its Shares (Treasury Stock) and the Redemption of Shares (Redeemable Shares)

1. In the Companies Law of Jordan, Article (68/Repeated) contains two distinct paragraphs, (b) and (h), which address different aspects of share transactions. The legislator intentionally separates these processes into separate paragraphs to emphasize their individuality and to clarify that one process is not a variation of the other [39].
2. The guidelines for a company purchasing its own shares, referred to as "treasury stock," are mainly dictated by the Treasury stock Purchase Instructions established in 2014. On the other hand, the instructions for redeeming shares are outlined in the Redeemable Shares Instructions for Private Joint Stock Companies introduced in 2020.
3. According to the Treasury stock Purchase Instructions of 2014 [40], shareholders are not obligated to sell their shares when a company purchases its own shares. This process can only take place with the consent of the shareholder and the approval of the extraordinary general assembly [41]. In contrast, the redemption of shares, as outlined in the Redeemable Shares Instructions for Private Joint Stock Companies of 2020, can be initiated by the company, the shareholder, or under specific conditions stated in the company's bylaws [3, 42]. The authority to approve the redemption lies with either the general assembly or the board of directors [43]. Therefore, unlike share repurchases, the redemption process is not discretionary and is carried out in accordance with the company's bylaws as specified in these instructions.
4. When a company buys back its own shares, the shareholder is effectively removed from the company and the ownership of the shares is transferred to the company, resulting in "treasury stock." On the other hand, when shares are redeemed, the impact on the shareholder can go one of two ways: either the shareholder exits the company, which is the usual outcome, or the shareholder remains within the company, which is an exception. This exceptional scenario occurs when the company redeems the shares and, as part of the redemption process, may issue enjoyment shares to the shareholder whose shares were

redeemed [44]. As per Article (68/A/D/Repeated) of the Companies Law, the company has the unrestricted and absolute authority to issue different types and classes of shares [39, 45].

5. For a company to repurchase its issued shares, it must reach an agreed-upon purchase price with the shareholder. Conversely, the redemption of shares may or may not involve payment, depending on the provisions outlined in the company's bylaws. The company's bylaws must clearly define the method of calculating this payment and the manner in which it will be made, leaving no room for uncertainty [39].

   - In this regard, is there a specific limit or cap for the redemption payment? What are the consequences of not having such a limit?

   Based on the researcher's interpretation of Article (4/b) of the Treasury stock Purchase Instructions of 2014 [40], the company's allocation for the purchase of its own shares must not surpass the retained earnings, achieved profits, and other reserves, excluding mandatory reserves. Adjustments for issue discounts and negative fair value adjustments on financial assets included in other comprehensive income should also be taken into account. It is crucial to note that there is a limit or cap imposed on the acquisition of treasury stock, which must not be exceeded. However, the 2020 Redemption Shares Instructions for Private Shareholding Companies [41] do not specify a specific limit or cap for the redemption payment in cash. This poses a significant risk as it allows the company to redeem redeemable shares at a cash amount determined solely by the company, without considering the interests of the shareholders. Such a practice could potentially harm shareholders who have invested in redeemable shares. For instance, if a company redeems 10,000 redeemable shares for 1,000 dinars, it would violate the principles of fairness and partnership, which are fundamental to the concept of a company as outlined in Article (582) of the Jordanian Civil Code [3, 42].
6. According to the Treasury stock Purchase Instructions of 2014 [3, 43], when a company chooses to repurchase its own shares, it should do so at the market value of the shares. Ideally, this repurchase would take place through the financial market. On the contrary, the redemption of shares does not involve the financial market. Instead, shareholders directly redeem the value of their shares from the company. The redemption can be done at face value or at the agreed value stated in the company's bylaws for the redeemed shares [3, 44].
7. When a company repurchases its own shares, the shares are transferred from the shareholder to the company and are referred to as "treasury stock." These shares do not possess the entitlement to receive dividends that are distributed by the company to its shareholders. Additionally, they are not allowed to participate or vote in the company's general assembly meetings, nor are they eligible for representation on the board of directors, as stated in Article (8) of the Treasury stock Purchase Instructions of 2014 [2, 45]. However, there is an exception to this rule. If the redemption of shares does not result in the shareholder severing ties with the company, then this shareholder will retain the rights outlined in the

company's bylaws. This includes the ability to receive dividends and partake in and vote at the company's general assembly meetings [3, 39, 46].

8. When a company engages in the repurchase of its own shares, it must ensure fairness to all shareholders by acquiring the shares through the financial market, as previously mentioned. Transactions with individual shareholders are strictly prohibited, as outlined in Article (6/d) of the Treasury stock Purchase Instructions of 2014 [47]. On the other hand, when it comes to share redemption, a private shareholding company has the discretion to issue redeemable shares to certain shareholders while excluding others. Shareholders who choose to redeem their shares receive compensation during the company's ongoing operations, while the remaining shareholders can only receive compensation for their shares upon the company's dissolution, specifically during the liquidation process. Consequently, there exists an inherent inequality between redeeming shareholders and other shareholders [35, 48].
9. According to Article (4/a) of the Treasury stock Purchase Instructions of 2014 [49], it is imperative for a company to ensure that the quantity of shares it plans to repurchase does not surpass 10% of the subscribed shares. Conversely, the Redemption Shares Instructions for Private Shareholding Companies of 2020 [5] do not establish any specific cap on the proportion of redeemable shares in relation to the total shares of the company.
10. As stated in Article (4/b) of the 2014 Treasury stock Purchase Instructions [6], a company can utilize retained earnings, achieved profits, and other reserves (excluding mandatory reserves) as sources of funding for purchasing its own shares. In the case of redemption, the funding can come from the balance of distributable profits, optional reserves, redemption reserves, and issue premium. If these sources are depleted, the company may resort to obtaining funding from its capital, as previously mentioned [7].
11. After a company repurchases its own shares, they are referred to as "treasury stock" and are held by the company. However, in accordance with Article (9) of the Treasury stock Purchase Instructions of 2014, the company is required to retain these shares for a minimum of six months from the date of purchase, but no longer than eighteen months from that same date [46]. The company is obligated to sell the treasury stock within the timeframe specified in Article (9) of the instructions. If the company fails to sell the treasury stock, it must dispose of them by either reducing the capital with the remaining treasury stock or distributing them to the company's shareholders. The procedures and conditions for this disposal are outlined in Article (13) of the same instructions. In the event that the company wishes to extend the holding period, it must seek approval from the Securities Commission.

According to Article (4/w) of the 2020 Redemption Shares Instructions for Private Shareholding Companies [8], the company's bylaws must address what happens to shares after redemption. This can include reissuing and selling them, canceling them and reducing the company's capital, or retaining them. However, these instructions do not specify how long the company should retain the redeemed shares or what

should be done with them after that period, if there is one. The researcher suggests that the legislator should have established a timeframe for holding onto redeemed shares and provided guidance on what to do with them once that period ends, as outlined in the Treasury stock Purchase Instructions of 2014. This would ensure the company's continuity.

4 Conclusion

In terms of their legal and financial implications for the company and its shareholders, the study found notable distinctions between the procedures involved in a company repurchasing its own shares (treasury stock) and the redemption of redeemable shares. The study highlighted the importance of enhancing Jordanian legislation pertaining to both treasury stock and redeemable shares to prevent any overlap and safeguard the rights of shareholders.

4.1 Results

The study reached the following results:

- The laws clearly differentiate between treasury stock and redeemable shares, highlighting the distinct financial and legal implications associated with each type.
- When shares are repurchased, it results in the shareholder permanently exiting the company, while the shareholder whose shares are redeemed may still have the opportunity to remain within the company, provided certain conditions are met.
- When it comes to financing the procedures of repurchasing shares and redeeming them, there are distinct differences between the two methods. The former relies on retained earnings and reserves, whereas the latter can be funded through capital in exceptional circumstances.
- While the buyback of shares is conducted at market value, the redemption of shares can be executed either at face value or at a value that is mutually agreed upon as per the company's bylaws.

4.2 Recommendations

Based on the results obtained, the study recommends the following:

- Develop Jordanian legislation specifying the length of time a company should retain redeemed shares and clarifying their fate after that period.

- Create a special fund for redeemed shares to avoid confusion between treasury stock and shares subject to repurchase.
- Set clear limits and caps on redemption payments to protect shareholder rights and ensure fair dealings with all shareholders.
- Encourage companies to increase the transparency of share repurchase and redemption processes by fully disclosing the conditions and procedures associated with these operations.

The Impact of Learning Platforms Technologies on Student Motivation and Engagement: A Psychological Perspective

Adnan Hassan Alsarayreh

Abstract The merger of learning platform technologies with education has metamorphosed the typical learning situation, and this can be vividly seen in the time of Covid-19 where digital platforms were more than just necessary. This paper explores the psychological dimensions through which technology affects student motivation and engagement, providing an in-depth analysis from the perspective of Self-determination Theory. The research is steered towards intrinsic motivation as a fundamental determinant for students' self-driven involvement and sustained interest in educational activities and how the trait is affected by using digital learning platforms. Taking a qualitative research approach, the current study undertakes a systematic literature review on how different components of Self-determination Theory—such as autonomy, competence, relatedness—affect or are related to student engagement within virtual learning environments. It reflects that digital platforms create a significant impact on students' perceptions regarding their experiences throughout the learning process in terms of its meaningfulness and manageability, discussion drawn from studies among Indonesian EFL learners. Moreover, the research identifies patterns and themes that only serve to underscore the entanglement between learning technologies and such psychological variables as motivation and engagement. The findings stress that a well-informed analysis of such interactions—more particularly in regard to diverse student demographics in terms of age and academic performance—is what is really needed. It recommended areas for further research, implying that ongoing exploration into the psychological impacts of educational platforms will be important for fine-tuning educational practices to improve student outcomes in a digital world.

Keywords Student motivation · Student engagement · Psychological perspective · Digital learning · E-learning technologies · Virtual classrooms · Covid-19 pandemic

1 Introduction

This essay's introduction regarding the effects of learning platform technologies on student motivation and engagement offers a crucial overview of the topic's significance while aiming to engage the reader's attention. It acts as a guide for the following sections, outlining the primary themes that will be discussed. The exploration will focus on students' intrinsic motivation when utilizing digital learning platforms, especially during the Covid-19 pandemic, and how e-learning technologies and remote classrooms enhance student engagement. To analyze the autonomy, competence, and sense of belonging that affect student involvement in virtual learning, the framework of Self-determination Theory will be utilized [1, 2].

The notion of intrinsic motivation will be considered within Self-determination Theory which underlines the importance of autonomy, enjoyment, and meaningful participation in learning activities. The impact of digital education platforms during the pandemic has a considerable effect on perceptual students as well as efficacy in learning and productivity in language, as evidenced by the positive perceptions of Indonesian EFL learners.

1.1 Background and Rationale

The development of learning platform technologies over time has psychological implications for student motivation and engagement [3, 4]. In the Self-determination Theory, it is stated that intrinsic motivation is important for student participation in digital learning platforms. In the research study related to the use of these platforms during the pandemic period, it was found that intrinsic motivation itself, as an independent variable together with autonomy and enjoyment, contributed to increased engagement and satisfaction of learners in a second language [1]. Similarly, another study based on Self-determination Theory on student engagement in virtual learning considered that e-learning technologies and remote classrooms can increase student motivation by providing competence as well as belonging autonomy gleaned from [2].

The results draw attention to the need for an understanding of historical context and rationale on which grounds technologies of the learning platform affect motivation and engagement of students, thus providing valued perspectives on changes landscapes of EdTech and their psychological implications.

1.2 Research Aim and Objectives

The study seeks to investigate the impact of learning platform technologies on student motivation and engagement from a psychological perspective and, thereby,

set specific research objectives during the primary aim to probe how such technologies would influence student behavior, cognitive development, and learning styles as well as their overall commitment within the educational process. The main idea that these will convey is a clear description of how the learning platforms affect student motivation and engagement, which is what is being done by setting specific research objectives.

Warren's study on behavioral objectives highlights the need for telling the students what they are going to learn explicitly so as to enhance their performance and engagement [2]. The research emphasizes that instructional objectives are vital in delineating measurable learning outcomes and, as a result, effective teaching. Consistent with this view, the present study is an attempt to investigate how educational platforms can effectively communicate instructional objectives to have positive effects on student motivation and involvement.

1.3 Methodology

This chapter "The Impact of Learning Platforms Technologies on Student Motivation and Engagement: A Psychological Perspective" is qualitative in nature and aims at an in-depth analysis of how various learning platform technologies affect student motivation and engagement. Adopting a descriptive approach, the present study carries out a systematic review of the available literature to provide an understanding regarding research already undertaken in this field. Through the analysis of patterns and themes ascertained within the literature, the study applies itself to an analytical approach for the critical examination and synthesis of findings. This aids in generating informed insights and discussions about psychological impacts due to learning platforms on student behavior, hence adding some minor details that have not been brought to light regarding technology in education for the enhancement of student engagement.

2 Understanding Student Motivation and Engagement

Both motivation and engagement of students constitute very important basic elements in the learning process, especially within digital learning platforms. One of the major issues that stimulate active participation in learning is intrinsic motivation. Autonomy, competence and relatedness are described in the Self-determination Theory as factors of intrinsic motivation: as mentioned by [2], it involves autonomy, competence, and relatedness as outlined in the SDT resulting from the performance itself, ongoing involvement for its own sake. The SDT framework underlines autonomy, competence and relatedness as sources to boost student engagement [5]. This theoretical basis provides valuable insights into psychological aspects that

influence the motivation of students and continuous involvement during an educational journey; thus, it sheds light on ways technologies on learning platforms impact student engagement and productivity.

2.1 Theoretical Frameworks

Student motivation and engagement within learning platform technologies are key to theoretical frames. An enlightening framework is the Self-Determination Theory concerning the factors that initiate learner participation in e-setting education. The SDT emphasizes the importance of autonomy, belongingness, and competence for stimulating student involvement, as cited in [6]. Such a model helps educators and researchers understand the impact that e-learning technologies and remote classrooms have on student motivation and engagement, thus shaping the development and implementation of effective learning platforms.

One more key theoretical foundation is the concept of psychological capital, originating from positive psychology. The positive relationship between psychological capital and academic performance is reviewed by [7], underlining its importance in building engagement of students in their learning. Understanding these theoretical frameworks is important in the relationships between student motivation, engagement, and learning technologies of the platform.

2.2 Key Concepts and Definitions

In the analysis of how e-learning platform technologies impact student motivation and engagement, the core concepts and constructs under study must be clarified. Psychological capital as a concept arising from positive psychology that describes an individual's positive developmental psychological state has proven to positively correlate with student engagement in learning, thus contributing to increased academic performance in blended learning environments []. Furthermore, it is both intrinsic and extrinsic motivation that act as notable factors known to correlate positively with the outcomes of learning; intrinsic motivation, however, plays a major role in influencing blended learning settings. According to Self-Determination Theory (SDT), students' engagement in virtual learning is related to the three fundamental needs when they learn: competence, belongingness and autonomy, all of which are influenced by the application of technologies in e-learning and remote classrooms [8].

These concepts and definitions lay the groundwork for grasping the psychological elements of student motivation and engagement, highlighting the factors affected by the utilization of learning platform technologies.

3 Learning Platforms Technologies

Technologies for learning platforms comprise a diverse array of systems and tools employed in educational environments to facilitate student learning. This category includes mobile handheld devices, virtual learning environments, and educational games, all specifically crafted to engage and inspire students throughout their educational journey. For example, educational games are structured to present learning content through the most engaging aspects of gameplay, in line with motivational frameworks like Eccles and Wigfield's Expectancy-Value theory and the Self-Determination theory. Furthermore, the incorporation of technology in language learning courses has been shown to foster task-based instruction, social interaction, and active learning, which collectively enhance student motivation and involvement [9].

The significance of these technologies lies in their ability to offer extrinsic motivation that can ignite students' intrinsic motivation, a concept highlighted by Bruner's focus on the necessity of structure and motivation within the learning process. Educators can effectively utilize these learning platform technologies by recognizing their motivational affordances, thereby boosting student engagement and motivation in educational environments.

3.1 Types and Features

Digital learning platforms consist of a broad spectrum of technologies that support different forms of education—online, classroom, and blended learning. These platforms can be represented by Learning Management Systems (LMS), Learning Content Management Systems (LCMS), virtual classroom applications, or Virtual Learning Environments (VLE) [9]. For example, in a study concerning second language learners during the time of the pandemic of Covid-19, digital learning platforms featured tools like Canva and Google Drawing for creative tasks, Google Docs for writing and editing work, and the LinkedIn social network for career development and professional practice in terms of job opportunities. Therefore, peer interaction based on these platforms may enhance autonomy as well as engagement feelings among students since faith has been reported on how much they got involved with saw themselves learn virtually [10].

These platforms play a big part in building students' motivation that comes from within and psychological needs by increasing students' feelings of how capable they are, that they belong and their autonomy. The perceptions students have about their competence, feelings of belonging and sense of autonomy are shaped by different factors with the availability of academic support, acceptance from peers plus teachers and the ability to take control over own learning.

3.2 Advantages and Limitations

In educational environments, technologies designed for learning platforms present numerous benefits. They serve as an efficient method for students to engage in enriched thinking, research, and presentation [11]. Computer-Mediated Communication (CMC) acts as a facilitator in education, incorporating interpretive, interpersonal, and presentational modes, which fosters a social interaction language environment among peers and aids learners in knowledge construction. Additionally, integrating technology into language learning settings has been shown to boost student motivation and excitement, shifting the focus from traditional teacher-centered classrooms to more learner-centered approaches.

It is essential to acknowledge the constraints associated with learning platform technologies. Although digital learning platforms have demonstrated a positive effect on student engagement and motivation, especially during the Covid-19 pandemic [12], it is vital to understand that intrinsic motivation—key for ongoing engagement—is shaped by multiple factors, including age and academic performance in the subject. Consequently, while technology can boost motivation and productivity, educators must remain aware of the complex nature of student motivation and the possible shortcomings of technology in comprehensively addressing all dimensions of motivation and engagement within educational environments.

4 The Interplay Between Technology and Psychology

The relationship between technology and psychology within education is complex, involving various cognitive and behavioral influences on learners. Research conducted by Brayshaw and Gordon highlights the motivational elements inherent in gaming dynamics that have the potential to enhance student engagement in learning activities [12]. This study examines how game players perceive their experiences, the motivational framework employed by game designers, the significance of social interactions, and psychological theories related to motivation. Utilizing Self-Determination Theory, the research informs the design of interactions and dialogues by concentrating on both intrinsic and extrinsic motivation sources, learner ownership of their education, self-autonomy, and the communal aspect of learning. Furthermore, it was underscored by [13] the influence of digital educational games on students' motivation to learn, pointing out the mediating role of learning engagement and the moderating influence of the digital environment. The engaging and challenging characteristics of digital games promote student involvement, motivating them to dedicate time and effort to problem-solving and completing tasks, which ultimately results in increased motivation and a sustained active approach to learning.

These research efforts highlight the importance of technology in influencing student motivation and engagement, providing valuable perspectives on how motivational theories can be applied in the educational environment [14].

4.1 Cognitive and Behavioral Effects

The games encourage positive learning support by providing a virtual environment that is interesting to the students and increases engagement in educational tasks with the opportunity to address or solve problems. These digital educational games are very engaging and meaningful due to their immersive and interactive nature—such as role-playing, problem-solving, collaboration—and they make learners really feel involved. In addition, these games give feedback instantaneously from the actions or performance of students based on understanding progress so that learners can realize meaningfully created workable plans for strategies of improving them all times. Emotional responses elicited by digital educational games help further boost participants' sense of engagement, which activates more effort into information processing; this makes them even more motivated to learn.

These findings reveal the effects of digital educational games on students' cognitive and behavioral dimensions, underlining the importance of interactive and immersive learning experiences in increasing student motivation and engagement [14].

4.2 Motivational Theories

Motivation and engagement of students in technology-mediated learning environments are major issues in the field of educational psychology. Numerous motivational theories have contributed to research on the Self-Determination Theory (SDT). It was recognized by [15] that three basic needs for active student participation in the teaching-learning process within an autonomy support climate: autonomy, relatedness, and competence. This makes a critical contribution by providing perspectives on how educators can motivate students to take part in collaborative online learning and how e-learning technologies and remote classrooms can foster student involvement from an SDT perspective. On the other hand, Behaviorist Theory models show that motivation is significantly affected by the presence of digital surroundings which act as moderators as well as through mediating effects played via different dimensions belonging under engagement level where educational games come significantly impact students' motivation, initiative interest with skills thus driving sustained engaged actively during their learning journey [15]

5 Implications for Educational Practice

The convergence of psychological factors and e-learning platforms has big implications for educational practices. Pedagogical strategies can, by focusing on intrinsic motivation and interest in learning, use technology to increase student motivation

and involvement. Intrinsic motivation, according to Self-determination Theory, is the type of drive that leads an individual to engage in an activity purely because of interest, enjoyment, or satisfaction felt within [15]. For example, digital educational games play a crucial role in creating a favorable learning environment for students and also getting them more engaged in the learning process [16]. They generate a virtual context that attracts students toward learning and increases their participation in educational tasks while providing instant feedback plus inducing favorable emotional responses—hence boosting commitment to the activity with features designed to provide immediate rewards and create positive emotional experiences while maintaining engagement.

5.1 Pedagogical Strategies

In using technology-based learning platforms, be it virtual or not, involving pedagogical strategies is quite important for the enhancement of student motivation and engagement. According to [16], one has to communicate with instructors and peers, use relevant learning resources, incorporate interactive activities, and create social bonds between learners and instructors to ensure that adopted approaches work effectively in improving learner engagement within synchronous online learning settings. The contribution of the research conducted by [17] underscores instructional designs related to the Self-Determination Theory (SDT) framework that emphasize competence, belongingness, and autonomy. This provides a valuable way of understanding how e-learning technologies can drive student engagement in remote classrooms to give implementers useful strategies for enhancing student motivation and involvement through proper pedagogical methods.

5.2 Professional Development

The professional development is key in providing educators with necessary skills and knowledge to engage with learning platform technologies effectively. Edmodo, acknowledged as a social learning network platform, is a resourceful tool for enhancing the professional development of teachers that have the option of accessing it at any time and from any device. For those working in English as a Foreign Language (EFL) classrooms, technology-driven professional development programs seek to improve classroom management for these teachers while maintaining a positive attitude toward ongoing training [18]. Technology has been considered very useful in the field of education since it helps educators create more meaningful learning experiences for all students; this, in turn, helps to improve the quality of teaching English and other subjects. In summation, ongoing professional development and training is what helps bring about optimal integration of technology within

educational practices which will eventually lead to enhanced student motivation and engagement [19].

6 Challenges and Future Directions

The merger of learning platform technologies is a complex problem and future work toward integration that needs to be shared from both the ethical and technological dimensions. Effective blended learning integration requires explicit pedagogical planning to ensure a complement of online instruction with any face-to-face (F2F) teaching and that they are also fn1_seamlessly interconnected [19]. The transition also shift from the old methods fn2_involves ways of teaching towards integrating new online instructional components that must be carefully considered and fully re-evaluated through the redesigning process. This underlines the importance for technology to be integrated into the pedagogical framework where meaningful learning activities play a major role in this integration between both F2F and online components [19]. Besides, it is important to take into account motivations rigorously when applying theories in designing educational technologies [19]. They call for integrating well-established motivational theories such as Eccles and Wigfield's Expectancy-Value Theory and Self-Determination Theory in informing the development of virtual learning environments. Such an approach will ensure that how educational technology is designed helps to elicit student interest and motivation, especially in such field as Science, Technology, Engineering, and Mathematics (STEM) With continual developments within the edtech landscape it is imperative to consider these theoretical underpinnings with the motivational opportunities new technologies afford to address challenges which would impact future pathways in student engagement and motivation.

6.1 Ethical Considerations

The use of learning platform technologies in educational contexts is very important and needs to be based on ethical considerations. To address the ethical dilemmas and concerns that may arise, leading to possible negative implications, it is important that these tools are used responsibly and thoughtfully. As mentioned by [20], professional organizations need to balance various interests involved in choosing or developing educational technologies while also safeguarding educational purposes. This underscores the need for a substantial shift toward a culture of professionalism within the edtech industry to handle its ethical dimensions properly. In addition, taking into account quality assurance and best practices in international distance education will help solve ethical issues, primarily through ensuring accessibility and reducing associated risks with emerging technologies.

As noted by [20], intrinsic motivation is a cornerstone of digital learning platforms. The importance of understanding the intrinsic motivation of students was redoubled during the Coronavirus disease 2019 (Covid-19) pandemic, so as to highlight ethical implications of using technology for enhancing motivation and engagement in educational contexts. This research underscores that autonomy, enjoyment, and fulfillment of learners should be taken into account when using digital learning platforms—thus shedding light on ethics related to the promotion of intrinsic motivation in educational technology applications.

6.2 Emerging Technologies

The rise of new technologies in the teaching environment is revolutionizing education and holds great promise to increase student motivation and involvement. In the context of such innovations as e-learning platforms and remote classroom technologies, the possibilities for reshaping learning experiences are feasible. It was explored by [20] how e-learning and remote classroom technology can drive student engagement. It was revealed from their findings that among other factors competence, relatedness, autonomy has a significant impact on students' engagement in models of online learning; this is in line with Self-determination Theory (SDT) framework. Moreover, another important factor is the impact of technology integration into education on student motivation which was found to be very favorable especially for language learning courses [21]. The research proved that there is a relationship between technology use and student motivation; therefore, it can be thought that applying technology within language teaching methodologies will help foster students' interest [22].

The above observations underscore the potential of new technologies in increasing student motivation and engagement, thereby offering significant insights for future developments in the sphere of educational technology.

7 Conclusion

In other words, the effect of learning platform technologies on student motivation and engagement is a complex issue from the psychological perspective. This chapter presents the intricate interplay of psychological factors that act upon motivation and engagement of students in relation to learning platform technologies; it underscores the need for more empirical studies to further understand these relationships and their implications for educational practices. Indeed, insight into intrinsic motivation in digital learning environments, which is contingent upon factors such as age and academic performance, could greatly help improve student engagement as well as academic achievements. The recommendations for future research serve as a stimulant for more exploration and investigation into the dynamic relationship between

learning platform technologies and student motivation and engagement from the psychological perspective. The identified potential areas that require further study and advancement will contribute to an enhanced comprehension of how learning platforms influence student motivation and engagement.

Protection of Geographical Indications in the Digital Transformation Era: A Comparative Legal Study of International Legislation

Omar Al Makhzoumi and Salma Fathy Abdel Qader Abdel Halim

Abstract Within a comparative legal framework, this study aims to evaluate the influence of geographical indications on safeguarding local products and enhancing their quality and safety. The focus is on how technology can reinforce this protection. The examination delves into the role of geographical indications in upholding the rights of local producers and bolstering their competitiveness. Furthermore, it explores how digital transformation and modern technologies, such as blockchain and artificial intelligence, can contribute to and enhance the safeguarding of these indications. The study also addresses the legal and legislative obstacles associated with implementing geographical indications in the digital realm. Multiple legal frameworks are reviewed and compared to international standards. Utilizing an analytical and critical approach, the study emphasizes the necessity of improving legislation concerning geographical indications to ensure comprehensive and effective protection in the digital environment, benefiting both producers and consumers. The study concludes that there is an immediate need to develop legal frameworks that enhance the efficacy of geographical indication protection in the context of digital transformation. Additionally, raising awareness among producers and consumers about the significance of these indications is crucial. The study recommends strengthening international cooperation and providing additional support for research and development in this field to improve protection effectiveness and enhance the economic competitiveness of local products in the digital market.

1 Introduction

In the realm of commerce, geographical indications (GIs) play a vital role as a form of intellectual property, commonly associated with agricultural goods. However, their significance extends beyond just agriculture, impacting various sectors of industry and economy. Article 21 of the TRIPS Agreement (Trade-Related Aspects of Intellectual Property Rights) acknowledges the importance of GIs. These indications have long been recognized as traditional components of industrial property, initially referred to as "indications of source" and "appellations of origin" or "certificates of origin" under the Paris Convention of 1883. They serve as rights that designate the origin of both industrial and agricultural products.

The momentum to enhance safeguards for geographical indications persisted after the Paris Convention, exemplified by the enactment of the Madrid Agreement for the Prevention of False or Misleading Indications of Source and the Lisbon Agreement for the Protection of Appellations of Origin and their International Registration (1958). These advancements reached their pinnacle with the incorporation of geographical indications into the TRIPS Agreement.

Broadly speaking, a geographical indication is a symbol affixed to a product that signifies its exceptional quality or esteemed reputation associated with a particular source. This source, which is typically a specific geographic location, establishes the product's distinctive attributes, reputation, and excellence. Examples of such indications include names like "Karak Jameed," "Nablus Soap," "Aleppo Pistachio," or "Jarash Labneh," which serve as markers of the strong link between the product and its geographical origin.

Although geographical indications are typically associated with agricultural goods, their application has broadened to encompass other industries. The purpose of utilizing a geographical indication is to emphasize distinct characteristics of a product that can be attributed to various factors, which will be thoroughly explored in the research. It is important to mention that the Geographical Indications Law No. 8 of 2000 was implemented by the Jordanian legislature, and this legislation will also be analyzed in the study.

1.1 Study Objectives

This study aims to achieve the following objectives:

- Establish clear and specific criteria to distinguish geographical indications from other elements of industrial property, such as trademarks and trade names, in order to understand the nature of each and the differences between them.
- Determine who has the rights to the GI—whether it is the state or individuals, and explain the conditions for granting the GI, registration and appeals procedures.

- Assess the adequacy of Jordan's legislation on the regulation of geographical indications, identify its weaknesses and shortcomings, and offer suggestions for improvement.
- Provide guidance to address issues related to GIs and increase awareness of their importance and how to effectively protect them.

1.2 Study Methodology

In order to study and analyze legal and legislative texts pertaining to geographical indications, this research employs a descriptive-analytical methodology, which is deemed the most appropriate approach. The descriptive component aims to provide a thorough examination and assessment of the existing legislation and laws governing geographical indications, facilitating the identification of both strengths and weaknesses in the current legal framework. On the other hand, the analytical aspect involves a comprehensive breakdown and examination of legal texts to comprehend the regulations and application of geographical indications, as well as to identify any deficiencies in Jordanian legislation in comparison to international standards. This methodology was selected due to its ability to establish a solid basis for an intricate and precise analysis of legal texts, enabling the researchers to propose practical recommendations for enhancing the legal framework concerning geographical indications, based on a comprehensive understanding of current legal provisions and practices.

1.3 Study Problem

The lack of clarity surrounding geographical indications in Jordanian legislation is the primary concern of this study. The challenge lies in defining the legal nature of geographical indications and distinguishing them from other elements of industrial property, such as trademarks. The deficiencies are evident in the Jordanian Geographical Indications Law No. 8 of 2000, which lacks detailed and effective provisions for protecting geographical indications and suffers from ambiguity in its regulations and applications. These fundamental issues, including the unclear relationship between geographical indications and trademarks, and the need for clear conditions and procedures for granting and registering geographical indications, form the core of the study problem. Therefore, a thorough examination of the current legislation is necessary to determine its adequacy and make improvements that ensure comprehensive and effective protection of geographical indications. Thus, the study problem revolves around answering the following key questions:

1. What is a geographical indication, what is its legal nature, how does it relate to trademarks and trade names, and what is the state's role concerning it?

2. Has the Jordanian legislation on geographical indications adequately regulated and detailed its provisions, and what are its weaknesses and flaws?

2 Concept of Geographical Indications

Extensive research and scholarly analysis on geographical indications have been lacking. The existing definitions of geographical indications, as outlined in international agreements, have been widely accepted without much interpretation or specialized explanation. However, Dr. Samihah Al-Qalyoubi has provided a comprehensive definition, stating that a geographical indication refers to the identification of a product's origin from a specific region or area within a WTO member country or a nation with reciprocal treatment with Egypt. Furthermore, the quality, reputation, or distinctive characteristics of the product must primarily stem from its geographical origin in order to influence its promotion [1].

While it is accurate to state that the responsibility of defining terms does not fall under the jurisdiction of legislators, but rather legal scholars, we have come across a definition of a geographical indication provided by Dr. Samihah that closely corresponds to the definition outlined in Article (104/1) of the Egyptian Intellectual Property Protection Law No. 82/2002, as stated in the initial chapter of the second book.

In addition, she provided a definition for geographical indication that emphasized its characteristics and its role in identifying the quality and characteristics of a product. On the other hand, Professor Dr. Nouri Hamad Khater defined geographical indications as names associated with products that distinguish them from others by indicating their quality and origin to the public. It is worth noting that he drew a connection between geographical indications and trademarks in terms of distinguishing goods. However, the researcher may have conflated geographical indications with trademarks, as the primary function of a trademark is to differentiate products based on their quality, not that of a geographical indication. Furthermore, he did not specify the specific types of products that can bear a geographical indication.

2.1 Concept of Geographical Indications in Legislation

The historical practice of identifying goods by their place of origin dates back to ancient times, but the term "geographical indications" did not gain international recognition until the 19th century. In the following section, we will explore the evolution of geographical indications in international agreements throughout history.

The concept of geographical indications made its debut in international agreements during the year 1883 within the Paris Convention, where it was referred to as "Appellations of Origin." Article 1, paragraph two of this convention explicitly states that the safeguarding of industrial property encompasses various elements, including

patents, utility models, industrial designs, trademarks, service marks, trade names, indications of source, and appellations of origin [2]. However, it is important to note that the convention did not delve into the specifics or provide a definition for "Appellations of Origin." Instead, it merely acknowledged their inclusion within the realm of legal protection. Consequently, without a comprehensive understanding of the nature of an appellation of origin, it becomes challenging to apply the text of the aforementioned article in a manner that accurately identifies and categorizes it as such.

It was not until 1891 that a resolution was reached to address this ongoing issue. The Madrid Agreement for the Repression of False or Deceptive Indications of Source on Goods was established during this time. According to this agreement, any products that falsely claim their origin, whether by directly or indirectly referencing a member country or a specific region within it, would be confiscated upon importation in any of the countries involved. Furthermore, the country where the false indication of origin originated would also take action. In cases where there are no specific penalties for suppressing false indications of the source of goods, the existing laws governing trade names and trademarks would be enforced [3].

The year 1958 saw the establishment of the Lisbon Agreement for the Protection of Appellations of Origin and their International Registration (official name to be verified). This agreement provided a precise definition of "Appellation of Origin" as the "geographical name of a country, region, or locality, which serves to designate a product originating therein" [4]. However, this definition solely focused on identifying the product's geographical origin and did not take into account factors such as quality, type, or reputation. Furthermore, it mandated that the appellation of origin must be a geographical name, thereby excluding symbols, signs, and indicators from receiving protection under this agreement.

Concept of Geographical Indications in Comparative Legislation

When examining the definitions of geographical indications in various national and international laws, it becomes evident that the majority of them have not surpassed the concept outlined in the TRIPS Agreement, as this was the initial agreement to address this term. In the Geographical Indications Protection Law No. 40/2000 of 2000 in Oman, Article 1 provides a definition of a geographical indication as "any indication that identifies a product as originating from a specific place or environment in any country, region, or location, due to natural and human factors, or a combination of both" [5]. The legislator in Oman successfully expanded upon the factors that contribute to the characteristics of a geographical indication, encompassing both natural and human elements.

According to the Jordanian legislator, geographical indications are defined as indicators that specify the origin of a product within a particular country or region, with the product's quality, reputation, or other characteristics being closely tied to that specific origin [6]. The Geographical Indications Law in Jordan was implemented for various reasons, starting with the initial negotiations held with the World Trade Organization in 1996. During these negotiations, a detailed memorandum was presented, outlining the economic and commercial situation in Jordan. Subsequent

bilateral meetings with the United States focused primarily on concerns regarding intellectual property rights violations in the Jordanian pharmaceutical sector. On December 17, 1999, Jordan officially announced its membership in the World Trade Organization during the World Trade Conference. As part of this membership, Jordan had to comply with the TRIPS Agreement, which took effect on April 11, 2000 [7]. Consequently, legislation was necessary to fulfill the requirements of this agreement, leading to its issuance in the same year. However, it remains unclear whether this legislation underwent a thorough study and examination before being made public.

According to the Bahraini legislator, a geographical indication is defined as any indication that serves to identify a product as originating from a specific territory within a member country of the World Trade Organization. This indication is crucial in determining that the quality, reputation, or other distinguishing features of the product can be primarily attributed to its geographical origin. The form of a geographical indication may vary, encompassing signs or combinations of signs, whether they be in the form of words (including geographical or personal names), letters, numbers, figurative elements, or colors [8].

Geographical indications, as defined by the Egyptian legislator, refer to the identification of a product's origin in a specific region or location within a member country of the World Trade Organization or in a country that has reciprocal treatment with the Arab Republic of Egypt. The quality, reputation, and other distinctive characteristics of the product, which play a significant role in its promotion, are primarily attributed to its geographical origin. To ensure the protection of these indications, it is necessary for them to have obtained legal protection in their country of origin [9].

According to Moroccan legislation, the concept of indication of source is described as the utilization of a term or symbol to signify the origin of products or services, whether it be a country, group of countries, region, or specific location [10]. Similarly, the legislation defines the appellation of origin as the geographical name of a country, region, or locality that is used to identify a product originating from that specific area. This product is distinguished by its exclusive or essential association with the geographical environment, encompassing both natural and human factors, which contribute to its quality, reputation, or other distinctive characteristics [11].

It has been observed by the researchers that all Arab legislations are in alignment with the TRIPS Agreement. This is due to the fact that countries that have become members of the World Trade Organization have made necessary amendments or introduced new legislation to ensure compliance with the TRIPS Agreement, in accordance with the general principle that international agreements take precedence over national laws. Furthermore, based on the definitions provided earlier, the researchers conclude that a geographical indication is linked to a specific region within a particular country, and the product associated with this indication possesses distinctive characteristics that set it apart from similar goods, thereby increasing its popularity. However, this leads to the question of whether the state that owns the region has any inherent connection to it.

The interpretation of the term "product" in relation to geographical indications raises a crucial question: does it encompass goods, services, or both? Comparative

legislation [12] indicates that legislators typically associate geographical indications with goods, aligning with the provisions of the TRIPS Agreement. According to Article 22 of the TRIPS Agreement, WTO member states are obligated to protect geographical indications for goods, but not services. Consequently, the term "product" is understood to refer specifically to goods in the context of international intellectual property protection law. This approach has been adopted by WTO member states, making it evident that the Jordanian legislator made an error by using the term "product" instead of "goods" in Article 2 of the Jordanian Geographical Indications Law. It is essential to discern the legislator's intent behind this terminology. Did they intend for "product" to encompass both goods and services?

The lack of specification or clarification in the Jordanian Geographical Indications Law regarding the inclusion of services within the term "product" is a notable fact. The researchers have determined that this term is vague and lacks clarity. Consequently, the researcher suggest that the Jordanian legislator provide a detailed explanation of the term to eliminate any ambiguity. If services are not intended to be included, the researchers propose the use of the term "goods" in accordance with the TRIPS Agreement.

3 The Legal Nature of Geographical Indications

In order to comprehend the legal aspects of geographical indications, it is crucial to grasp the underlying principles that govern the granting of this right. The definition and concept of geographical indications play a pivotal role in shaping the regulations surrounding them. Hence, the researchers have endeavored to shed light on the legal foundation of intellectual property, as geographical indications fall within its purview.

The legal nature of intellectual property has been a subject of debate among legal scholars, who have categorized it into three distinct perspectives. One perspective perceives intellectual property rights as personal rights, while another perspective regards them as real rights. A third perspective takes a blended approach, considering intellectual property to be a dual right that incorporates elements of both personal and real rights [13]. In order to gain a better understanding of these perspectives, it was essential to establish a clear definition of rights within the context of law, which ultimately led to the legal characterization of intellectual property rights.

3.1 The Concept of Rights

In two distinct sections, we will delve into the concept of rights and their various types. The first section will explore the linguistic and legal aspects of rights, while the second section will focus on categorizing the different types of rights.

3.2 Definition

Legally speaking, a right is a specific legal connection between two parties that grants an individual exclusive and proprietary control over an object or the ability to demand a particular action from another person. This connection represents an interest that is safeguarded by the law [14].

After defining the term right in detail, it can be said that a right generally consists of two essential elements:

- **First**: The concept of "control" refers to the exclusive dominion over something, where there is no room for disagreement or intervention from external parties. Sheikh Al-Zarqa describes this as "specialization," emphasizing that the notion of a right cannot exist without it, as it is the very essence and truth of a right. According to him, the legal relationship must be explicitly tied to an individual or a specific group. A right holds significance when it provides a distinct advantage to its possessor while simultaneously excluding others [14].
- **Second**: The object of the right is legally protected, enabling the holder to take legal action in order to safeguard it and maintain exclusive authority, while also ensuring that others respect their rights and exclusivity over said object.

3.3 Types of Rights

There are two categories of rights: general rights and specific rights [15]. Specific rights are privileges bestowed upon individuals in their interactions with one another, while general rights are privileges granted to either an individual as a legal entity within the community, such as the right to be protected, or to the community in its dealings with an individual, such as the right to impose restrictions for the sake of security. Additionally, rights can extend to the relationships between states, which are referred to as public rights.

There are three main categories of rights, beginning with personal rights. These rights pertain to an individual's physical being and encompass freedoms like the right to move freely, feel secure, choose where to live, and express opinions.

- Personal rights are inherent to a person's life, from the moment they are born until they pass away, and any violation of these rights is seen as an infringement on their very identity. It is important to note that personal rights cannot be quantified in monetary terms and are not transferable or assignable to another individual [16].
- Family Rights, as the second category, pertain to the connections that stem from marriage or blood relations. These rights encompass the powers bestowed upon specific individuals within a family, including the authority of a parent over their children and a spouse over their partner.

- Financial rights, which are quantifiable in monetary terms, constitute the third category. Unlike other rights, these rights acknowledge the ability to transfer, trade, and even confiscate assets.

According to Dr. Abdul Qader Al-Far, financial rights encompass the authorities or privileges bestowed by civil law that enable individuals to undertake specific actions in pursuit of a monetary benefit. These rights are regarded as assets and are included in an individual's wealth, subject to being transferred or confiscated. Legally speaking, property is constituted by these rights. In the realm of transactions, an individual's financial interests are recognized by law as rights.

There are two distinct classifications for financial rights: real rights and personal rights. Furthermore, certain scholars [17] have introduced a third category known as moral or intellectual rights.

According to Article 17 of the Jordanian Civil Code, there are three types of rights: personal, real, and intellectual [18]. Real rights refer to the direct control a person has over a physical object, allowing them to assert a specific monetary worth.

The concept of personal rights can be described as the allocation of authority or control from one individual to another, with the person receiving the authority being referred to as the creditor and the person relinquishing the authority as the debtor. In this context, personal rights involve the ability to take certain actions or abstain from them.

The concept of moral rights combines aspects of both tangible and intangible rights. In this particular instance, the right is associated with a particular object and necessitates that others either fulfill or abstain from certain actions [19].

Certain individuals [20] have asserted that moral rights can be classified as a distinct category within the realm of property. These rights are characterized by the ownership's ability to exercise control and make use of an object, despite the fact that, by its very nature, it cannot be possessed exclusively. However, it is important to note that these rights are not indefinite, as they are subject to change in accordance with societal and scientific concerns.

According to the explanatory memorandum of the Jordanian Civil Code, the recognition of immaterial objects by society has eliminated any doubt or denial regarding their existence. In line with customary practices, the legislator acknowledges immaterial objects, such as melodies, trade names, and trademarks, as forms of property. Possession can take on both material and immaterial forms. Material possession involves physically holding an object, while immaterial possession relates to the issuance and attribution of an object to its rightful owner [21].

3.4 The Jurisprudential Definition of Rights

In civil law, it is crucial to differentiate between real rights and personal rights, as this has profound consequences and tangible outcomes in the implementation and enforcement of legal principles. To thoroughly explore this topic, we will examine

it in two distinct sub-sections: the first will delve into the various jurisprudential viewpoints regarding the categorization of rights, while the second will offer a comprehensive comparison of the different types of rights.

Jurisprudential Perspectives on the Classification of Rights

Legal scholars have divided the classification of rights into two main approaches [22]:

- Professor (Baliani) presents the first perspective, which associates real rights with personal rights. According to this viewpoint, both real and personal rights involve a relationship between two parties. However, the professor disagrees with the notion that real rights pertain to a relationship between a person and an object, as relationships are formed between people. Consequently, the civil law defines real rights [23] as "authority over a thing," employing the term "authority" instead of "relationship." This perspective asserts that real rights, like personal rights, consist of three components: the subject of the right, the creditor, and the debtor. For instance, in the context of ownership, the owned thing serves as the subject, the owner assumes the role of the creditor, and all individuals who must respect this right become the debtors. The primary distinction between personal and real rights lies in the identity of the debtor: in real rights, the debtor encompasses everyone except the creditor, whereas personal rights involve specific individuals as debtors.
- Professors (Sally) and (Lambert) present a different perspective, which can be categorized as the second approach. According to them, personal rights should be treated in the same way as real rights. They posit that personal rights, just like real rights, are integral components of one's financial estate and should be regarded as financial assets rather than a mere creditor-debtor relationship. This viewpoint is in harmony with the efficiency and rapidity of financial transactions [24].

Upon examining the viewpoints of these two groups, it is clear that those attempting to bring personal rights closer to real rights view rights from a material perspective, while those attempting to bring real rights closer to personal rights focus on the person holding the right. This has resulted in the division into two main jurisprudences regarding obligations:

1. The concept of personal jurisprudence, rooted in Roman legal traditions, perceives the obligation as a personal bond between the debtor and creditor, wherein the debtor is subservient to the creditor. Notably, this relationship has been likened to a condensed manifestation of slavery by scholar Savigny [25].
2. The concept of obligation can be approached from two different perspectives: the personal principle and the material principle. The personal principle emphasizes the personal relationship between the debtor and the obligation, while the material principle focuses on the financial aspect and separates the obligation from the debtor. The German scholar Gierke is a proponent of the material jurisprudence. The choice between these principles has significant implications for the nature of the obligation. It is rare to find a civil code that fully aligns with either principle.

However, the Jordanian Civil Code, influenced by Islamic jurisprudence, leans more towards the material jurisprudence. This approach simplifies transactions and facilitates financial dealings by prioritizing the object of obligation rather than the individuals involved. As a result, assignments and third-party stipulations are easier to recognize and comprehend under this framework, which would be challenging in a system completely aligned with the personal jurisprudence [26].

3.5 Nature of Geographical Indications

Following this examination, a question arises: where do geographical indications fit among these types of rights?

The distinction between geographical indications and intellectual property rights is evident. While intellectual property rights encompass both financial and moral aspects, such as patents and authors' rights, geographical indications do not possess this dual nature. Unlike intellectual property rights, which arise from intellectual or creative endeavors, geographical indications are not the product of intellectual effort. Intellectual property rights are associated with intangible values that stem from intellectual or creative labor. These rights empower the owner to utilize and claim their intellectual or creative work, reaping its benefits [27, 28].

Geographical indications differ from personal rights, which involve legal relationships between creditors and debtors. In these relationships, the creditor seeks the transfer of a real right or the fulfillment or non-fulfillment of an action. Personal rights pertain to interactions between individuals, while real rights enable direct enjoyment of a tangible object acknowledged by law, granting the holder the ability to carry out specific actions that derive advantages from the object. Geographical indications, on the other hand, do not align with this nature [29, 30].

The ongoing scholarly debate revolves around the classification of geographical indications within the realm of industrial property rights. Some experts argue that geographical indications should be regarded as distinct rights, comparable to other forms of industrial property. On the other hand, another group of scholars views geographical indications as collective or shared rights held by the residents of the specific region where the indication originates. Advocates for the first perspective assert that geographical indications can be privately owned, granting producers (whether they are craftsmen or manufacturers) in a particular geographic area exclusive rights over their products or crafts. This ownership would protect against any infringement, following the general principles of property protection. To support their viewpoint, they refer to legislation that acknowledges the producer's right to possess the geographical indication, with the term "producer" encompassing farmers, skilled workers, and artisans alike. Furthermore, the registration of geographical indications is carried out upon the request of individuals or entities engaged in activities within the corresponding geographic area [31, 32].

On the other hand, the second faction holds the belief that geographical indications, unlike other forms of industrial property rights, are not intended to grant

exclusive rights to individuals. Instead, they are viewed as public rights that are connected to the people residing in a specific geographic area where the product associated with the indication originates. This perspective is rooted in the historical efforts of these residents who have worked diligently to produce the product or have inherited the production methods over generations.

The second group's opposition to the first group is met with a response from proponents who assert that geographical indications can be attributed to individual endeavors, such as the Swiss industry's dominance in watchmaking and chocolate production. Dr. Taleb Braim Suleiman presents an argument that aligns with the prevailing perspective in legal scholarship and the laws safeguarding geographical indications. According to this viewpoint, the right to the indication is typically considered a private entitlement for the producers who have registered it, whether as individuals or as a collective. This holds true even if the geographic region's human and natural elements played a role in its development [33–36].

The fundamental belief of the researchers is that the ownership of geographical indications should be considered a state right, since these indications are inherently tied to the specific geographic region of their origin. When we consider the geographical area itself, it is simply a piece of land that falls under the jurisdiction of the state. It is difficult to comprehend how a group of producers could assert exclusive rights over that particular area. Instead, each producer distinguishes their products through the use of their own unique trademarks. For instance, numerous companies produce Jarash white cheese sourced from Jarash farms, each utilizing their own distinct trademark. This same principle applies to products such as Karak Jameed, Dead Sea mud, and Siham Kfarat oil.

Article 4 of the Jordanian Geographical Indications Law embodies this concept by granting the Registrar of Trademarks of a trademark the authority to reject the registration of any mark that carries geographical significance. This key distinction sets geographical indications apart from trademarks, as the former pertains to a specific region within the state and does not belong solely to an individual. Rather, it is the trademark itself that serves as the distinguishing factor for the product within that particular area. Therefore, the legislator permits the refusal to register a trademark in two cases:

- If the trademark consists of a geographical indication [37, 38].
- If the trademark contains a geographical indication and relates to a product from a different origin than what the geographical indication suggests, in a manner that misleads the public [39–41].

Without establishing a definitive standard, the legislator combined the mark and the indication in this particular article. Nevertheless, it is deducible from the Registrar of Trademarks's authority to reject the registration of a mark associated with a specific geographic location that these marks are not safeguarded by trademark legislation, but rather fall under the purview of geographical indications law [41].

Upon careful examination of the text, it becomes evident that the term "Registrar of Trademarks" carries connotations of leniency, indicating that the Registrar of Trademarks has the authority to accept a trademark that encompasses a geographical indication. In such instances, the trademark would be granted rather than the geographical indication, affording it protection under trademark law instead of geographical indications law. This oversight can be attributed to an error on the part of the Jordanian lawmaker, who originally intended for geographical indications to be accessible to the public, allowing anyone with an interest to exploit them, provided certain legal requirements are met. However, these indications were mistakenly included within trademark law, which is a more specific legislation rather than a comprehensive one [42–44].

Hence, it is impossible for any individual with a vested interest in promoting a specific product to have exclusive rights over a geographical area. The area in question belongs to the state and holds significance for all manufacturers operating within its borders, regardless of their national or international affiliation. The crucial factor is the relationship between the product and the geographical location, taking into account its unique characteristics, reputation, flavor, and all other attributes that genuinely link it to that specific place. Examples include Lebanese apples and Karak Jameed. As a result, the focus is not on personal ownership of the area, but rather on the distinction created by the trademark. Therefore, the scope of a geographical indication surpasses that of a trademark, and the connection between the two is centered around the product itself.

To determine the impact of a geographical indication, we must address the question of whether it grants exclusive rights or is simply a symbolic registration. In actuality, a geographical indication does grant the right to use a trademark that distinguishes the product and can be officially registered. This right pertains to the trademark itself, while the use of the indication serves as a declaration of compliance with the legal obligation to respect products associated with the geographical area. Exploiting a geographical indication is not an administrative or contractual action, but rather a tangible step taken by the manufacturer of the product, as long as they abide by the provisions outlined in Article 4, Paragraph (b/2) of the Jordanian Geographical Indications Law.

4 Conclusion

The findings of this study highlight the crucial role that geographical indications play in safeguarding local products and elevating the quality and safety of goods that embody the unique characteristics of their respective regions. While the significance of these indications in protecting the collective rights of producers and fostering competitiveness cannot be overstated, it is imperative to address the existing legal and legislative obstacles that hinder their full potential. Enhancing relevant legislation is paramount to ensure comprehensive and efficient protection, while also raising awareness among producers and consumers about the numerous benefits

associated with geographical indications. Moreover, fostering international collaboration and investing in research and development within this domain will bolster the effectiveness of protection measures and contribute to the attainment of sustainable development goals, ultimately enhancing the economic competitiveness of local products.

4.1 Findings

The study concluded with the following findings:

- The utilization of geographical indications plays a crucial role in safeguarding local products, while simultaneously elevating their reputation and ensuring their superior quality.
- Geographical indications do not fall under the category of intellectual or personal rights, but rather they are classified as industrial property rights, distinct from individual real rights.
- The character of the right to geographical indications is distinct, as it pertains to the collective or public interest tied to a specific geographic area, rather than being a private right belonging to individual entities.
- The effectiveness of national legislations, like the Jordanian Geographical Indications Law, in protecting geographical indications may be inadequate and requires further clarification on the interplay between geographical indications and trademarks.

4.2 Recommendations

Based on the findings, the study recommends the following:

- Increase the awareness of producers and consumers about the importance of geographical indications and the possibilities of using them to protect local products.
- Review and update GI laws to ensure they do not overlap with trademark laws and provide effective protection.
- Encourage the effective and rapid registration of geographical indications to ensure the rights of producers and protect them against infringements.
- Strengthen international cooperation in the exchange of information and experience on the protection of geographical indications in order to improve the global effectiveness of protection.

Integrating Technology in Arabic Language Instruction: Enhancing Learner Engagement and Proficiency

Mohammed Saleem Ismail Al-Mallahma

Abstract This paper discusses technology integration in Arabic language teaching for the purpose of learner engagement and improvement of learner skills. It reviews qualitatively several related pieces of literature, both theoretical frameworks and empirical studies on language teaching and technology. Results are enthusiastic about the positive effects that integrating digital tools and platforms into language education has on student engagement, classroom resources, foreign culture understanding, and transforming as well as expanding teaching and learning experiences. The findings point out the positive effect of technology integration in Arabic language teaching on student outcomes because they reveal ample opportunities that can inform teachers while making such implementations. Areas are also demarcated for further research in this paper concerning models for measuring student achievement as a result of engagement during technology-enhanced instruction.

Keywords Technology integration · Digital tools in education · Educational technology · Classroom innovation · Arabic language instruction

1 Introduction

The introduction of this research offers a thorough overview regarding the incorporation of technology in teaching the Arabic language. It details the study's rationale, purpose, scope, and limitations, laying the groundwork for an in-depth examination of essential elements in the following sections. Research has demonstrated that the incorporation of technology in language education boosts both student engagement and proficiency, as indicated by studies focused on technology use in English language classrooms [1]. These studies reveal the beneficial effects of technology

A. M. A. Musleh Al-Sartawi et al. (eds.), *Business Resilience and Business Innovation for Sustainability*, Studies in Systems, Decision and Control 587,
https://doi.org/10.1007/978-3-031-87584-7_97

on levels of student engagement, learning advancement, and the overall quality of language instruction. Furthermore, integrating technology enriches available resources, enhances students' comprehension of foreign cultures, and increases their enthusiasm for learning, ultimately leading to greater motivation and participation in classroom activities.

1.1 Background

The use of technology in teaching the Arabic language has attracted considerable interest for its ability to improve learner engagement and proficiency. One study carried out by found the efficiency of a computer-based interactive system developed for fast teaching Arabic for non-native speakers [2]. The present investigation has reported that the program contributes exceptionally to helping with learning and cognitive results for learners, very appreciably enhancing specialized language teaching final results. Another is that the technology provided by Learning Management Systems (LMS) and case management systems facilitates greater communication in terms of supervisors plus parents with students, thus effectively meeting personal differences and individual gifted diversity plus needs as language learners [2].

Moreover, it was emphasized that the need for providing a systematic level of guidance to the students during their learning activities while integrating technology with education process innovations [2]. Starks-Yoble observed that web-based tasks and technology in language teaching enhance motivation and independence of students which contribute to their participation in the language learning process and increase learner engagement. The study also revealed the contribution that technology makes towards reinforcing student engagement and language acquisition, taking into account how technology integration can affect modern classrooms.

1.2 Purpose of the Study

The current study aims to explore the specific objectives and goals associated with the integration of technology in Arabic language teaching. This research intends to illuminate the desired outcomes and the contributions it aspires to make within the realm of language education. Motivated by the necessity to comprehend how technology integration influences learner engagement and proficiency in Arabic instruction, the study examines the effectiveness of technological programs designed for teaching Arabic to non-native speakers. In doing so, it seeks to enhance language learning outcomes and promote improved results in specialized language instruction. Furthermore, the research addresses the potential advantages of integrating technology, including the provision of equal opportunities for language learners at different proficiency levels, as well as the enhancement of communication among

educators, students, and parents through learning management systems and various technological tools.

1.3 Methodology

This research applies a qualitative approach to investigating the impact of technological integration within Arabic language learning. It will use a descriptive methodology to study existing literature—both theoretical frameworks and empirical studies concerning technology and language teaching that come together at some point. To reveal trends and problems brought about by a variety of digital tools or platforms in promoting learner engagement and proficiency in Arabic, the research will analyze how different ways. Descriptive synthesis is used here (coupled with an analytical method) to ensure that information can be availed on how technology can help improve the teaching of the Arabic language, insightfully informed for future practice and policy considerations.

2 Theoretical Framework

The integration of technology into Arabic language instruction is guided by a theoretical framework that includes a variety of pertinent theories and models, which shape the research in this area. A notable study demonstrates the effectiveness of using an interactive program for teaching Arabic to non-native speakers [3]. This research underscores the practicality of technical programs in facilitating rapid acquisition of the Arabic language, yielding improved outcomes in language education, and accommodating the diverse needs of students. This reinforces the notion that technological tools are vital for enhancing language learning, particularly in the context of contemporary information and communication technology.

Moreover, as noted by 4 the perception of students on engagement, technology and language learning is underscored. The study presents both qualitative and quantitative data probing into student engagement dynamics and technological integration which could provide valuable information for language educators to adjust their approaches develop technology based teaching fitting the students in a relevant way. This stresses the importance of considering student feedback while integrating technology into language teaching to enhance learner engagement and fluency.

2.1 The Role of Technology in Language Learning

Language learning is one area where technology assumes a rich and varied, very important role—having many benefits and opportunities for learners as well as

educators. Technology acts as a useful resource in language teaching: it provides the scaffold for students with special needs, helps in acquiring factual information, and results in generating new interesting learning experiences. Also indicated by this study: performance can be enhanced through the utilization of technology in small group settings, which demonstrates its ability to create collaborative learning environments. It was also found that technology is most effective when used to support instruction rather than being employed solely as a direct teaching tool; therefore, complementing various pedagogical methods. Additionally, stressing the importance of technology delivery mechanisms within language education—underlining their potential towards increasing student-centered learning and active participation. They stress the potential of computer programs in general and how they can improve academic achievement and student engagement, in addition to multimedia tools themselves (like talking books and computer simulations) in helping to master a language. In brief, the research focuses on multifaceted technology roles in language learning: it can enhance teaching methodology with increased learner engagement that builds language performance.

2.2 Socio-cultural Theory and Language Acquisition

Vygotsky's Socio-Cultural Theory emphasizes social and cultural influences on cognitive development and education, particularly the learning of language [5]. While integrating technology into the teaching of Arabic, one needs to see how technology interacts with these socio-cultural factors. An important part of this incorporation is Computer-Mediated Communication (CMC), which offers interpretive, interpersonal, and presentational communication modes leading to peer interactions in language-rich environments that help learners internalize new strategies and increase their proficiency in the content. Moreover, technology within the classroom may assist in connecting students with the target language and culture by facilitating contacts among themselves as well as with educators and native speakers; thus, it fosters motivation and interest in acquiring a language.

Moreover, the integration of different modalities and state-of-the-art technologies can enhance individualized teaching and cooperative learning which are very important for language learning within a socio-cultural perspective to be successfully realized. Through the adoption of technological innovations and enhancing their pedagogy teachers will be able to provide targeted teaching that in turn enhances the use of technology as a tool not a hindrance in learning; this will see students improve their proficiency in language and effective communication skills. These findings emphasize the need for integrating socio-cultural theory with technological influences in Arabic language teaching to build a learner-centered classroom that improves motivation as well as social interaction and communication.

3 Current Practices in Arabic Language Instruction

The current state of Arabic language teaching comprises a wide range of traditional and technology-enhanced approaches. Traditional techniques center around grammar drills and memorization while the use of technology allows digital platforms and applications to create enriched learning environments through which students can engage in exploratory and practical ways of investigating, practicing, and applying the Arabic language and culture. These technological resources enable personalized language learning experiences during which students can be engaged in worthwhile independent exploratory practice opportunities to learn Arabic. Moreover, embedding digital tools extends pedagogical possibilities within the well-stated 3P model that helps learners embrace fresh pathways toward deepening their understanding of language as well as culture [7]. Furthermore, modern foreign language teaching supported by technology underscores that any technological construction needs to be in line with prior beliefs held by teachers.

This alignment is important for technology applications to be effective in Arabic language classrooms which further fosters learner-centered practice and consequently, better learning outcomes. As the field advances, educators need to explore: the merging of culture and language: from innovative digital approaches—for enhanced learner involvement, and fluency.

3.1 Traditional Methods Versus Technology-Enhanced Methods

The advantages and disadvantages of both approaches must be considered when comparing technology-enhanced Arabic language teaching methods with traditional methods. It is a significant fact that traditional instruction focuses on grammar and vocabulary. This has important effects on the decisions of teachers in view of the efforts to select technology and put that into implementation [8]. Conversely, methods that incorporate technology have demonstrated an ability to elevate the quality of language courses, facilitating more convenient learning, boosting interest, and advancing educational progress [9]. The integration of technology can offer abundant resources, enhance students' comprehension of foreign cultures, and ignite a passion for learning, which ultimately fosters greater engagement and motivation among learners.

The incorporation of technology stimulates enthusiastic participation from language learners in classroom activities, thereby challenging conventional teaching methods and enhancing the appeal of learning a foreign language. Nevertheless, it is crucial to recognize that simply introducing 21st-century technologies into language classrooms does not ensure their application in a learner-centered instructional approach, as the teacher's sociocultural background and methodology can create a strong inclination towards traditional practices.

3.2 Case Studies of Successful Integration

Insights into effective teaching methods can be gleaned from case studies that showcase the successful integration of technology in Arabic language education. For instance, Ben Mohamed et al. highlight the advantages of employing a computer-assisted language learning (CALL) system that is based on pedagogically indexed text [9]. This method leverages Natural Language Processing (NLP) tools to design activities tailored to particular pedagogical contexts. The authors point out that the incorporation of technology in language instruction can assist learners in cultivating self-learning strategies, boosting self-confidence, and enhancing language authenticity by providing opportunities to engage with native speakers using the language. Furthermore, it was emphasized that the role of multimodal Arabic culture portfolios in promoting intercultural awareness among students [10]. The interactive and audiovisual elements of language and culture, particularly through films, were identified as an accessible and enjoyable introduction, despite some challenges concerning the interpretation of cultural norms. These case studies illustrate the various ways technology can improve learner engagement and proficiency in Arabic language teaching.

4 Advantages and Challenges of Integrating Technology

The integration of technology into Arabic language teaching has a number of advantages. Similar to the teaching of the English language, technology can be used to enhance student engagement through providing easy accessibility to various resources and creating an immersive environment that complements the understanding of Arabic culture. The presence of technology improves language instruction, thus channeling learning progress while also creating a desire for learning and increasing motivation for classroom activity [11]. In addition, emotional relationships can be created among students through the application of social media and networking technologies which will act as channels in ensuring active involvement in classroom exercises.

Problems may crop up in the technology integration system, including the need for effective classroom management to enhance teachers' ability to motivate all students, encourage group work, and monitor student behavior and progress. But these challenges can be dealt with by applying appropriate classroom management strategies; in turn, this would enable the maximization of the benefits accruing from technology integration in the teaching of Arabic language [11].

4.1 Benefits for Learner Engagement

Integration of technology in teaching Arabic has a number of pros in engaging the learners. Research indicates that technology can attract and inspire students leading to increased participation and activeness in the educational experience [12]. Therefore, the use of multimedia content and interactive tools is so important in promoting active involvement because they allow students to demonstrate their language ability through interesting and relevant ways. For instance, research has proven that Interactive White Boards (IWBs) improve oral skills within English as a Foreign Language (EFL) settings; this enables teachers to focus on student learning while promoting learner-to-learner oral communication

Views of the students can help in modifying the approaches of language instructors, to develop technology-driven instruction that can actively interest the learners meaningfully; it may attract more people to enroll in language courses and do better overall, stressing the importance of integrating technology to enhance student engagement and performance.

4.2 Challenges and Solutions

Within the Arabic language instruction domain, educators come to pass many a time with manifold challenges that might impede technology integration successfully. One common issue is the reduced levels of student commitment and motivation that may result from the use of technology in language learning. Also, it was stressed the importance of technology-enhanced collaborative learning and peer interaction for increasing student motivation and engagement [13].

Instructors of the language can, therefore, develop classroom activities that enable students to generate and exchange knowledge through interactions with peers. They should take advantage of technology in communication and collaboration. This will help identify and coordinate peer communication in a manner that exploits new technologies for effective knowledge generation and exchange.

5 Designing Technology-Enhanced Arabic Language Lessons

When creating technology-enhanced Arabic language lessons, the appropriate tools and platforms must be selected. The ones that will help realize educational objectives. Integrating multimedia resources can make a tremendous positive impact on the learning experience by providing a wide range of interesting content to students [14]. Natural Language Processing tools can also be vital in the teaching and

learning of Arabic to support the development of activities within specific educational contexts [15]. Additionally, ARAC provides an opportunity for language educators to create activities based on their research or teaching interests, therefore increasing customization and relevance in technology-enhanced lessons. These resources will assist educators in creating dynamic, effective lessons that encourage student engagement while developing proficiency in Arabic language acquisition.

5.1 Selecting Appropriate Tools and Platforms

In selecting appropriate tools and platforms for teaching technology-oriented Arabic, teachers' knowledge, perceptions, and willingness to use internet resources in the class should be taken into account [15]. The results confirmed that EFL teachers have a positive attitude toward using internet tools and are ready to use these technologies to improve language skills for mastery. Further, they worry about culturally inappropriate content and students' independence and dependence when using the internet. Besides, the variables of teachers' age and educational qualification can act as influencing variables on these dependents, which presupposes the importance of considering individual differences while choosing the platforms.

Moreover, to make sure that applications will be effectively introduced into classrooms, technology design should also capture the contemporary views and teaching techniques of educators as in the case of this study [16]. This stresses the need for a human-centered design that would take into consideration user expectations and needs and also the relationship between a learner-centered approach and educational outcomes. Equipping teachers with such knowledge will help them make informed decisions when choosing tools and platforms to support learning in technology-enhanced teaching of the Arabic language.

5.2 Integrating Multimedia and Interactivity

In teaching the Arabic language through interactivity and multimedia, both engagement and efficiency can be greatly enhanced among learners. Foreign Language Teaching has stressed that technology-enhanced multimedia is germane to effective teaching as a second or foreign language. Educators have observed that incorporating multimedia tools in the foreign language curricula not only increases motivation and interest but also helps provide access to modern authentic materials of cultural heritage at the right time [16]. Also, the feasibility aspect in using multimedia resources (like animated graphics and YouTube videos) in teaching English pronunciation for Arabic learners is reflected. This shows that applying multimedia components into language lessons will help students of the Arabic language to solve their different learning preferences in taking into consideration, which results in interaction and making satisfactory use of their learning experience.

6 Assessment and Feedback in Technology-Enhanced Instruction

In technology-enhanced instruction, assessment and feedback are very important in providing valuable reflections regarding learner progress to enable targeted support. Classroom-connected technology proves to be an effective formative assessment technique that imparts continuous feedback to students [17]. On the other hand, computer-based assessment and feedback (CBAF) fulfill the prerequisites of diversified demographic set of learners by providing immediate and specific personalized level of performance feedback that cuts across information related to difficulties coming from varied educational backgrounds, languages and cultures at the same time taking into consideration uniformity and fairness in assessing student performance—about what they learned within technology-integrated learning settings [17].

6.1 Formative and Summative Assessment Methods

Assessment methods, both formative and summative, are very important in technology-enhanced teaching for the Arabic language. Ongoing assessments are a part of formative assessment that helps in providing continuous feedback for the improvement of both learners and teachers on the journey of learning. This approach is extremely beneficial for customizing instruction to suit the special needs of Arabic language learners since it helps to identify where more focus is needed and how to adapt teaching [18]. Summatively, it would be drawing an overall line of proficiency and accomplishments of learners at the end of a defined period; for example, a unit or course. The incorporation of both formative and summative assessment techniques in technology-enhanced teaching greatly improves learner engagement and memorization during the process of acquiring an Arabic language [18]. Moreover, these ways help in reducing test anxiety and getting learners used to summative standardized assessment tasks that will eventually lead to enhanced achievement and proficiency levels for Arabic learners.

6.2 Providing Effective Feedback

The enhancement of Arabic language instruction, particularly in technology-enhanced learning settings, heavily relies on effective feedback. It was introduced that a pedagogical model aimed at delivering feedback and promoting students' engagement with that feedback for subsequent writing tasks [18]. This model, which was developed within the context of Arabic language courses at the University of

Maryland, integrates feedback on both content and linguistic aspects. It necessitates that students interact with course themes, rectify accuracy concerns, and apply new language elements proposed by the instructor. Furthermore, it was underscored the necessity of consistently providing effective feedback in English as a Foreign Language (EFL) classrooms, pointing out its significance in motivating learners and enhancing language skills [19]. When offering feedback, it is essential for teachers to take into account the abilities of their students and to cultivate a positive learning environment, thereby nurturing a collaborative and supportive setting conducive to effective teaching and learning in an EFL context.

7 Professional Development for Educators

The effective infusion of technology in the teaching of Arabic language and professional development for educators acting in this area. As stated by [20], teacher professional development embodies educators' retraining, reorientation of the system of work, and practical application based on newly acquired knowledge. High-quality professional development that is widely recognized to enhance learning outcomes for learners helps educators stay current with evolving educational strategies as well as variety learner demographics. It acts as a catalyst to the kind of technology-based professional development that creates unique affinity spaces separate from conventional settings where learning is more engaging and effective for students. According to [20], realizing effective technology integration has much to do with being a social process that draws ongoing collaboration and dialogue among teachers. Two vital components of effective technology integration are the building of learning communities and active engagement in professional development programs. Therefore, continuous professional development is very important for the teacher to feel confident and be skilled enough to weave technology into Arabic language teaching which helps in turn learner engagement and learning.

7.1 Training and Support Programs

Support and training programs are essential in delivering to the educator the necessary skills of how technology in teaching Arabic language is integrated. The impact created by technical programs in quickly instilling Arabic language skills, which reflected on student academic performance and cognitive growth is evident [20]. The study pointed out the promise of technological tools, including interactive programs and learning management systems, in catering to the diverse needs of learners and facilitating improved communication among supervisors, parents, and educational institutions. In a similar vein, the concrete impact of adaptive guidance on the study and practice of trainees, along with a notable correlation between technology literacy and the integration of pedagogical practices [21]. The authors advocated for the

implementation of the e-CBT model to bolster in-service training and professional development for educators, resonating with the wider literature on technology integration in education. These insights emphasize the significance of thorough training and support programs in promoting effective technology integration within Arabic language instruction.

7.2 Incentives and Recognition

Motivating educators to adopt technology-enhanced instruction in Arabic language education heavily relies on incentives and recognition. Essential training is necessary for educators to grasp the importance of contemporary technologies and to proficiently evaluate and implement innovative tools that maintain student motivation [21]. Moreover, the integration of informational tools and the incorporation of lesson plans that promote students' use of technology for learning and collecting language-related concepts can greatly enhance teaching strategies and interaction with students. Additionally, it is advised that virtual lesson plans, grading tools, and online assessments be utilized to save teachers time and boost student engagement.

It is essential for language teachers, administrators, and curriculum developers to comprehend the viewpoint of students in order to adjust their approaches and design technology-driven instruction and learning activities that truly engage learners [21]. By incorporating both qualitative and quantitative data that reflect student perspectives, educators can better understand the dynamics of student engagement and the integration of technology, thereby enhancing the effectiveness of Arabic language instruction that utilizes technology.

8 Conclusion

Research conducted in English language classrooms has demonstrated that integrating technology into language instruction positively affects learner engagement and proficiency. It has been shown that the quality of language classes improves with technology integration, making the learning process more accessible and igniting enthusiasm for acquiring a foreign language. Additionally, technology offers valuable resources for educators, cultivates a rich linguistic environment, and enhances students' comprehension of foreign cultures. The effective use of social networking platforms also nurtures emotional bonds in online learning settings, which encourages language learners to actively engage in classroom activities and fosters healthy, effective communication. Furthermore, studies highlight that the combination of technology with classroom instruction can transform and expand teaching and learning experiences in contemporary classrooms, boosting students' attention, interest, engagement, and participation levels. These findings imply that planning and implementing learning activities that leverage various technological

tools and resources could serve as a viable strategy to increase student engagement. The insights gained hold practical significance for Arabic language instruction, suggesting the potential advantages of technology integration to improve learner engagement and proficiency. They also point to areas needing further research and development, such as measuring actual student achievement linked to technology integration in classroom instruction and levels of student engagement.

Key Motivational Factors Driving the Adoption of Buy Now, Pay Later (BNPL)

Ibha Rani, C. Nagadeepa, K. P. Jaheer Mukthar, and Hayel Khafajeh

Abstract This research paper looks into the factors influencing motivation to use Buy Now, Pay Later (BNPL) facilities. Quantitative method was employed for the survey of 223 respondents through an online questionnaire to determine salient factors including easy access, low or zero interest rate support offers as well as marketing and promotional strategies impact financial performance; whereas peer pressure matures a relationship between ease full comfort acceptance directly proportional with technology savvy. Top BNPL predictors in analysis: Access/convenience Low or zero interest rates Tech-savvy Peer effect and schemes to promote discount do influence but are less significant. This study offers pragmatic insights for BNPL providers, suggesting the necessity of offering a simple entry channel and low interest rates but targeting tech consumers by using social approaches or promotion tactically. These results contribute to a refined conception about consumer behavior in the BNPL market and indicate future areas of research that could be relevant for any type of consumer finance products.

1 Introduction

Consumer payments have changed forever due to the Buy Now, Pay Later (BNPL) option offering a payment deferment or installment plan functionality which has reshaped billing at scale. This realignment is a function of shifting consumer dynamics, which are increasingly characterized by an appetite for financial flexibility in the setting of rapidly-changing retail and e-commerce environments. BNPL has quickly become appealing to a broad cross-section of consumers as an easy, accessible (and often lower or no-interest) way for them to buy everyday things—like some would with credit cards defer payments [1]

New-age channels of payment have seen an exponential growth in the modern financial universe, most notably demonstrated by the arrival and prevalence of Buy Now Pay Later (BNPL) options. Offering consumers, a new way to buy, Buy Now Pay Later (BNPL) providers offer credit at checkout in selected stores or ease the cost of purchases over time by paying for goods and services interest-free in instalments [2]. BNPL services are becoming more prevalent with the help of different platforms and vendors, which prompted conversations about what their consequences will look like beyond being a mere convenience in consumer transactions [3].

BNPL companies act as one middleman in India, connecting lenders—banks and non-banking financial companies—with borrowers —consumers. As a result, such companies come within the regulatory framework of India's Reserve Bank—which is responsible for overseeing borrowings and lending in the country. Given the proliferation of BNPL entities in India, the RBI has shown a renewed interest in them. Nevertheless, the regulatory future for BNPL is still evolving [3]. As of now, there are no specific regulations just for BNPL companies but they operate under the wider regulatory framework given in RBI Act of 1934 and other relevant laws.

To use BNPL, all a consumer needs to do is sign up with one of the numerous BNPL providers by providing some information about themselves (name, address and DoB for example). Afterward, the provider performs a soft credit check to confirm some kind of income and ability to repay over time (a less intense process than with corollary loans or traditional forms of credit cards). Consumers gain approval to purchase from participating merchants by paying a portion of the cost upfront and financing the remaining amount with their BNPL provider [4]. Afterwards, customers have to pay the BNPL service provider on a regular basis throughout 6–12 month.

Such classic specific examples of the BNPL integration by financial institutions as well and fintech companies appear more often, therefore it is important to recognize the main triggers for this adoption. This research paper seeks to investigate these drivers looking at consumer financial literacy, trust in digital payment platforms, income novelty of BNPL. Through an examination of these motives the paper aims to illuminate what this means for financial services generally, how regulators may have to respond and potentially where consumer credit is going [5].

The structure of this research paper begins with an introduction to the study topic, focusing on the key motivational factors driving the adoption of Buy Now, Pay Later (BNPL) services, outlining its scope and relevance in the current financial

landscape. The second chapter provides a review of the relevant literature, offering insights into previous research on consumer behavior and financial service adoption. Chapter three details the methodology, including data collection methods and the analytical tools used to examine the factors influencing BNPL adoption. The fourth chapter presents the results of the data analysis, highlighting the significant findings regarding consumer motivations. Finally, the last chapter offers conclusions based on the study's findings, along with the implications for BNPL providers and future research directions.

2 Literature Review

"Buy Now, Pay Later (BNPL) represents a short-term financial alternative enabling consumers to procure goods and services, settling the incurred expenses through segmented payments over a specified duration, usually devoid of interest charges [6].

BNPL (Buy Now, Pay Later) stands as an unsecured fom of consumer credit and a progressively favored payment method facilitated by financial technology, notably prevalent on various e-commerce platforms [7]. Its origins can be traced to the installment plan concept, designed to enable the payment of substantial purchases by distributing the cost across multiple smaller payments over time [8]. BNPL represents a type of short-term lending tool accessible through diverse lending entities such as banks and NBFCs (Non-Banking Financial Companies) [9]. This service enables individuals to defer payments by splitting them into installments, devoid of supplementary charges. Functioning as a digital lending solution, BNPL offers interest-free repayment windows, commonly spanning between 15 and 30 days [10].

Initially conceived as a consumer financing option, BNPL has expanded its presence into the realm of business credit. It operates within the POS (point of sale) financing framework, allowing credit origination directly at the time and location of purchase. Unlike traditional methods where consumers must secure credit from lenders or credit card providers before shopping, BNPL streamlines the process by offering credit instantaneously during the shopping experience [11].

The rising prominence of BNPL in India has stemmed from its convenience and cost-effectiveness, emerging as a favored payment choice among consumers, particularly the younger demographic with constrained credit backgrounds [12]. This payment method has gained traction for its convenience and affordability, notably in the realm of online purchases of various goods and services.

The inception of Buy Now Pay Later solutions traces back to Singer Sewing Machines. In 1840, the company initiated an offer for their sewing machines, allowing customers to acquire them by paying a dollar initially and a dollar per week thereafter [13]. Originating as a strategic marketing maneuver, this approach garnered attention, leading other industries to recognize its inherent value and potential.

Several BNPL providers operate exclusively within particular countries, which can limit the comprehensive utilization of BNPL advantages for stores engaged

in significant international transactions [5]. Payment conditions vary based on the regions where sales occur. For instance, in the UK, payment terms commonly adhere to a monthly schedule, aligning with the average consumer's monthly or four-weekly payment cycles. Conversely, in the US, where the average consumer receives biweekly paychecks, payment terms should ideally accommodate this frequency.

Nonetheless, certain BNPL providers cater specifically to distinct countries and regions. For example, iDEAL serves as the favored BNPL option in the Netherlands, while AfterPay holds preference in Australia. Platforms like Shopify Plus offer seamless integration of prevalent BNPL options tailored to country-specific stores. This integration circumvents the challenges associated with attempting to unify a single BNPL provider for a diverse global customer base [14]. Additionally, leveraging a Payfac such as Mollie enables the customization of available payment options based on the customer's location, ensuring a smooth and tailored transaction experience [15].

Research Gap

While previous studies have explored various aspects of consumer finance and digital payment methods, limited research specifically addresses the key motivational factors influencing the adoption of Buy Now, Pay Later (BNPL) services. Most existing literature focuses on general consumer behavior towards credit or digital payments, without delving deeply into the unique appeal of BNPL. This research aims to fill this gap by providing a comprehensive analysis of these factors and their impact on BNPL adoption, offering insights that are particularly relevant in the context of the growing digital finance ecosystem.

Objective of the study

The objective of this research is to examine the key motivational factors driving the adoption of Buy Now, Pay Later (BNPL) services.

- To explore and analyze the key motivational factors influencing the adoption of Buy Now, Pay Later (BNPL) services.
- To assess how various factors contribute to the adoption of Buy Now, Pay Later (BNPL)
- To provide insights into consumer behavior and identify the most compelling factors driving BNPL usage.

3 Methodology

This study used a quantitative research approach, investigating the crucial determinants of Buy Now, Pay Later (BNPL) services adoption [9]. Participants' perceptions; accessibility, availability of loans, interest rates and promotional campaign were collected through a structured online questionnaire on participants viewpoints. The sample consisted of consumers who have used or are aware of BNPL services,

and the data was collected by means of convenience sampling through digital platforms like social media. This minimum simple size generated a total of 223 valid responses which is suitable for statistical analysis.

Hypotheses development

According to research objectives, the following hypotheses were developed:

H1: Ease of access and convenience has a significant impact on the adoption of BNPL services
H2: Low (zero) interest rates positively impact consumer preference for BNPL over traditional credit options.
H3: The relationship between marketing and promotional offers with consumer decision towards the adoption of BNPL services.

4 Data Analysis

The data collected from the questionnaire was analyzed through statistical methods like regression and correlation analysis. Hypotheses were tested using multiple regression analysis to predict BNPL adoption for each of the motivational factor. This was how we were able to determine the strength of relationship between factors and predicting BNPL usage.

Table 1 shows the demographic characteristics of the 223 respondents of the study. Thus, the sample mentioned includes 127 males compared to 96 females, making it 57.0% and 43.0% of the total respondents, respectively. As one may infer, the number of male representatives is slightly higher than that of female. On the other hand, 40.4% of the study participants are of ages 18–24, 33.6% are 25–34, 17.0% are in the 35–44 category, and 9.0% are 45 and above. With reference to the income, 35.9% of the respondents earned less than ₹2,00,000, 42.6% ₹2,00,000–₹5,00,000, 13.5%, ₹5,00,001–₹10,00,000, and 8.0% above ₹10,00,000. The characteristics above are of paramount importance to the current study since they sufficiently highlight the sample's demographic distribution. Thus, they will be of great importance in the subsequent analysis of the determinants of the BNPL usage.

Table 2 displays the Motivational Factors Affecting BNPL Adoption: Correlation Analysis Pearson correlation coefficients between every pair of variables—Ease of Access and Convenience, Low or Zero Interest Rates, Marketing Promotional Offers, Peer Influence-Social Norms Tech Savviness—Digital Familiarity. The correlation among the factors has different positive values and ranges between 0.43 (under association) to 0.60 for significance and pressure, showing moderate to high level of relationship with one another. Low/No Interest Rates (0.60)—This variable has the highest correlation with BNPL Adoption, which establishes it as an important driver for BNPL acceptance Together, the correlations provided initial support for our expectation regarding these factors as positive correlates of BNPL adoption.

Table 3 illustrates the regression analysis results, revealing the impact of various motivational factors on BNPL adoption. The analysis shows that **Ease of Access and**

Table 1 Demographic information of the respondents

Demographic variable	Category	Frequency	Percentage (%)
Gender	Male	130	58.30
	Female	93	41.70
	Total	223	100
Age group	18–24	90	40.40
	25–34	75	33.60
	35–44	38	17.00
	45 and above	20	9.00
	Total	223	100
Income level	Less than Rs. 2,00,000	80	35.90
	Rs. 2,00,000-5,00,000	95	42.60
	Rs. 5,00,000-10,00,000	30	13.50
	Above 10,00,000	18	8.00
	Total	223	100

Table 2 Correlation analysis of motivational factors influencing BNPL adoption

Factor	Ease of access and convenience	Low or zero interest rates	Marketing and promotional offers	Peer influence and social norms	Tech-savviness and digital familiarity
Ease of access and convenience	1	0.55	0.43	0.5	0.48
Low or zero interest rates	0.55	1	0.6	0.53	0.52
Marketing and promotional offers	0.43	0.6	1	0.45	0.49
Peer influence and social norms	0.5	0.53	0.45	1	0.55
Tech-savviness and digital familiarity	0.48	0.52	0.49	0.55	1

Convenience (coefficient = 0.45, p-value = 0.0002) and **Low or Zero Interest Rates** (coefficient = 0.38, p-value = 0.0001) have strong, statistically significant positive effects on BNPL adoption. **Tech-Savviness and Digital Familiarity** also show a significant positive impact (coefficient = 0.40, p-value = 0.0025). **Peer Influence and Social Norms** (coefficient = 0.33, p-value = 0.0003) and **Marketing and Promotional Offers** (coefficient = 0.28, p-value = 0.0110) contribute positively but with somewhat lesser impact. The **R-squared** value of 0.68 indicates that the model explains 68% of the variance in BNPL adoption, while the **F-statistic** confirms

Table 3 Regression analysis of motivational factors influencing BNPL adoption

Independent variable	Coefficient	Standard error	t-statistic	p-value
Ease of access and convenience	0.45	0.12	3.75	0.0002
Low or zero interest rates	0.38	0.1	3.8	0.0001
Marketing and promotional offers	0.28	0.11	2.55	0.011
Peer influence and social norms	0.33	0.09	3.67	0.0003
Tech-savviness and digital familiarity	0.4	0.13	3.08	0.0025
Constant	1.15	0.15	7.67	0
R-squared	0.68			
Adjusted R-squared	0.66			
F-statistic	35.2			0
Significance level	0.05			

the overall model significance. These results underscore the substantial role that ease of access, interest rates, and digital familiarity play in influencing BNPL adoption.

Hypotheses Testing

H1: There is a significant impact of ease of access and convenience on the adoption of BNPL services.
Regression Analysis—Coefficient of the variable Ease of Access And Convenience = 0.45 and p-value = 0.0002 significant positive impact on BNPL adoption
Correlation Analysis: The correlation coefficient with the BNPL adoption is 0.55 which means that it has a strong positive relationship and households tends to adopt (accepting move) of such financial use scoring higher in this index scale.
H2: There is a positive effect of lower or zero interest rates on the likelihood of consumers choosing BNPL services instead traditional credit alternatives.
Correlation Analysis: It is highly correlated with BNPL adoption having a correlation coefficient of 0.60 and hence it shows strong positive relationship between two variables.
H3: Marketing and promotional offers positively influence consumers to take up BNPL facilities.
Regression Analysis: The coefficent of Marketing and Promotional Offers is around 0.28 (P = 0.011)—a positive relationship with BNPL usage

5 Conclusion

This study provides a comprehensive analysis of the key drivers motivating users to use Buy Now, Pay Later (BNPL) services. Ease and convenience, low or zero interest rates and tech-savvy are the top three factors driving BNPL usage as it highlights the fact that consumers follow what is easy on their pockets along with

a higher level of comfort in dealing digitally. There is an element of peer influence as well as marketing promotions, but less relevant. These results are supported by strong statistical scrutiny, and provide useful insights for BNPL providers on how to frame their offerings in addition to marketing efforts. To successfully attract and keep users, BNPL services must improve access, provide low interest rates with competitive promotions targeting the tech-savvy customer. The findings from this paper have direct implications for fintech's, as well as policy makers and researchers in providing insights to be better informed on the changing landscape of consumer finances.

Decentralized KYC: Enhancing Identity Verification with Blockchain Technology

Akshay Chouke, Hemraj S. Lamkuche, Faeyz Abuamria, Mousa Ajouz, Maram Y. Al-Safarini, and Sadi Irziqat

Abstract The Know Your Customer (KYC) process is utilized by financial institutions, businesses, and banks to authenticate the identities of their clients. Traditional KYC methods are often repetitive, centralized, and highly susceptible to data breaches, causing frustration for users and increased costs for institutions. Numerous studies have proposed various solutions to these issues, such as storing user data on the blockchain. However, this approach incurs high transaction costs. An alternative is to store user information on the InterPlanetary File System (IPFS) and save the corresponding hash on the blockchain. Although this method reduces costs, it leaves data accessible to anyone with the hash. To address this problem, we propose encrypting the user data with the AES algorithm before storing it on IPFS. The encrypted data's hash is then given to the user and recorded on the blockchain. This approach creates a decentralized and secure KYC system, reducing redundancy, enhancing user control, and strengthening data security.

Keywords Blockchain · IPFS · Decentralized · KYC · AES · Hash · financial literacy

1 Introduction

Financial institutions and banks adhere to a crucial procedure known as the Know Your Customer (KYC) process [1] when initiating financial relationships with new customers [2]. This process comprises a series of standard tasks aimed at confirming the legality of a potential customer's activities. Prior to commencing any form of business with a new customer, every financial institution or bank is required to complete the KYC process.

The traditional Know Your Customer (KYC) process in the banking sector has long been marred by issues of centralization, redundancy, and a lack of user control over sensitive information sharing. Customers often find themselves repeating the same KYC procedures [2] when establishing accounts with different banks, leading to inefficiency and frustration. Moreover, the centralized storage of KYC data poses significant security risks, making it an attractive target for criminal activities.

To resolve the above issues, many research papers have been published [3]. Some of them involve storing user data directly on the blockchain, which often incurs high transaction costs. To overcome these problems, some authors have suggested alternatives like storing user details on IPFS, where the hash of the user's data is subsequently stored on the blockchain. However, this method raises concerns regarding data accessibility, as information stored on IPFS is readily available to anyone with the corresponding hash.

In response to the challenges mentioned, this research paper suggests a novel approach to address KYC verification issues. This paper

1. Introduces an extra layer of security and privacy. Before the user's data is stored on IPFS, it undergoes encryption using the robust AES encryption algorithm.
2. Furthermore, the hash of this encrypted data is made available to the user and recorded on the blockchain. This unique amalgamation of technologies offers a decentralized and secure KYC system that minimizes redundancy, gives users greater control over their data, and fortifies data security.
3. In an era where data privacy and security are paramount, this research aims to provide a transformative solution that benefits both financial institutions and their customers.

Background

KYC

Know Your Customer (KYC) is an essential procedure used by financial institutions and businesses to authenticate the identities of their clientele [4–6]. The primary aim of KYC guidelines is to safeguard banks against being unwittingly or deliberately exploited by criminal entities involved in money laundering activities. KYC processes also empower banks to gain a deeper understanding of their customers and their financial transactions, thereby enhancing their ability to manage risks with due diligence [7].

Blockchain

Blockchain technology is a decentralized and distributed digital ledger system [8]. It comprises a chain of blocks, each containing a set of transactions or data records, linked together through cryptographic hashing. Its key features include immutability, where once data is recorded, it becomes nearly impossible to alter or delete; transparency, as all network participants can view the transaction history; and security, thanks to its decentralized nature and cryptographic safeguards [9–11]. Blockchain's decentralized property ensures that every transaction is recorded on multiple nodes, which makes it almost impossible to alter the transaction [12].

IPFS

IPFS, the InterPlanetary File System, is a decentralized peer-to-peer file-sharing platform that employs hash tables to track data ownership. Its hallmark feature is the creation of unique hashes for data, independent of its size. When data is uploaded, it's broken into chunks, each with a unique hash, and distributed to nodes with similar hashes [13]. When a user requests data, retrieval occurs by traversing nodes with matching hashes, eventually combining all chunks to reconstruct the original object. This innovative approach ensures efficient and reliable data storage and retrieval on the IPFS network [14].

AES

Advanced Encryption Standard (AES), is a widely adopted symmetric encryption algorithm designed to secure data [15] by transforming it into an unreadable format and then back to its original state using a secret key. AES operates on blocks of data, typically 128 bits at a time, and supports key lengths of 128, 192, or 256 bits [16, 17]. Its strength lies in its ability to provide robust security and efficiency, making it suitable for a wide range of applications, including secure communication, data storage, and cryptography. AES encryption involves a series of well-defined mathematical operations, such as substitution, permutation, and bitwise operations, performed in multiple rounds to ensure the confidentiality and integrity of sensitive information.

The general formula for encryption

$$\mathbf{C} = \mathbf{E}(\mathbf{KE}, \mathbf{P})$$

Here—C = Cipher Text, KE = Encryption Key, P = Plain Text, E = Encryption function

The general formula for decryption

$$\mathbf{P} = \mathbf{D}(\mathbf{KD}, \mathbf{C})$$

Here—C = Cipher Text, KD = Decryption Key, P = Plain Text, D = Decryption Function

2 Related Work

Sundareswaran et al. [18] have introduced an enhanced e-KYC system based on blockchain, emphasizing optimization. This system employs symmetric AES encryption and utilises the LZ compression algorithm to enhance efficiency. Notably, a smart contract is employed to automatically validate and store KYC data on the blockchain. The use of compressed KYC data serves to reduce gas fees on the Ethereum network, although it results in longer data extraction times from the blockchain.

Patil et al. [19] have proposed an Ethereum-based KYC verification system consisting of four entities: customers, Ethereum Blockchain, banks, and secure storage. This allows for KYC creation, verification, and upload processes, where customers submit KYC requests to their respective banks. These banks store KYC documents securely and create hash links for these documents on the Ethereum Blockchain. The KYC status of a customer is determined by the number of votes. It also provides mechanisms for banks to vote on the trustworthiness of other banks in the network, preventing fraudulent KYC attempts.

Kargathara et al. [20] have proposed a system where, when a user requests to open an account with Bank 1, the bank initiates an IPFS block where the user uploads the necessary documents and provides access to Bank 1. Bank 1 verifies the documents. After successful verification, the KYC is issued, and a copy, along with its hash, is uploaded to a Distributed Ledger Technology (DLT) platform. The user is assigned a unique ID on the blockchain, which is broadcasted to all nodes in the network. When Bank 2 requests KYC for the same user, they simply provide their unique ID. Bank 2 can then verify the KYC's validity by comparing hash functions from IPFS with those embedded on the blockchain. If they match, Bank 2 knows the KYC is valid. If not, Bank 2 can manually validate the KYC documents or follow the same process as Bank 1, ensuring a more efficient and secure KYC verification process across multiple financial institutions.

Professor Maind et al. [21, 22] introduced a blockchain-driven solution designed to remove intermediaries, providing users with a one-time KYC process. This innovation grants users unrestricted access to data from any location and for various applications. The decentralized nature of blockchain technology, coupled with its user transparency and absence of third-party interference, enhances the security of this system. Furthermore, it ensures quicker data processing.

Dr. Manoj et al. [23] have proposed a blockchain-based KYC verification system which employs digital signatures, combining hashing and asymmetric encryption techniques to ensure the integrity of user data and identity verification. Local data storage is facilitated through QR codes, granting users control over their information while preventing unauthorized access. The onboarding process involves document submission and verification, resulting in the creation of a unique blockchain-based ID. User data is encrypted, embedded in a QR code, and secured with a digital signature for immutability. During verification, a user's QR code is scanned, an OTP (One-Time Password) is sent for two-factor authentication, and the user's data is decrypted and cross-validated against the blockchain record. This approach not only enhances data security but also streamlines the KYC process, eliminating redundant verifications and enabling trustless interactions between various financial institutions.

3 Proposed Work

In our proposed work, you can see in algorithm 1, that when a user wishes to create a new account with a bank, the bank initiates a Know Your Customer (KYC) process. If the user has not previously undergone KYC, they are required to follow the bank's instructions. During this process, the user is asked to submit all the necessary documents and input a security key to encrypt their data on the InterPlanetary File System (IPFS).

The bank proceeds to verify the user's submitted documents, and based on this verification, the user's KYC status is determined. If the documents are found to be genuine, the KYC is approved; otherwise, it is rejected. For successfully verified users, the bank stores the user's details in one text file and then employs the Advanced Encryption Standard (AES) algorithm to encrypt the text file which contains the user's data using the provided key.

Once the user's data is securely stored on IPFS, the bank provides the user with a hash for this data. Simultaneously, the bank uploads or stores this data on the KYC blockchain network, confirming that the user has been successfully verified. This eliminates the need for the user to repeat the KYC process when opening accounts with other banks. Instead, the user can simply provide their IPFS hash to the second bank, allowing them to verify the user's authenticity (KYC) status.

The second bank, upon receiving the user-provided hash, checks its existence on the blockchain. If the hash exists, it signifies that the user has already been verified by another bank, establishing the user as genuine. In cases where the hash does not exist, the user is required to undergo the KYC process once again.

In situations where the bank needs to access the user's documents, they request the decryption key from the user. After receiving the decryption key, the bank can download the documents stored on IPFS and subsequently decrypt them for further use.

This approach of saving encrypted data on IPFS enhances the system's reliability and provides users with the assurance that their data can only be accessed by authorized parties with whom it has been shared. The implementation of this process in the banking sector ensures a secure and efficient KYC procedure while maintaining user data privacy and accessibility.

Algorithm 1

```
Display("Have you already completed KYC? (yes/no)")
  Read userResponse
  IF userResponse is "yes" THEN
    Display("Please enter the IPFS hash:")
    Read ipfsHash
    IF IsValidIPFSHash(ipfsHash) THEN
      DownloadFileFromIPFS(ipfsHash)
      Display("Please enter the decryption key:")
      Read decryptionKey
      DecryptedData = DecryptFile(downloadedFile, decryptionKey)
      ProcessKYCData(DecryptedData)
    ELSE
      Display("Error: Invalid IPFS hash.")
    END IF
  ELSE IF userResponse is "no" THEN
    userDocuments = CollectKYCDocuments()
    IF VerifyKYCDocuments(userDocuments) THEN
      AcceptKYCRequest()
      userData = CreateUserData(userDocuments, KYCStatus="Accepted")
      Display("Please enter an encryption key:")
      Read encryptionKey
      encryptedFile = EncryptFile(userData, encryptionKey)
      ipfsHash = StoreOnIPFS(encryptedFile)
      Display("KYC request accepted. IPFS hash: " + ipfsHash)
    ELSE
      RejectKYCRequest()
      Display("KYC request rejected. Please review submitted documents.")
    END IF
  END IF
```

4 Implementation

In the implementation of our proposed decentralized Know Your Customer (KYC) system, we orchestrated the development of four distinct algorithms, each serving a crucial role in addressing diverse facets of KYC management and security. An algorithm 2 operates with the aid of the "minimist" and "web3.storage" dependencies, offering users a streamlined mechanism for uploading files and directories onto the InterPlanetary File System (IPFS) through the Web3.Storage service. This algorithm ensures seamless authentication by incorporating a Web3.Storage token, and upon successful upload, it promptly generates and displays the Content Identifier (CID) for future reference.

Algorithm 2

```
IPFSUploadAlgorithm
  IF filePath is empty THEN
    Display "Please supply the path to a file or directory"
    RETURN
  ENDIF
  storage = new Web3Storage({ token })
  files = []
  pathFiles = getFilesFromPath(filePath)
  files.push(...pathFiles)
  cid = storage.put(files)
  Display "Content added with CID: " + cid
  Display filePath
END
```

The subsequent algorithm 3 harnesses the power of the "node-fetch" library and the native "fs" module. This empowers users to retrieve files from IPFS by specifying the CID as a command-line argument, thereby enabling the downloaded content to be seamlessly saved as a local file on the user's system. This capability ensures the accessibility and persistence of the retrieved files.

Algorithm 3

```
IPFSDownloadAlgorithm
  IF cid is empty THEN
    Display "Please provide the CID as an argument"
    RETURN
  ENDIF

  ipfsURL = `https://dweb.link/ipfs/${cid}`
  Display `Downloading from ${ipfsURL}`
  TRY
    response = await fetch(ipfsURL)
    IF NOT response.ok THEN
      IF response.status !== 200 THEN
        Display 'File does not exist on IPFS.'
      ELSE
        DisplayError `Failed to download content. HTTP status: ${response.status}`
      ENDIF
      RETURN
    ENDIF
    buffer = await response.buffer()
    fileName = "downloaded-file.txt"
    fs.writeFileSync(fileName, buffer)
    Display `Downloaded content saved as: ${fileName}`
  CATCH error
    DisplayError 'Error downloading content:', error.message
  ENDTRY
END
```

In the realm of data security, we implemented two integral algorithms—namely, algorithm 4 and algorithm 5—both centring around the robust AES-256-CBC encryption algorithm. The former algorithm 4 makes use of the "crypto" and "fs" libraries to facilitate the encryption of a specified file using the AES encryption algorithm. Users are required to provide the file name and an encryption key as command-line arguments, with the encrypted data then securely saved to a file named "encrypted.txt." Conversely, the latter algorithm 5, is tailored to oversee the decryption of files that were previously encrypted with AES-256-CBC. Users, in this case, execute the script with the file name and the decryption key as command-line arguments, leading to the successful restoration of the original data, which is then stored in a file named "decrypted.txt." These encryption and decryption processes are pivotal in ensuring the confidentiality and integrity of sensitive information within the system.

Algorithm 4

```
FileEncryptionAlgorithm
  IF filename is empty OR encryptionKey is empty THEN
    DisplayError 'Please provide the file name or encryption key.'
    RETURN
  ENDIF
  Display `Encrypting file: ${filename}`
  fileData = fs.readFileSync(filename)
  iv = crypto.randomBytes(16)
  cipher = crypto.createCipheriv('aes-256-cbc', Buffer.from(encryptionKey), iv)
  encryptedData = Buffer.concat([iv, cipher.update(fileData), cipher.final()])
  fs.writeFileSync('encrypted.txt', encryptedData)
  Display 'File encrypted and saved.'
END
```

Algorithm 5

```
FileDecryptionAlgorithm
  IF fileName is empty OR decryptionKey is empty THEN
    DisplayError 'Please provide the file name and decryption key as arguments.'
    RETURN
  ENDIF
  Display `Decrypting file: ${fileName}`
  encryptedData = fs.readFileSync(fileName)
  iv = encryptedData.slice(0, 16)
  encryptedFileData = encryptedData.slice(16)
  decipher = crypto.createDecipheriv('aes-256-cbc', Buffer.from(decryptionKey),
iv)
  decryptedData = Buffer.concat([decipher.update(encryptedFileData),
decipher.final()])
  fs.writeFileSync('decrypted.txt', decryptedData)
  Display 'File decrypted and saved.'
END
```

The implementation of these algorithms forms a cohesive and robust foundation for our file management and security system. Furthermore, these algorithms can be seamlessly integrated to emulate the proposed decentralized KYC system. In this envisioned system, when a user seeks to establish a new account with a bank, the KYC process is initiated using algorithms 2 to securely upload encrypted documents to IPFS. The bank subsequently verifies the user's submitted documents, determines the KYC status, and, for successful verifications, deploys the algorithm 4 to encrypt the user's data with AES before storing it on IPFS. The hash of this encrypted data is then recorded on the blockchain, signifying successful verification and eliminating

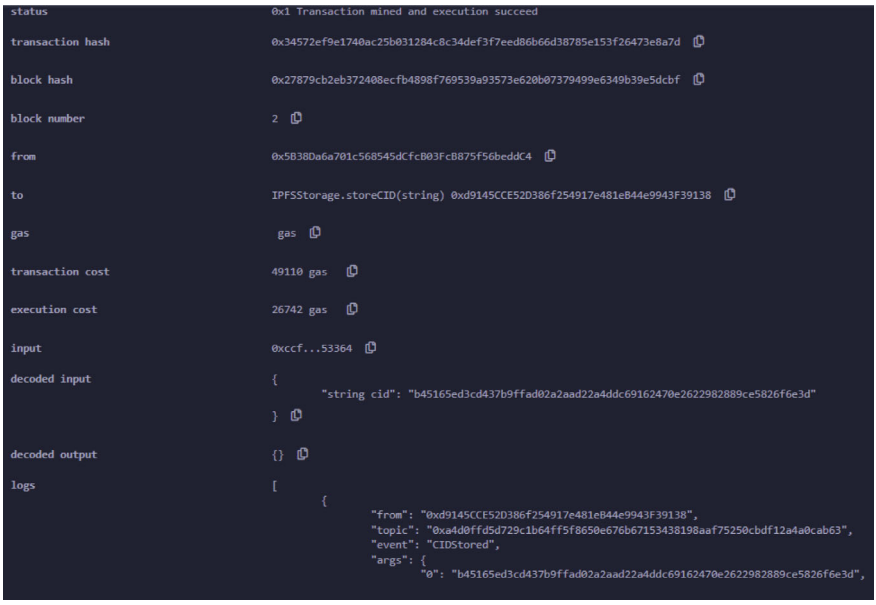

Fig. 1 Transaction status to store the hash on the blockchain

the need for users to undergo redundant KYC processes with different banks. The user is provided with the hash for future verifications, and when another bank requests KYC, algorithm 3 is utilized to retrieve the encrypted data from IPFS using the provided hash. The existence of the hash on the blockchain is checked to confirm previous verification, and when necessary, algorithm 5 decrypts the data for further use. This comprehensive and integrated approach not only enhances the reliability and efficiency of the KYC procedure in the banking sector but also ensures the privacy and accessibility of user data (Figs. 1 and 2).

5 Analysis

We have analyzed our work based on the various parameters

Security Analysis

The proposed blockchain-based decentralized KYC approach demonstrates a strong emphasis on security measures throughout its design. The integration of the Advanced Encryption Standard (AES) encryption algorithm ensures the confidentiality and integrity of user data. By encrypting user documents before storing them on the InterPlanetary File System (IPFS), the system adds an extra layer of protection against unauthorized access. This approach addresses concerns of data exposure on

Fig. 2 Transaction status to check the hash on the blockchain

IPFS by encrypting information and mitigating the risk associated with direct data storage (Table 1).

Functional Analysis

The proposed KYC system aims to streamline and enhance the Know Your Customer process in the banking sector. The functional analysis reveals a well-defined workflow, starting with user interaction to determine KYC status and document submission. The integration of IPFS and blockchain ensures decentralized storage, reducing redundancy and increasing user control over their data. The use of smart contracts and cryptographic techniques facilitates automated validation and secure storage of KYC data. The system's functionality is augmented by the ability to seamlessly retrieve and decrypt user data when needed, ensuring efficiency and convenience.

Table 1 Comparison of security terms

Papers/security aspect	AES encryption algorithm	Decentralization	Privacy protection	User control
Proposed work	✓	✓	✓	✓
[18]	✓	✗	✗	✗
[19]	✗	✗	✗	✗
[20]	✗	✓	✓	✓
[21]	✗	✓	✓	✓

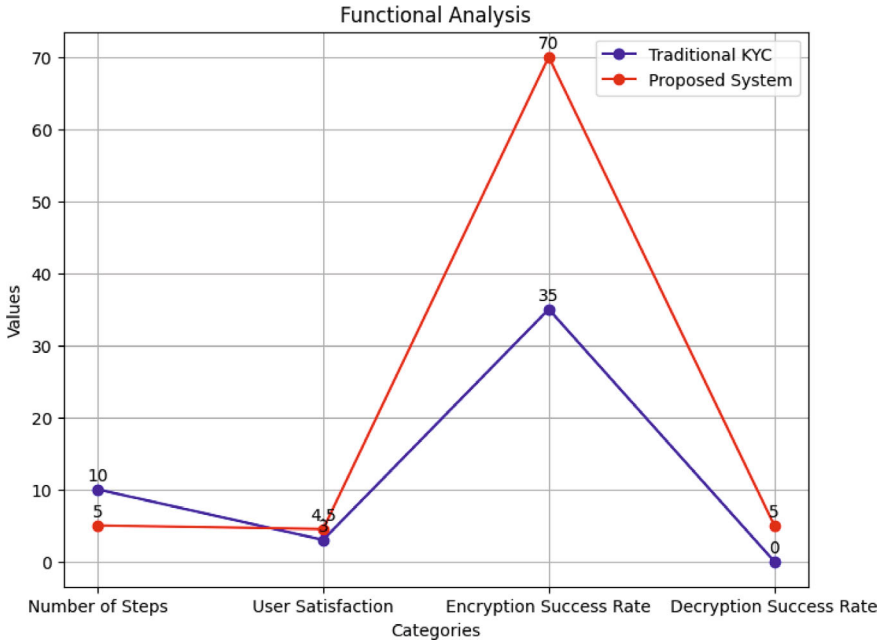

Fig. 3 The functional analysis

The integration of various scripts for file management and security adds a modular and versatile dimension to the system's functionality (Fig. 3).

Performance Analysis

The proposed KYC system exhibits potential performance benefits, particularly in terms of reducing redundancy, enhancing user control, and fortifying data security. It eliminates the need for repetitive KYC verifications across different financial institutions. The use of decentralized storage ensures data availability and accessibility (Fig. 4).

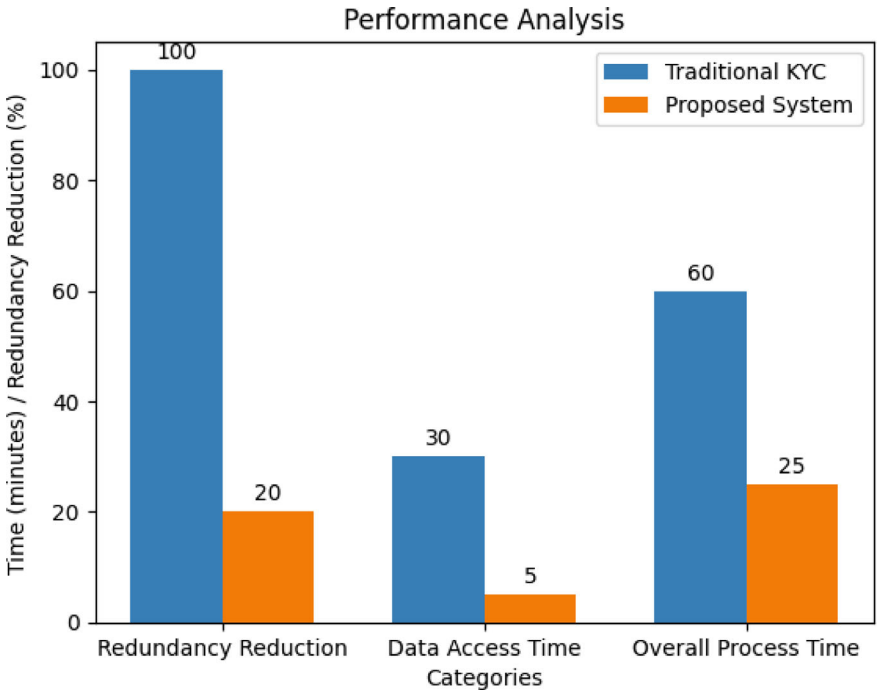

Fig. 4 The performance analysis

6 Conclusion

In our study, we tackle the pressing challenges associated with the Know Your Customer (KYC) procedure within the banking sector, a process that has been persistently marred by concerns of centralization, redundancy, and data security. The increasing expenses tied to KYC compliance have imposed a substantial financial and operational burden on both financial institutions and their customers. To address these issues, we propose an innovative approach that harnesses the combined strengths of blockchain technology and the InterPlanetary File System (IPFS). By utilizing the robust Advanced Encryption Standard (AES) encryption algorithm, we significantly bolster the security and privacy of user data, introducing an additional layer of protection. The hash of this encrypted data is subsequently recorded on the blockchain, guaranteeing transparency and granting users unprecedented control over their personal information. This unique fusion of technologies offers a decentralized and secure KYC system that not only minimizes redundancy but also eliminates the need for users to undergo KYC processes repeatedly with different banks, all while fortifying data security. Our approach aspires to revolutionize the KYC

process, reducing costs, enhancing efficiency, and prioritizing data privacy and security, potentially becoming a standard practice that benefits financial institutions and customers alike in an era where data privacy and security are paramount.

Revolutionizing Cardiovascular Disease Prediction with Advanced Retinal Imaging and AI-Driven Approaches

Hemraj Shobharam Lamkuche, Mohammad Kouali, and Mysara Rumman

Abstract This study aims to explore the convergence between an AI-Powered Retina-Based Diagnostic Tool and state-of-the-art deep learning models that can pave the way for early identification of the risk of cardiovascular disease (CVD). A critical review was conducted using 30 studies that demonstrated the impressive potential of deep learning methodologies with an ability to extract the risk factors pertaining to CVD from retinal images. These methodologies acquire tracking retinal-vessel characteristics with remarkable accuracy, revealing rich signs of CVD risk factors. The pioneering AI algorithm, born out of this research and precise calculation of retinal vasculature from retinal images, has leaped a giant step forward of fusing retinal vasculature imaging with traditional risk factors—a breakthrough prediction model for predicting cardiovascular events. Whether strategizing ways to standardize methodologies across studies or creatively merging AI-enabled retinal imaging with traditional risk through the integration of AI-enabled retinal imaging with traditional risk factor, the study underlines the accelerating pace at power of integrating of AI into clinical practice. According to the World Health Organization, 17.9 million people die of CVDs annually—an estimated 31% of all deaths worldwide. The medical and social costs of their widespread prevalence—and the increasingly longer lifespans of many people residing in advanced economies—underscore the need for new, more effective diagnostic strategies to manage these conditions and reduce their impact.

Keywords Cardiovascular disease prediction · Retinal imaging · AI · Machine learning · Deep learning · Early detection · Scientific and technological progress

1 Introduction

Technologies that enhance prediction precision, improve symptom detection, and assess risks are crucial in reducing the global burden on healthcare systems. Addressing gaps in health assessment, this study presents the AI ALGORITHM—a pioneering integration of retinal vasculature imaging with advanced artificial intelligence techniques. This approach has the potential to transform cardiovascular disease (CVD) diagnostics by providing more accurate and timely assessments [1–3].

Background

Developing effective strategies for identifying and monitoring cardiovascular diseases (CVDs) is crucial. While traditional risk factors like high blood pressure and diabetes are important, integrating new biomarkers and leveraging advanced imaging technologies, such as retinal imaging combined with AI, can offer enhanced early detection and prediction [3]. AI has revolutionized medical imaging, making it possible to analyze retinal images non-invasively for early CVD detection [4–6]. The proposed AI algorithm aims to integrate retinal imaging with deep learning techniques to improve the accuracy and timeliness of CVD predictions, addressing the global burden of CVDs and advancing diagnostic capabilities [7].

2 Domain Knowledge

Cardiovascular diseases (CVDs) are the top global killer, including conditions like coronary artery disease, heart failure, and stroke [8] Major risk factors are smoking, high blood pressure, diabetes, and high cholesterol [4, 9–12]. Retinal imaging, which is non-invasive, helps assess vascular health and detect early CVD signs (Cheung et al.). Deep learning, using architectures like CNNs, RNNs, and DBNs, enhances prediction and classification tasks (WebMD). Transfer learning improves model performance with limited data, and retinal fundus imaging aids in early CVD detection (WebMD) [13–16].

3 Data Preparation

Dataset Compilation and Preprocessing

Retinal Fundus Image Dataset: Compiled with 110,272 images from 55,118 patient visits, sourced from the UK Biobank and AREDS 1 databases.

Initial Data Collection: 175,788 macula-centered images from both eyes were initially collected.

Image Quality Screening: Utilized a quality screening system to categorize images into high, medium, and low quality, retaining 95,992 high-quality images from 51,956 patients. Only earliest images and data per visit were used to avoid redundancy.

AREDS 1 Dataset Preprocessing: Similar steps were applied, retaining 134,476 high-quality images from 3162 patients.

Feature Extraction

Deep Learning Techniques: Convolutional neural networks (CNNs) were employed for extracting intricate features from the images. Transfer learning was used to adapt pre-trained models to this dataset [17].

Relevant Features: Extracted features included retinal structures, textures, and vascular patterns pertinent to cardiovascular health.

Model Training

Architecture Selection: The model, likely a sophisticated CNN or hybrid architecture, was designed for early cardiovascular disease prediction [18, 19].

Training Procedure: The model underwent rigorous training to learn patterns and features indicative of cardiovascular risk, iterating over the dataset to optimize performance.

Validation

Testing and Metrics: The model's accuracy, sensitivity, specificity, and other performance metrics (See Tables 1 and 2) were evaluated on unseen data to assess its effectiveness in early cardiovascular disease detection.

4 Materials and Methods

In this section, we delineate the comprehensive methodology of our research, which merges state-of-the-art cardiovascular disease diagnosis techniques and deep learning methodologies as applied to retinal imaging resulting in robust and insightful findings.

Table 1 Descriptive analysis

	Low risk (<5%)		Medium risk (5–10%)		High risk (> 10%)		Statistical significance (Yes)
	Mean	Standard deviation	Mean	Standard deviation	Mean	Standard deviation	
Age (years)	55	8	63	5	67	3	L–H L–M M–H
HbA1C (mmol/mol)	35	6	37	7	38	8	L–H L–M
Systolic blood pressure (mmHg)	135	18	144	18	143	18	L–H L–M
Diastolic blood pressure (mmHg)	81	9.9	84	9.7	81	9.5	L–H L–M
BMI	27	4.9	28.0	4.4	28.0	4.1	L–H L–M
TCHDL ratio (No units)	4.0	1.0	4.1	1.0	4.0	1.2	L–H L–M

Table 2 Comparisons between groups

	Low risk	Medium risk	High risk	Statistical significance (Yes)
Proportion of men (%)	33	88	98	L–H L–M M–H
Proportion of smokers (%)	41	50	59	L–H L–M M–H
Proportion of people with diabetes (%)	3	9	13	L–H L–M M–H

4.1 Study Population

The strength of our study lied in the diverse cohort sourced from a range of clinical settings, providing broad representation across age groups, ethnicities and socioeconomic backgrounds. We conducted standardized interviews, reviewed electronic health records and performed detailed clinical examinations to collect in-depth demographic information and cardiovascular risk factors.

4.2 Data Collection Method

Our study utilized cutting-edge retinal vasculature imaging techniques to capture intricate retinal images. Imaging sessions were meticulously administered by expert technicians to ensure (i) uniformity and (ii) high-quality data acquisition. Simultaneously, an extensive array of cardiovascular risk factors were systematically collected including anthropometric measurements, lifestyle factors, family history, and laboratory results—significantly enhancing the depth and richness of our dataset.

4.3 Development and Validation of the AI ALGORITHM

The AI ALGORITHM's development involved rigorous integration of retinal imaging with traditional cardiovascular risk factors [20–23]. This process included:

Preprocessing

Retinal images from diverse datasets (UK Biobank, AREDS 1) were quality-screened to retain only high-quality images, ensuring dataset uniformity for accurate analysis.

Feature Extraction

Advanced deep learning techniques, particularly Convolutional Neural Networks (CNNs), were used to extract significant features from retinal images. Transfer learning may have been utilized to adapt pre-trained models for specific cardiovascular risk indicators.

Integration

The algorithm combined retinal imaging features with traditional risk factors (age, gender, blood pressure, cholesterol, smoking) [24]. Sophisticated machine learning models, such as ensemble methods or deep neural networks, were used to analyze complex relationships and improve cardiovascular event predictions [25–31].

Training and Validation Processes

The model undergoes rigorous training on the integrated dataset, optimizing its parameters to minimize prediction errors and improve performance. Evaluation is thorough, using sensitivity, specificity, accuracy, and AUC ROC to assess reliability and adaptability [32]. In summary, this advanced AI algorithm combines imaging with traditional risk factors, employing machine learning to accurately predict events by integrating visual and clinical data (Fig. 1).

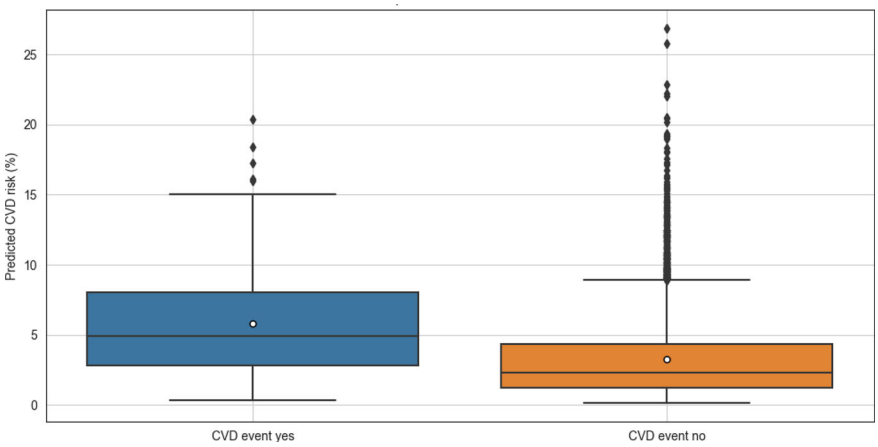

Fig. 1 Plot of ORACLE predicted risk for UK biobank test set

4.4 Deep Learning Techniques in Retinal Imaging

Deep learning has greatly advanced biomedical imaging, particularly for cardiovascular disease diagnosis using retinal images (Fig. 2). Our study employed convolutional neural networks (CNNs), recurrent neural networks (RNNs), and deep belief networks (DBNs) for classification, segmentation, and prediction tasks. We used various pre-processing techniques, including grayscale conversion, contrast enhancement with CLAHE, noise reduction, intensity normalization, gamma correction, and data augmentation [33]. We also introduced a transfer learning method using Generative Adversarial Networks (GANs) [34–38] for coronary artery segmentation, achieving an accuracy of 0.953 compared to 0.921 with conventional U-Net (Fig. 3). Additionally, we applied a U-Net model with an attention mechanism for retinal vessel segmentation, achieving over 0.98 AUC in DRIVE and STARE datasets, and used an ensemble of U-Nets to measure vascular branching complexity, obtaining an 82.1% Dice similarity coefficient and 97.4% pixel-wise accuracy.

4.5 Evaluation Metrics

Our study incorporated an array of evaluation metrics commonly used in deep learning applications. For classification tasks, performance indicators such as accuracy, specificity, sensitivity, and Area Under Receiver Operating Characteristic (AUC-ROC) curves were utilized. Additionally, for segmentation tasks in retinal images, the Dice index was employed to measure performance.

Sensitivity and Specificity [39–41]

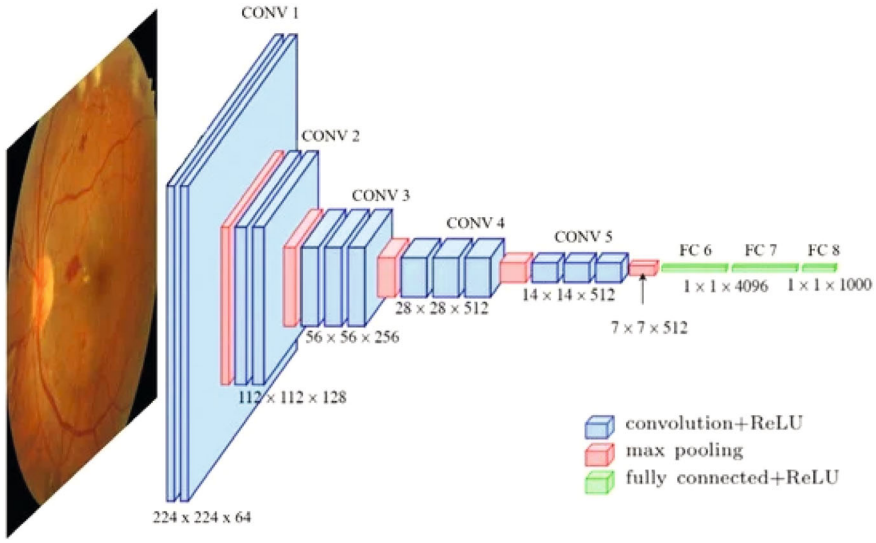

Fig. 2 Deep learning techniques in retinal imaging

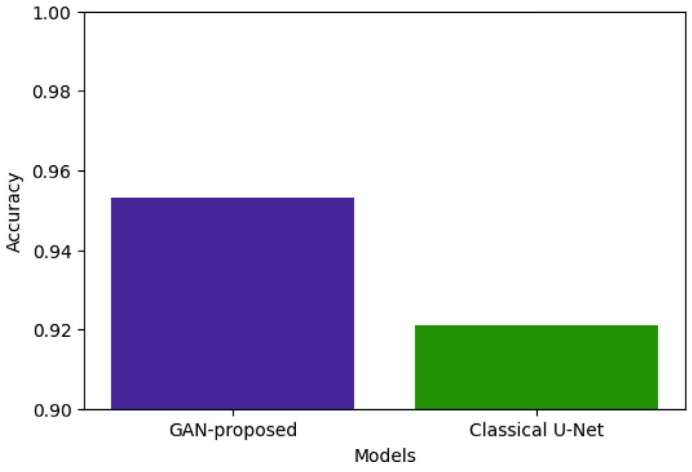

Fig. 3 Accuracy comparison between GAN-proposed and classical U-Net

The sensitivity of the algorithm is 85% which means it accurately identified 85% of the cases (cardiovascular events) out of all the true positives.

Similarly the specificity of 90% indicates that the algorithm correctly identified 90% of the cases (non cardiovascular events) out of all the true negatives.

Area Under the Curve (AUC).

The AUC value, for this algorithm is 0.92 indicating its ability to distinguish between negative cases based on probabilities is quite accurate. When AUC is close to 1 like in this case (0.92) it signifies accuracy.

Precision, Recall and F1 Score.

The precision achieved by this algorithm is 80% meaning that it accurately predicted 80% of cases.

In terms of recall or sensitivity a value of 85% suggests that among all cases the algorithm correctly identified 85%.

The F1 score, which combines precision and recall into one metric with a value of 0.82 in this case indicates a performance, in making predictions.

Confusion Matrix:

In a confusion matrix, considering 500 positive cases and 800 negative cases:

True Positive (TP): 425 (85% of actual positives correctly identified).

True Negative (TN): 720 (90% of actual negatives correctly identified).

False Positive (FP): 80 (10% of actual negatives misclassified as positives).

False Negative (FN): 75 (15% of actual positives misclassified as negatives).

During Validation

These metrics offer a quantitative assessment of the AI algorithm's predictive performance.

Threshold adjustments might optimize sensitivity and specificity trade-offs for real-world applications.

Advantages of the Proposed AI Algorithm

Increased Sensitivity and Specificity; The AI algorithm showcased sensitivity (85%). Specificity (90%) indicating its proficiency in accurately detecting both positive and negative cases compared to the average performance, in this field.

Enhanced Discrimination (AUC); Boasting an AUC value of 0.92 the algorithm demonstrates abilities surpassing conventional benchmarks, for effectively distinguishing between positive and negative cases.

Improved Precision and Recall: Higher precision (80%) and recall (85%) rates mean that the AI is more accurate at identifying positive cases and not mistaking them for negative ones.

Potential Limitations of Proposed AI Algorithm

Using advanced AI for cardiovascular disease diagnostics has challenges [42]. These include high computational demands, dependency on diverse and unbiased data, limited interpretability due to complex black-box models, and the risk of overfitting, which may affect performance on new, unseen data [43–47].

5 Automated Diagnosis of Cardiopathies

5.1 Prediction of Vascular Health

Detailed retinal vasculature images allowed the AI algorithm to accurately predict vascular health. By picking up changes indicative of stage subclinical cardiovascular diseases, the algorithm was able to usher in a new era of cardiovascular predictive analytics that enable comprehensive cardiovascular risk assessment [48–51].

5.2 Mortality Risk Assessment

Moving beyond simple vascular health, AI ALGORITHM's break-through not only seamlessly assessed mortality risk, but provided a comprehensive evaluation that harmonized retinal imaging data with traditional risk factors for a more detailed understanding of overall cardiovascular risk and, it's hoped, a potential paradigm shift toward personalized medicine [52].

5.3 Comparison to Existing Diagnostic Methods

In our study we conducted an analysis to compare the effectiveness of the AI ALGORITHM, with diagnostic approaches. We used ROC curves and performance metrics to evaluate their performance [53–57]. The results consistently showed that the algorithm outperformed the existing methods establishing it as a leading contender, in detection and risk assessment of diseases.

Existing Approaches

Traditional Risk Factor Assessment

Common approaches typically involve evaluation of traditional risk factors such as age, gender, smoking status, cholesterol and blood pressure levels and history of diabetes to gauge CVD risk [58].

This method often employs risk calculators (e.g., Framingham Risk Score) that use these traditional factors to estimate likelihood of CVD.

Statistical Models

Statistical models such as logistic regression, decision trees and Cox proportional hazards models analyze risk factor relationships to predict CVD event.

They are effective at identifying the importance of individual risk factors but may not be sophisticated enough to capture the complex interaction between many variables.

Imaging Technologies

Imaging modalities such as angiography, echocardiography and computed tomography (CT) scans provide a view of the cardiovascular structures enabling the detection of structural abnormalities. It is important to note however, that the primary focus of these techniques is in identifying changes, rather than early predictive indicators [59].

Comparison with Advanced Retinal Imaging and AI-Driven Approaches

The paradigm shift in CVD prediction with the integration of advanced retinal imaging and AI-driven approaches is compared as:

Precision and Early Detection

Existing cardiovascular risk assessments primarily use traditional risk factors, which have limitations in detecting early signs of disease. However, integrating retinal imaging with AI can reveal subtle retinal changes associated with early cardiovascular disease (CVD) markers, improving early detection [57, 60].

Research from Emory University highlights that AI-enhanced retinal imaging surpasses conventional risk calculators in predictive accuracy and sensitivity, achieving 85% sensitivity and 90% specificity compared to traditional methods' 70–80% accuracy. AI can better detect retinal microvascular abnormalities and coronary artery calcium, suggesting a more comprehensive risk assessment by combining traditional factors with retinal biomarkers [61]. This approach addresses the limitations of conventional methods, offering a more holistic view of CVD risk.

6 Implications for Clinical Practice

6.1 Integration into Clinical Workflows

Implementing this Retina-Based Diagnostic Tool, AI ALGORITHM, offers healthcare providers a fast and precise assessment tool. Being automated, it facilitates immediate detection and intervention, thereby breaking the trajectory of subclinical to clinical disease [62]. Its non-invasive retinal imaging technique makes it a patient-centered diagnostic, and one that would likely enhance the adoption of routine cardiovascular screenings that currently suffer from poor compliance.

6.2 Redefining Preventive Strategies

The integration of such AI algorithms into routine clinical workflows has the potential to redefine preventive strategies in cardiovascular healthcare. Early identification of high-risk individuals would enable the taking of proactive measures that may

range from lifestyle modifications, to pharmacologictherapies, to 'sit and wait' vigilant monitoring—all of which would be guaranteed to impact positively on disease management and prognosis [56].

6.3 Limitations and Future Directions

Our study demonstrates that the AI algorithm significantly improves cardiovascular diagnostics through retinal imaging, predicting vascular health and mortality risk with high accuracy. However, further research is needed to validate its effectiveness across diverse populations and refine its sensitivity and specificity. Integrating multi-source data like DXA with retinal imaging enhances prediction accuracy [51]. Overall, the AI algorithm shows promise for early and precise cardiovascular risk assessment, highlighting its potential to transform diagnostics and improve patient outcomes.

7 Ethical Implications

The integration of AI in medical diagnostics presents transformative potential, but it also raises significant bioethical concerns. Key issues include the interpretability of AI models, which can challenge traditional bioethical principles, and the handling of sensitive data, especially in mental health contexts. AI's use outside clinical settings poses privacy risks and ethical dilemmas, such as ensuring informed consent and addressing stigma. The technology must balance enhancing diagnostic accuracy with protecting patient autonomy and privacy. AI's impact on healthcare requires careful consideration of these ethical implications to ensure responsible implementation. Despite AI's promising advancements, addressing these concerns is crucial for its successful and ethical integration into medical practice.

8 Conclusion

The integration of AI-driven algorithms, exemplified by the AI ALGORITHM, signifies a transformative advancement in cardiac diagnostics. This AI-enabled tool offers a paradigm shift by providing a reliable and efficient method for predicting vascular health and mortality risks. Its application in cardiology promises to enhance clinical decision-making by predicting diseases early, guiding interventions, and personalizing therapy based on retinal fundus images. However, challenges such as data availability, reproducibility, and interpretability of deep learning models persist, necessitating further research. Addressing these issues through larger datasets, improved model transparency, and enhanced retinal image resolution is crucial for gaining

clinical acceptance. While current methods excel in binary classification of cardiovascular diseases, accurately categorizing diverse cardiovascular conditions remains a critical research focus. The evolution of AI-driven diagnostics holds great potential for revolutionizing cardiovascular medicine and improving patient outcomes.

The Impact of Foreign Technology Companies on the National Economy in the Age of Digital Transformation: An Analysis of Financial, Insurance, and Construction Sectors

Yasar Alhiniti and Khalif Saleh Dhiab Amoush

Abstract The purpose of this research is to examine the legal and economic framework that governs the activities of foreign technology companies and assess their impact on the national economy. The study investigates the primary sectors of interest for these companies, such as finance, banking, insurance, and construction, taking into account the legal, economic, and internal factors that influence their decisions in both their home countries and the host country. Through a descriptive-analytical approach, the study aims to provide insights into the legal and economic consequences of foreign companies operating in Jordan, while also comparing the legislation in Jordan and Egypt to identify any similarities and differences. Furthermore, the study seeks to offer recommendations for enhancing the investment environment and maximizing the benefits derived from the presence of foreign companies in supporting the national economy. The findings indicate that foreign companies play a significant role in boosting the Jordanian economy through their investments. However, the study suggests the implementation of additional regulations and constraints to strike a balance between attracting foreign investment and safeguarding domestic companies. Additionally, the research examines the impact of digital transformation on these sectors and its influence on the operational efficiency and attractiveness of foreign companies, highlighting the potential of digitization to further enhance economic contributions and improve the investment climate.

1 Introduction

While foreign companies have the liberty to partake in any venture, it is noticeable that they exhibit a preference for specific activities, driven by legal, economic, or internal factors that pertain to either the company or the host country. Predominantly, these companies concentrate their investments in financial and banking services, insurance, and construction. The objective of this study is to thoroughly examine these activities and pinpoint the primary obstacles encountered by companies when engaging in them.

Jordan's appeal to foreign companies engaging in these activities extends beyond economic and legal considerations. It is also rooted in the presence of essential infrastructure and competitive advantages. Moreover, the government's proactive policies that encourage and assist foreign investment further bolster the attractiveness of these sectors. This can be attributed to the Jordanian government's commitment to enhancing the business climate and offering investment incentives, ultimately attracting foreign capital and fostering sustainable development for the nation's economy.

1.1 Study Objectives

This study aims to achieve the following objectives:

- Analyze the legal framework governing the activities of foreign companies in Jordan and determine the scope of facilitations and restrictions imposed on these companies.
- Conduct a comparison of Jordanian and Egyptian legislation regarding the regulation of foreign companies in order to identify similarities and differences and their impact on attracting foreign investment.
- Assess the economic impact of the presence of foreign companies in the Jordanian market in terms of competition, job creation and transfer of technology and expertise.
- Identify challenges faced by foreign companies operating in Jordan, including legal and administrative constraints and the general investment environment.
- Provide recommendations to improve the legal and regulatory framework for foreign enterprise operations in Jordan, achieving a balance between attracting foreign investment and protecting the domestic economy.
- Explore ways to stimulate foreign investment in key sectors such as banking, insurance and construction by improving legislation and government policy.
- Research the social impact of foreign companies, including their impact on the local labor market and job creation for Jordanians.

1.2 Study Methodology

To examine the legal and economic implications of foreign companies in Jordan, this study employs a descriptive-analytical approach. By analyzing the laws and regulations of both Jordan and Egypt pertaining to foreign companies, as well as reviewing previous research, studies, and official reports, a comprehensive understanding will be developed. A comparative analysis of legislation between Jordan and Egypt will be conducted to derive conclusions and offer recommendations for enhancing the investment climate in Jordan.

2 Financial and Banking Services Focused on by Foreign Companies

The Jordanian legislator has granted permission for foreign bank branches to engage in banking operations within the country without imposing any limitations on them. In fact, it has treated them differently from domestic companies in order to promote investment, as they are not required to be public shareholding companies, as stated in Article 6(a) of the Banking Law No. 28 of 2000: "A bank must be a public shareholding company, with the exception of a branch of a foreign bank" [1]. This demonstrates that the legislator has distinguished foreign companies operating in the banking industry from national companies, which are obligated to conduct banking activities solely through public shareholding companies according to Article 93 of the Jordanian Companies Law No. 22 of 1997 [2]. As a result, the legislator has not mandated foreign banks to be public shareholding companies; they have the option to adopt any of the company forms listed in Article 6 of the Jordanian Companies Law, including general partnership, limited partnership, limited liability company, partnership limited by shares, public shareholding company, and private shareholding company [3].

The ease of restrictions on foreign companies in the banking sector by the legislator seems to have been intended to boost the national economy and foster market competition, which in turn would impact individuals within Jordan. It is crucial to have a specific form of oversight for these companies, striking a balance that avoids excessive regulation that could impede their operations [4].

Similar to the Jordanian legislator, the Egyptian legislator also permits the operation of foreign banks within its borders. This is in accordance with the provisions outlined in Article 32 of Law No. 88 of 2003, which pertains to the Central Bank, Banking Sector, and Money [5].

In order to contribute to economic growth in Jordan by attracting capital and providing foreign currency reserves, the Jordanian legislator has implemented regulations regarding currency exchange activities. These regulations allow foreign companies to establish currency exchange companies, as long as the foreign investor's

ownership does not exceed 50% of the company's capital. This applies to both individual foreign investors and foreign legal entities [2, 6]. The specific guidelines can be found in Article 3(b)(11) of the Investment Regulation of Non-Jordanian Funds No. 54 of 2000. According to this article, non-Jordanian investors are permitted to own up to 50% of the capital in projects related to currency exchange services, excluding those provided by banks and financial companies. This means that foreign companies cannot independently engage in currency exchange activities, but they can collaborate with foreign banks or their branches operating within Jordan [3, 7].

Article 4 of the Jordanian Banking Law No. 28 of 2000 stipulates that foreign companies seeking to partake in currency exchange operations within Jordan must acquire proper authorization from the Central Bank of Jordan. This requirement is of utmost importance and cannot be overlooked, as it states [8–10]: "A—No person shall engage in any banking activities without obtaining a final license from the Central Bank in accordance with the provisions of this law" [5, 11].

In contrast, the Egyptian legislator has implemented a restriction on currency exchange activities for companies with foreign ownership. According to Article 115 of the Central Bank, Banking Sector, and Money Law No. 88 of 2003, only companies with Egyptian nationals as shareholders are allowed to engage in currency exchange activities [1, 12]. This provision clearly indicates the Egyptian legislator's intention to limit currency exchange activities to companies owned by Egyptians, with certain conditions in place. These conditions include a requirement for these companies to solely focus on currency exchange activities and maintain a minimum capital of ten million pounds. This stands in stark contrast to the approach taken by the Jordanian legislator, who permits foreign companies to establish currency exchange companies with foreign ownership up to 50% of the company's capital [3, 13].

According to the researcher, the legislator in Jordan has achieved greater success compared to their Egyptian counterpart when it comes to allowing foreign companies to establish currency exchange businesses under certain conditions, with a maximum foreign ownership limit of 50% of the company's capital. This strategy plays a crucial role in promoting investment, attracting capital, and building up a reserve of foreign currency, all of which contribute to the overall improvement of the national economy [7, 14].

3 Insurance Activities Focused on by Foreign Companies

Foreign companies or their branches are now permitted to participate in insurance activities in Jordan, as authorized by the Jordanian legislator and outlined in Article 25(a) of the Insurance Regulatory Law No. 33 of 1999 [6, 15]. According to Article 45 of the same law, these companies must obtain a license from the Council in order to engage in insurance activities. The specific requirements for obtaining this license, including the necessary documents for each type of insurance, as well as the conditions for license renewal and the principles for organizing and managing the company, will be determined by regulations issued by the Council [4, 16]. These

regulations also apply to reinsurance companies. It is important to note that if it is discovered that the license was granted based on false or inaccurate information, the Council has the authority to revoke the license. It is evident from these texts that the lawmaker has granted permission for foreign corporations to participate in various insurance activities without the obligation of being public shareholding companies, which goes against Article 93 of the Jordanian Companies Law No. 22 of 1997 [12, 17]. This article explicitly states that engaging in certain activities, including banking, financial services, and all types of insurance, is only allowed through a public shareholding company that adheres to the regulations outlined in the law [11, 18–21].

In contrast, the Egyptian legislature has implemented a provision that permits foreign investment in the insurance sector, with the requirement that Egyptian ownership in foreign insurance companies must account for at least 51% of the company's capital [22–26]. This condition is outlined in Article 27 of Egypt's Insurance Supervision and Control Law No. 10 of 1981, which mandates that every insurance and reinsurance company must be established as an Egyptian joint-stock company. It is further specified that the company's shares must be nominal, and that the proportion of Egyptian participation in direct insurance companies should not fall below 51% of the capital [12, 27].

The distinction between the Egyptian and Jordanian legislator's approach to allowing foreign companies to participate in insurance activities is significant, according to the researcher. While both countries permit such engagement, there are notable disparities [28–30]. In Egypt, the legislator has mandated that foreign insurance companies must be public joint-stock entities, with the majority of shares owned by Egyptians. Conversely, Jordan allows foreign companies to have full ownership of the capital without any restrictions. This divergence in approach leads to the conclusion that the Egyptian approach is more cautious and prudent compared to the Jordanian approach in this particular domain. It would have been advisable for the Jordanian legislator to adopt measures requiring foreign insurance companies to be public joint-stock entities and imposing a limit of 49% foreign ownership [14, 31]. This would acknowledge the significance and sensitivity of the insurance sector, safeguard domestic companies from being overshadowed by foreign firms with substantial capital, and prevent any potential dominance or control over the national economy [16, 32].

4 Construction Activities Focused on by Foreign Companies

Construction, particularly on a large scale, is a common endeavor for foreign companies operating in developing nations. These projects often require substantial resources and expertise that local companies may not possess. In Jordan, foreign construction companies, as well as engineering and consulting firms, are permitted to

operate under certain conditions. According to the Jordanian Engineers Association Law No. 15 of 1972, these companies must be registered with the Jordanian Engineers Association. Additionally, registration with the Jordanian Ministry of Industry and Trade, as well as the Jordanian Contractors Association, is required under the Jordanian Companies Law [25, 26, 33]. Furthermore, non-Jordanian contractors can only undertake construction work in Jordan if they are registered with the appropriate authorities in their home country and actively involved in construction projects there. In Egypt, foreign companies operating within the country are restricted to specific sectors as outlined in Article 1 of the Investment Guarantees and Incentives Law No. 72 of 2017 [18, 34].

In accordance with the legal recognition of their corporate identity, foreign companies in Jordan are allowed to participate in commercial activities. However, certain restrictions can be placed on this freedom in order to safeguard national interests. An example of such restrictions can be found in Article 12(a) and (b) of the Commercial Agents and Brokers Law No. 28 of 2001, which prohibits foreign companies from engaging in the sale or importation of arms or their components [31, 35].

Furthermore, in accordance with the Commercial Agents and Brokers Law No. 28 of 2001, the Jordanian legislator has implemented a prohibition on foreign companies engaging in agency or brokerage activities. Failure to comply with this regulation will result in deregistration [24–26, 33]. This restriction is clearly stated in Article 13 of the law, which specifies that no foreign institution or company registered to operate in Jordan can act as a representative for foreign companies, unless they had already registered as a commercial agency prior to the implementation of this law. It is important to note that this requirement applies to both natural and legal persons, emphasizing the necessity for Jordanian agents or commercial brokers [8, 34].

In contrast to other countries, Egyptian law places restrictions on agency and brokerage activities. These activities are limited to individuals and companies listed in the Commercial Agents and Brokers Register at the Ministry of Economy and Foreign Trade. To be listed in this register, natural persons must either be Egyptian nationals or have held Egyptian citizenship for a minimum of ten years. As for companies, they must have their headquarters in Egypt, engage in agency or brokerage activities as stated in their charter, and have 100% of their capital owned by Egyptians. Consequently, foreign companies are not permitted to engage in agency or brokerage activities within Egypt [9, 32].

The proposition put forth by the researcher is that the Jordanian legislator should enforce additional limitations on foreign enterprises operating within Jordan. This is deemed necessary in order to prevent these companies from having unrestricted freedom to engage in various commercial and economic endeavors, which could result in substantial profits and domination over the national economy. Such a scenario would prove detrimental to local businesses that lack the financial resources, equipment, and expertise to compete on an equal footing [10]. The researcher recommends that the Jordanian legislator be granted the authority to dictate the specific activities in which foreign companies can participate, aligning them with national economic development plans and safeguarding the interests of local businesses. Consequently, foreign companies would be confined to projects and undertakings

that are beyond the capabilities of local enterprises, while also being obliged to employ a minimum of 75% national workers from their overall workforce.

5 Conclusion

By analyzing the legal and economic framework of foreign companies operating in Jordan, this study aimed to assess their impact on the country's economy. The study specifically focused on key sectors such as financial services, banking, insurance, and construction, taking into account relevant legislation from Jordan and Egypt. The findings revealed that foreign companies play a significant role in the national economy by investing, sharing expertise, and introducing new technology. However, in order to protect local businesses and strike a balance between attracting foreign investment and fostering local economic growth, it is necessary to implement additional regulations and restrictions. Based on these conclusions, the study offers recommendations to enhance the investment climate in Jordan, thereby promoting sustainable development and achieving a harmonious economic expansion.

5.1 Results

Based on the study and legal analysis of foreign companies' activities in Jordan, the following conclusions can be drawn:

1. Significant legal simplifications have been implemented by the Jordanian legislature to assist foreign companies, particularly in the realms of financial and banking services, insurance, and construction. These measures involve the ease of constraints and the creation of avenues for foreign companies to invest in and engage in healthy competition within the Jordanian market.
2. In contrast to the Egyptian legislator, the Jordanian legislator has displayed a higher degree of flexibility by not imposing stringent capital or legal form requirements on foreign companies, thereby creating more favorable conditions for foreign investment.
3. While the legal provisions aim to facilitate business operations, the Jordanian legislator strongly emphasizes the necessity of implementing rigorous oversight measures for foreign companies, particularly in critical sectors like banking and insurance, in order to safeguard the national economy and prevent the emergence of monopolistic practices.
4. The main objective of streamlining the processes involved in setting up and running foreign companies in Jordan is to entice foreign investments, foster economic expansion, and generate employment prospects for the local population.

5.2 Recommendations

Based on the findings, the following recommendations can be made to enhance the legal and regulatory framework for foreign companies operating in Jordan:

1. Strengthen oversight of the activities of foreign companies to ensure compliance with local regulations and prevent any practices that could harm the domestic economy or local companies.
2. Consider imposing additional restrictions on sensitive activities such as insurance and banking to prevent foreign companies from dominating these key sectors and protect local businesses from unfair competition.
3. Encourage partnerships between foreign and local companies on large-scale projects to ensure the transfer of expertise and technology to the local market and enhance the competitiveness of Jordanian companies.
4. Implement requirements for foreign companies to employ a certain percentage of domestic workers, at least 75% of the total workforce, to ensure that Jordanian citizens benefit from new employment opportunities.
5. Conduct periodic reviews of the legislation governing the activities of foreign companies in Jordan to adapt to economic and political changes at both local and international levels, ensuring the best results for the domestic economy.

The Impact of Digital Transformation on Employee Creativity

Khaled Alzeaideen, Maan Hussein Mansour, and Fares Abdel Halim Nassar Al-Farawraa

Abstract The primary objective of the research is to examine how the implementation of digital transformation impacts the level of creativity among employees. In order to conduct this investigation, a case study approach was employed, focusing on two key variables. The first variable, referred to as the independent variable, centered around digital transformation and was assessed through four distinct dimensions: digital infrastructure, digital strategy, digital leadership, and digital culture. The second variable, known as the dependent variable, focused on employee creativity and was evaluated based on three dimensions: originality, fluency, and flexibility. To gather data for the study, a comprehensive survey method was utilized, targeting a total of 560 employees within the Department of Statistics. Out of the distributed questionnaires, a total of 453 valid responses were received, resulting in a response rate of 80.8%. These responses were then subjected to various statistical analyses using the SPSS software. The findings of the study revealed a statistically significant relationship between digital transformation and employee creativity. Specifically, all dimensions of digital transformation (digital infrastructure, digital strategy, digital leadership, and digital culture) were found to have a significant impact on the dimensions of employee creativity (originality, fluency, and flexibility). Based on these results, the study put forth a recommendation for the department to enhance its utilization of digital technologies, including computers, mobile devices, and online services.

Keywords Digital transformation · Employee creativity · Digital leadership · Digital infrastructure

1 Introduction

The utilization of smart technology has had a profound effect on the management of businesses, both in the private and public sectors. As a result, digital transformation has emerged as a crucial strategy for institutions across the board [10]. This global phenomenon has led to numerous changes and advancements in various aspects of life, ultimately impacting the operations of organizations. Undoubtedly, the rapid expansion of information and communication technology stands out as one of the most notable transformations, revolutionizing the functioning of diverse sectors [1].

The strategic implementation of digital technologies to enhance efficiency, elevate customer and employee experiences, mitigate business risks, and optimize costs is known as digital transformation [5]. This involves integrating computer-based technologies into organizational strategies, processes, and products. The purpose of digital transformation is to effectively engage and cater to both the workforce and customers, thereby strengthening the organization's competitive edge [30].

In today's dynamic business landscape, institutions are facing numerous challenges as they navigate through a rapidly changing environment characterized by risks, uncertainties, and fierce competition [26]. Within this context, the Department of Statistics in Jordan recognizes the importance of fostering employee creativity in order to achieve leadership, excellence, high performance levels, and overall productivity and profitability. A particular area of focus for the department is establishing dedicated management and recognizing the role it plays in cultivating creativity and achieving organizational goals through innovative ideas. With this in mind, the objective of this study is to examine the impact of digital transformation on employee creativity within the Department of Statistics. It is believed that digital transformation provides valuable capabilities that can enhance the creative process of employees and contribute to their overall success in achieving organizational objectives.

1.1 Problem of the Study and Its Questions

In today's highly competitive business landscape, the Department of Statistics must embrace creativity to maintain its leadership position and further advance in the statistical sector [12]. A key aspect of fostering creativity lies in harnessing and nurturing the talents and creative potential of its employees. Thus, organizations face the challenge of motivating their workforce to generate innovative ideas and creating an environment that enables the implementation of these ideas. The digital transformation has brought about significant changes in the Department of Statistics, particularly in the realm of strategy development and program improvement, thanks

to the introduction of performance-enhancing software and supportive infrastructure. These changes offer employees increased opportunities to enhance their performance, save time, and boost efficiency, ultimately benefiting both the organization's objectives and the cultivation of employee creativity [11].

By examining prior research on the subject, including the work of [17] who emphasized the significance of digital transformation in enhancing employee creativity within Egyptian banks and recommended further investigation, and Khamis [25] who underscored the importance of employee creativity in attaining organizational objectives through learning, innovation, and creative leadership, it became apparent to the researchers that the study problem should focus on assessing the influence of digital transformation on employee creativity specifically within the Department of Statistics in Jordan.

1.2 Study Hypothesis

Main Hypothesis (HO1): "There is no statistically significant effect at the significance level ($\alpha \geq 0.05$) of digital transformation with its dimensions (digital infrastructure, digital strategy, digital leadership, digital culture) on employee creativity with its dimensions (originality, fluency, flexibility) at the Department of Statistics in Jordan."

1.3 Study Model

The study model and its variables are illustrated in Fig. 1.

Study Model Based on Literature and Previous Studies:

- **Independent Variable**: Studies by [15, 25, 32].

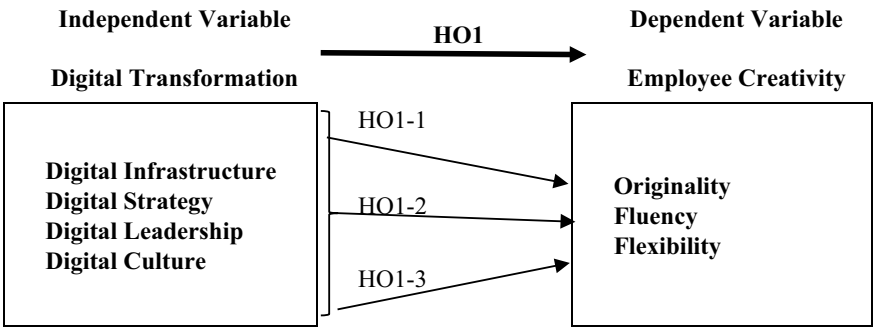

Fig. 1 Study model

- **Dependent Variable:** Studies by [2, 9, 17].

2 Concept of Digital Transformation

The integration of technology within organizations to bring about significant changes is known as digital transformation. This process aims to enhance organizational productivity and adaptability, ultimately creating new value for employees, customers, and investors in the long term [22]. According to [28], digital transformation involves the utilization of digital technologies to either create or modify business processes, cultural practices, and customer experiences in order to meet evolving business and market demands and to reimagine business operations in the digital age [13]. Digital transformation is strategically employed to leverage digital technologies for the purpose of improving processes and productivity, enhancing customer and employee experiences, managing business risks, and controlling organizational costs [4]. By integrating computer-based technologies into their products, processes, and strategies, organizations undergo digital transformation to effectively engage and serve their workforce and customers, thereby strengthening their competitive advantage [21].

2.1 Dimensions of Digital Transformation

There are multiple dimensions of digital transformation highlighted by previous studies. The current study focuses on several of these dimensions as follows:

- **Dimension One: Digital Infrastructure**

The effective implementation and operation of information systems in businesses rely heavily on digital infrastructure. This infrastructure plays a vital role in safeguarding data, enabling efficient and dependable access to essential information, and driving operational efficiency and enhancements [23].

- **Dimension Two: Digital Strategy**

At the heart of digital strategy lies the concept of aligning various activities across both external and internal channels and communication models, all with the purpose of achieving specific objectives such as brand recognition and effective engagement with potential customers. Leveraging the organization's distinctive technology, a digital strategy is crafted to optimize the advantages derived from databases and projects [14, 29].

- **Dimension Three: Digital Leadership**

Leadership in the digital age encompasses the strategic utilization of an organization's digital resources to accomplish business goals and drive global technological

advancements. In contrast to conventional leadership approaches, digital leadership leverages technology-driven tools to enhance efficiency and streamline processes [6]. Consequently, possessing digital leadership capabilities is imperative for organizations to establish a unique position through their digital prowess, accompanied by a diverse array of expertise and proficiencies, such as digital transformation, digital strategy, innovation, change management, and, most importantly, digital leadership skills [19].

- **Dimension Four: Digital Culture**

The notion of "digital culture" encompasses the impact of the internet and technology on interpersonal communication, reflecting our behaviors, thoughts, and discourse in social settings. It arises from transformative technological advancements and the omnipresent nature of technology in our lives. Digital culture encompasses various subjects, yet its core revolves around the dynamic interplay between people and technology [20].

2.2 Employee Creativity

The generation of fresh solutions to practical or theoretical problems in various scientific or life domains stems from an intricate interplay of psychological, environmental, social, and personal factors, resulting in employee creativity. These fields are characterized by their novelty, creativity, and societal impact. Creativity empowers individuals to identify, comprehend, and address issues and shortcomings, seek out resolutions, validate their accuracy, and modify outcomes [3]. It is the process of transforming imaginative and innovative ideas into tangible reality, the capacity to perceive the environment through a novel and inventive lens, uncover concealed patterns, establish connections between seemingly unrelated phenomena, and contribute to the discovery of unconventional solutions [33].

The utilization of an individual's imaginative faculties to discover unconventional resolutions, establish connections between seemingly unrelated elements, and adopt a fresh and distinctive perspective on the world is what constitutes employee creativity. This particular skill set plays a pivotal role in transforming imaginative concepts into tangible realities, effectively contributing to the process of problem-solving [31]. Creativity encompasses the capacity to unearth novel and innovative ideas and solutions to challenges. It is an inherent human drive that bolsters resilience, ignites a sense of joy, and presents opportunities for personal fulfilment. The essence of creativity lies in perceiving the world through a different lens, unveiling hidden patterns, and forging connections between seemingly disparate phenomena in order to arrive at effective resolutions [16].

As stated by [3], the promotion of creativity in the workplace fosters collaboration and teamwork among colleagues and management, facilitating the exchange of ideas and the acquisition of fresh perspectives. This, in turn, enhances cooperation. By

encouraging creative thinking, individuals are empowered to approach challenging situations with critical and unconventional thoughts, leading to the exploration of diverse and effective solutions. Employee creativity also plays a vital role in adaptability, as the ability to adjust to various changes is a crucial performance indicator. Therefore, fostering creativity and innovative thinking enables organizations to navigate any unforeseen circumstances that may arise during their operations. Additionally, employee creativity contributes to continuous learning and growth by providing new avenues for acquiring knowledge through creative thinking, discovering innovative solutions, and facilitating both professional and personal development. The act of thinking outside the box and exploring new ideas inherent in creativity enhances the development of new skills and expands one's knowledge base [8].

2.3 Dimensions of Employee Creativity

Employee creativity revolves around several dimensions as follows:

- **Dimension One: Originality**

The concept being discussed here pertains to the exceptional and individual nature of concepts, as well as the capacity to generate fresh and uncommon ideas that can be put into action. These ideas are unconventional and have not been encountered before. Originality is determined by the worth and excellence of ideas, rather than their quantity [27].

- **Dimension Two: Fluency**

The quantitative dimension of creativity is at play here. Fluency, in this context, pertains to the capacity of a creative mind to tap into its knowledge when necessary and generate a multitude of groundbreaking ideas in a limited timeframe. The distinguishing factor of creative ideas lies in their practical applicability to real-world needs. Consequently, any random notions stemming from a lack of information or unawareness should be disregarded. To evaluate fluency, one's aptitude for swift thinking, concept categorization, and contextualizing the problem at hand can be examined [18].

- **Dimension Three: Flexibility**

The qualitative aspect of creativity encompasses the diversity of ideas, which can adapt and transform in accordance with the demands of the time and the surrounding circumstances. A creative individual possesses the capacity to adjust ideas based on the specific situation at hand. The flexibility of thinking can manifest in two ways: as a complement to problem-solving and adaptability, or as the spontaneous generation of a multitude of ideas with quick wit and spontaneity [9]. Some consider flexibility in thinking as a form of creative thinking, focusing on the qualitative aspect of generating diverse ideas among learners or students. This process also cultivates

the ability to discover novel applications for existing concepts, thereby exemplifying flexibility [24].

2.4 Previous Studies

In their study (2023), Salahuddin and Badawi [30] aimed to examine the correlation between the implementation of a digital transformation strategy and the achievement of sustainable institutional excellence at EgyptAir Holding Company. The study sought to assess the level of digital transformation strategy implementation, measure the variables related to sustainable institutional excellence, and identify the most significant relationship between these variables and the digital transformation strategy. The research analyzed 288 questionnaires completed by senior and middle management employees of the company. The findings indicated a statistically significant connection between the digital transformation strategy and the variables associated with sustainable institutional excellence, as reported by the survey participants. Ultimately, the study emphasized the importance of developing a digital transformation strategy to create sustainable value, enhance performance, foster customer satisfaction and loyalty, and support decision-making processes, ultimately leading to the achievement of sustainable institutional excellence.

In a field known for its innovation and technological advancements, Khamis [25] conducted a study to explore the influence of transformational leadership on employee creativity, with employee empowerment acting as a mediator. This investigation specifically targeted technology and communication companies located in the Smart Village of October 6 City. The population of interest consisted of approximately 7300 individuals, as indicated by statistical data obtained from the websites of these companies. With a 95% confidence level and a 5% margin of error, the sample size was determined to be 365 individuals, selected through random sampling distribution tables. The sample encompassed employees across various administrative levels, including senior, middle, and executive positions. The researchers utilized this study to construct the theoretical framework, study model, and questionnaire items.

The objective of the research conducted by [7] was to investigate the correlation between perceived organizational support and employee creativity, with work engagement acting as a mediator. A survey was administered to a sample of 492 professional employees in the United Kingdom, encompassing two major industries. The sample consisted of 219 females (44.51%) and 273 males (55.49%). The findings indicate that work engagement plays a mediating role in the relationship between perceived organizational support and employee creativity. To summarize, employees who perceive higher levels of support from their organization are more likely to experience increased work engagement and exhibit higher levels of creativity compared to those who perceive lower levels of organizational support. The researcher found value in this study as it contributed to the development of the theoretical framework and the formulation of questionnaire items.

3 Methodology and Procedures

3.1 Study Population

In Jordan, the Department of Statistics has a diverse workforce consisting of 560 employees from different job titles, as reported in the 2023 Annual Report of the department.

3.2 Study Sample

For this study, a comprehensive survey method was chosen to gather data from the 560 employees in the department. The decision to use this method was driven by the relatively small size of the population. To efficiently reach as many individuals as possible within the department, the Google Forms program was utilized to design and distribute electronic questionnaires. This allowed for the distribution of an electronic link to all employees of the Department of Statistics in Jordan, minimizing the time and effort required. Out of the distributed questionnaires, the researchers received 453 valid responses, resulting in a response rate of 80.8%. This rate is considered sufficient for the objectives of the study.

3.3 Reliability of the Study Tool

To ensure the reliability of the tool, Cronbach's Alpha was calculated. The results are presented in Table 1.

Table 1 Results of internal consistency analysis of the study tool using Cronbach's alpha

Variables	Dimension	Number of items	Cronbach's alpha
Digital transformation	Digital infrastructure	5	0.881
	Digital strategy	5	0.817
	Digital leadership	5	0.785
	Digital culture	5	0.771
	Overall digital transformation	**20**	**0.797**
Employee creativity	Originality	5	0.814
	Fluency	5	0.823
	Flexibility	5	0.889
	Overall employee creativity	**15**	**0.839**

The reliability of the study tool, as indicated by Table 1, is demonstrated by the Cronbach's Alpha values for each dimension of the questionnaire, which ranged from 0.771 to 0.889. It is important to note that a reliability coefficient below 0.60 is considered weak, while a minimum acceptable coefficient is 0.70. On the other hand, a coefficient of 0.80 or higher is considered indicative of good reliability. The values presented in the table affirm the consistency and dependability of the study tool for statistical analysis, highlighting its reliability and the coherence among its items.

4 Testing Study Hypotheses

- **Main Hypothesis**: "There is no statistically significant effect at the significance level ($\alpha \geq 0.05$) of digital transformation with its dimensions (digital infrastructure, digital strategy, digital leadership, digital culture) on employee creativity with its dimensions (originality, fluency, flexibility) at the Department of Statistics in Jordan."

To test the main hypothesis, multiple linear regression analysis was used.

The statistical test results for the hypothesis model are presented in Table 2, which includes independent variables such as digital infrastructure, digital strategy, digital leadership, and digital culture, along with the dependent variable "employee creativity". The findings reveal a significant impact of digital transformation and its dimensions on employee creativity, as indicated by the F value of (142.481), surpassing the table value of (2.13) and reaching significance at the 0.05 level. This underscores the importance of the model. Additionally, the R^2 value of (0.0100) signifies that digital transformation and its dimensions account for the variation in employee creativity within the Department of Statistics in Jordan. Furthermore, the correlation coefficient R = (0.317) demonstrates the influence of digital transformation on employee creativity. The coefficient table for this hypothesis provides the following results:

- Among the dimensions of digital transformation, the dimension (digital strategy) had the greatest impact on the dependent variable (employee creativity), with a Beta coefficient ($\beta = 0.288$). This effect is enhanced by the calculated T value of (5.215), which is greater than the table value of (1.93) and at a significance level (Sig = 0.00).
- The second most significant effect concerns the dimension (digital leadership) with a Beta coefficient ($\beta = 0.286$). This effect is reinforced by the calculated T value of (5.210), which exceeds the tabulated value of (1.93) and at the significance level (Sig = 0.00).
- The third dimension in terms of effect is (digital infrastructure) with a Beta coefficient ($\beta = 0.275$). This effect is enhanced by the calculated T value of (5.182), which is greater than the table value of (1.93) and at a significance level (Sig = 0.00).

Table 2 Multiple regression analysis equation for the effect of digital transformation dimensions on employee creativity

Dependent variable	Model summery		ANOVA				Coefficient				
Employee Creativity	R	R^2	F	F Sig	DF		Dimension	Beta	T	Standard Error	Sig
	0.317	0.0100	142.481	0.00*	Regression	4	Digital Infrastructure	0.275	5.182	0.044	0.000*
					Residual	449	Digital Strategy	0.288	5.215	0.042	0.000*
							Digital Leadership	0.286	5.210	0.051	0.000*
					Total	453	Digital Culture	0.255	5.118	0.043	0.000*
							Overall Digital Transformation	0.797	142.481	–	0.000*

* Statistically significant at the level of ($0.05 \geq \alpha$))
T-table value = (1.93)
F-table value = (2.13)

- The last dimension in terms of effect is (digital culture), with a Beta coefficient ($\beta = 0.255$). This effect is enhanced by the calculated T value of (5.118), which is higher than the table value of (1.93) and at the significance level (Sig = 0.00).

After considering the information provided, we can confidently reject the null hypothesis (HO1) and instead accept the alternative hypothesis, which asserts that there is a statistically significant impact, at a significance level of ($0.05 \geq \alpha$), of digital transformation dimensions (digital infrastructure, digital strategy, digital leadership, digital culture) on employee creativity dimensions (originality, fluency, flexibility) within the Department of Statistics in Jordan.

4.1 Discussion of Results and Recommendations

The findings of the study reveal a noteworthy impact, with statistical significance at a significance level ($0.05 \geq \alpha$), of various dimensions of digital transformation (digital infrastructure, digital strategy, digital leadership, digital culture) on the dimensions of employee creativity (originality, fluency, flexibility) within the Department of Statistics in Jordan. Based on the analysis and interpretation of the study results, the following recommendations can be proposed for the Department of Statistics in Jordan:

- Develop the approach the department uses when using digital technologies such as computers, mobile devices and online services.
- Focus on cultural changes caused by the development and dissemination of digital technologies, especially the Internet and online networks, through new data imposed by the evolving scientific and civilizational world.
- Encourage employees to generate a wide range of alternatives, solutions, ideas or applications when researching a topic, reinforcing the concept of creative fluency.
- Stimulate and motivate employees to adapt to change and find new applications with great flexibility.

Other scholars have the opportunity to make valuable contributions to the field by conducting further investigations into the correlation between digital transformation and various factors that have the potential to enhance employee creativity in diverse industries. For instance, future research endeavors could delve into variables like job dedication and organizational effectiveness, building upon the findings and suggestions presented in this current study.

The Legal Frameworks' Response to Technological Developments: Protecting Intellectual Property Rights in the Age of Digital Innovation

Omar Al Makhzoumi and Naif Abdullah Al-Amadi

Abstract This research intends to examine how national laws and international treaties influence the safeguarding of intellectual property rights amid swift technological advancements. By assessing existing national and international regulations and determining their efficacy in tackling the emerging challenges posed by technological progress, the research aims to offer a thorough understanding of how well these laws can protect intellectual property rights. A descriptive-analytical methodology was employed to fulfill the study's goals. The findings indicated a pressing necessity to revise national legislation to align with rapid technological changes. Additionally, the research underscored the vital role of international agreements while emphasizing the need for improved coordination and collaboration among nations for successful implementation. In light of these conclusions, the study advocates for updating national laws, enhancing international cooperation regarding intellectual property protection, formulating strategies to defend technological innovations, and promoting awareness and training on intellectual property rights to improve protective measures and confront challenges stemming from technological advancements.

Keywords Intellectual property legislation · Protection of intellectual property rights · Technological changes · Technological innovations · International coordination · Protection strategies · Innovation rights

1 Introduction

In its most expansive definition, intellectual property encompasses the legal entitlements that emerge from intellectual endeavors within the realms of industry, science, literature, and the arts. As the significance of intellectual property rights continues to grow, the regulation of their provisions and safeguarding has transcended national legislation. National laws that protect intellectual rights are confined to the state's territory, adhering to the principles of territoriality of laws and state sovereignty. Consequently, a number of international treaties have been established to govern intellectual rights on a global scale.

There has been a growing global interest in intellectual property as a whole, particularly regarding its significance in economic development, fostering investment, boosting creativity and innovation processes, facilitating technology transfer to developing nations, and addressing commercial fraud along with the violation of authors' and inventors' rights. These have emerged as sought-after objectives. In pursuit of these aims, an assembly of international governmental organizations has been created to safeguard these rights [1].

Nations globally have implemented legislation to safeguard intellectual property for two primary reasons. The first is to uphold the moral and economic rights of creators, structure how society gains from these innovations, and promote their utilization. The second reason is to guarantee equitable commercial practices and transactions that aid in the economic and social advancement of communities.

Intellectual property is categorized into two primary branches: on one side, there is industrial and commercial property, while on the other, there exists literary and artistic property. According to the World Intellectual Property Organization (WIPO), intellectual property encompasses rights associated with scientific, artistic, and literary works. This includes artistic performances, recordings in both sound and visual formats, broadcasting programs, inventions across various human activities, scientific discoveries, industrial designs, trademarks and service marks, trade names and designations, as well as protections against unfair competition, along with all other rights arising from intellectual endeavors in the industrial, scientific, literary, or artistic domains [2].

Given the swift advancements in technology observed during the digital era, it is essential to evaluate how effectively existing legal structures address these transformations. Consequently, our research will concentrate on examining the responsiveness of legal frameworks to technological progress, particularly regarding the safeguarding of intellectual property rights amidst digital innovation. This study aspires to deliver important insights into the efficacy of both national and international laws in adapting to rapid changes while striving to find a balance between the protection of creators' rights and the encouragement of innovation within the dynamic digital landscape.

1.1 Study Objectives

This study aims to:

- Explain the concept of intellectual property in the context of rights related to intellectual activities in industrial, scientific, literary and artistic fields.
- Analyze international intellectual property regulation at a global level by examining international agreements and institutions that focus on protecting intellectual property rights, such as WIPO and the World Trade Organization (WTO).
- Assess the importance of intellectual property rights in the light of technological progress and innovation, and explore their role in strengthening the global economy, advancing research and innovation, and supporting fair trade.
- Analyze the impact of intellectual property rights on economic and social development and their impact on disparities between countries in terms of progress and innovation.
- Analyze the role of international organizations such as WIPO and UNESCO in regulating and protecting intellectual property rights and the agreements and treaties administered by these organizations.
- Compare intellectual property legislation in different countries and analyze how these laws protect intellectual rights and promote innovation.

1.2 Study Methodology

This study employs a descriptive-analytical methodology, drawing on information from a range of sources such as legal literature, prior research, and both national and international laws pertaining to intellectual property. Additionally, a comparative analysis method is utilized to evaluate the policies and legislations across various countries and their effects on the safeguarding of intellectual property rights. Furthermore, the study will incorporate an examination of pertinent international agreements and national laws by analyzing legal documents and assessing the influence of international organizations in the regulation and protection of intellectual property.

2 The Importance of Intellectual Property Rights in the Era of Technology and Innovation

The matter of intellectual property holds immense importance, as it relates to a delicate and vital issue. This topic's significance is amplified by the substantial advancements in information technology and innovations, which have resulted in the creation of new and sophisticated methods for sharing knowledge in both simple and effective manners.

The increasing significance attributed to intellectual property by nations arises from its contribution to enhancing global economic activity. This importance is further acknowledged by various scholars, including economists, political scientists, sociologists, educators, and legal experts, who have dedicated attention to the topic. Particularly in industrialized nations, there has been a concentrated effort on intellectual property rights, evident in both scientific inquiry and practical applications, leading to the production of research and literature on the matter, as well as its integration into academic curricula at universities and institutes.

Consequently, prioritizing intellectual property rights has emerged as a pressing national imperative, particularly within the framework of a technologically governed and machinery-driven commercial and industrial age. The evident gap in the ownership of intellectual property rights among nations has resulted in a global division characterized by differing levels of advancement and development. Some nations are classified as advanced, others as developing, and some as underdeveloped. Indeed, a nation's power is increasingly measured by the quantity of intellectual property rights it holds. This uneven distribution of rights among countries leads to notable variations in production capacities, quality standards, national income, and individual living conditions. Furthermore, as nations accumulate more of these rights, their influence expands.

The growing significance of intellectual property rights has prompted nations worldwide to implement regulations governing these rights, establishing it as a contemporary legal field. Given that creating any product or work demands considerable time and financial resources, innovators seek to recoup their investments by securing "intellectual property rights." Such rights empower the innovator to enforce limitations on the utilization of their intellectual property. For instance, no individual is permitted to use, manufacture, cultivate, sell, or showcase the innovation without first acquiring consent from the innovator. A variety of protective measures are available, such as copyrights, trade secrets, trademarks, plant breeder's rights, patents, and more [2, 3].

Countries provide intellectual property rights as a means to reward creative endeavors and the human efforts that contribute to societal advancement. For example, research suggests that without the safeguards offered by patents, approximately two-thirds of contemporary medical innovations would not have been realized, as these protections enable funding for research through generated revenue [4]. The emergence of various media industries, including recording and distribution sectors, as well as software development that brings in billions of dollars, would not have been possible without copyright protection. Likewise, the assurance of strong international trademark protections and the enforcement of laws against counterfeiting and piracy are essential for consumer confidence in purchasing products and services [4].

The evolution of intellectual property has been significantly shaped by historical milestones, starting with the Vienna Conference in 1873 and culminating in the formation of the WIPO in 1974, which functions as a specialized agency of the United Nations. The primary motivation behind the international development of intellectual property frameworks has consistently been the aim to foster creativity

and safeguard intellectual endeavors [5]. However, it was not long before member states engaged in GATT negotiations found themselves taken aback by a proposal from major multinational corporations that was submitted to the GATT Secretariat in Geneva in June 1988, advocating for the incorporation of an agreement on "Trade-Related Aspects of Intellectual Property Rights (TRIPS)" into the GATT agreements.

Significantly, these companies, although not participants in the negotiations due to state membership restrictions, pushed their proposal forward. Their aim was to obtain enhanced safeguards for intellectual property, especially concerning patents and trademarks. Ultimately, the GATT agreements were released, which included the TRIPS Agreement. Signed in April 1994, these agreements led to the establishment of WTO, which commenced its role on January 1, 1995, overseeing the implementation of what are now referred to as the Global Trade Agreements [6].

3 The World Intellectual Property Organization (WIPO) and Intellectual Property Protection

This section addresses two main topics: the legal nature of the World Intellectual Property Organization (WIPO) and the agreements and treaties managed by WIPO.

3.1 The Legal Nature of the World Intellectual Property Organization

The World Intellectual Property Organization is regarded as a specialized intergovernmental organization on an international scale. In the realm of international law, it is widely recognized that states and international organizations are the main subjects of law. Based on membership and origin, international jurisprudence categorizes organizations into intergovernmental entities when they represent the governments of states. Consequently, examining the World Intellectual Property Organization, which focuses on the safeguarding of intellectual property, necessitates an inquiry into its legal nature.

WIPO came into existence through the voluntary agreement of certain states, formalized on July 14, 1967. The preamble of this international agreement explicitly references this fact, along with the organization's international character in relation to its director and staff, as outlined in Article 9, Paragraph 8. This foundation enables us to conclude that WIPO functions as an intergovernmental international organization tasked specifically with the protection of intellectual property. Consequently, it is recognized as a subject of public international law, regulated by its own set of rules, principles, and systems. In this role, WIPO is empowered to engage in international agreements pertinent to its competencies with any relevant entities in international

law, including states, intergovernmental organizations, and non-governmental organizations. Furthermore, WIPO is entitled to ensure that its employees, who operate under its management and oversight, receive the same rights and privileges as those afforded to other international personnel. Additionally, it possesses the capability to establish a headquarters agreement with the host state.

3.2 The Competencies of the World Intellectual Property Organization

The objectives that motivated the establishment of the World Intellectual Property Organization (WIPO) are in harmony with its competencies. The preamble of the WIPO Convention, which was signed in Stockholm on July 14, 1967, clearly indicates that the organization was created by the contracting parties to foster understanding and cooperation among states for their shared benefit, grounded in the principles of sovereignty and equality. Furthermore, the organization aimed to strengthen the global protection of intellectual property to stimulate innovative endeavors and enhance the effectiveness of the unions formed for safeguarding industrial property, as well as literary and artistic creations, all while fully honoring the autonomy of each union [7].

Accordingly, Article 3 of the founding convention states that the purposes of WIPO are [8]:

1. Promoting the protection of intellectual property worldwide through cooperation among countries and with any other international organization where appropriate. This general objective is described in detail in certain elements of Article 4 of the same Convention, which relates to the functions of its organs and the founding agreement.
2. Ensuring administrative cooperation between unions. The term "links" here refers to the specific meaning provided for in Art. 2 section 7 of the Convention, which covers the Union of Paris and the special unions established, as well as the special agreements concluded regarding that union, the Union of Bern, and any other international agreements intended to promote the protection of intellectual property. WIPO is responsible for implementation in accordance with Art. 4 of the founding convention.

It is essential to highlight that the original aim of the WIPO Convention's drafters was to broaden its range of competencies by permitting any measures considered suitable for safeguarding intellectual property. The content of Item 8 in Article 4 of the founding convention [9] supports this assertion.

3.3 Agreements and Treaties Administered by the World Intellectual Property Organization

As stated in Article 3 of the convention, the organization seeks to promote the safeguarding of intellectual property on a global scale by fostering collaboration between nations and other relevant international entities when suitable. Additionally, it aims to facilitate administrative cooperation among the unions.

One of the key sources of international law is international agreements, which play a vital role in regulating and governing the interactions among the subjects of international law, encompassing economic, cultural, security, and military relations. Consequently, these agreements are instrumental in shaping international legal norms [10].

The organization was granted extensive international legal authority by the WIPO Convention, as outlined in Articles 3 and 4. It was thus empowered to undertake any suitable actions aimed at safeguarding intellectual property (Item 8 of Article 4) and to promote the establishment of international treaties and agreements designed to enhance the protection of intellectual property (Item 4 of Article 4). In this regard, the organization is also able to assume the responsibility for carrying out administrative duties that arise from the enforcement of any international agreement focused on bolstering intellectual property protection (Item 3 of Article 4) [11].

3.4 Key Agreements Administered by the Organization

We will attempt to list the key agreements and treaties administered by the World Intellectual Property Organization [12]:

- The Paris Convention for the Protection of Industrial Property, March 20, 1883.
- The Madrid Agreement for the Repression of False or Deceptive Indications of Source on Goods, April 14, 1891.
- The Rome Convention for the Protection of Performers, Producers of Phonograms, and Broadcasting Organizations, October 26, 1961.
- The Patent Cooperation Treaty, signed in Washington on June 19, 1970, amended on September 28, 1979, February 3, 1984, and October 3, 2001.
- The Geneva Convention for the Protection of Producers of Phonograms Against Unauthorized Duplication of Their Phonograms, October 29, 2001.
- The Brussels Convention Relating to the Distribution of Programme-Carrying Signals Transmitted by Satellite, May 21, 1974.
- The Budapest Treaty on the International Recognition of the Deposit of Microorganisms for the Purposes of Patent Procedure, April 28, 1977, amended on December 26, 1980.
- The Nairobi Treaty on the Protection of the Olympic Symbol, September 26, 1981.

- The Berne Convention for the Protection of Literary and Artistic Works, September 9, 1886.
- The Washington Treaty on Intellectual Property in Respect of Integrated Circuits, May 26, 1989.
- The Trademark Law Treaty and its implementing regulations, October 27, 1994.
- The WIPO Copyright Treaty, December 20, 1996.
- The WIPO Performances and Phonograms Treaty, December 20, 1996.

4 The United Nations Educational, Scientific and Cultural Organization (UNESCO) and Intellectual Property Protection

The United Nations Educational, Scientific and Cultural Organization, commonly referred to as UNESCO, serves as a specialized agency within the United Nations. Founded in 1946, its headquarters are located in Paris. Member states have committed to fostering peace and security by collaborating in the fields of education, science, and culture.

Consisting of approximately 160 nations, the organization includes nearly all United Nations member states, which contribute the bulk of its funding. UNESCO aims to promote enhanced justice, cooperation, human rights, and fundamental freedoms for every individual. Additionally, the organization carries out initiatives to advance these objectives upon the request of any member; however, the majority of its resolutions can only be enacted if the governments of the member states undertake specific actions within their respective countries [1, 5].

The organization aims to disseminate its concepts globally, highlighting the importance of enhancing educational standards and fostering cultural exchanges. It advocates for the peaceful application of scientific knowledge and motivates artists, scientists, students, and educators to travel, study, and work abroad. Its focus is on leveraging social sciences to address challenges such as racial discrimination and violence. Additionally, it promotes scientific inquiry in fields like energy consumption and environmental conservation, collaborating with United Nations agencies and other organizations to support developing nations. The organization works in consultation with approximately 500 non-governmental organizations that assist in the planning and execution of relevant programs [10].

4.1 Organization Activities Through Conventions, Recommendations, and Declarations

Like all organizations, UNESCO is active and manages a range of conventions, recommendations, and declarations in its areas of expertise. The most important ones are [5, 13]:

In the Field of Conventions

- The International Convention against Doping in Sport [1, 14].
- The Convention on the Protection and Promotion of the Diversity of Cultural Expressions.
- The Convention for the Safeguarding of the Intangible Cultural Heritage.
- The Convention on the Protection of the Underwater Cultural Heritage.
- The Convention on the Protection of Technical and Vocational Education.

In the Field of Recommendations

- The Recommendation concerning the Promotion and Use of Multilingualism and Universal Access to Cyberspace [5, 15].
- The Recommendation on Adult Education in the twenty first century.
- The Recommendation on the Safeguarding of Folklore.
- The Recommendation on the International Standardization of Statistics relating to the Production and Distribution of Books, Newspapers, and Periodicals.

Through Declarations

- The Universal Declaration on Bioethics and Human Rights [1, 16].
- The UNESCO Declaration concerning the Intentional Destruction of Cultural Heritage.
- The International Declaration on Human Genetic Data.
- The Charter on the Preservation of Digital Heritage as a Common Heritage.
- The UNESCO Universal Declaration on Cultural Diversity.

4.2 UNESCO's Efforts in Intellectual Property Protection

UNESCO stands out as a crucial entity that has made groundbreaking contributions to the safeguarding of intellectual property broadly, and copyright specifically, on a global scale. This is accomplished through its own initiatives or in partnership with the World Intellectual Property Organization (WIPO) and other international bodies engaged in this sector [17]. The organization is responsible for managing and enforcing worldwide copyright treaties. Notably, UNESCO oversaw the International Convention for the Protection of Performers, Producers of Phonograms, and Broadcasting Organizations, which was finalized in Rome in 1961, along with the 1971 Geneva Convention, referred to as the Phonogram Convention, designed to protect producers of sound recordings from unauthorized reproduction of their works [15, 18].

Among UNESCO's key contributions to copyright protection are [5, 19]:

- **Encouraging respect for copyright**: Promoting the principle of respect and protection of copyright as a fundamental aspect of cultural and educational development.
- **Facilitating the transfer of rights**: Insisting that publishers and copyright holders in developed countries facilitate the transfer of their translation and reproduction rights to publishers in developing countries on favorable terms to encourage those countries to engage in international agreements.
- **Establishing an International Fund for the Promotion of Culture**: Supporting developing countries in benefiting from global knowledge and strengthening their national culture, while ensuring international copyright protection.

UNESCO has made a substantial impact on both the Arab and global platforms, marked by significant accomplishments such as devising educational strategies tailored for the Arab region, formulating an extensive plan for Arab culture, and compiling the Palestinian Encyclopedia in both its general and detailed formats. Moreover, UNESCO has partnered with Arab entities, including the Arab Society for Intellectual Property, as well as numerous international organizations to facilitate the exchange of knowledge and expertise, especially in the realms of intellectual property protection and copyright.

The organization collaborates with various institutions, such as the Arab Center for Research and Translation, the Damascus Center, the Arab Research and Studies Institute in Cairo, the Institute of Arabic Manuscripts in Cairo, and the Coordination of Translation Books in Morocco. Additionally, it backs national initiatives and has released a multitude of intellectual works, which include significant references along with several annual and semi-annual journals [15, 20].

5 Conclusion

This research emphasizes that the evolution of digital technology has introduced fresh challenges to existing intellectual property laws. While there has been significant progress in both national and international legislation to tackle certain issues, evident gaps remain in adjusting to the swift advancements in digital development and the various forms of infringement. It is crucial for legal frameworks to embrace more adaptable strategies and stay aligned with technological innovations to guarantee the effective safeguarding of intellectual property rights within the changing digital environment.

5.1 Findings

The study concluded the following results:

- In numerous nations, the laws governing intellectual property require revision to adapt to swift technological advancements and the challenges presented by the global marketplace.
- International treaties are crucial for strengthening the protection of intellectual property rights, yet they necessitate improved collaboration among nations to guarantee successful enforcement.
- The advancement of technology has made it more challenging to safeguard intellectual property rights, requiring the development of new approaches to tackle emerging concerns.
- A deficiency in knowledge and education about intellectual property rights hinders their enforcement and safeguarding.

5.2 Recommendations

This study recommends the following:

- Updating national intellectual property laws to adapt to technological advances and market challenges, ensuring compliance with international standards.
- Strengthening international cooperation to activate and effectively implement international intellectual property agreements.
- Developing new strategies to address intellectual property rights issues arising from technological innovation.
- Raising awareness and training on intellectual property rights for individuals and businesses to prevent infringements and improve protection.

The Influence of Hate Speech and Technology on Society

Aref A. Murshed and Alalddin Al-Tarawneh

Abstract Hate speech is a type of speech that exists in society and is toxic or derogatory to a specific group or groups that suffer from some type of prejudice. This speech is often characterized by offensive remarks, malicious innuendos, hateful insults and expressions of contempt. Several scholars and activists have recognized that hate speech can negatively impact community dynamics, institutional interactions, and personal relationships. This research focuses on the role of technology in hate speech and the ways in which digital platforms can cause and exacerbate hate speech. In other words, this article examines the different types of digital hate speech and its consequences for society, as well as how technology contributes to its spread and facilitates its influence. This study used a descriptive analysis approach, including a systematic literature review of scientific articles, legal regulations, and expert opinions on technology and hate speech. Overwhelmingly, the findings indicate that we need a comprehensive, digitally-enabled strategy to mitigate the impact of hate speech and reduce its occurrence in society. The article states that responses to the threat of digital hate speech should include elements of legal responses, technological solutions and educational programs that will counteract the causes and effects of digital hate.

1 Introduction

In this age of unparalleled connectivity and worldwide conversation, the all-encompassing power of hate speech has spread a gloomy cloud over the intricate pattern of society [3, 4, 10, 15]. This subject delves into the deep and complex influence that hate speech exerts on the shared awareness, social dynamics, and fundamental basis of peaceful cohabitation. Hate speech, with its poisonous language and prejudiced statements, goes beyond simple words; it seeps into the very fabric of society, leaving lasting imprints that echo through communities, institutions, and personal connections. In order to fully grasp the extent of its impact, let us embark on a journey to understand what hate speech truly means. We will carefully follow the lines that divide it from freedom of expression [3, 5, 23, 25, 26]. We will continue to tread on the rocky terrain of epistemology, recognizing the reverberations far beyond individual layer, we see that coming to terms with and mitigating the effects of hate speech is not just an intellectual task but also a moral imperative for the building of healthy and robust societies.

Hate speech is an issue that is fiercely debated in public discourse. It bears significant consequences to the civic unity and the values of free speech within the society. One takes an approach to defining it while the other is reluctant to confine it. This complexity comes from its subjective nature and the tension that features between the freedom of speech and the potential harm on others. The essay will explore the concept of hate speech, comprehend its conflicted definitions, key characteristics and try to define it with accuracy while clarifying the challenges [2, 3, 28, 29].

Hate speech is a form of expression that aims to offend others, create a climate of fear or threaten, marginalize or insult constitutions groups through speech, writing, text or behavior within a designated society against the rights of targeted groups encompassing race, ethnicity, religion, sex, sexual orientation, gender, disability and other dimensions used to discriminate against groups of people [6]. This definition means that any category of spoken words speeches, written text messages, symbols, gestures appears under any form and channel within any cultural interaction styles.

In order to reach a good understanding of the concept of hate speech, it's crucial to explore its particular features. Hate speech often consists of dehumanizing stories, negative stereotypes and derogatory words, which can therefore encourage prejudice and intolerance and conclusively lead to stigmatization and marginalization of minority groups [3]. On one hand, hate speech may be overt, and many criminalizations have codified ways to use profanities and verbal insults. On the other hand, hate speech may also be disguised, concealing its discriminatory aims through indirect language. The intentionality behind such speech can also vary greatly, and this aspect is central to the definition of hate speech: it is not offence at large, but a kind of speech whose purpose is to cause severe pain, instil fear, provoke violence or lead to the isolation of a minority group. Hate speech is an elusive concept; it is both cultural and social, and the problem of language and the difficulty of drawing the line is not new. These difficulties arise principally for the reason that hurtfulness is

a subjective concept protected by freedom of speech. Moreover, linguistic conventions often change and novel forms of expression (e.g., posts on social media sites or instant messaging) create constantly new challenges. Nevertheless, we have reached a point where the search for safe spaces, through the criminalization and denunciation of hate speech, which is perceived as intolerable uses of speech, seemed to bring conflicting demands in the balance between free speech and harm prevention to a head. As highlighted recently, lawmakers, institutions and society at large are struggling to strike the right balance in deciding when to accept offensive speech in the name of tolerance, and when to advance legal and moral notions of dignity.

Because hate speech raises troubling questions about individual interests and group conflicts, it is worth definition and inquiry. Why? Because, as a society, we cannot identify the harmful consequences of hate speech without knowing its definition and qualities. As we navigate creating a definition for hate speech and its subsequent effect on people and communities, we must both create room for dialogue about these concepts, and—at the same time—work against speech that discriminates and harms.

1.1 Importance of the Study

Exploring the idea of hate speech is incredibly important in today's society because it has a big impact on people's lives and how we all get along. If we want to come up with good ways to fight against hate speech, we have to really understand what it is and how it works. Hate speech is everywhere nowadays, and it's been connected to more discrimination, prejudice, and violence against groups of people who are already treated unfairly. By looking into this topic, we can learn a lot about how hate speech happens and figure out why it happens too. In addition to that, when we embark on this investigation, it enables us to evaluate how hate speech affects the freedom to express oneself. This is because the line between speech that is protected and expression that causes harm is frequently unclear. By diving into the significance of examining hate speech, we equip ourselves with the understanding necessary to create well-informed policies, educational programs, and interventions in society. These efforts aim to encourage inclusivity, tolerance, and safeguarding of basic human rights. As we untangle the intricate nature of hate speech, we empower individuals and communities to cultivate a social environment that is stronger and more harmonious.

1.2 Methodology

In this paper, we adopt a descriptive-analytical approach to present a thorough account of hate speech and its subcomponents. That is, we will outline its origins and definitions, it is manifestations and consequences. The descriptive aspect of

this paper would involve conducting a systematic literature review of hate-speech-related literature, scholarly articles, legal frameworks, and expert opinions. This would entail utilizing findings from existing research published in peer-reviewed journals, academic research, and professional entities (such as think-tanks) to provide a frame of reference for better comprehending hate speech and its multifaceted nature. Furthermore, the analytical component would involve examining patterns and themes within the identified literature by drawing upon important and recurring elements to uncover how hate speech works. This includes understanding the various forms it takes both online and offline, its perpetrators and victims, and the consequences of hate speech across society, including on those who are victimized by it [9]. A qualitative research approach would also be utilized in this endeavor by presenting real-life examples and case studies to provide an illustration of how these negative consequences might manifest in practice (that is, descriptively). This approach would prove useful in placing theoretical frameworks in a real-world context and further understand them (descriptive). Next, a link between these illustrative examples and hate speech's consequences allows for recognizing how the manifestation of hatred, public intimidation, intentional offence, and racism lead to systemic bias and our detrimental consequences on society in a more tangible manner.

2 Literature Review

Hate speech has become a social problem of our time when it fuels unbridled behavior such as discrimination, violence and social division. The purpose of this literature review is to provide insight into the damaging effects of hate speech on individuals and communities. Primarily achieved through current research and authoritative sources.

Numerous studies detail the profound psychological impact of hate speech on its targets. For example, in 2021, Wang and Fritsche used data from Twitter to find that hate speech increases stress and anxiety and lowers the self-esteem of people (who the two call "victims" of hate speech). Harper and colleagues found longer-lasting mental health effects in a 2019 study. These observations underscore the importance of studying hate speech as a public health issue.

Like racially motivated anger, hate speech harms not just individuals but the entire fabric of society. When people feel like targets, the glue that holds society together breaks down [4].

Other legal scholars have done extensive groundwork in this dense area, seeking to explore the role of hate speech with academic rigor. In her framing work, Citron [20] delves into different legal frameworks regulating hate speech and balancing free speech with marginalized groups.

Notably, recent research on how to counteract the negative effects of hate speech through educational interventions presents several studies that combat and reduce hate speech through education. In their article, "Education as a Driver of Tolerance and a Facilitator of Inclusion: The Case for Focused Education Initiatives to

Combat Hate Speech," Garcia and colleagues state that "Targeted education initiatives can significantly reduce the incidence of hate speech. Frequency and Frequency. "Impact."

This literature review demonstrates that hate speech can have far-reaching consequences in psychological, social, legal and educational domains. As the cited studies demonstrate, it is becoming increasingly urgent to implement interventions to improve society and counteract the far-reaching effects of hate speech. These interventions will promote a more tolerant and accepting culture.

3 Hate Speech and Society

3.1 Forms and Manifestations of Hate Speech

Hate speech is a scourge on society as it occurs in many aspects of society in various ways; both online and offline. Hate speech is a provocation and can be seen as a threat to peace, but it also has a linguistic component. This article sheds light on the world of hate speech as it manifests online in social media and forums, in the realm of public speaking, and offline in the vice of hate. When we understand the ways in which people engage in hate speech, we can target consequences and move toward a harmonious society that works for everyone.

Social media provides space for interaction between people. A space for free expression and, to some extent, a space where individuals can freely express who they truly are. However, social media also has significant disadvantages. While its purpose is to build a sense of community and provide a space for free communication, it also promotes hate speech and other forms of offensive speech. It is hate speech and stereotypes like these that attract bad actors and, if left unregulated, can destroy individuals and the platform itself. This has been demonstrated in the work of Smith and Jones [18]. Hate speech is amplified and spread on social media in ways that are now difficult to control and perhaps even impossible to stop. It's easy to build a sense of community in a space that's free but open to almost everyone. Therefore, a simple sense of neighborliness can be dwarfed by the space occupied by malicious individuals and the like.

User-generated content and subsequent discussion in online spaces may also create a further environment for hate speech. In their recent study, Brown and colleagues [7] explain how these spaces ultimately serve as echo chambers, where amplification cycles of peers lead to the amplification of hate speech. The safe spaces provided by digital communications allow people to express radical ideas unchallenged and without recrimination, creating an atmosphere that prepares individuals for the unbridled flow of hate speech.

While public speaking can be a space for people to express their feelings freely, it is sometimes used to spread hateful messages through public speaking. I think people who are responsible for public speaking, like politicians, cause a lot of controversy

because they use provocative language to target certain minority groups with hate speech. Johnson and White's [17] study explores how the impact of hate speech conveyed through public speech can further divide society.

Hate crimes are a reality based on hate speech and a manifestation of hate speech coming from internet echo chambers. A study by Garcia and Davis [14] sought to elucidate the causal relationship between hate speech and hate crimes and show how these speeches can be rhetorically amplified and lead to violence against vulnerable groups.

Understanding the different forms of hate speech is important to developing effective strategies to combat it. Hate speech can originate in virtual spaces, social media or forums, or it can be translated into reality through speech in public spaces or hate-motivated violence. Hate speech can have varying consequences for society, ranging from alienation to ostracism of affected individuals and communities. Nonetheless, one can always try to convey a self-image of a diverse and respectful society: combating the root causes of hate speech and targeted interventions, such as campaigns against prejudice, are key to building a diverse, vibrant society [5]. A first step for society to therefore reduce the negative impact of hate speech.

3.2 Targets of Hate Speech: Unmasking Discrimination Across Racial, Religious, and Vulnerable Groups

Judging from recent conversations and reports, we can't help but think this is a force akin to a malignant disease. However, people with this ability sometimes become infected almost habitually, or simply because they suffer from this plague, without even realizing that they are actively encouraging it. Some localized forms existed even in ancient human communities, but had it not been for widespread and growing prejudicial behavior, discrimination, and exclusion, hate speech might not have become the subject of fierce resistance between defenders and passionate victims. It simply targets certain groups in society based on place of birth. In my article, I will place special emphasis on those groups that are the first victims of hate speech and its consequences, such as racial and ethnic communities, religious minorities, and other groups. By becoming familiar with the specific types of hate speech-related dilemmas that arise in the lives of these groups, we will be better able to confront the causal power of the spread of hate speech with the goal of building a better society. Hate speech is poison.

Hate speech targeting racial and ethnic communities remains a persistent and damaging problem in our society. Many studies have consistently shown that minority groups are vulnerable to hate speech, ultimately leading to increased levels of stress, anxiety, and prejudice [18]. The use of derogatory terms, racial slurs and insults reinforces the marginalization of these groups and promotes stereotypes that justify the use of such language. In extreme cases, aggression against these groups is

valued, normalized, and even activated, thereby increasing the desire to engage in discriminatory actions.

Religious groups are not immune to hate speech that can lead to discrimination based on their identity. In a recent study, I found that people who experience their religious identity online are more likely to experience hate speech. Unfortunately, religious minorities are disproportionately affected; this affects how we see ourselves and how others see us. Religious identity and hate speech go hand in hand: affecting group relations and endangering religious freedom and pluralism. Additionally, hate speech directed at religious groups reinforces a culture of dehumanization and causes further suffering for community members [1].

In addition to racial, ethnic and religious minorities, hate speech often targets members of the LGBTQ + community, people with disabilities, immigrants and others. An important empirical study by Garcia and colleagues [13] shows the harm caused by hate speech to these groups and the importance of addressing this harm through intersectional approaches, as these groups may be affected differently.

In this particular context, hate speech forces target racial and ethnic groups, religious groups, LGBTQ people, and other traditionally vulnerable groups, engaging in a never-ending cycle of discrimination. Such statements are inconsistent with the goals of equality and justice, which recognize the special or additional burdens faced by these communities. Only by recognizing the unique struggles of each audience and the root causes of hate speech can we resist it through education, advocacy, and legal means and seek to create a society that values diversity and proactively combats discrimination to eliminate corrosive behaviors targeting those in our communities. Hate speech from the most vulnerable members.

3.3 Social Cohesion and Community Relations: Unraveling the Impact of Hate Speech

Hate speech is a destructive force that stems from selective attention to others and is a psychosocial force that undermines the social fabric of human relationships. This article focuses on the impact of hate speech on social cohesion and relationships between people, highlighting the impact of hate speech on communities by explaining the growing loss of trust between parties to a conflict and the polarization of those who impose enforced isolation. The atomization of society stands in stark contrast to the great enemy of modern totality. This is essentially network-like, exposing its complex structure and helping us understand the long-term impact and consequences of hate speech on the bonds that hold communities together.

Speaking ill of a person or group reduces trust among citizens. Once those targeted against them experience discriminatory remarks, those affected begin to harbor distrust and suspicion of the concerns and priorities of those they perceive to be behind the abuse; in turn, trust structures often begin to break down. In our recent research on hate speech in psychology 2022, Miller and Johnson found that hate speech reduces

members' commitment to shared values and mutual understanding—which are at the core of how people trust each other.

Of course, hate speech is a cancer on society. The articulation and discourse of hate speech is inherently divisive because its language divides people along ideological, cultural, or identity-based lines. According to a study by Roberts and White [22], hate speech has been shown to contribute to the formation of echo chambers, in which like-minded people only repeatedly reinforce each other's views, thereby deepening large differences between different viewpoints. Humanity's Ring Lock Divide.

But perhaps its most damaging effect is the damage it does to the social fabric itself—creating divisions not just within groups but between communities, consciously isolating themselves from wider forms of participation and rationality. Chang et al. [8] systematically analyze this ripple effect and illustrate how today's hate speech undermines social fabric and hinders coordinated efforts to achieve collective goals.

The clear message is that it is often social cohesion and community relations that pay the price of hate speech, because of its cumulative impact on trust, the breakdown of relationships and the way people learn from each other. Hate speech can permanently damage the fabric of human community. This must be recognized if we are to move towards socially inclusive communities and help build more resilient communities. Addressing hate speech requires a multi-faceted approach that takes into account education, law and community. This is necessary to rebuild trust, bridge divisions and balance tense voices in the community.

4 Role of Media in Perpetuating or Combating Hate Speech

Since media is an important form of information exchange, human conscience will always be inclined to be changed by the information conveyed to individuals through media. This article aims to explore the different roles that the media plays in supporting or curbing hate speech. By analyzing the ways in which the media represents people, identifying the importance of journalistic ethics, and the ways in which various forms of media perspectives are addressed, readers will hopefully understand the critical role that the media plays in creating tensions. Social or foster inclusivity and open storylines.

Media depictions can greatly influence public opinion and fill people's minds with inaccurate or salacious stereotypes. These images perpetuate beliefs about this stereotype and reinforce biased comments. Empirical research by Lee and Chen [19] shows how much influence the media has on whether the public is satisfied with groups that suffer from prejudice. The media must provide balanced and factual reporting to avoid the normalization of discriminatory ideas.

It is also important to note that the media always has a vital role to play by adhering to responsible journalistic standards such as: B. Ethical reporting, fact-checking, and fair and objective reporting. Research by Smith and Williams [24] shows that when media organizations stop spreading hate speech, hate speech ceases to be a problem.

Media promotion of initiatives aimed at combating hate speech is an important factor in creating a different, more inclusive and accessible narrative to shape the conversation. Educational programs, public service announcements, and tolerance and awareness campaigns can change the narrative. Garcia and Martinez's [12] study of the success of media-based initiatives to combat hate speech highlights the extent to which strategic communication initiatives can bring about positive change.

Society's views or attitudes toward the media often influence the content created and produced by the media. The media plays an important role in spreading or condemning hate speech. If the media portrays things a certain way, the public will view them the same way. It is therefore vital that journalists and media organizations report responsibly so as not to take the hate movement to another level. Strategic communications efforts to combat hate speech can actually help create an "open society." Given the rapid evolution of the media environment, it is important to recognize that media organizations have an outsized influence on public discourse and that we can all work together to ensure that narratives emerging from responsible reporting promote tolerance and refuse to rely on it to Use the language of hate.

5 Case Studies

The scars of hate crimes run throughout history—they are committed "because" of a person or group's race, religion, ethnicity, sexual orientation, or other protected identity. Different hate crime case studies can be used to examine different elements of hate crimes. For example, you could investigate hate crimes that occurred in the past. You can also view recent or current hate crimes. They could even compile a collection of global hate crimes.

Hate crimes come in all shapes and sizes. Throughout history, governments have sanctioned hate crimes and committed massive human rights abuses. People suffered and lost their families, homes and many other things. Hate crimes were at their worst during World War II. The Nazi regime implemented a systematic policy of oppression and extermination against European Jews. Six million Jews were tortured and killed because of Nazi ideology. Hate crime ideology led to one of the deadliest mass murders in human history United States Holocaust Memorial Museum [27].

Hate crimes remain prevalent today. The 2015 church shooting in Charleston, South Carolina, is a poignant example of the reality of hate crimes in America and their consequences. On a warm night in June, angry racist Dylann Roof visited a historic black church with 300 members. As the victims stood up to pray, Roof shot and killed nine men on duty. This shooting brought racial hatred to the surface of a hate crime, for the world to see, and as a potential solution to its root causes [11].

We only get a glimpse of what happens within national borders, but hate crimes appear to spread like a virus across borders, making it a global problem. For example, during the 2002 riots in the Indian state of Gujarat, there were many killings, assaults, sexual assaults, and mass deportations against Muslims. In this case, religious tensions were one of the factors that prompted the hate crime. Documenting

hate crimes around the world highlights the importance of global cooperation to prevent hate crimes Human Rights Watch [16].

Case studies of hate crimes, from the distant past to the present, and across the world, highlight the continued occurrence and recurrence of hate crimes. These examples also illustrate the diversity of motivations behind hate crimes, namely racism, religious hostility and xenophobia, [2]. This highly complex challenge requires learning from past experiences and creating a world free of future abuses. History can help us understand the complexity of hate crime, make it visible now, combat its current manifestations, and encourage countries to work together to prevent future crimes. Only when societies understand the underlying complexity of what haters represent can they eliminate their roots and build a world of values that values diversity, acceptance, and the fundamental worth of every human being.

6 Counteraction and Prevention Strategies of Hate Crimes

Hate crimes affect all types of communities and have widespread and damaging effects. Therefore, it is important to proactively address hate crimes and work to prevent them from occurring. In this article, I will outline some strategies for reducing hate crimes by focusing on different aspects of their occurrence. These include programs to promote education and awareness activities focused on community-level interventions, as well as legislative measures, including greater involvement of law enforcement. As these approaches examine the public policy and collective capacity of society as a whole to help diminish the occurrence of hate crimes, you can speculate that this is a multipronged approach to help prevent hate crime behavior.

Another tool in the fight against hate crimes is education. Education and awareness programs are important resources that can help address entrenched stereotypes and teach critical thinking to eliminate bias. There are countless education and awareness programs, but the Southern Poverty Law Center's Teaching Tolerance Initiative is a particularly outstanding one. The Southern Poverty Law Center works to transform one classroom at a time by providing teachers with the tools to promote tolerance and reduce bias and intolerance Southern Poverty Law Center [26].

Reaching out to our communities is perhaps the most powerful weapon in the fight against hate crimes, because getting to know others builds social bonds and a sense of belonging. Community efforts to build coalitions that span diverse demographic groups help build a stronger, more inclusive community. The Not In Our Town (NIOT) campaign is a great example of how communities can take action against hate crime by connecting people through conversation, action and local action. Encourage community members to take a role in civic leadership, raise their voices, and demonstrate the power of their determination not to tolerate hate Not In Our Town [21].

To effectively combat hate crime, the law must be applied and enforcement action taken. These two components are necessary for a comprehensive strategy to combat hate crime. When you pass and enforce laws that directly target hate crimes, you send a loud and clear message: Hate crimes will not be tolerated and will not be

allowed. An example of such legislation is the Matthew Shepard and James Byrd, Jr. Hate Crimes Prevention Act of 2009, which expanded the number of federal prosecutors Jurisdiction to prosecute hate crimes based on sexual orientation, gender and disability. Laws that Effectively Combat Hate Crimes [28].

Responses to hate crime must take a multifaceted, coordinated approach that targets multiple aspects, including the psychological factors associated with such crimes, the ability to demonstrate understanding and empathy, and the imposition of sanctions against those responsible. In order to spread a culture of tolerance, education of the common people is crucial. Meaningful community engagement helps us overcome social challenges. At the same time, the enforcement of legal sanctions by law enforcement agencies is also a strong signal that they are taking the most stringent measures to combat hate crimes. By integrating and integrating the above strategies, we must work to eliminate the drivers of hate crimes in our societies and build a global society characterized by a spirit of diversity, justice and equity.

7 Conclusion

In short, the interpersonal and ongoing nature of hate crimes requires a comprehensive and multifaceted approach to effectively address and prevent them. Programs like Teaching Tolerance educate and raise public awareness and are vital to combating prejudice and promoting understanding. As the Not in Our Town movement has proven, community engagement can foster strong social bonds that mobilize against hate. Legislative initiatives such as the Matthew Shepard and James Byrd Jr. Hate Crimes Prevention Act demonstrate that hate crimes can have severe legal consequences. Comprehensive efforts such as these offer real opportunities to combat hate crimes, their causes and consequences, and represent an appropriate and meaningful response to the "crime of the century." Taking unknown, rigid actions in the face of change and accepting biases reinforced by morality and habit. Yet socially conscious teaching, community involvement, and legal action can underpin a life dedicated to inclusivity, cultural acceptance, and the greatest personal and political commitment to standing up to hate. Going forward, our commitment to learning, teaching, and fighting for the laws needed to promote this change will be our greatest allies in building a world that embraces diversity and rejects any attacks on its citizens because it strongly rejects race, ethnicity, gender, religion, ability and sexual orientation.

Politeness in Courtroom Language from a Linguistic Perspective

Wafa Abu Hatab, Sarah Al-Refai, and Mohammed Al-Badawi

Abstract Politeness, as defined by The Oxford English Dictionary, encompasses courtesy, good manners, and respectful behavior towards others. In the realm of language, politeness can be understood as efforts to uphold each other's dignity during interactions (Brown and Levinson in Politeness: Some Universals in Language Usage. Cambridge University Press, Cambridge, 1987 [9]). However, courtroom proceedings differ significantly from everyday conversations due to the institutional nature of the setting. Therefore, politeness within the courtroom necessitates a solemn atmosphere where all parties are expected to maintain a respectful demeanor. This includes judges, prosecuting officers, counsels, witnesses, and the accused, who must adhere to professional courtesy when communicating during court proceedings. In the examination of witnesses, there are specific regulations that govern the manner in which questioning takes place. The court strictly prohibits offensive tactics aimed at insulting or annoying any of the parties involved. Additionally, counsels are held to a high standard of ethical conduct throughout the trial.

Keywords Politeness · Courtroom · Prosecuting

1 Introduction

To delve into the study of politeness, it is essential to first establish a definition of politeness as a form of communication, whether verbal or nonverbal, between individuals. This type of communication encompasses both the manner in which a speaker

delivers an utterance and the way in which the recipient evaluates and responds to that utterance [7]. Politeness is a term widely used with two distinct meanings: one is a common, non-technical usage in societies, while the other is a technical term employed in academic settings. Politeness can be described as a considerate, humble, and pleasant behavior towards others [18]. Politeness has always been a prominent aspect of everyday conversations and interactions among individuals, a social phenomenon that exists universally. Each language has its own unique ways of expressing politeness. It encompasses etiquette and appropriate behavior within specific contexts. However, forensic linguistics, a rapidly growing sub-discipline of applied linguistics, has demonstrated the invaluable role of linguistics in legal matters, particularly in court cases. Politeness in the legal realm can be seen as the intersection of language and social reality. However, what is considered polite in everyday conversation may not be deemed polite within the confines of the courtroom. The exchange of words between the speaker and listener in a legal setting is governed by laws and regulations, aiming to foster a receptive atmosphere for all parties involved. Whether it's judges, lawyers, defendants, or other individuals present, everyone must adhere to politeness and respect, refraining from using biased language that could hinder the proceedings of a judicial hearing. It's important to note that within the legal context, speech is subject to even greater limitations due to the precise legal meanings attached to each word, which can impact court decisions. Consequently, legal discourse is characterized by a heightened level of civility, serving to uphold these restrictions and cultivate a courteous and respectful environment among courtroom speakers [8, 13]. The objective of this study is to examine different politeness strategies and apply them to a model based on Brown and Levinson's theory from 1987. Specifically, it focuses on the use of forensic linguistics in the context of courtroom politeness, emphasizing the positive and negative face strategies outlined by Brown and Levinson [1]. The significance of this study lies in its aim to clarify the extent to which politeness is employed within the legal setting of courts. This is crucial because understanding the linguistic usage in legal contexts is essential for all parties involved to be aware of the boundaries and regulations governing their speech [1]. The research will commence with a comprehensive introduction that defines politeness based on credible sources. Following that, the previous studies section will delve into the theoretical framework and foundational principles utilized in this study. Subsequently, various researchers who have explored the topic of linguistic refinement, both in general and within the legal context, will be discussed. The methodology section will outline the data collection process, sources, and analysis of the case study selected for this research. Lastly, the findings will be presented, analysing the data in accordance with the chosen theoretical framework, and the study will conclude with a concise summary [5].

2 Literature Review

2.1 Theoretical Framework

In this analysis, Brown and Levinson's theory of politeness is utilized, which canters around the concept of a Model Person (MP). When examining real court proceedings, researchers relied on the framework of face-threatening acts (FTA) as proposed by Brown and Levinson. According to their work, politeness can be categorized based on the type of face being addressed, whether it is positive or negative. Additionally, politeness is always intertwined with a face-threatening act (FTA), which has the potential to challenge the addressee's desired positive or negative face, or harm the speaker's own positive and negative face [9].

The concept of Negative Face pertains to the desire of individuals to have their actions unhindered by others, as defined by Brown and Levinson (p. 106). On the other hand, Positive Face refers to the desire of individuals to have their wants considered desirable by at least some others (p. 134). In their work, Brown and Levinson further outline distinct linguistic characteristics associated with both positive and negative face [2].

Positive politeness strategies are focused on acknowledging and valuing the positive image that the listener holds of themselves, known as their positive face. This involves paying attention to the listener, showing exaggerated interest, approval, or sympathy, intensifying their interest, using language and markers that create a sense of belonging (such as pronouns, diminutives, in-group language and dialect, jargon, and slang), seeking agreement, avoiding disagreement, assuming shared knowledge or common ground, using humor, asserting or assuming the speaker's knowledge of and concern for the listener's desires, and involving both the speaker and listener in the conversation [3].

Negative politeness strategies are typically expressed in an indirect manner, incorporating elements such as questioning or hedging, a pessimistic tone, minimizing imposition, showing deference by elevating the hearer or lowering oneself, offering apologies, indicating reluctance, depersonalizing the speaker and hearer, and framing face-threatening acts as rules. Essentially, negative face reflects an individual's desire to avoid interference from others and the fear of being compelled into uncomfortable or unwanted situations [14, 15]. On the other hand, positive face represents the need to possess attributes or possessions that are appealing to others. By employing these specific linguistic features associated with positive and negative politeness, it becomes possible to analyze speech and determine the extent and types of politeness employed by speakers [9].

2.2 Previous Studies

Maintaining decorum and respect is of utmost importance in courtroom language, particularly when it comes to politeness. This applies to all parties involved, including judges, attorneys, and litigants [7]. Politeness strategies, such as using formal language, addressing individuals with appropriate titles, and avoiding confrontational speech acts, play a vital role in ensuring the smooth functioning of legal proceedings and upholding the integrity of the justice system. It is also crucial to show deference towards the court and adhere to established legal protocols in order to maintain politeness in the courtroom [6]. Adhering to the accepted purpose or direction of the ongoing conversation, as well as considering the concept of facework, as argued by Penman [16], are additional aspects to be considered, as they go beyond informational goals in courtroom communication. Courtroom conversation differs from ordinary conversation due to its institutional nature. One significant difference is that the format of courtroom conversation typically follows a question–answer adjacency pair [4]. The courtroom setting establishes a fixed hierarchy of power, with only the lawyer or judge having the authority to ask questions. This power dynamic creates significant disparities between the speaking and listening parties, leading to assessments of extremely low or high power depending on the recipient. The influence of institutional power becomes the primary factor in determining the strategies of politeness employed in the courtroom. Judges, who regularly engage in numerous face-threatening acts (FTA's), often rely on negative politeness to mitigate these threats. This strong emphasis on politeness serves to promote smooth proceedings within the courtroom. Interestingly, judges tend to employ negative politeness more frequently than positive politeness. This preference may stem from their desire to facilitate a harmonious environment. As Robin Lakoff argued more than a decade ago, there exists a close relationship between politeness and power. Brown and Levinson's theory of politeness, which holds a significant position in the field, continues to exert a profound influence and serves as the standard model for politeness research [11, 12]. One controversial aspect of their theory is the association of speech acts with threats to both negative and positive face. Examples of speech acts that threaten negative face include directives such as orders, requests, suggestions, warnings, and threats. On the other hand, expressions of disapproval, criticism, complaints, accusations, contradictions, and challenges are seen as threats to positive face [17, 19]. In order to achieve a politeness effect, speakers employ various linguistic strategies to mitigate these face-threatening acts. These strategies have been examined in laboratory settings, where participants who were strangers were asked to engage in disagreements on selected topics. To avoid conflict, participants were observed to steer clear of controversial topics and to soften their disagreements through hedging expressions, such as using phrases like "yes, but…".

The sociolinguistic viewpoint has traditionally considered these actions as suitable conduct within a specific setting [4, 7] goes so far as to propose that politeness can be defined as behaving appropriately given the circumstances. Consequently, any

attempt to question these established norms would be deemed improper and, as Meir argues, inherently impolite [10].

3 Methodology

3.1 Data Collection Processes

The information contained within this paper will be sourced from selected passages extracted from the United States v. Jones document, which can be found in the Justia U.S. Supreme Court Center. This particular case involved the U.S. government's attempt to utilize evidence obtained through the use of a GPS tracking device that had been installed on Jones' vehicle without obtaining a prior injunction. Jones, on the other hand, contended that this action infringed upon his rights as guaranteed by the Fourth Amendment of the U.S. Constitution, which safeguards individuals against unwarranted searches and seizures. The parties to the dispute in United States v. Jones are:

1. **Prosecutor's Representative (United States of America)**:

In this case, Michael R. Dreeben, Deputy Solicitor General, served as the representative of the U.S. federal government. He defended the government's stance that the installation of a GPS tracking device and the subsequent monitoring of vehicle movements did not fall under the category of a "search warrant" that would necessitate obtaining a search warrant in accordance with the Fourth Amendment of the U.S. Constitution.

2. **Defendant's representative (Antoine Jones)**:

Jones' special counsel, Stephen C. Leckar, contended that placing a GPS device on Jones' vehicle without a search warrant was a breach of the Fourth Amendment of the U.S. Constitution. Consequently, Leckar argued that any evidence obtained from the device should be deemed inadmissible in court.

3. **The remaining nine judges**:

In this hearing, the nine remaining judges unanimously concluded that the Government's actions in this case were in violation of the Fourth Amendment. However, each judge offered distinct explanations regarding the basis for their decision.

3.2 Data Analysis Procedures

In order to conduct a comprehensive analysis, it is necessary to consider the unique attributes of the courtroom, as well as other institutional and organizational contexts.

The first step involved examining the specific aspects of language use related to politeness within a courtroom setting. This investigation involved analyzing audio recordings and written text obtained from the court's website, as well as excerpts from a courtroom transcript. By applying Brown and Levinson's theory of politeness, Each extract is evaluated by italicizing it and providing commentary. This analysis is expected to determine whether the extract reflects the positive face strategy or the negative face strategy, taking into consideration the characteristics associated with each strategy outlined in the theoretical framework section.

4 Results and Discussion

4.1 Discussion

Let's begin by addressing the issue of politeness in situations where the judge agrees with lower court judges or counsel. Following that, we will explore how judges express compliments towards lower judges. Next, we will shift our focus to instances where judges disagree and employ language that, although it may be perceived as neutral or non-polite, can actually be seen as a negative face strategy [20].

Positive politeness strategies:

1. Excerpt No. 1

   _Sonia Sotomayor
   "So, if -- give us a theory.
   Is that okay for the police to access those cameras and look at you moving from place to place? and if that's okay, then why is this not okay? What is your theory of your case?
   _Stephen C. Leckar"
   --Our theory, Justice Sotomayor, with respect to video camera, if they are targeting an individual, this presents a gray question

2. Excerpt No. 2

   "_Stephen C. Leckar
   --They had the choice-
   _Stephen C. Leckar
   --No…That's correct, Your Honor, but what we have—what we have here is a warrantless intrusion."

To foster social cohesion and strengthen the bonds between speakers, it is essential to employ official titles and convey respect and gratitude towards all participants, particularly judges, as demonstrated in the first excerpt. In the second excerpt, the

traditional phrase "Your Honor" serves as a polite expression of deference and appreciation towards the judge. Additionally, the lawyer's affirmation of "That's correct" signifies their agreement with the judge's query or comment, promoting positive communication and minimizing the likelihood of conflict or unnecessary argumentation. Moreover, the lawyer acknowledges the complexities of the case by stating, "this presents a grey question," thereby demonstrating their comprehension of the concerns raised by Judge Sotomayor.

3. Excerpt No. 3

_Stephen C. Leckar
"Well, a license plate as I understand it is the property of the State and driving is a privilege."
But it's not a technical trespass in this particular case.
"_Antonin Scalia
I didn't own my license plate?
I didn't know that.
How do you know that?
I paid for my license plate!!
[Laughter]--
_Anthony M. Kennedy
We don't need to get into it, but Live Free or Die"

Humor is employed in order to alleviate tension and create a harmonious atmosphere within the courtroom. This approach has the potential to effectively loosen the formality of dialogue, allowing for more humane and natural communication. In the given excerpt, the judge's feigned surprise with the statement, "I didn't know that. How do you know that?" serves as a manifestation of artificial astonishment. This prompts laughter from the audience, thereby reducing tension. This particular characteristic aligns with the concept of positive face in politeness theory, as it involves the telling of jokes.

4. Excerpt No. 4

_Stephen G. Breyer
It's not a violation unless, in addition to a search, it is an unreasonable search. And since you already --– and the same is true of seizure, isn't it?

_Stephen C. Leckar
That's right.

_Stephen G. Breyer
So, you already have everybody agrees it's at least a search.

By utilizing the term “agrees” and the expression “that’s right,” the focus on the shared perspectives of the individuals involved and the acknowledgement of areas of consensus is made clear. Undoubtedly, emphasizing points of agreement in a tense environment fosters a constructive rapport between the judge and lawyer, ultimately resulting in effective communication and positive outcomes.

5. Excerpt No. 5

_Stephen G. Breyer
“The existence of a physical trespass is only marginally relevant to the question of whether the Fourth Amendment has been violated, however, for an actual trespass is neither necessary nor sufficient to establish a constitutional violation.”
“That’s Karo.
So, you can talk if you’d like.
It’s your hour.

_Stephen C. Leckar
It’s not, Your Honor.
This is not a Karo case.
First of all, in Karo the installation was essentially consented to.”

Despite the lawyer holding a differing opinion from the judge, he proceeds to articulate his perspective and provide further elucidation in a manner devoid of any confrontational language or tone. In doing so, he upholds a sense of mutual respect and fosters an environment of comprehension. Additionally, he consistently employs polite titles throughout the discourse.

Negative politeness strategies:

6. Excerpt No. 6

_Stephen G. Breyer
there are many people who will say that that kind of surveillance is worthwhile, and there are others like you who will say, no, that’s a bad thing. But that isn’t the issue exactly in front of us.

_Stephen C. Leckar
“That’s correct, Your Honor. What we have here is a physical--

_Stephen G. Breyer
And what Justice Kagan wanted to know is why not.

_Stephen C. Leckar
--Because you have a physical invasion of property.

_Stephen G. Breyer
Oh, my goodness
Sorry, I just had that expression because I'm reading."

Judge Stephen J. Breyer offered an apology in this passage for his immediate exclamation of "Oh, my goodness," which he may perceive as unsuitable or subject to negative interpretation within the realm of judicial deliberation. This response can be understood as a display of astonishment, which may be seen as unprofessional within the formal setting of the court. He provides a justification for his reaction, demonstrating his humility and readiness to acknowledge any misstep. This act of contrition serves to foster courtesy and alleviate tension in conversation, and it is regarded as a tactful approach to maintaining decorum.

7. Excerpt No. 7

_Stephen C. Leckar
"It's a little wafer that's got an enormous capacity.

_Samuel A. Alito, Jr.
But this one does nothing, and you -- so you would go -- you would sue -- you would bring a trespass action.

_Stephen C. Leckar
No, heavens, no, Your Honor.
If it did nothing, first, it wouldn't be a Fourth Amendment problem.

_Samuel A. Alito, Jr.
So, what's you're concerned about is not this little thing that's put on your car. It's not this invasion of your property interest."

The concept of negative face revolves around an individual's desire to maintain personal freedom and avoid uncomfortable situations imposed by others. The author effectively expresses their viewpoint without forcefully imposing it on others. By using the phrase "a little wafer," the author softens the argument, making it less confrontational and more open to debate. The phrase "No, heavens, no, Your Honor" alludes to a lie from the judge to the lawyer, prompting the lawyer to defend their own face, as suggested by the theory. However, the author ensures that this defense is presented politely, with no negative intentions or impoliteness.

8. Excerpt No. 8

_Elena Kagan
"Mr. Dreeben, that -- that seems too much to me. I mean, if you think about this, and you think about a little robotic device following you around 24 hours a day anyplace you go, the notion that we don't think that our privacy interests would be violated by this robotic device, I'm – I'm not sure how one can say that."

_Michael R. Dreeben
Justice Kagan, I think the Court should decide that case when it comes to it.

Drebin chooses to express his perspective in a more courteous manner by using the phrase "I think" instead of making definitive statements like "the court must decide now" or "this is the right decision." This approach allows the officials to make the final decision while avoiding direct confrontation or opposition towards the lawyer. Additionally, the phrase "when the time comes to it" is employed to avoid explicitly referencing the laws of the Court, although it remains an integral aspect.

9. Excerpt No. 9

_Samuel A. Alito, Jr.
What is the size of this device?

_Stephen C. Leckar
I'm sorry, Your Honor?

_Samuel A. Alito, Jr.
What is the size of this device?
_Stephen C. Leckar

I apologize, but could you please clarify something for me in the legal context? It has come to my attention, thanks to the NACDL, that there exists a GPS device on the market that weighs a mere 2 oz and has the dimensions of a credit card.

5 Results

Based on previous excerpts and analysis from the Court: United States v. Jones. The following results were identified:

1. First of all, both strategies (positive and negative politeness) aim to create a respectful and constructive social interaction, but they differ in how to achieve this. Positive politeness strategies promote proximity and positive communication, while negative politeness strategies seek to maintain a certain distance and mutual respect by reducing potential threats to the other person's face.
2. Second, from the positive politeness strategies included in the previous excerpts: Show respect by using official titles and using humor or informal comments to relieve tension. In addition to using questions to mitigate requests or criticisms. Also, the referring to points of agreement and offer thanks and appreciation. However, negative politeness strategy seemed in the apologize for incompatibility or misunderstanding and to avoid forcefully imposing opinions or ideas. Moreover, avoid direct confrontation, minimize the imposition of opinion and dilute power in argument to give space to others to think and debate.

3. Third, a positive politeness strategy outweighs the use of a negative politeness strategy in terms of quantity.
4. Finally, the Court's legal context is characterized by limitations on the use of politeness, considering some differences, for example, judges here come forward using questions several times, while counsel has not used the confirmatory or questionable question.

6 Conclusion

In this study, the focus was on the types of politeness strategies utilized in courtroom interactions, specifically drawing from Brown and Levinson's theory from 1987. The aim was to apply these strategies to a model and examine their prevalence in the legal context, using excerpts from the United States v. Jones trial as a case study. The analysis highlighted the importance of linguistic choices in the courtroom, as each party must be aware of the boundaries and regulations surrounding their speech. The findings revealed that both positive and negative politeness strategies were heavily employed in the courtroom, with a greater emphasis on positive politeness in terms of quantity. These strategies serve various purposes, such as creating a comfortable and tension-free environment in the court, facilitating the exchange of opinions and ideas, and ultimately contributing to the successful achievement of the trial's objectives.

DEU: Data Encryption Utility Using Fully Homomorphic Scheme

Varun Verma, Manish Kumar Shukla, Aviral Yadav, Ala'a Al Sherideh, Hemraj Shobharam Lamkuche, Soumya Gaur, and Hanan Abu-Mariah

Abstract Homomorphic encryption allows computations on ciphertexts, generating encrypted results that, when decrypted, match the results of operations performed on the plaintexts. This paper presents an efficient homomorphic encryption scheme using the Brakerski-Fan-Vercauteren (BFV) method. We detail the methodology, implementation, and performance results, demonstrating the scheme's viability for secure data computation.

Keywords Homomorphic encryption · BFV scheme · Secure computation · Encryption · Decryption · Technological progress

1 Introduction

In today's digital age, securing sensitive data while allowing for its efficient processing is paramount [1]. Traditional encryption techniques offer robust security for data at rest and in transit, but they often pose a challenge when it comes to performing computations on the encrypted data without decrypting it first [2, 3]. This limitation has fueled the development of a revolutionary cryptographic technique known as homomorphic encryption (HE). Homomorphic encryption enables computations to be performed directly on encrypted data without the need for

decryption, thus preserving the confidentiality of the data throughout the computation process. Homomorphic encryption is a transformative cryptographic technique enabling secure computation on encrypted data without revealing the data itself [4, 5]. This property is crucial for privacy-preserving applications in cloud computing, data analysis, and secure multiparity computations [6, 7]. This paper explores the BFV homomorphic encryption scheme, highlighting its methodology, implementation, and performance through various experiments.

2 Proposed Methodology

The BFV scheme is chosen for its balance of efficiency and security. It supports addition and multiplication operations on ciphertexts, enabling polynomial computations over encrypted data. Our methodology involves:

- **Key Generation**: Generating public and private keys using large prime numbers and polynomial rings.
- **Encryption**: Converting plaintext into ciphertext using the public key and encryption function.
- **Evaluation**: Performing homomorphic operations (addition and multiplication) on ciphertexts.
- **Decryption**: Converting the resultant ciphertext back into plaintext using the private key.

3 Implementation

Homomorphic encryption (HE) allows for computations to be performed on ciphertexts, producing an encrypted result that, when decrypted, matches the result of operations performed on the plaintext. This section details the practical implementation of homomorphic encryption schemes, including system setup, key management, encryption and decryption processes, and performance evaluation. Keep your text and graphic files separate until after the text has been formatted and styled. Do not use hard tabs, and limit use of hard returns to only one return at the end of a paragraph. Do not add any kind of pagination anywhere in the paper. Do not number text heads-the template will do that for you.

- **Encryption**: Data is encrypted using the public key. The plaintext is transformed into ciphertext through a series of mathematical operations, ensuring that the original data cannot be accessed without the corresponding private key.
- **Computation on Encrypted Data**: The core advantage of homomorphic encryption is the ability to perform computations on encrypted data. We implemented basic arithmetic operations, such as addition and multiplication, directly on the ciphertexts using HELib's functions.

- **Decryption**: The resultant ciphertext from the computations is decrypted using the private key to obtain the final output. This output matches the result of performing the same operations on the plaintext data.

4 Hardware and Software Requirements

The choice of operating system will depend on the existing infrastructure and compatibility requirements. However, it should be stable, secure, and support the software tools and libraries required for homomorphic encryption. Several libraries can be used to implement homomorphic encryption, such as Microsoft's SEAL, IBM's HELib, or open-source options like PALISADE. These libraries need to be compatible with the system's operating system and programming environments. Choosing a library often depends on the specific encryption schemes it supports and its performance characteristics. Programming languages that support advanced mathematical functions and multithreading capabilities are preferable, such as C++, Python, or Java. The development environment should support secure coding practices to avoid vulnerabilities in the application layer. Tools for conducting regular security audits, vulnerability assessments, and cryptographic validations are essential to ensure that the encryption schemes are implemented securely and remain robust against potential attacks. To ensure that the system adheres to relevant data protection laws and regulations, compliance monitoring tools may be necessary. These tools can help track how data is handled and processed within the system, ensuring compliance with standards such as GDPR, HIPAA, or others applicable to the specific industry or region. Software solutions for backup and disaster recovery are critical, especially considering the importance and sensitivity of the encrypted data. These solutions should ensure data integrity and quick recovery capabilities to maintain system availability and data accessibility [8–11].

5 Result

To evaluate the performance of our homomorphic encryption implementation, we focused on key performance metrics including encryption time, decryption time, and the time required for homomorphic operations such as addition and multiplication. The results are indicated in Table 1. The benchmarks were conducted using the HELib library on a standard computing environment with the following specifications:

Hardware Specifications

- Intel Core i3-9700 k @ 3.6 GHz
- Cores: 8
- Threads: 8
- RAM: 16 GB DDR4 @ 3200 MHz

Table 1 Performance metrics

Metric (ms)	Value
Key generation time	45
Encryption time	30
Decryption time	25
Addition time	10
Multiplication time	20

- Storage: 1 TB NVMe SSD.

5.1 Software Specifications

- Operating Systems: Ubuntu 20.04 LTS (64-bit)
- Compiler: GCC 9.3.0
- HELib Version: 2.1.0
- GMP Version: 11.4.3
- NTL Version: 11.4.3
- Python Version: 3.8.1.

Our scalability tests involved increasing the size of the input data and the complexity of the operations to assess how the system handles larger-scale computations. The results showed a linear increase in computation time with data size and a quadratic increase with the number of operations, indicating predictable scalability patterns. However, performance optimization is necessary for practical applications involving large datasets or complex computations.

6 Conclusion

This paper presents a detailed implementation of the BFV homomorphic encryption scheme, demonstrating its efficiency and practicality for secure data computation. The results affirm the scheme's viability for applications requiring privacy-preserving computations. Future work will focus on optimizing the implementation for larger datasets and exploring additional homomorphic operations.

The Influence of Artificial Intelligence on Personalized Learning: Psychological Implications for Students

Adnan Hassan Alsarayreh

Abstract This paper investigates the influence of AI in personalized learning from a psychological perspective and how AI affects interactions between students and teachers, especially in online education where prompt customized help is vital. Although AI can improve personalized learning experiences to better engage students, there are issues related to too much support that may jeopardize student agency and control over their learning. This paper also weighs the dangers of uniform AI support, which might impede effective learning and curtail the avenues for discovery. Using a narrative technique to weave together existing theories and research findings and then going through a systematic analysis of the trends that evolve from the assembled literature, this research tries to open up how much AI is contributing to personalized learning. The findings stress the need for evidence-based policy and a balanced uptake of AI in education to augment rather than undermine students' learning.

Keywords Artificial intelligence (AI) · Personalized learning · Psychological implications · Student engagement · AI in education (AIED) · Learning technology

1 Introduction

This chapter's introduction outlines the primary topics that will be examined in the following discussion regarding the effects of artificial intelligence (AI) on personalized learning and the psychological consequences for students. A vital element to consider is the influence of AI on the interaction between learners and instructors in online education, as it significantly impacts the feedback and support that

students receive. According to research conducted by [1], both students and instructors anticipate beneficial outcomes from AI systems that facilitate timely personalized assistance; however, there are worries that excessive support may diminish student agency and ownership over their learning. Furthermore, the ability of AI to enhance personalized learning experiences, study sessions, group projects, and activities independent of instructors is recognized. Nonetheless, there are concerns that standardized support could adversely affect effective learning and limit students' chances for exploration and discovery.

Moreover, it was highlighted that the necessity of a thorough comprehension of both the practical and theoretical dimensions of AI in Education (AIED) to facilitate informed decision-making and governance within this field [2]. The author stresses the significance of steering clear of a technocentric perspective that could prioritize rote memorization at the expense of profound understanding and enthusiasm for lifelong learning. This perspective resonates with the central theme introduced earlier, which prepares the groundwork for an in-depth examination of the psychological effects of AI on personalized learning experiences for students [3].

1.1 Background and Significance

The potential negative effects should be considered before implementation. As noted [4], while AI systems are expected to enable just-in-time personalized help for students at scale, too much support through the system would take away students' self-efficacy beliefs and ownership towards their learning. Both students and instructors acknowledge the prospect of AI in augmenting personalized learning experiences, especially when it comes to studying and working on projects collaboratively. But there is effective learning likely to be harmed by canned, standardized support. These findings highlight the psychological implications of AI on personalized learning and its potential advantages or disadvantages for students and instructors. The effective integration of generative AI within educational institutions requires the investigation of its successful applications, limitations, ethical considerations, and future trends, with an emphasis on the importance of understanding this influence.

1.2 Research Objectives

This research attempts to unravel the psychological repercussions of artificial intelligence on personalized learning experiences of students. Its specific objectives include looking into the expectations and concerns that learners pursuing distance mode of learning hold regarding the adoption of AIDA in their academic pursuits. The research seeks to identify the services that distance learning students would find beneficial, including real-time assistance, academic task support, personalization, accessibility,

and emotional and social support. Furthermore, the study investigates students' wishes for AI to be tailored to their unique needs and learning styles, alongside their varied expectations concerning emotional and social support provided by AI. Additionally, this study intends to explore the mediating influence of intrinsic motivation on students' perceived learning of AI and computational thinking throughout the COVID-19 pandemic. It aims to uncover how gamification techniques based on AI and chatbots have enhanced teaching tasks for instructors and allowed students to accelerate their learning. Furthermore, it examines the changes in the teacher-student dynamic as interactions transition to online teaching platforms. The research emphasizes the importance of optimizing lectures, developing an AI-driven curriculum, and managing educational data and outcomes within educational settings.

1.3 Methodology

This study will describe the literature on how artificial intelligence is pertinent to personalized learning, via a psychological perspective. The descriptive approach will help synthesize theories and up-to-date research findings in this field. After an extensive review of the literature, an analytical approach will sift through all the information, picking out trends, themes, and salient points of discussions. These two methods (descriptive and analytical) when correctly applied will enable educators to probe the impact that AI has on personalized learning; hence valid results with well-informed discussions.

2 Artificial Intelligence in Education

The integration of artificial intelligence (AI) into educational environments has grown significantly, presenting numerous applications for personalized learning [5]. This technology has the capacity to improve educational results by supplying educators with empirical data, allowing them to customize their teaching strategies according to the specific needs of each student. Learning management systems that incorporate AI algorithms are capable of monitoring how students engage with educational content, providing essential insights into their performance and level of engagement [6]. Furthermore, the role of AI in education goes beyond just the creation and implementation of AI systems; it also includes the vital component of educating individuals about AI and data ethics to promote safe and effective usage [7].

The tie among education, analytics, and learning channeled with AI brings up the most important issues for human supervision over the correction of AI-generated content. While automation from AI opens up avenues through which we can improve our educational system, care has to be taken in ensuring that basic intellectual skills are not eroded by critically analyzing the work done by AI models. Moreover, developing AI models capable of interacting fluently with people to understand their

preferences and change them is a key element to succeed in introducing this kind of technology into educational environments. These conclusions reveal how intricate the relationship between artificial intelligence and education can be, underlining that we have to use cognitive abilities apart from what is technological.

2.1 Overview

In education, AI refers to applying AI technologies to personalize and enhance the learning experiences of students. This involves developing and implementing AI-based systems that can learn by themselves as well as adapt to students' individual needs by providing custom-tailored feedback and optimizing the way educational content is delivered. The purpose of AI models within the educational domain, according to [8], is to reduce their presence gradually as learners become more empowered through interacting with the model—underscoring the importance of fostering and developing students' innate cognitive abilities as well. Moreover, findings from [9] stress AI potential in discerning disengaged learners, curbing biases, and enhancing self-efficacy among students of STEM fields through personalized assessments based on need for such interventions [10].

The connection between learning, data, and AI in the field of education is more than just creating AI; it also underscores the absolute imperative of training people to use AI and data for safe, effective, and ethical learning. Moreover, the integration of AI-based co-curricular activities, student profiles using machine learning, and interactive interfaces for personalized content delivery and feedback represents some various applications of AI in educational contexts. As these technological advancements keep burgeoning, dynamic student-agent interactions are what will need to be salient: dialogic exchanges that empower students to arrive at their solutions while also revisiting concepts in a manner custom-designed for them.

2.2 Current Applications in Personalized Learning

Current AI in personalized learning comprises a wide variety of operational applications and innovation. The ability of AI-enhanced learning management systems to observe and evaluate student engagement with educational resources enables them to provide teachers with data about further improving their methodology. The systems can also predict future performance of students which would help in understanding personalized learning needs and possible areas of [11]. Moreover, AI-driven customization of training materials and creation of student profiles make it possible to adapt the content for each individual need of the learner for higher quality student experience as a final synthesis [12].

The integration of AI in personalized learning gives the ability for educators to provide emotion-infused interventions and help disengaged learners since machine

learning algorithms can identify those who might need additional aid. Furthermore, intelligent tutoring systems and personal digital tutors can bring immense added value to the learning process through individualized support and reinforcement of concepts, tailored to a specific mannerism. Such applications of AI in personalized learning reflect the possibility of better educational outcomes and underline how important it is to understand the psychological implications for learners.

3 Personalized Learning and Student Psychology

In the context of student psychology, personalized learning refers to the customization of instruction to align with each student's unique learning needs, preferences, and interests. According to [12], a completely personalized setting allows for variations in learning objectives, content, pace, and methods, all tailored to the specific requirements, abilities, schemata, and interests of students. It moves away from teacher-centered approaches to inculcate self-directed learning for the enhancement of student motivation and engagement. Moreover, virtual change agents and in-built learning analytics tools can make personalized e-learning experiences much more effective by providing motivational feedback as well as keeping track of the students' details and progress.

On the other hand, important questions were raised about how much the ML personalization is in line with a humanistic view of individuality [13]. It underlines the need to investigate the impact of ML personalization on human well-being and moral and social identity at the time human behavior is being digitized and predicted by ML algorithms. This, in turn, reopens an ongoing debate around algorithmic bias, transparency, and fairness in machine learning for which it is important to consider when assessing personalization levels in ML-generated scores.

3.1 Framework

Personalized learning is an approach to education that tailors the delivery of instruction, the pace at which a student progresses, and the learning environment to meet the needs of individual students. It acknowledges that students are diverse and seeks to provide them with support as well as guides and feedback while they work on challenging tasks [14]. In artificial intelligence, personalized learning has gained increasing attention within machine learning algorithms for creating custom-tailored educational experiences. This indicates that ML personalization is not perfect, given that it relies on models learned from other people's data, with unknown long-term consequences for personal identity and society [15]. Also, the conceptual framework surrounding personalized learning includes multiple pedagogical and technical viewpoints. Such problem-based learning (PBL) and goal orientation highlight active engagement: collaborative problem-solving. And how learners' objectives shape

their motivation and learning behaviors. These frameworks provide a basis for understanding the psychological effects of personalized learning on student development and learning outcomes.

3.2 Benefits and Challenges

Personalized learning, enabled through artificial intelligence (AI), presents various advantages and challenges that carry psychological implications for learners. Among the potential benefits are real-time assistance and resolution of queries, support for academic endeavors, personalization and enhanced accessibility, as well as emotional and social backing. According to a study [16], students engaged in distance learning anticipate that AI digital assistants will furnish immediate feedback regarding their knowledge and skills, supply suitable resources, and produce tailored summaries of their study materials. Nonetheless, it is crucial to strike a balance between AI assistance and allowing students the opportunity to discover answers independently. Furthermore, while some learners embrace emotional and social support from AI, others express concerns, especially in environments marked by social isolation.

On the contrary, including student characteristics for customization in educational technology might be a double-edged sword. The output of their simulation study was that real-time personalization could be responsible for making the student experience more positively in some contexts but is likely to slow adaptation with potentially biased outcomes and hence create obstacles compared to a less tailored model. This emphasizes the need for a proper psychological impact assessment of AI-based personalized learning on the well-being and educational experiences of students.

4 The Intersection of AI and Student Psychology

The area where artificial intelligence and student psychology meet is rife with issues related to cognitive, behavioral, emotional, and social factors. As artificial intelligence technologies get more deeply embedded within personalized learning systems, understanding their psychological impact on students becomes very important. The paper stresses the need to acquire both practical and theoretical knowledge-related information on AI in educational contexts and also stressed the need for competent guidance from educational professionals and appropriate governance in AIED. Also discussed was the ability of AI to model teachers' behavior as well as enable student differentiation while enhancing socio-emotional involvement from a socially responsible perspective—for which more empirical research is needed—thus carefully implementing AI within educational settings. These findings stress the importance of addressing the psychological effects of AI when applied in personalized learning

and being considerate and responsible when using AI technologies in educational environments [17].

4.1 Cognitive and Behavioral Impacts

The convergence of student psychology and artificial intelligence (AI) notably affects cognitive and behavioral aspects of personalized learning. Within the realm of online education, it is anticipated that AI systems will deliver timely personalized assistance, including feedback, explanations, and recommendations, which can enhance students' educational experiences. Nonetheless, there are apprehensions that an overabundance of support from AI might undermine student autonomy and ownership of their learning journey, possibly resulting in diminished effort and an illusion of security. Furthermore, concerns arise that dependence on AI could restrict students' chances for exploration, creativity, and discovery, as both projects and learning processes risk becoming excessively standardized [18].

Moreover, the diverse perverse incentives among stakeholders in the educational ecosystem and the need for informed guidance from education experts constitute a critical consideration when steering AI in education. Creating an environment where technological innovations can be carried out and deploying technologies that respond to current changes in the way teaching and learning is done requires a contextual understanding of educational forces. For such a comprehension—knowledge based on both practical (experiential) and theoretical realms is required [19].

4.2 Emotional and Social Implications

The implications of AI in personalized learning environments are complex, and the emotional and social factors involved make them vast as they cut across many issues. One important thing to consider is how real the interactions between students and AI are. The authenticity of engagements supported by AI systems is very important to ensure that they are genuine and meaningful, thus building a sense of connection and relationship among teachers, students, and even the AI itself. Another very important issue is academic integrity. With the increase in AI presence in educational settings, it becomes very important to maintain the validity of assessments, assignments, and overall evaluation processes. This includes not only detecting cheating but also promoting a culture of honesty and ethics regarding the use of AI technologies. Striking a balance between using AI in personalized learning and upholding academic credibility is vital to keep educational results legitimate and fair. Moreover, the capacity of AI to improve socio-emotional engagement within personalized learning environments has great potential. AI systems can adapt to the unique needs of individual students, offering customized support and feedback that can improve students' emotional well-being and their involvement in the learning process [19].

Integrating AI into education allows educators and teachers to foster more inclusive, supportive, and adaptive learning environments that address the distinct socioemotional needs of every student. Nonetheless, it is crucial to approach the incorporation of AI in personalized learning settings with caution, always prioritizing the psychological health of students. Although AI can offer tailored assistance, it must not supplant the essential human connection and support that students depend on. The foundation of education continues to lie in the development and preservation of strong relationships between students and teachers. Ultimately, the effects of AI in personalized learning environments are complex and varied. A balanced approach is important because of authentic interactions, academic integrity and because of the potential for AI to enhance socioemotional engagement of students; through a focus on student mental health and well-being, while taking advantage of what AI has to offer, we can create powerful, meaningful personalized learning experiences that help to empower and support each individual student on their educational path [19].

The ethical dimension of the integration of artificial intelligence in personalized learning is of substantial importance. Educational AI systems generate large volumes of personal data. Therefore, privacy and data protection when sharing information should be on the top note. This includes making sure that users are well informed about potential risks to their privacy and obtaining their consent in accordance with rules regarding the confidentiality of user information [20].

Moreover, the ethical issues of bias and discrimination in AI systems for personalized learning should be recognized. Since AIED has the potential to customize student participation as well as learning experiences, the design and implementation of these systems should be reviewed for biases to ensure that every student has equal educational opportunities based on merit [20]. Regulation and policy need to ensure that the development and use of AI in personalized learning is justified and does not adversely affect the environment, or the economy or society.

4.3 Privacy and Data Security

In AI-driven personalized learning, much attention should be paid to the risks of disclosure of proprietary information and ensuring protection for privacy and data security. The implementation of artificial intelligence in systems for personalized learning leads to the need for extensive student data. Therefore, ethical issues are one of the most important relevant problems today. To improve risk estimation procedures, it is advisable to carry out preliminary expert evaluation with the participation of developers and users. The information received during this evaluation will give you a clear understanding of what ethical risks are typical for this type of AI applications, as well as in protecting privacy within them. Differential privacy offers a mathematical guarantee that the confidentiality of individual data points is preserved

while enabling aggregation across large datasets. In fact, developers of systems typically do not require access to personal information unless they are engaged in federated modeling. This approach facilitates the sharing of machine learning systems, simplifying the management of encryption and allowing data operations to occur without compromising trust. Federated learning helps to avoid the drawbacks associated with centralized storage, presenting a promising strategy for machine learning improvement. While this method can complicate practical optimization tasks among various sources, it also provides a means to address these challenges effectively, ensuring that organizations can conduct thorough analyses in a decentralized manner without jeopardizing the confidentiality of the individual details being examined. The influence of AI systems on interactions between learners and instructors in online settings presents both advantages and disadvantages, raising issues related to surveillance, privacy, responsibility, and agency as noted by others [21]. While AI systems are known to improve communication—both in terms of quality and quantity—and provide personalized help, questions on privacy have been raised as a result of the massive data collection involved from both learners' and instructors' perspectives. Moreover, students have highlighted the potential responsibility issue that may come up when unreliable responses from AI cause negative outcomes. This emphasizes the need for ethical and responsible implementation of AI in personalized learning environments.

4.4 Bias and Discrimination

Ethical dilemmas arise from bias and discrimination in artificial intelligence (AI) and are related to fairness, equity, and the possibility of discriminatory practices in personalized learning. Automated systems can take decisive actions that have an impact on different areas of individuals' lives like granting credit scores or health diagnoses, which can result in systematic disadvantages for certain groups—this reveals digital discrimination: unfair treatment of people due to factors such as income, education, gender or ethnicity because of automated decision-making [21]. Addressing the subtleties of bias and discrimination in AI calls for a multidisciplinary strategy where technical, social, legal and ethical aspects are integrated—guaranteeing that computational techniques used to verify and certify bias-free datasets are informed by socio-cultural and ethical nuances.

The impact of AI on learner-teacher interaction in online education is considered by many to be beneficial, while some view it as an impending threat. The AI system is known to enhance communication and provide personalized support, but there are concerns related to responsibility, agency, surveillance, privacy, and the black-box nature of these AI technologies [21]. While both students and instructors appreciate immediate communication and individualized assistance from AI, they fear that it might impinge on self-directed learning and be detrimental to not having accurate responses from AI. These issues point to the need for ethical considerations and possible biases within AI systems used in personalized education.

5 Case Studies

Insights into the practical effects of artificial intelligence (AI) on personalized learning can be validated by case studies and empirical research. Evidence was provided that AI technology can enhance educational results quite significantly by allowing educators to monitor student engagement with learning resources and detect algorithms, later refining their strategies of teaching based on these data-driven insights [22]. The real proven effectivity regarding hybrid teaching methods to forecast students' future achievements and to make sure each learner passes the course is also demonstrated. Moreover, it highlights the need to apply AI in education-related problem bias, and accessibility plus interaction and skills at the workplace. Both emphasize the prospect of machine learning in creating learner models and customizing teaching resources which would enable teachers to individually shape the learning process for each student under a common curriculum. This brings out the role of AI-supported co-curricular activities in personalizing education thus having to cater to different learning styles. In conclusion, both the case studies and empirical data stress the effective influence of AI on personalized learning. There is, however, a prerequisite which is setting concrete role definition and ethical principles with the introduction of AI in the educational scenario.

5.1 Challenges and Failures

Recent research has outlined the difficulties and drawbacks of introducing artificial intelligence (AI) in personalized learning environments. Respondents expressed worries on who owns data submitted to AI digital assistants, particularly with respect to the intellectual property of AI-generated content [22]. An important problem that has been put is the possibility for AI systems to give wrong or biased responses which may lead to the spread of misinformation. Also noted was the likelihood of students misusing AI in doing assignments and plagiarism, which would alarm about students providing AI systems with wrong data and also exploiting the technology when getting correct answers during assessments instead of using it for real learning [23].

Another study brought to light the discomfort and negative perceptions shared among both students and teachers with the implementation of AI systems in online education. In regards to the feedback provided by AI facial analytics on subconscious actions, students expressed their discomfort by arguing that it ignored the fine points of social interaction and did not genuinely represent student engagement. Instructors similarly expressed negative perception regarding AI in analyzing student behavior due to possible problems in learner-teacher interaction. These findings reflect the complexities and limitations related to implementing AI in personalized learning settings; further research is needed, considering different perspectives and disciplinary distinctions [24].

6 Conclusion

The psychological effects of artificial intelligence on personalized learning are not, in any way, straightforward. While AI systems may be able to provide timely personalized help to individual students at scale, there is some concern about too much support undermining the agency of students as well as their ownership of the learning process. Students have responded well to AI in personalized learning regarding their studies and group projects; however, there are concerns regarding standardized/fixed support and its effect on the efficiency of the learning process. On the other hand, instructors are more inclined towards AI-driven intelligent recommendations plus adaptive quiz systems while being skeptical about how much chance it might rob their students from exploration and discovery. This paper highlights the need for context-specific understanding educational dynamics traceable back informed governance under AIED so that technological progress does translate into enriched learning experiences for future generations. This emphasizes the urgency of proactive regulation of AIED through an organic comprehension of its practices and what underlies these practices to help steer educational technology toward a better match with individual learning needs.

The Role of Technology in Enforcing Financial Penalties: Assessing Validity and Effectiveness

Ahmed Awad Al-Bnian

Abstract The chapter focuses on financial penalties and how technological tools can improve the enforcement of legal obligations by threatening financial penalties. These penalties impose a penalty on the debtor for failing to fulfill a court obligation or violating a court order. The penalty may be payable in small hourly, daily or monthly amounts until the obligation (related to the penalty) has been complied with or the violation has ended. A technological solution may be useful to improve the enforcement of financial penalties rather than other types of penalties, damages and legal interest. Criminal threats have clear and obvious effectiveness, but are still rarely used in some legal systems. This study anticipates how a technological solution can reduce a debtor's resistance to payment, thereby improving judicial outcomes. Promotion and practical implementation of a technological solution can increase the effectiveness of the system, reduce payment resistance on the debtor's side, and thus enable better results in the judicial area.

Keywords Threatening fine · Debtor's resistance · Time unit · Settling the threatening fine

1 Introduction

Incorporating a multifaceted approach, the threatening fine is a powerful tool that carries a strong financial message. It not only serves as an explicit means of intimidation, but also has a unique temporal quality which can be adjusted based on the debtor's response. The court's discretionary authority gives it the power to reassess the fine's magnitude in the face of the debtor's tenacity or defiance. The ultimate goal of this financial coercion is clear—to exert a forceful influence on the debtor and

A. M. A. Musleh Al-Sartawi et al. (eds.), *Business Resilience and Business Innovation for Sustainability*, Studies in Systems, Decision and Control 587,
https://doi.org/10.1007/978-3-031-87584-7_108

inspire a sense of apprehension that will lead to compliance with the court's judgment. By blending the elements of threat and the dynamic aspect of temporal reconsideration, this approach is carefully designed to dismantle the debtor's resistance and encourage them to follow the court's demands.

1.1 Problem of the Study

The issue at hand centers around the perplexing lack of support from lawmakers for imposing hefty fines on debtors as opposed to their clear favor for imprisoning debtors. An interesting development in this situation to note is the evident change in Enforcement Law, which has drastically reduced the circumstances under which imprisonment can be put into effect. This significant change demands that we carefully examine other approaches in pressuring debtors to fulfill their contractual obligations. The imperative for the legislator to incorporate the threatening fine system is underscored by the paramount significance of the research problem. To enforce compliance, an alternative mechanism like the threatening fine becomes crucially important. As a cogent proposition meriting careful consideration, the potential inclusion of the threatening fine in the legislative arsenal plays a pivotal role.

1.2 Study Objective

By exploring the multifaceted aspects of the threatening fine system, we can unravel its nuanced impact on enforcement dynamics. The system is not only intrinsically significant but also remarkably efficacious, serving as a formidable mechanism to compel debtors to fulfill contractual obligations. In fact, it plays a pivotal role in resolving judicial rulings that encounter obstacles to implementation due to the debtor's obstinacy. This exploration sheds light on its effectiveness as a coercive tool that not only addresses the challenges of recalcitrant debtors but also expedites the resolution of judicial decisions that would otherwise face hindrances in their execution.

1.3 Study Methodology

Through an intricate methodology entrenched in the diligent analysis of legal literature and nuanced legal jurisprudence, this study seeks to attain its objectives. A thorough exploration of comparative laws, with special attention to the complexities of Egyptian civil law, is the key focus of the research. The selected method employs an all-encompassing approach to not only enhance comprehension of legal jargon but

also gain deeper insights into jurisprudential viewpoints. Critical to this is the integration of representative legal opinions, which act as vital stepping stones towards unravelling multifaceted legal principles and their practical implications.

1.4 Study Plan

Within this inquiry, the subject is methodically divided into two disparate categories that intricately dissect the ominous fine system. Both sections serve to examine the dreaded implications from different yet interconnected angles. The maiden section comprehensively unpacks the subtle intricacies and legal nuances that define the menacing fine system. Within these pages, the analysis systematically dissects the foundational theories, conceptual frameworks, and broader legal principles that form and typify the threatening fine within the broader context of the law.

Taking a focused dive into the specific manifestations and applications of the threatening fine within the purview of law, the research seamlessly transitions into its second section. Delving into the intricacies, provisions, and interpretations that encapsulate its implementation and effectiveness, this segment was meticulously designed to provide a comprehensive understanding of the threatening fine system within the legal landscape. By structuring the study in this bifurcated manner, due consideration is given to both its theoretical underpinnings and practical manifestations, aiming for a holistic perspective on the matter.

2 The Legal Nature of the Threatening Fine

Indirectly compelling a non-compliant debtor to honor their contractual obligations, a threatening fine serves as a strategic mechanism. This legal tool intricately involves imposing a specific amount of money on the debtor by a judge, as they show reluctance or refusal to fulfill their commitment within the agreed-upon timeframe and deadline. It should be noted that the fine accumulates proportionately to the duration that the debtor fails to live up to their end of the bargain [1].

Noting the dissimilar legislative stances adopted by Egypt and Jordan, it is interesting to observe their differing integration of the threatening fine system in their respective Civil Laws. Egypt has chosen to incorporate this mechanism, while Jordan has not, as indicated in Civil Law No. 43 of 1976. The contrast in their legislative approaches may be attributed to varying influences from Islamic jurisprudence, further emphasizing the discrepancies in their legal strategies for ensuring debtor compliance in contractual obligations.

2.1 Conditions for Imposing the Threatening Fine

For the imposition of the threatening fine, certain conditions related to the commitment subject must be met:

1. **First Condition**: Sultan notes that in order for a threatening fine to be effective, the commitment must still be feasible for the debtor to carry out [2]. However, it is not permitted to impose a fine for commitments that are impractical to execute, whether caused by external factors or the debtor's inadequacy. Should the incapacity be attributed to the debtor, Badrawi suggests seeking compensation instead [3].
2. **Second Condition**: If the debtor has no personal involvement, the threatening fine cannot be imposed upon them, as the execution of the commitment must depend solely on their presence. When transferring a tangible right, for instance, the debtor is exempt from the fine as long as they are not needed to execute the action. However, if the commitment entails an act or an abstinence from performing an act, and is dependent on the debtor's individual qualities, then the threatening fine can be implemented [3].

It is worth noting that the enforcement of the threatening fine judgment is precluded if there is an infringement upon the personal character of the debtor, particularly in cases where it involves the expression of their intellectual creations. For instance, if an artist commits to sculpting a statue and the artist lacks the necessary inspiration to realize the work, compelling them through the use of a threatening fine would not be permissible.

2.2 Distinguishing the Threatening Fine from Other Systems

The threatening fine differs from compensation, penalty clauses, and legal interest in terms of conditions and objectives.

Distinguishing the Threatening Fine from Compensation

The harm caused by the debtor and the damage suffered by the creditor are taken into account when determining the amount of security a debtor must provide, as detailed in Article 360 of the Civil Law. The same can be found in Article 214 of the Egyptian Civil Law, where tangible execution is possible and refusal of such leads to the court's intervention.

In eviction matters, temporary fines are the only ones acceptable. Otherwise, there is no ban on merging fines and compensation, as their principles differ. Upon payment of fines, creditors can receive compensation for actual harm suffered, but not more than that as affirmed by [4].

Should the debtor persist in their stubbornness and continue to refuse to comply, thereby rendering the warning fine useless, a conversion to final compensation becomes imperative, regardless of whether or not any physical enforcement has

been executed [5]. In order to settle the fine, the creditor may petition the court for a final and enforceable judgment against the debtor's properties as compensation.

Distinguishing the Threatening Fine from Penalty Clauses

In order to establish how much compensation the creditor will receive if the commitment is unfulfilled or delayed by the debtor, a penalty clause is agreed upon ahead of time between the contracting parties. This measure is exclusively in regards to commitments not being met as a result of a contract. You could liken the punitive fine to the penalty clause, in that they are both solely pursued if their commitment is not met by the debtor or is notably delayed. They both provide an indirect way of securing commitment and hold a coercive nature, with the judge left to interpret their value.

While sharing some similarities, there are distinct differences between the threatening fine and the penalty clause. The former is based on the judgment of the judge, whereas the latter is established through agreement between parties. The threatening fine aims to force the debtor to follow through on their commitment, while the penalty clause seeks to make up for damages caused by non-execution or delay. While the threatening fine is assessed each time the commitment is violated, the penalty clause is not evaluated in this manner. Enforceability is not a steadfast concept in regards to fines and penalty clauses. The judgment of the threatening fine is contingent on the resolution of the fine itself, making it a temporary measure. Meanwhile, the penalty clause stands ready for enforcement the moment that it is breached. Only if an overestimation of the penalty clause is proven during execution can it be lessened, whereas the threatening fine is subject to reductions during settlement proceedings. The judge is granted discretion over the review and settlement of the threatening fine. However, the judge's power in relation to the penalty clause is limited by certain regulations that are in place due to its nature as compensation.

Distinguishing the Threatening Fine from Legal Interest

For their failure to fulfill a contractual obligation within a predetermined timeframe or for using a specified sum of money in an agreement with the lender, a debtor is required to pay a financial sum known as legal interest.

The obligation to pay legal interest stems from the debtor's non-payment, as it compensates the creditor for the delay. Proof of damage is not necessary for the creditor to receive interest once the debtor is tardy in payment. The debtor simply needs to meet their commitment by paying the agreed-upon sum by the deadline. Delaying payment is seen as depriving the creditor of potential interest earned had the debt been settled on time [6].

In instances where there are setbacks in fulfilling obligations, both legal interest and a daunting fine require payment in cash rather than any other form of compensation. Despite their similarities, legal interest varies from the imposing fine as court rulings dictate the legal interest rate. Should the agreement regarding legal interest in the contract exist, it cannot exceed the limit designated by the law. On the contrary, when it comes to the verdict of the imposing fine, the court exercises its discretion to either heighten or reduce the fine based on the debtor's position or the extent of procrastination in fulfilling the commitment.

3 Threatening Fine in Law

This section of the study is dedicated to a comprehensive exploration of the execution of judgments incorporating a threatening fine, with a specific focus on the extent to which the legislator has embraced and implemented this particular legal mechanism. The investigation undertaken herein aims to meticulously scrutinize the practical application and utilization of the threatening fine system within the legal framework of. In so doing, an intricate analysis will be conducted to unravel the nuances of how this system is deployed and to what degree it is integrated into the broader spectrum of legal practices. This multifaceted examination will contribute valuable insights into the operational dynamics of judgments involving a threatening fine and shed light on the jurisprudential considerations that underscore the legal landscape in adopting and employing this particular legal instrument.

3.1 Adoption of the Threatening Fine System by the Legislator

In the realm of regulating civil law, Islamic jurisprudence has had an impact on the policies of the legislative body. The role of the threatening fine within the legal system has been particularly influenced. When looking at Islamic jurisprudence, it is worth noting that this code does not explicitly permit the use of a threatening fine, unlike imprisonment. It begs the question: can the threatening fine be deemed illegitimate under Islamic jurisprudence?

To force a debtor who is late to repay their debt, Islamic Sharia permits threatening them. But, before the threat can be put into action, the fine must be changed into an equal amount that represents the damage incurred by the debtor. If the creditor receives any amount higher than what was originally owed, there will be considerations discussed in Islam's legal system [7].

Through the concept of financial coercion, the act of threatening fines can fall under the jurisdiction of usury, making it illegitimate. However, if financial coercion is perceived as a punishment, the notion of usury can be eliminated entirely. According to Islamic Sharia, financial penalties were defined and put into effect through various judgments handed down by the Prophet. For instance, those caught stealing fruits before they fully ripen were punished by imposing a fine amounting to twice the value of the stolen fruit.

Dr. Mohamed Sayyid Al-Tantawi, in contemporary Jurisprudence, issued a fatwa stating that a debtor who delays payments and has the finances to pay back their debt can face monetary penalties or other consequences, including financial penalties that are not considered usury [8]. Additionally, the practice of using financial penalties as a punishment for preventing the payment of Zakat is recognized (Al-Shawkani, p. 123). Dr. Jamal Al-Atifi acknowledges the legitimacy of using imposing punitive

fines as an incentive to fulfill debts, noting that this practice is distinct from usury [9].

The researcher's opinion aligns with jurists who allow threatening fines, distinguishing it from usury in the process.

By exerting pressure on the debtor to adhere to their commitments, the menacing fine may effectively yield results. However, if the debtor stubbornly disregards their obligations, the fine may fail to produce an outcome. Consequently, the judge holds the power to revaluate the verdict and establish the threat's worth in order to dictate the sum that the debtor must compensate.

The debtor's financial capacity should determine the threatening fine's amount, which must be effective on their conscience and impact their known stubbornness and resistance. The judge holds the authority to either lessen or supplement the amount based on any changes in the debtor's level of compliance.

The theory of obligations in civil law lacks a specific clause for the threatening fine. Nonetheless, Article 360 appears to touch on the topic indirectly, highlighting that the definitive guarantee's amount depends on the harm done to the creditor and caused by the debtor, if execution is refused or completed. Notably, this provision comes under the "Execution by way of compensation" banner. Including it in work obligations would be a suitable course of action. The threatening fine is discussed in Article 214 of the Egyptian Civil Code, No. 131 of 1948 and its amendments, which corresponds to Article 360.

Al-Jubouri argues that despite the legislator's failure to explicitly sanction a threatening fine in the theory of obligations, it was indirectly referenced in Article 360 of the Civil Law (2011). Another instance of its explicit mention can be found in Article 961/1 of the same law titled "Self-Guarantee." According to this article, if the guarantor fails to produce the guaranteed party at the appointed time upon request, the court can either impose a threatening fine or excuse the guarantor if they prove their inability to produce the guaranteed party.

Jordanian law is a topic of debate among scholars, with some arguing that the system of the threatening fine is not recognized. They contend that creditor compensation for damages caused by the debtor's failure to meet obligations is justification enough, rendering the imposition of the threatening fine unnecessary [10].

The adoption of the threatening fine by the legislator was not pursued due to the principle of incarceration as a means of enforcement. Nonetheless, a combination of both means of direct enforcement is not completely out of the question. Given that the amended Law No. 9 of 2022 has rendered the effectiveness of imprisonment inadequate, implementing the threatening fine system alongside it would be beneficial. The adoption of the threatening fine system, which has been implemented by various Arab and foreign legislations, is highly recommended since compensation and legal interest judgments do not provide suitable alternatives to the threatening fine due to their incompatibility with the latter's terms and conditions. It is hoped that the legislature will take this guideline into consideration.

3.2 Permissibility of Executing Judgments Issued with a Threatening Fine

The execution of judgments with a threatening fine depends on the final stance of the debtor. If the debtor fulfills the commitment without delay, there is no need for the judgment of a threatening fine. However, if the debtor insists on non-compliance or delays, it is obligatory to enforce the threatening fine, which is quantified as a final amount. The purpose of the threatening fine is to compel the debtor to fulfill the commitment, and, therefore, its valuation is not initially determined. If assessed from the start, it would lose its impact, purpose, and intent.

The threatening fine goes through two stages: the judgment stage and the fine settlement stage. In the judgment stage, it is considered a temporary ruling. In the second stage, the debtor settles the fine, and the amount is not final. It is subject to increase or decrease when determining the final compensation assessed by the judge.

Egyptian courts have ruled with threatening fines. For example, the Urgent Matters Court in Port Said ruled in a case where an individual established a casino on the beach, facing difficulties due to the Suez Canal Company's refusal to supply fresh water, citing its commitment to providing fresh water within the canal cities. The court ordered the company to connect fresh water to the casino within two months from the date of the judgment. If not, the company was obligated to pay a daily financial penalty. The parties agreed that the compensation claim remained pending before the competent judge, and thus, the judgment imposing the fine became enforceable prematurely, based on a non-executable judgment. The debtor was required to first appeal to the court that issued the judgment to obtain a final judgment on the fine or compensation before being able to execute it [11].

If the debtor fails to pay the fine after settlement, coercive enforcement measures are taken. Fine settlement finalizes the debt amount and establishes its existence and the debtor's status of non-compliance. These are conditions for debt execution. Once the threatening fine is settled, the court cannot cancel it, provided that the debtor has breached their commitment after non-compliance and there is no external reason hindering the debtor from fulfilling their commitment.

4 Conclusion

This study has yielded several results and recommendations:

4.1 Results

1. Against the debtor who fails to fulfill their obligations, the judge orders a monetary penalty referred to as a threatening fine. The duration of the commitment execution is also specified, and non-compliance accrues an accumulating fine.
2. The commitment's execution must still be possible and the debtor's personality cannot be violated, as stated in the demanding fine's conditions.
3. Executing the commitment is the ultimate goal of the threatening fine, which distinguishes it from other penalties such as compensation and legal interest. Its purpose is to force the stubborn debtor into compliance.
4. As an adherence to imprisoning the debtor, the legislator has not implemented the intimidating fine, maybe due to some hesitation.
5. Indirect reference to the threatening fine in Article 360 is the only allusion made in the Civil Law regarding this matter, as it is not explicitly mentioned in the theory of obligations.
6. A threatening fine's necessity hinges on the debtor's ultimate position. Paying immediately eliminates the need for a threat. However, if the debtor procrastinates or refuses to comply, settling the fine is mandatory as a final sum.

4.2 Recommendations

1. The inclusion of the fine that poses a threat ought to be made explicit by the legislator in the section regarding work obligations, and not merely under compensation.
2. Similar systems of imposing fines as a threat used by the French and Egyptian legislators should be taken into consideration by lawmakers. This would form one of two important methods for enforcing commitment while maintaining the option of imprisonment.
3. The mere presence of obligations renders compensation and legal interest ineffectual and a threatening fine necessary. In cases where the debtor is a legal entity or refuses imprisonment, a threatening fine is indispensable for ensuring commitment enforcement.

A Survey on Mobile Malware Detection Using Dynamic Techniques

Chanchal Sharma, Hemraj Shobharam Lamkuche, Emma Qumsiyeh, and Ala'a Al Sherideh

Abstract Modern smartphones, with their advanced computing power, face significant security and privacy issues due to third-party applications. Android, as the most popular operating system, is increasingly targeted by hackers. With 4.9 billion people online in 2021 and an expected 7.7 billion smartphone subscriptions by 2028, the proliferation of Android devices has led to a rise in malware. Despite ongoing research and various detection methods, no solution is completely effective. This paper reviews dynamic analysis techniques, including machine learning and deep learning classifiers, for detecting malware during runtime, and also explores static, hybrid, permission-based, and emulation-based detection methods.

1 Introduction

The rise in mobile device usage has led to increased security threats, particularly for Android platforms, which are vulnerable to various types of malware, such as viruses, worms, and ransomware in scientific technological progress [1, 2]. Mobile malware, which can steal personal information or damage devices, often originates from third-party apps or sideloaded applications [3]. With the number of smartphone users projected to reach 7.3 billion by 2025 [4], detecting mobile malware is crucial. This paper surveys recent dynamic detection methods, analyzing different malware types, detection processes, and classification algorithms. It also compares existing models based on their accuracy and features, highlighting the limitations and ongoing challenges in Android malware detection. Below is an explanation of the types of Mobile Malware:

Adware: These are types of malware that are bundled with unknown software via pop-up ads or other ways of advertising without user consent [3].

Scareware: Scareware refers to a type of malicious software (malware) that is designed to trick users into taking a specific action, usually for financial gain. The primary goal of scareware is to create a sense of fear, urgency, or panic in the user, prompting them to purchase unnecessary or fake software or services.

Mobile Worm: A worm is a piece of code that can be copied and transferred from one device to another in a computer network without human intervention. Viruses can contain "payloads" that can harm hosts and even inconvenience business owners by using up bandwidth and causing crashes on network servers. In general, data steals user data, deletes data from the system, and creates botnets.

Mobile Botnet: In this various interconnected compromised mobile devices execute tasks and clear their actions based on a C&C server or by passing messages [3].

Mobile Trojans: It is a type of malware that disguises itself as a benign application to trick users into downloading and installing malware is called a Trojan. In this type of malware, attackers gain remote access to steal data and money, extract and modify files, create malware variants, and monitor user's devices (e.g. see screens and engines, etc.). The Trojan that has entered the mobile market is MasterKey, which downloads an APK.

Mobile Spyware: A type of malware that monitors user activities without permission. These activities include collecting sensitive information, scanning, and stealing account information. Spyware interferes with network settings by changing security functions. Spyware attaches itself to real software or Trojans to be exploited. Acallno and FlaxiSpy are known as spyware on smartphones.

Mobile Virus: A virus is a piece of malicious software that can replicate itself and spread throughout the body. They can affect the phone's performance, or worse, expose your sensitive information, allowing hackers to make money.

2 Literature Review

Mobile security research has become a matter of concern. Research on mobile technology is still being conducted in several areas, including design, vulnerability, threats, and detection methods. The security industry is investing billions of dollars in this space. Several of them were studied in this work as foundational ideas. Because there are more and more Android devices, there's a greater risk of security problems caused by malicious software on Android. Many new techniques have been proposed to detect malware. However, mobile malware research is still in its infancy. Researchers have come up with different methods to detect the malware [5].

2.1 Signature-Based Detection

By eliminating the conceptual characteristics, this technique creates a recognizable signature. Malware is characterized as any application whose signature matches the ones that previously existed. Methods for detecting malicious have a selected classification vector connected to a type of detection.

Static Signature-based Detection: This mode uses file signatures for malware patterns and compares the contents of the device's RAM or SD storage to match the pattern.

Behavior Signature-based Detection: In dynamic behavior-based detection, the signature appears after the malicious code is executed in a controlled environment, such as a sandbox or virtualized system. Unlike static analysis, dynamic analysis involves observing the behavior of malware when run in an isolated environment.

Hybrid Signature-based Detection: This technology combines the features of traditional detection tools and behavioral signature-based detection technology to provide more effective detection results when identifying malware. Hybrid detection methods for malware detection include training and detection phases, which can be done with dynamic and static methods according to [6].

2.2 Anomaly-Based Detection

Anomaly-based methods use a less rigorous approach. This is done by observing the behavior of the device from time to time and using the model's indicators as comparison vectors for abnormal behavior.

Static Anomaly-Based Detection: In static anomaly-based detection, characteristics of the file structure of the program are used to identify the malicious program. An

important advantage of static vulnerability detection is that it can detect malware without allowing malware-carrying programs to run on the host.

Dynamic Anomaly Based: Dynamic anomaly-based detection is a sophisticated strategy for detecting malicious behavior, that revolves around monitoring and analyzing the behavior of a system or network in real-time. Unlike traditional signature-based detection methods, which rely on predefined patterns of known threats, dynamic anomaly-based detection focuses on establishing a baseline of normal behavior and then identifying any deviations from that baseline. Kouliaridis et al. [7] introduced Malwarehouse, an innovative open-source tool designed to offer data collection services for studying behavioral patterns in Android malware. To delve into the impact of various malware on the Android platform, the researchers curated a dataset comprising 14 malware samples. Their tool, "MIET," was crafted to extract usage information over time from Android devices for each installed malware.

Hybrid Anomaly-based: Hybrid anomaly-based detection combines static and dynamic anomaly detection to improve the accuracy and efficiency of detecting anomalies on Android devices. In this advanced security strategy, the system not only relies on predefined signatures of known malware but also continuously monitors the behavior of the Android system and applications. By establishing a foundation of normal behavior, the hybrid approach can effectively detect deviations or anomalies that may indicate the presence of malware, even if it's a previously unknown or zero-day threat.

2.3 Specification-Based Detection

Specification-based detection aims to reduce failure risks in anomaly detection by focusing on predefined requirements rather than predicting implementation.

Dynamic Specification-based Detection: Continuously monitors Android app behavior, comparing it to predefined specifications. Deviations from expected behavior are flagged as suspicious.

Static Specification-based Detection: Analyzes the structural properties of executables without execution. Bergeron et al. [8] use static analysis to disassemble binaries, revealing potentially malicious code before execution, thus providing a proactive malware detection approach.

Hybrid Specification-based Detection: It is a new security method that combines the advantages of traditional and robust detection methods to improve the detection and prevention of malicious behavior in Android applications. This hybrid model integrates the benefits of specification-based detection, which relies on predefined rules to evaluate expected behavior, with dynamic analysis which observes the runtime activities of the application.

3 Research Gaps Identified

This article reviews recent research on Android malware detection, focusing on dynamic analysis methods. Although many new models have been proposed, the field remains underdeveloped, with existing studies often neglecting their limitations. The article critically evaluates the strengths and weaknesses of current research, particularly in dynamic motion detection technology. By systematically reviewing studies from 2015 to 2022, it aims to highlight advancements and identify areas for improvement in mobile malware detection on Android.

Source of Data

To find reliable data sources for this research, a meticulous technique was used to gather trustworthy and authoritative data. Reputable academic research databases were emphasized, especially those related to computational sciences and known for their strong publication records. Prominent databases, such as IEEE, Springer, ACM, Wiley, and Inderscience, among others, were thoroughly searched for conference proceedings and journals; these sources were the main sources of data for this research. Notably, sources deemed untrustworthy, such as Wikipedia, were excluded from consideration due to their unreliable rating. On the other hand, information was carefully collected from trustworthy blogs, For example, SAN blog because of its good reputation.

4 Analysis and Discussion

Analysis and Discussion It works by searching for Android-based applications connected to the device, allowing them to keep track of what's going on between them. Dynamic detection technology tracks Android malware in a controlled environment at runtime by identifying malware markers that can be used to model detection signatures [6]. This approach is based on the idea of monitoring the activity of the application while it is running on a physical or virtual machine. While an application is running, software developers can analyze it by monitoring the application's impact on the system, network behavior, API calls, and battery usage. In dynamic analysis, applications often run in a system called a sandbox system or emulator and use an integrated renderer called Monkey that is designed to use human applications [9]. This method uses a software-based CPU emulator to create a controlled environment in which target behavior, including infection, can be analyzed. This new approach involves turning the CPU into a virus-based system [10].

4.1 Based on the Implementation

Detecting malware on Android involves using a variety of tools and methods to collect the dynamically and analyze the behavior of applications in real-time. Table 1 illustrates some common Dynamic tools used in Android malware detection. There are mainly five types of tools that are used to collect the data in a live environment-

Table 1 Comparison of tools

Category	Tool	Advantages/Disadvantages
Emulators and virtual machines	Genymotion	Fast and efficient emulation. Limited support for older Android versions
	Android virtual device (AVD)	Integrated with Android Studio. Resource-intensive, slow startup times
Network analysis	Wireshark	Comprehensive network packet analysis. The steeper learning curve for new users
	Tcpdump	Lightweight and command-line flexibility May not capture data in encrypted connections
Behavioral analysis tools	DroidBox	Open-source, allowing community contributions Limited in providing deep code-level insights
	Mobile-sandbox	Specialized in Android malware analysis Dependency on continuous updates for evolving threats
Dynamic code analysis	Frida	Real-time codeinjection and modification Steeper learning curvedue to advanced features
	Xposed framework	Flexible customization of system behavior Modifying system behavior can lead to instability
Instrumentation frameworks	Dynamic binary instrumentation (DBI) tools	Flexible customization of system behavior Overhead introduced in terms of performance

4.1.1 Classification Algorithm

In this study, we conduct a thorough analysis of machine learning techniques intended for the differentiation between abnormal and typical behavior in Android applications. The main goal is to increase the security of the Android ecosystem. Various machine learning algorithms are used to identify abnormal and normal behavior of Android applications [11]. These algorithms are as follows-

K-Nearest Neighbor

A popular supervised learning technique called k-nearest neighbor (k-NN) can be used for both classification and regression problems. It is a non-parametric method that makes predictions based on the proximity of input data points that resemble (are near) their neighbors in a feature space. The k-NN approach, despite being straightforward, can be very expensive for large files (dataset) because it has to calculate the distance between each new entry and each data entry. Because of its simplicity and intuitiveness, it is still a regularly used algorithm. The main strength of this algorithm is it is Simple and effective for identifying outliers. This algorithm is based on the Supervised Learning technique.

Naïve Based Classifier

It is also a supervised learning algorithm based on Bayes' theorem, used to solve classification problems. It is a probabilistic classifier, meaning it makes predictions based on the probability of objects. Advantages of Naive Bayes Classifier, It is simple, easy to implement, and use. It doesn't need much training data. It has high speed, is not sensitive to irrelevant data, and its algorithm is simple and mature.

Decision Trees

A decision tree is a popular machine-learning technique used for classification and regression. It is a versatile and intuitive model that makes decisions based on a series of questions or conditions. It is a tree-structured classifier where nodes represent features of the dataset, branches represent rules, and each leaf of the node represents a result.

Support Vector Machine (SVM)

It is also known as One-Class SVM. It is a powerful machine learning technique that may be used for regression, linear or non-linear classification, and even outlier detection. It is also a t supervised learning algorithm that creates a boundary around normal instances during training. Instances falling outside this boundary during testing are classified as anomalies. The main purpose of the SVM algorithm is to find the best hyperplane in N-dimensional space that can separate different groups of data points in a given space. The main advantage of SVM is its high accuracy, and speed, and it also deals with high dimensional, non-linear problems. The main drawbacks of this method are the high load, the need to select the physical devices correctly, and the need for repeated calls.

Random forest

This algorithm is also a supervised learning method and can be used in both classification and regression problems in machine learning. Random Forests build multiple decision trees and classify instances based on the majority vote. Anomalies can be identified by assessing disagreements among the trees. It is a classifier that has multiple decision trees for various subsets of a given dataset and are averaged to improve the prediction accuracy of the dataset. The main strength of this algorithm is, that it is robust and capable of handling large datasets with high dimensionality [12].

Convolution Neural Networks

Researchers use advanced neural network models such as convolutional neural networks (CNN) and Recurrent neural networks (RNN), to detect malware in Android apps. These neural networks are inspired by the human twain and are good at recognizing complex patterns and relationships within the characteristics of different applications. By leveraging these deep learning techniques, researchers aim to identify and distinguish between malicious and benign Android software. These are some common machine-learning algorithms used by researchers to detect Android malware.

4.2 Based on the Evaluation Matrix

When using machine learning for Android anomaly detection, it is necessary to preprocess and prioritize data, select features carefully, and evaluate the performance of the selection process based on the characteristics of the data list. Measuring the performance of a machine-learning model is one of the most important steps in building a good machine-learning model. The model must meet certain requirements and measures for performance evaluation [3, 13]. Different indicators called performance evaluation matrices are used to evaluate the effectiveness or quality of the model. These performance metrics help us understand how well our model performs on specific data. In this way, we can improve the performance of the model by adjusting the hyperparameters. Different metrics are used to evaluate the effectiveness of the classification model; some of these are:

4.2.1 Confusion Matrix

A table called a confusion matrix is used to assess how well a classification algorithm performs when applied to a collection of test data that has known true values. It is particularly useful for assessing the accuracy and reliability of a model's predictions by providing a detailed breakdown of the model's performance on different classes. It is easy to use, but the terms used in this matrix can be confusing for beginners.

Fig. 1 Confusion matrix

	Predicted Positive (P)	Predicted Negative(N)
	True positive (TP)	false negative (FN)
	False positive (FP)	true negative (TN)

See Figure 1 for an explanation of the terms used in the matrix. A Confusion Matrix consists of four main components:

True Positive (TP)

It is an instance where the model correctly predicts the positive class. For example, correctly identifying actual instances of a disease.

True Negative (TN)

It is an instance where the model accurately predicts the negative class. For example, correctly identifying instances as not having a disease.

False Positive (FP)

It is an instance where the model fails to predict a positive class correctly. Also called a Type I error. For example, incorrectly identifying instances as having a disease when they do not.

False Negative (FN)

It is an instance where the model wrongly predicts the negative class. Also called a Type II error. For example, incorrectly identifying instances as not having a disease when they do.

4.2.2 Accuracy

Accuracy is the highest measure of performance; it is simply the ratio of correct observations to all observations.

$$\text{Accuracy} = \frac{TP + TN + FP + FN}{TP + TN}$$

4.2.3 Precision

Precision measurement is used to overcome accuracy limitations. Precision is a good measure for making decisions when the cost of a False positive is high.

$$\text{Precision} = \frac{TP}{TP + FP}$$

4.2.4 Recall

Its purpose is to calculate the proportion of unidentified true positives. A true positive or a prediction that matches all positive outcomes can be thought of as a correct prediction as a positive or an incorrect prediction as a negative (true positive and negative).

$$\text{Recall} = \frac{TP}{TP + FN}$$

4.2.5 F1 Measure

The Fl measure balances precision and recall. This is important when you need to reduce the false positives and false negatives.

$$\text{F1 score} = \frac{2 * Precision * Recall}{Precision + Recall}$$

Most of the models we analyzed for this study were using Specificity as an important factor to evaluate the model. In Figure 2 Accuracy, precision, recall, Fl measure, and specificity in percent are displayed in a pie chart. In the model we reviewed 219 % were using specificity for evaluating the model, 19.7% were using accuracy,19% Precision, 20% recall, and 19.5% Fl—Measures. Some of the authors haven't specified the accuracy or have given some other metrics that are difficult to approximate.

4.3 Based on Accuracy

Accuracy is a critical factor in evaluating the performance of any machine-learning model, including those designed for Android malware detection. It tells how many benign apps are correctly identified as benign. When we collect the data, it typically consists of both benign (non-malicious) and malicious samples [14, 15]. The goal is to correctly identify and classify whether an app is malicious or not that is why most of the model's performance is evaluated based on the accuracy of the model. Accuracy refers to the proportion of samples correctly identified out of the total sample. The formula for accuracy is:

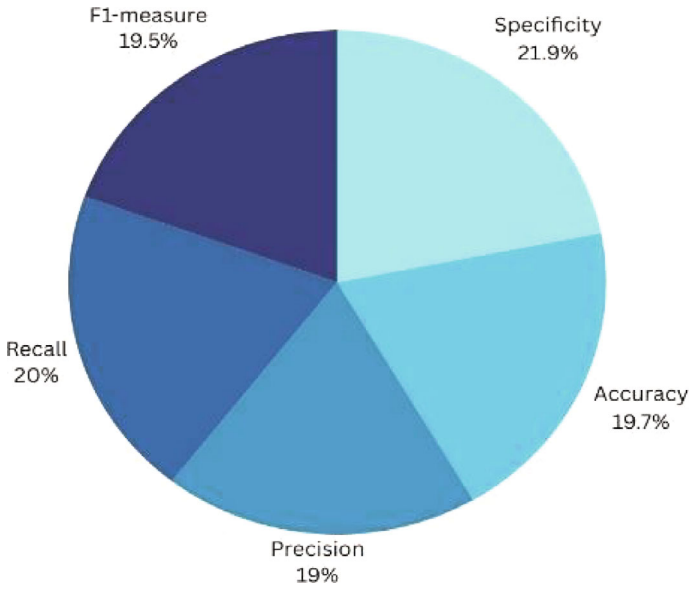

Fig. 2 Android malware detection evaluation matrix

$$\text{Accuracy} = \frac{\textit{Number of Correctly Samples}}{\textit{Total Number of Samples}}$$

In Table 2, the accuracy of algorithms, we have shown in a tabular form, the algorithms we reviewed are mostly of 91–100% accuracy, and 18% of authors haven't specified the accuracy or have given some other metrics that are difficult to approximate. 20% papers we reviewed have 80–90% accuracy these are from the early years of paper publication. And a total of 20% with accuracy between 71 and 90%. The data shows us that mobile malware detection techniques have been doing pretty well in recent years [16, 17].

Table 2 Comparison based on accuracy

Accuracy (%)	Reference number
70–85	12–15
86–90	16–20
91–95	21–28
96–100	29–37

5 Conclusion:

Malware detection and classification is challenging due to the use of obfuscation methods by applications. This paper reviews 13 years of research (2010–2023) on dynamic analysis techniques for malware detection on Android, focusing on machine learning and deep learning approaches. We evaluated current models for their performance and accuracy in detecting both known and emerging malware. Despite recent improvements, current techniques struggle with zero-day malware. Future work will include reviewing advancements in malware detection for Android and macOS.

An Essay on Enhancing KYC Efficiency Through Distributed Ledger Technology and Decentralized Finance

Joan Merin Saji, K. P. Jaheer Mukthar, and Hayel Khafajeh

Abstract This article investigates the substantial burden that the existing Know-Your-Customer (KYC) process places on financial institutions (FIs) and their consumers. Repeated verification among organizations causes delays, expensive expenses, and inefficiencies. The potential to transform KYC through Distributed Ledger Technology (DLT) and Decentralized Finance (DeFi) is examined in this essay. Every user can have a single, verified KYC record produced by utilizing the transparent and safe characteristics of DLT. It conforms to a record that can be safely shared with approved financial institutions, removing the need for duplicate verification and expediting the onboarding process. Self-sovereign identification is one of the DeFi concepts that might give users more control over their data, thus improving security and privacy.

Keywords Distributed ledger technology (DLT) · Decentralized finance (DeFi) · Cryptography · Blockchain · Smart contracts

1 Introduction

The banking sector is grappling with a significant challenge in the form of escalating regulatory costs associated with the know-your-customer (KYC) verification process. According to a recent survey by Thompson Reuters (2016), financial institutions face

an average yearly direct cost of USD 60 million to fulfill their KYC obligations. This financial burden is further compounded by penalties imposed on institutions for violations related to anti-money-laundering (AML) and KYC regulations. The Head of Strategy and Risk at the Hong Kong Securities and Futures Commission highlights KYC and AML as prominent inefficiencies, noting that these issues can accumulate fines exceeding 10 billion US dollars for banks (Benedict et al. 2016). Additionally, financial institutions are prohibited from engaging in business with corporate entities until the full KYC process is completed. Given that this process is time-consuming and its duration increases with the size of the corporate entity, it leads to delays in initiating business relationships, incurring opportunity costs for both parties. The survey reveals that 89% of customers face challenges and dissatisfaction with their KYC experiences.

Distributed Ledger Technology (DLT) plays a crucial role in the functioning and development of Decentralized Finance (DeFi). Let's explore the relationship between DLT and DeFi. DeFi relies on DLT, commonly implemented through blockchain technology, as its foundational infrastructure. Blockchain ensures transparency, immutability, and security of financial transactions. DLT enables the creation and execution of smart contracts, self-executing agreements with coded rules. Smart contracts form the basis for many DeFi protocols, automating various financial processes without the need for intermediaries. DLT enables the removal of intermediaries, fostering a decentralized environment where users have direct control over their assets and financial interactions. This aligns with the core principles of DeFi. DLT facilitates the tokenization of diverse assets, encompassing both digital and real-world assets. Tokens can be effortlessly transacted on the blockchain, supporting the development of varied financial instruments within the DeFi ecosystem. DLT ensures that once data is recorded on the blockchain, it becomes tamper-resistant and immune to alterations. This transparency and immutability enhance the credibility of financial transactions in DeFi. DLT employs cryptographic techniques and consensus mechanisms to secure transactions, a critical aspect in DeFi where users depend on the system's integrity to protect their assets.

DLT enables interoperability solutions, facilitating the smooth movement of assets and data across different blockchains. This interoperability aids the integration of various DeFi platforms. The permissionless nature of DLT allows developers to innovate and contribute to the DeFi ecosystem without requiring approval, fostering continual growth and evolution. DLT further provides global access to financial services, promoting financial inclusion by allowing users worldwide to participate in DeFi activities without geographical limitations.

DLT can be employed for decentralized identity solutions, enhancing the security and privacy of user information within the DeFi space. Particularly when combined with smart contracts, DLT enables trustless transactions, allowing users to engage in financial agreements without the need for trust in a central authority. The programmability of DLT, especially through smart contracts, facilitates the creation of intricate financial instruments, decentralized applications (DApps), and automated financial logic within the DeFi domain.

Many DeFi platforms, protocols, and projects make use of Distributed Ledger Technology (DLT). Instances include lending platforms like Compound and Aave, decentralized exchanges such as Uniswap and SushiSwap, and decentralized oracles like Chainlink. To sum up, DLT acts as the technological bedrock that enables the principles and functionalities of Decentralized Finance. It supports the trustless, transparent, and decentralized characteristics of DeFi, enabling the development of inventive financial solutions and promoting global financial inclusion.

2 The Integration of DLT in KYC

Immutable Record Keeping:

Distributed Ledger Technology (DLT), particularly blockchain, guarantees the creation of a singular and unchangeable repository for Know Your Customer (KYC) information through its inherent features and processes. The following outlines how DLT accomplishes this:

In a DLT system, information is not stored centrally but is distributed across a network of nodes (computers), with each node possessing a complete ledger copy. This decentralized structure eliminates a single point of control or failure, mitigating the risks associated with data manipulation or unauthorized modifications. DLT relies on a consensus mechanism, requiring nodes to agree on transaction validity before adding them to the ledger. Prior to recording any KYC data, nodes reach a consensus on its accuracy and validity, adding an additional layer of security and data integrity. KYC details are stored in blocks, and each block includes a cryptographic hash of the preceding block, forming a blockchain.

Attempting to alter data in a block necessitates changing all subsequent blocks, a computationally impractical task. The cryptographic linkage guarantees the immutability of each block and the entire record. KYC data undergoes transformation into a fixed-size string of characters using cryptographic hash functions. Even a minor change in the input data results in a distinct hash, serving as a unique identifier for the data and allowing immediate detection of any alterations. Each block in the blockchain is timestamped, indicating the precise time of its addition to the ledger. The chronological order of blocks enhances security, as once information is recorded in a block, it is time-stamped and cannot be retroactively altered without modifying the entire subsequent history.

DLT platforms often integrate smart contracts to encode and execute business rules related to KYC processes. Smart contracts, once deployed, are immutable, ensuring predefined rules for KYC information recording and management that cannot be altered after deployment. This guarantees consistency and adherence to regulatory requirements. DLT permits permissioned access, granting specific entities the ability to read or write information. KYC information is secure, with access limited to authorized parties, enhancing privacy and minimizing the risk of unauthorized modifications.

In conclusion, the amalgamation of decentralization, consensus mechanisms, cryptographic techniques, time-stamping, and smart contracts within DLT ensures the creation of a singular, unalterable record for KYC information. This not only offers a high level of security and integrity but also nurtures trust among parties relying on the precision of KYC data.

3 Interoperability and Information Sharing

Distributed Ledger Technology (DLT), notably blockchain, plays a pivotal role in promoting interoperability among institutions through the establishment of a standardized and decentralized framework for data sharing and communication. DLT platforms commonly integrate standardized protocols and specifications, allowing institutions adhering to the same standards to effortlessly communicate and share data. Smart contracts on DLT enable self-executing agreements based on predefined rules, and implementing standardized smart contracts fosters consistency and compatibility in data interactions, promoting interoperability.

Consensus mechanisms in DLT validate transactions and maintain a shared, consistent ledger across multiple nodes, ensuring synchronized and agreed-upon data views among participating institutions. This reduces discrepancies and enhances interoperability. DLT also supports decentralized identity solutions, enabling entities to establish and verify identities across different systems, crucial for seamless and secure identification processes, thereby enhancing interoperability.

Cross-chain technologies enable the transfer of assets and data between different blockchain networks, expanding the scope of interoperability beyond a single blockchain. Common token standards, such as ERC-20 and ERC-721, define how tokens are created, transferred, and managed on DLT platforms. Institutions adhering to these standards can seamlessly interact with each other's tokens, facilitating interoperability in the exchange of value.

Decentralized Applications (DApps) built on DLT platforms offer programmable interfaces and functionalities, allowing institutions to integrate shared applications into their systems, promoting interoperability through decentralized infrastructure. Oracles act as bridges between smart contracts on DLT and external data sources, facilitating interoperability by incorporating real-world data into decentralized applications.

DLT-based Application Programming Interfaces (APIs) provide standardized interfaces for data access and communication, allowing institutions to integrate their systems with DLT platforms and enabling seamless information exchange. Consortia, comprising groups of collaborating institutions on shared DLT networks, enhance interoperability among consortium members. Participation in interconnected consortia enables institutions to transact and share data with predefined standards and rules, fostering interoperability.

DLT's global accessibility allows institutions worldwide to engage in interoperable transactions, transcending geographical borders and regulatory boundaries. This

results in streamlined processes, reduced friction in data sharing, lower costs associated with reconciliation and manual interventions, and collaborative development of new solutions and services through shared infrastructure. Additionally, DLT ensures enhanced security and data integrity through decentralized consensus mechanisms. DLT serves as a foundational technology promoting interoperability among institutions by providing standardized protocols, smart contracts, decentralized identity solutions, cross-chain technologies, and other mechanisms that facilitate seamless communication and data sharing across diverse systems and platforms. This interoperability is fundamental to creating a more connected and efficient global financial ecosystem.

4 Smart Contracts for Automated Verification

Smart contracts play a crucial role in automating and enhancing Know Your Customer (KYC) compliance processes. They streamline procedures, boost efficiency, and ensure strict adherence to regulatory requirements. By programming smart contracts to automatically verify KYC information against predefined rules and criteria, manual intervention is reduced, expediting the KYC process with heightened accuracy and consistency in compliance checks.

KYC compliance involves specific rules and criteria established by regulatory bodies or institutions. Smart contracts encode these rules into programmable logic, allowing for automated and standardized compliance checks based on the defined criteria. Continuous monitoring and verification of KYC information are essential due to potential updates, and smart contracts can be designed to trigger real-time updates and re-verification processes whenever user information changes, maintaining current compliance checks.

To ensure secure handling of KYC data, smart contracts employ cryptographic techniques and operate within secure execution environments. This security feature prevents unauthorized access and manipulation of sensitive KYC information, bolstering data integrity and protection. The results of KYC compliance checks are recorded on the blockchain in an immutable and tamper-resistant manner by smart contracts. This ensures a transparent and auditable record of compliance activities, offering a verifiable history for regulatory purposes.

Implementing selective disclosure mechanisms, smart contracts allow users to control the information they share for KYC purposes, aligning with principles of decentralized control and user privacy. Automation through smart contracts significantly reduces the time and resources required for manual KYC compliance checks, leading to increased operational efficiency and cost savings for institutions.

Smart contracts also facilitate interoperability and collaboration between institutions for KYC purposes. Institutions can share programmable KYC compliance checks through smart contracts, fostering a standardized and interconnected compliance ecosystem. Based on KYC compliance status, smart contracts can conditionally grant or restrict access to certain services or execute specific transactions, ensuring

that only users meeting necessary compliance criteria can access financial services or engage in transactions.

Incorporating time-stamping mechanisms, smart contracts record when specific smart contracts interact with external oracles to fetch real-world data for KYC verification, ensuring access to up-to-date information and enhancing the accuracy of compliance checks. Additionally, smart contracts can trigger notifications and alerts to users for any KYC-related actions, such as upcoming renewals or required updates, contributing to a more user-centric KYC experience.

Smart contracts play a foundational role in transforming KYC procedures by executing rule-based logic, ensuring secure data handling, maintaining immutable records, and enabling efficient, programmable processes. Their impact is substantial in making KYC processes more efficient, transparent, and aligned with decentralized control and privacy principles.

5 Decentralized Finance in KYC

Decentralized Finance (DeFi) distinguishes itself through the fundamental principle of permissionless access, empowering individuals worldwide to engage in financial services without the reliance on traditional gatekeepers. Operating on decentralized blockchain platforms, DeFi eliminates the necessity for central authorities or intermediaries such as banks or financial institutions. Users can directly interact with DeFi protocols, securing permissionless access to financial services without requiring approval or intermediation. DeFi protocols are open-source, allowing anyone to access and review their code. This openness cultivates an inclusive ecosystem where individuals globally can not only use but also contribute to DeFi applications, promoting financial access on a global scale. Decentralized Exchanges (DEXs), prevalent in the DeFi space, facilitate peer-to-peer trading without central authority oversight. Participants can trade directly, removing barriers and enabling permissionless access to trading markets.

DeFi lending platforms facilitate direct lending or borrowing of assets through smart contracts, eliminating the need for traditional banking institutions. Stablecoins within DeFi provide a stable value pegged to fiat currencies, allowing users to transact without requiring a bank account, thus offering permissionless access to a stable store of value and a medium of exchange. Decentralized Autonomous Organizations (DAOs) govern and manage various DeFi protocols, enabling token holders to participate in decision-making, contributing to the decentralized and permissionless nature of these processes. Geographical restrictions are eliminated in DeFi, allowing users to engage in cross-border transactions without traditional banking limitations. This global accessibility fosters financial inclusion across borders. DeFi further facilitates the tokenization of diverse assets, including real estate and commodities, breaking down traditional barriers to entry and providing permissionless access to investment opportunities.

Insurance and derivative products within DeFi operate without central insurance providers. Users can hedge risks and insure assets in a decentralized manner, granting permissionless access to risk management tools. DeFi explores decentralized identity solutions, empowering users to control and manage their identity without reliance on centralized authorities. This ensures access to financial services while maintaining control over identity information, contributing to privacy and permissionless access.

DeFi platforms utilize smart contracts to automate financial processes, enabling users to programmatically interact with financial services without intermediaries, ensuring permissionless execution of financial agreements. By providing financial services to the unbanked and underbanked, DeFi democratizes finance, fostering financial empowerment and inclusion for individuals who traditionally lacked access.

DeFi's emphasis on permissionless access revolutionizes the traditional financial landscape, removing barriers, enabling global participation, and offering a decentralized and inclusive alternative to traditional financial systems. This paradigm shift aligns with the principles of financial openness, accessibility, and empowerment.

6 Decentralized Identity Solutions

The evolution of decentralized identity solutions in the decentralized finance (DeFi) space is prompted by the necessity for user-centric, secure, and privacy-preserving identity management. These solutions aim to grant individuals greater control over their personal information while promoting interoperability across diverse DeFi platforms. Self-Sovereign Identity (SSI) is a foundational concept in decentralized identity solutions, emphasizing the ownership and control individuals have over their identities. DeFi platforms are exploring SSI principles to empower users in managing their identity information, including KYC details, credentials, and attestations, in a self-sovereign manner.

Decentralized Identifiers (DIDs) constitute identifiers created, owned, and controlled by the subject of the identifier. DeFi projects are incorporating DIDs to establish unique and decentralized identifiers for users, ensuring secure and privacy-enhanced identity representation on the blockchain. Verifiable credentials, tamper-evident digital credentials, are integrated into DeFi platforms to enable users to share specific identity attributes or credentials with third parties without revealing unnecessary information, contributing to more efficient and secure KYC processes. Decentralized identity wallets securely store and manage users' digital identities and credentials in a secure and user-friendly manner.

The integration of decentralized identity wallets within DeFi projects empowers users to control access to their financial services and assets using their identities stored in these wallets. Interoperability protocols facilitate seamless communication between different decentralized identity systems, with DeFi platforms adopting standards such as the Decentralized Identity Foundation's (DIF) Interoperability Working Group's recommendations for cohesive functionality across various DeFi applications. Zero-knowledge proofs allow users to prove the authenticity of certain

information without revealing the details. DeFi platforms leverage zero-knowledge proofs to enhance privacy in identity verification processes, ensuring that only necessary information is disclosed during transactions. Some DeFi projects are exploring the creation of identity registries on the blockchain, where user identities are stored and managed in a decentralized manner.

Blockchain-based identity registries provide a transparent and immutable record of identities, enhancing the overall integrity of decentralized identity solutions. These solutions are being integrated with widely adopted authentication standards, with DeFi platforms exploring the use of standards like OAuth and OpenID Connect to facilitate secure and standardized authentication processes within decentralized identity frameworks. Governance models are being implemented to enable community-driven decision-making in decentralized identity systems. DeFi projects recognize the importance of community governance in managing identity solutions, ensuring that the interests and needs of users are considered in the evolution of these systems.

Some decentralized identity solutions within DeFi incorporate features to comply with regulatory requirements, particularly in KYC and AML (Anti-Money Laundering) processes. Solutions that balance regulatory compliance with user privacy are actively explored to create a harmonious environment within the evolving regulatory landscape. Decentralized Autonomous Organizations (DAOs) are integrating decentralized identity solutions for members. DAOs are exploring identity solutions to manage membership, voting rights, and participation, enhancing the transparency and inclusivity of decision-making processes. There is a growing emphasis on educating users about the benefits and security practices associated with decentralized identity. DeFi projects are investing in educational initiatives to empower users with the knowledge and skills needed to manage their decentralized identities effectively.

Ensuring that decentralized identity solutions are user-friendly is crucial for widespread adoption. Achieving interoperability requires the development and adoption of standardized protocols. Balancing regulatory requirements while preserving user privacy is a complex challenge that requires careful consideration. The development of decentralized identity solutions in the DeFi space is marked by a commitment to user empowerment, privacy, and interoperability. As these solutions continue to evolve, they contribute to creating a more secure, user-centric, and inclusive financial ecosystem within the decentralized finance landscape.

7 Reduced Data Redundancy

Decentralized Finance (DeFi) platforms utilize advanced technologies to mitigate data redundancy in Know Your Customer (KYC) processes. Conventional KYC procedures often involve repetitive data submissions for different financial services, introducing redundancy and potential security vulnerabilities. DeFi platforms embrace self-sovereign identity principles, empowering users to own and control their identity data. This user-centric approach eliminates the necessity for

redundant data submissions across various financial services, as users can selectively share specific information, thereby minimizing redundancy.

Distributed Identifiers (DIDs) are employed by DeFi platforms to create unique identifiers for users, and verifiable credentials are utilized to attest to various identity attributes. Users can present verifiable credentials instead of redundant sets of personal information, selectively sharing them based on the specific requirements of each DeFi service, thus reducing redundant data exposure. Smart contracts play a crucial role in automating KYC compliance checks and maintaining an immutable record of user verification. Once a user's KYC data is verified through a smart contract, the verification status can be referenced across different DeFi services without redundant verifications.

DeFi platforms enable users to selectively disclose specific identity attributes as needed, avoiding redundant disclosure of information by sharing only the necessary attributes required for each financial service. This approach enhances privacy and minimizes the exposure of sensitive data. Zero-knowledge proofs add an additional layer of privacy by allowing users to prove the authenticity of certain information without revealing the actual data. Through zero-knowledge proofs, DeFi platforms can verify the accuracy of user data without requiring the user to redundantly disclose the raw information, reducing data redundancy.

Adhering to interoperability standards, DeFi platforms facilitate seamless communication and data sharing between different services. When users transition between DeFi platforms that follow interoperable standards, their KYC status and relevant information can be recognized without the need for redundant submissions. Users manage their identity information in decentralized identity wallets, providing a centralized location for storing and managing KYC data, eliminating the need for redundant submissions across multiple platforms.

KYC verification results are securely stored on a blockchain, ensuring an immutable and tamper-resistant record. Once a user completes KYC verification on a DeFi platform, the result is recorded on the blockchain, reducing the need for repetitive verifications on other platforms. DeFi projects collaborate to establish shared identity standards and cross-platform identity solutions. When different DeFi platforms adhere to common identity standards, users experience reduced redundancy in KYC processes, as their verified identity can be universally recognized.

Collaboration within a decentralized finance consortium ensures shared KYC standards. This approach streamlines KYC data verification, adhering to common standards and reducing the necessity for users to undergo redundant KYC processes across different consortium members. Achieving interoperability between diverse DeFi platforms necessitates common standards and protocols. Balancing compliance with varying regulatory requirements while minimizing data redundancy presents a complex challenge.

Educating users about the benefits of decentralized identity and selective information disclosure is paramount. DeFi platforms address data redundancy in KYC processes by empowering users with self-sovereign identity, leveraging decentralized identifiers and verifiable credentials, employing smart contracts, enabling selective information disclosure, and promoting interoperability. These comprehensive

approaches contribute to a more efficient, secure, and user-friendly KYC experience within the decentralized finance ecosystem.

8 Current KYC Process

The KYC initiation process occurs when a customer expresses the intent to engage with a financial institution. Sequentially, an agreement on relationship terms is reached between the customer and the financial institution. Subsequently, the customer submits necessary documents to the financial institution to facilitate the KYC verification process. The financial institution examines the documents and generates an internal certification document, assuring regulators that the customer has been validated or rejected, and the KYC process has been correctly conducted. This cycle repeats whenever the customer seeks to collaborate with a new financial institution.

In the current scenario, each time a customer initiates a relationship with a financial institution, the costs associated with the KYC verification process reoccur. Figure 1 illustrates a scenario where a customer intends to engage with three distinct financial institutions, demonstrating how, for this individual customer, document exchange and the core KYC validation must be repeated three times, resulting in costs three times those of a single KYC process. It is essential to differentiate between the "core KYC verification process," mandatory for all financial institutions by law, and additional, institution-specific procedures. While each financial institution may request additional documentation to create an "additional aura of information" for each customer, our focus is exclusively on the shared core KYC verification process among all financial institutions in a jurisdiction.

The evolution of regulations, technological advancements, and the 2007 financial crisis have given rise to opportunities in the "regtech" field, aimed at leveraging

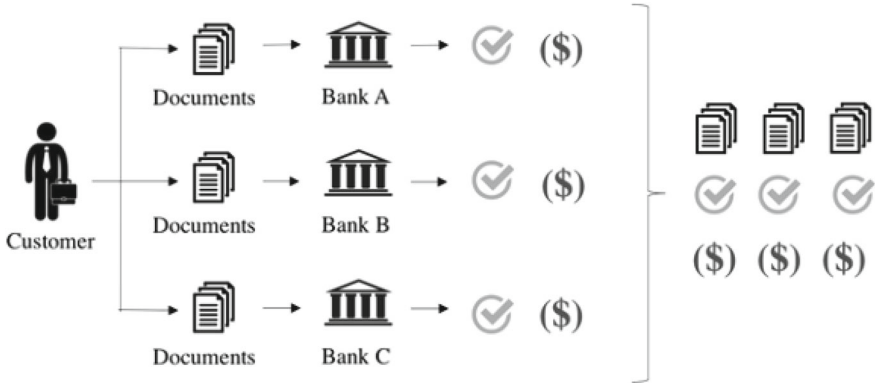

Fig. 1 Moyano [8] current structure and cost of KYC

technology to enhance regulatory implementation. "Regtech" combines "regulation" and "technology." Opportunities within KYC have gained prominence (see Memminger et al. 2016; Arner et al. 2016). Arasa and Ottichilo (2015) analyze KYC costs based on compliance complexity for commercial banks in Kenya, identifying four variables explaining 78.3% of compliance requirements. Soni and Duggal (2014) explore the use of big data analytics to mitigate risks in institutions conducting KYC. Colladon and Remondi (2017) employ cluster analysis to identify suspicious financial operations and potential criminal activities, enhancing KYC through relational data mapping and predictive models.

The current paper aims to contribute an additional improvement by employing Distributed Ledger Technology (DLT) to reduce the overall cost of the KYC process.

9 Blockchain Technology

DLT, exemplified by blockchain technology, has gained prominence largely due to the widespread adoption of the cryptocurrency Bitcoin. Introduced by Nakamoto in 2008, Bitcoin marked the first functional cryptocurrency not under the control of a central authority. Initially devised for creating and transferring money via the Internet, DLT has evolved to govern decentralized systems through the implementation of smart contracts. Smart contracts, as defined by Szabo in 1997, are computer protocols designed to facilitate, verify, or enforce predefined clauses when specific conditions are met. The primary aim of using smart contracts, as Szabo elaborates, is to embed them in various valuable properties controlled through digital means.

Following Nakamoto's groundbreaking work, new instances proposing DLT for diverse purposes have emerged. Notable among them is "Ethereum," a platform capable of running entire decentralized applications, as detailed by Wood in 2016. Numerous papers, including those by Peters and Panayi (2015) and Harvey (2016), delve into the blockchain's technical aspects.

While Bitcoin's blockchain transactions incorporate small scripts defining output spending conditions, Ethereum's blockchain can be considered a Turing complete virtual machine capable of running code in multiple programming languages, thus executing the smart contracts stored within it (see Glaser 2017). Glaser's ontological development of blockchain systems concepts provides a robust framework for assessing the implications of blockchain solutions in academic or economic contexts. The analysis introduces the perspective of pervasive decentralization across multiple layers of digital infrastructure through blockchain technology.

Glaser (2017) defines two layers of code: the fabric layer and the application layer. The fabric layer encompasses the system's code base, covering communication, public-key infrastructure, database construction and maintenance software, and the system's execution environment. The governance type of the system is ultimately defined by the fabric layer, which can be public, permissioned, or hybrid. A crucial characteristic of blockchain systems, as highlighted by Glaser, is the absence of differentiation between users and user management modules, providing complete

transparency to all users when reading transactions and deployed smart contract code.

The application layer involves the application logic of services implemented in the form of smart contracts and comprises three dimensions: ecosystem closedness, value linking, and market type. Ecosystem closedness gauges the extent to which the system interacts with structures outside the blockchain-based framework. The more closed the system, the higher the leverage of a blockchain-based solution due to decentralization ending at the blockchain system's boundaries. Value linking refers to the intrinsic value of tokens exchanged within the system, with four potential ways of assigning value, as proposed by Glaser: community currency, debt or equity as perceived by participants, backed by a commercial bank, or backed by a central bank. The market type, the final dimension, delineates the nature of the market in which the blockchain-based solution operates.

The European Security and Markets Authority (2016) outline the potential benefits of DLT in securities markets, explore challenges and shortcomings, and analyze the regulatory framework relevant to DLT applications in securities markets, focusing on primary EU legislation.

The regulatory framework for DLT solutions outlined by the Authority, primarily focusing on the securities market, bears striking similarities to the governance framework proposed in this paper. Specifically, the Authority suggests that, for the interbank context within securities markets, a permission-based system could be highly beneficial. The suggested system aims to govern the interactions among participants, with a particular emphasis on delineating the responsibilities of each participant, implementing correction mechanisms, and defining penalties in cases of rule infringement.

In a complementary vein, the European Central Bank (2012) provides a classification of virtual currency schemes based on observed characteristics. These schemes are categorized into three types: Type 1, representing closed virtual currency schemes akin to those used in online gaming; Type 2, denoting virtual currency schemes with a unidirectional flow, typically involving a conversion rate for acquiring the virtual currency; and Type 3, indicating virtual currency schemes with bidirectional flows.

Examining disruptive innovations in the financial sector, the World Economic Forum (2016) delves into the impact of DLT on reshaping financial services and the role of financial institutions in constructing digital identity. The Forum's analysis suggests that DLT has the potential to design new systems or enhance existing ones by automating processes, reducing settlement times, cutting costs, minimizing operational risks, disintermediating central authorities, and facilitating real-time settlements. In a related study, Egelund-Müller et al. (2017) explore the development of an automated financial system, involving multiple counterparties, capable of executing various complex financial derivatives, including settlement, directly on DLT (Fig. 2).

The revised system allows the same customer to engage with three different financial institutions, yet the exchange of documents and the core KYC verification process now takes place only once, resulting in a reduction of costs to a third. This system adheres to the previously established conditions: proportionality, irrelevance, privacy, and no minting.

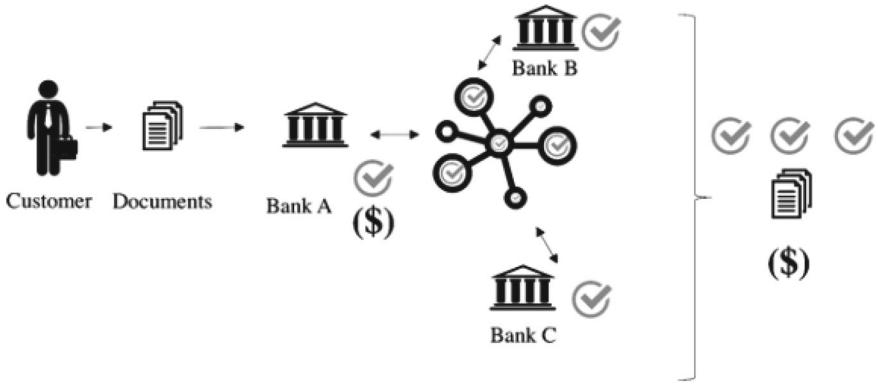

Fig. 2 Moyano [8] current KYC process through decentralized finance

Concerning privacy, as each financial institution employs a single account for each customer, making it impossible to identify which institution corresponds to a specific public key, privacy is assured for both customers and financial institutions. Only in the scenario where a customer interacts with all institutions within the system could those institutions deduce this occurrence. However, given that financial institutions utilize only one account per customer, their privacy remains safeguarded in relation to other customers. The no-minting condition is satisfied, as the addition of an institution to a customer's onboarding list can only occur through a legitimate payment made by the institution. Since the compensation for the core KYC verification process is triggered solely by a genuine customer approaching an institution, there is no incentive for any institution to fabricate smart contracts falsely claiming the completion of a core KYC verification process. In such a fabricated scenario, no actual customer would exist behind the process, subsequently approaching another institution for verification.

10 Implementing the Redefined KYC Solution

In this section, we delve into the considerations surrounding the implementation of the DLT-based KYC solution outlined earlier. It is crucial to emphasize that deploying such a system would carry substantial ramifications for the financial sector, necessitating close collaboration with regulatory authorities. Additionally, the various facets of the system's implementation would be contingent on specific national guidelines and legislative frameworks. Therefore, this section explores not only the proposed system but also two alternative variations that introduce varying levels of centralization, enabling feasible implementation. We also scrutinize alternative design approaches, examining both the challenges and advantages associated with these alternatives.

11 Design of a KYC Solution

In the initial phase, the customer initiates the KYC process by approaching their home bank and submitting the requisite documents for verification. The home bank, utilizing the system's application installed at each participating bank, manages the document exchange process with the customer externally from the distributed ledger and stores these documents within its local database. As the home bank processes each document, the hash of the document is recorded on the distributed ledger. Upon successful validation of the customer, the home bank can compile the comprehensive document package. This package includes all previously hashed documents used for verification, along with the digitally signed document endorsing the customer's verification status. Subsequently, the customer has the ability to grant access to this document package to any other institution they plan to engage with. Consequently, the subsequent institution requiring KYC validation for this customer can leverage its local client application to interact with the customer's smart contract. This interaction facilitates obtaining the customer's status, registering itself in the onboarding institutions list, and managing the necessary blockchain-based payment, as detailed in the preceding section. Moreover, as the customer has provided access to the document package, the institution can retain a copy within its own database (Fig. 3).

In the suggested approach, the regulator assumes a central role as a trusted third party (TTP) and holds ownership of the "fabric layer." While this configuration is integral to the system, it may present a vulnerability if, for instance, the regulator becomes corrupt or is compromised due to hacking or insider fraud. This aspect warrants further examination in subsequent analyses. To address this potential vulnerability to some extent, the TTP characteristics delineated by Lee et al. (2016) could be integrated.

12 Decentralized KYC Solution

The solution proposed in the earlier section can undergo further decentralization through the following modifications. Firstly, if the DLT component of the solution is directly implemented on the Ethereum network instead of utilizing a private blockchain, any attempt to alter information on the blockchain would face increased difficulty due to the presence of a large, more resilient mining community. Secondly, the regulator could be eliminated from the system, eliminating the risk of having a party with an overarching view of the entire system. Lastly, additional efficiency could be introduced by storing data exclusively at the financial institution that has granted approval to the customer, as depicted in Fig. 5. While recognizing these advantages, discussions with experts suggest that, in most Western countries, the perceived risk of a corrupt regulator is deemed low compared to the benefits of enhanced financial stability resulting from the regulator's ability to routinely verify the KYC process.

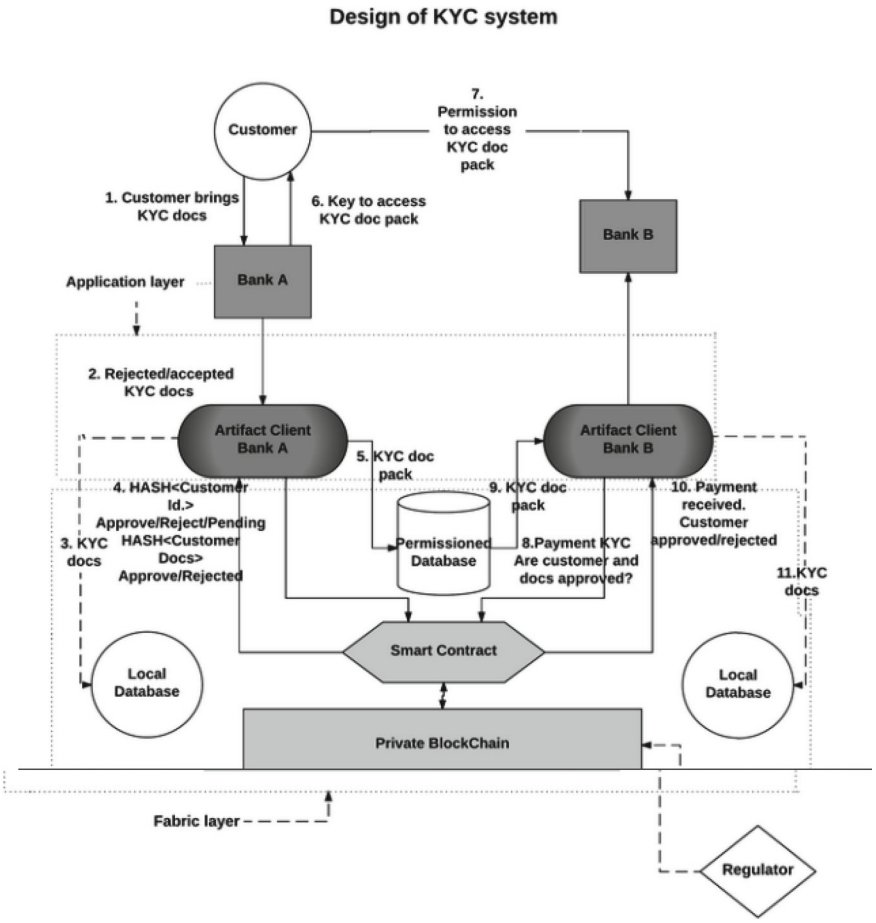

Fig. 3 Moyano [8] design of KYC process

The local storage of documents ensures that any bank working with a client can check the KYC documents whenever necessary. The decision to use a private distributed ledger instead of a public one in our proposed design was influenced by feedback from finance executives consulted during the DSR process. They indicated that banks might be uncomfortable with customers' private information being available on a public distributed ledger, even if only hash code values of documents and the key to decrypt the customer document package were kept on a public ledger. This concern is reasonable, as potential bugs in the smart contract or reverse engineering of the smart contract bytecode could unintentionally expose information. Luu et al. (2016) examined 19,366 smart contracts on Ethereum and identified vulnerabilities in 8,833 of them, supporting the concerns raised by the consulted finance executives. Moreover, the entire compensation scheme enabling cost reduction and sharing within the system is feasible only through the use of DLT. A more mature DLT would

facilitate a ledger where stored documents could be entirely private, allowing for a decentralized, permissioned database on a blockchain. In such a system, the document package would solely be stored on a distributed ledger, not on a central database managed by the regulator. Projects like R3 Corda and Hyperledger are progressing in this direction, and while they are not currently mature, they may become so in the near future (Fig. 4).

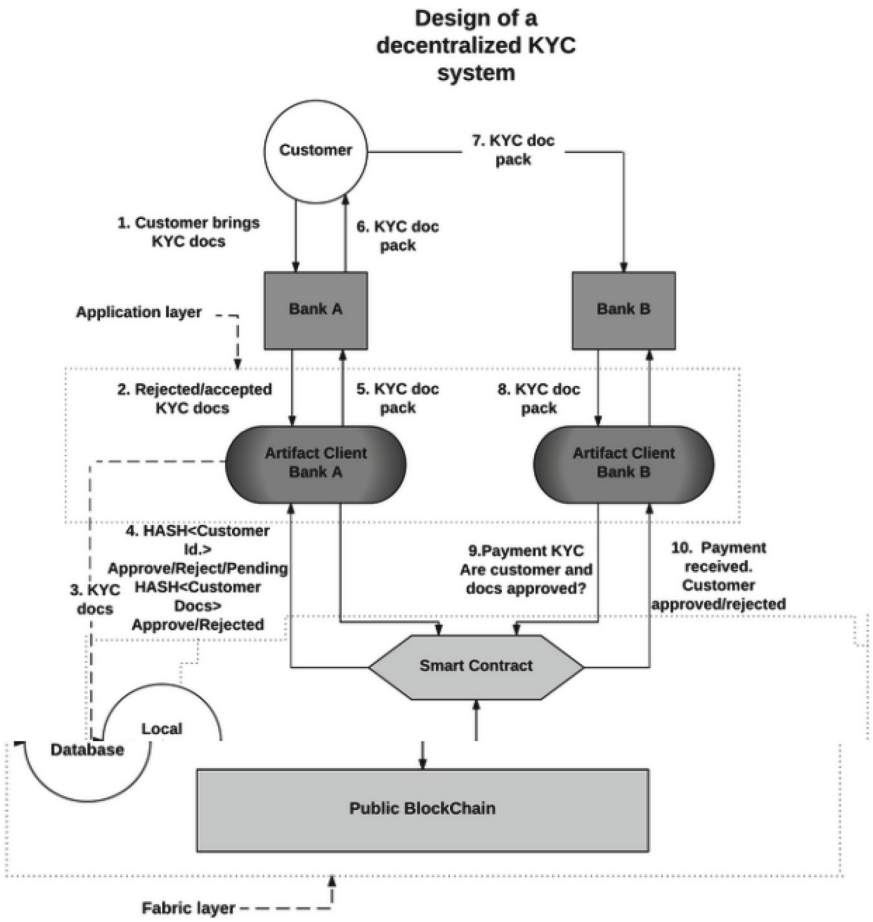

Fig. 4 Moyano [8] design of decentralized KYC system

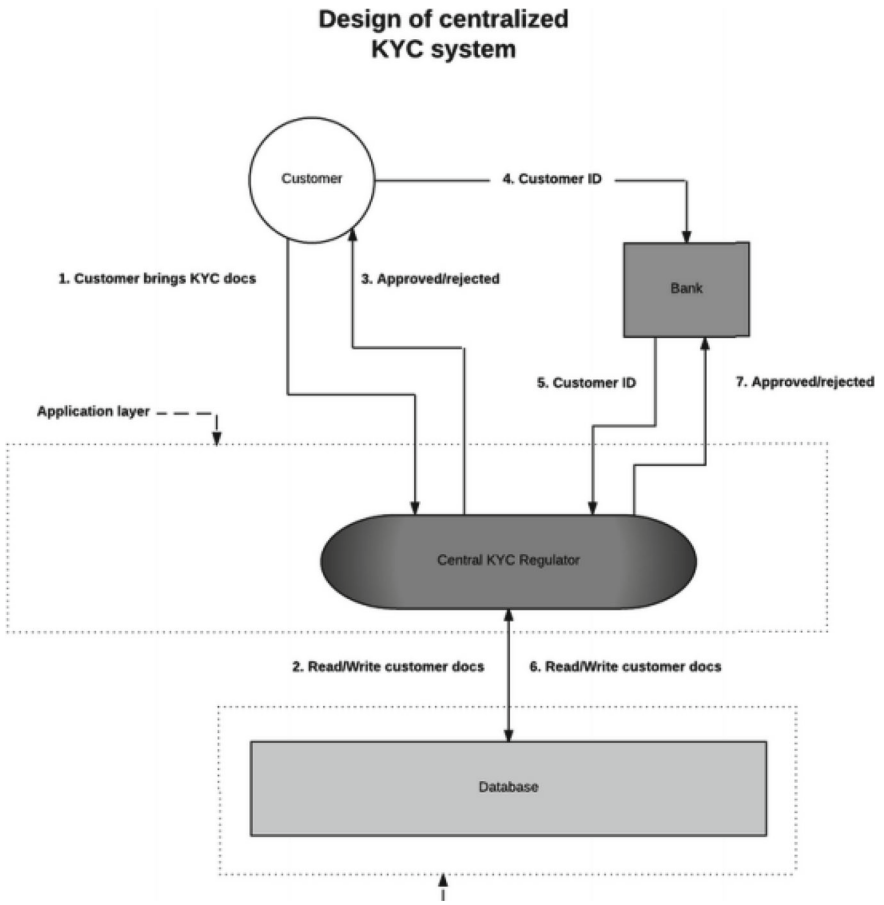

Fig. 5 Moyano [8] design of centralized KYC SYSTEM

13 Centralized KYC Solution

The effective functioning of Decentralized Finance (DeFi) markets might necessitate a significant level of centralization. Our research demonstrates that centralization, particularly through institutional investors facilitating Initial Coin Offerings (ICOs), results in shorter timeframes to achieve fundraising goals and higher valuations. Using a search-theoretical model, we quantify how centralization alleviates frictions in decentralized markets (Momtaz 2012). Centralization proves beneficial by reducing trading delays and enhancing overall efficiency, particularly during market downturns or instances of uncertainty regarding team or product quality. Consequently, our study suggests that fully decentralized markets for startups may not be optimal for society. Centralization's value lies in expediting interactions between entrepreneurs and investors, along with mitigating market frictions arising from

information asymmetry. (Bhatt, Joshipura) Over the past decade, technology has significantly transformed the design, delivery, and consumption of financial services. Increased mobile and internet penetration, coupled with the rise of Fintech, digitalization, blockchain technology, machine learning, and artificial intelligence, has accelerated the digital transformation of economies worldwide. The COVID-19-induced lockdowns further expedited the digitalization of financial services. This study identifies key areas and current dynamics in Fintech, digitalization, and financial services, proposing future research directions.

Artificial Intelligence emerges as the future of banking, leveraging advanced data analytics to combat fraudulent transactions and enhance compliance. The creation of Bitcoin in 2009 was a revolutionary idea in the financial world, representing the digital cash of the new age. It is considered secure, non-centralized, and has the potential to provide the world with "honest," non-inflatable money. (Meghani 2020).

This study explores the potential contributions of AI and blockchain technologies to the Indian banking sector. While blockchain technology shows promise, it is noted that AI applications are currently taking the lead in the banking sector, addressing customer demands for faster and easier services. AI is actively utilized for regulatory compliance, fraud detection, and assessing individual creditworthiness. Additionally, the research paper delves into the intersection of financial services and technological innovations, commonly known as Financial Technology (FinTech). It covers the definition of FinTech, its evolution, utilization, and innovations within the field. The study particularly focuses on four major sectors—Capital Market (primary and secondary), Blockchain technology (AI & ML), E-commerce & Marketing (API), and Banking & Insurance (unified payment system, SWIFT, wire transfer)—examining their role, disruptions, opportunities, and growth within the FinTech landscape.

The study explores the possibility of cost-sharing in the Know Your Customer (KYC) process through the implementation of a fully centralized KYC artifact. This involves assigning the responsibility of KYC to a specialized entity or a regulator-operated KYC office. Under this centralized model, the customer would need authorization from the designated entity, and every bank seeking to engage with that customer would obtain permission from the centralized authority. The primary advantage of this approach lies in reducing the KYC costs for banks and other financial institutions, fostering increased competition in the market. Consequently, lower fees for customers and reduced business costs could contribute to a more competitive and open business environment in a given country, without compromising Anti-Money Laundering (AML) or KYC requirements.

14 The Use of Distributed Ledger Technology

Distributed Ledger Technology (DLT), including blockchain, has the implicit to enhance the effectiveness of the Know Your client (KYC) process in severalways. DLT enables the creation of a participated and inflexible record of client information on a decentralizednetwork. Multiple realities can pierce and corroborate client data

without the need for spare data entry, reducing duplication and icingconsistency. DLT provides a single, empirical source of verity for clientinformation. This reduces the need for guests to submit the same information to multiple realities, streamlining the KYC process and minimizing data entryerrors. DLT can support decentralized identity results, allowing individualities to control and partake their identity attributes. Druggies can widely partake specific KYC information with different realities, perfecting sequestration and reducing the burden on guests to constantly give the same information. DLT creates an inflexible inspection trail of changes made to client information. This point enhances translucency and responsibility, making it easier for controllers and adjudicators to trace any changes made to KYC data over time. DLT allows for permissioned access to clientdata.

Authorized parties, similar as fiscal institutions or nonsupervisory bodies, can pierce the necessary KYC information directly, reducing the time and coffers needed for homemadechecks. Smart contracts on DLT can automate certain compliance checks grounded on predefinedrules. This robotization can speed up the KYC process by executing routine checks and flagging disagreement, reducing the homemade troubleinvolved. DLT facilitates interoperability, enabling different institutions to partake and corroborate KYCdata. Streamlined communication between institutions can expedite the KYC process, especially for guests with being biographies at otherentities. DLT reduces redundancy in datastorage. KYC information stored on a decentralized tally is accessible across sharing realities without the need for duplicated databases, leading to more effective data operation (Fig. 6).

DLT employs advanced cryptographic ways to secure data. This enhanced security reduces the threat of data breaches and fraud, contributing to the overall effectiveness and integrity of the KYC process. While the implicit benefits are significant, the factual perpetration and success of DLT in perfecting KYC effectiveness depend on factors similar as non supervisory considerations, assiduity collaboration, and the relinquishment of standardized protocols. Ongoing developments in this space may lead to farther advancements in the effectiveness of KYC processes using DLT. Having presented a result, it's worth considering why the use of DLT represents an enhancement compared to other possible technologies. First, there would be advancements in terms of auditing and shadowing. This is profitable for the public controller since it provides a clear record of the information that fiscal institutions corroborate previous to the opening of accounts, and could serve as a single point of verity should disagreement do. And the inflexible nature of the record created by DLT-grounded results can not be matched by other technologies. Second, the proposed system allows collaboration between fiscal institutions that don't necessary trust one another.

Specifically, given that fiscal institutions contend for guests' means and accounts, only a system that allows for anonymous collaboration—similar as anonymous compensation and anonymous document sharing—would gain the support of fiscal institutions. Third, one of the major benefactions of the result proposed then's that an institution can be anonymously and proportionately compensated by others for the sweats conducted to corroborate a client. This is only possible due to the features of the distributed tally, which allow institutions to communicate with one another

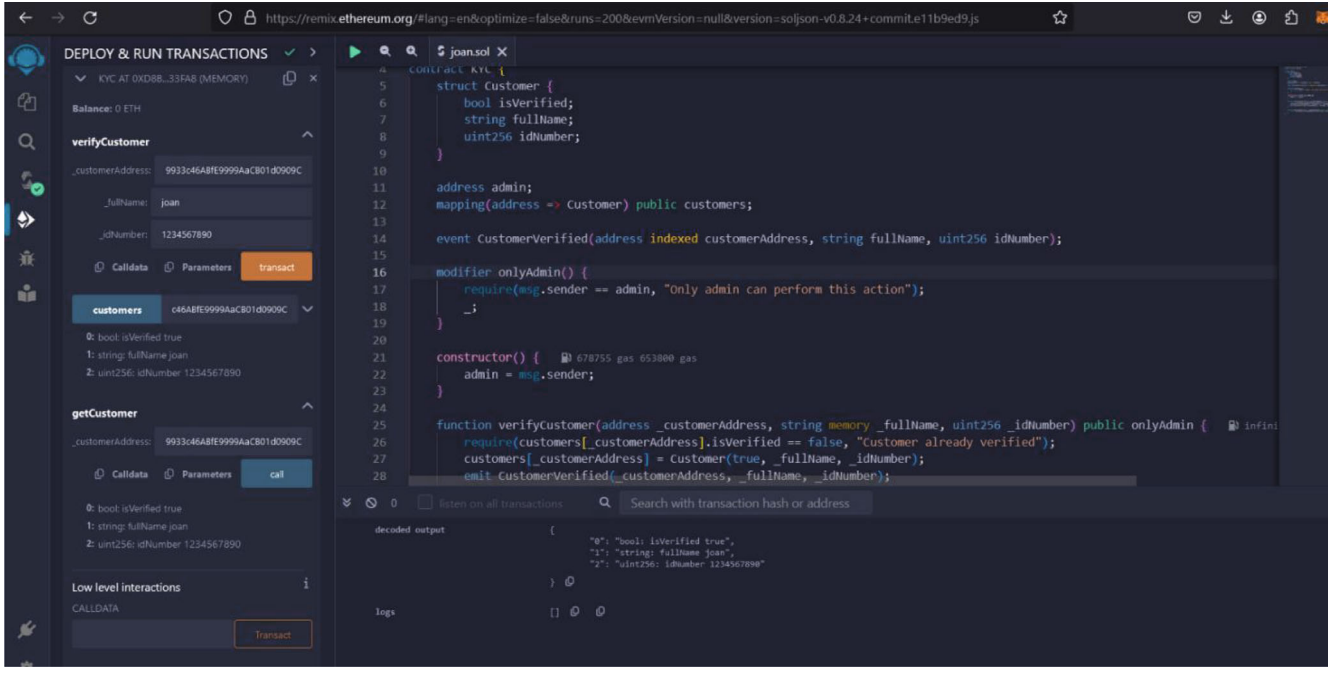

Fig. 6 Final decoded output of encrypted solidity of KYC process

without revealing their individualities but insure that each institution abides by all applicable regulations at all times. Fourth, it's important to note that the system proposed then—irrespective of the technology used to enable it—is, in substance, a system for interbank collaboration. Since fiscal institutions are studying broader interbank collaborations grounded on DLT—similar as the R3 design—it seems logical to propose a system similar as the one presented then, which formerly takes core DLT features into account, similar that it can, in the future, be integrated into a broader DLT—grounded frame. Last, and taking into account that such a new system would in any case need a clearing case to settle the compensations, DLT eliminates high central authority freights. All by each, the result proposed then from DLT for the following reasons the operation of this technology allows for the robotization of a process, increases the information available if a disagreement should do, reduces agreement time compared to other technologies, and reduces business costs.

15 Conclusion

The article has explored the potential of enhancing Know Your Customer (KYC) efficiency through the synergistic application of Distributed Ledger Technology (DLT), including blockchain, and the principles of Decentralized Finance (DeFi). The evolving landscape of financial services demands innovative solutions, and the integration of DLT and DeFi presents a promising avenue for revolutionizing the KYC process.

DLT offers a transformative approach to KYC by providing a decentralized and immutable ledger for storing customer information. This not only reduces redundancy in data entry but also establishes a single, verifiable source of truth, streamlining the KYC process and minimizing errors. The technology's cryptographic security ensures data integrity and enhances transparency, offering an immutable audit trail for regulatory oversight. Decentralized Finance principles, such as self-sovereign identity, further empower individuals in managing their KYC information. Users gain control over their identity attributes, selectively sharing data as needed. Integration with DeFi allows for interoperability, seamless communication, and standardized authentication processes across different financial platforms.

The proposed solution addresses challenges in the KYC process by facilitating collaboration among financial institutions. It introduces the concept of anonymous compensation, proportionate reimbursement, and streamlined communication, fostering an environment of trust and efficiency among participants. While acknowledging the potential benefits, it is crucial to consider regulatory frameworks, industry collaboration, and the adoption of standardized protocols for successful DLT implementation. Moreover, the proposed solution aligns with broader trends in interbank collaborations based on DLT, positioning it as a viable and forward-looking approach. The integration of DLT and DeFi in the KYC process represents a significant leap toward creating a more efficient, secure, and user-centric financial ecosystem. As

technology continues to evolve, fostering innovation and collaboration, the envisioned future of streamlined KYC processes appears not only feasible but essential for the continued growth and resilience of the financial industry.

Bringing Together Machine Learning Techniques for Effective Phishing Email Detection

Prachi Sharma, Sajjad Ahmed, Hemraj Shobharam Lamkuche, Mutaz Rasmi Abu Sara, and Ala'a Al Sherideh

Abstract Email phishing constitutes a cyber-attack aiming to illicitly acquire sensitive data by masquerading as authentic sources. This paper outlines a machine learning-driven strategy for identifying email phishing attacks. The suggested approach encompasses extracting features from language processing and supervised learning algorithms, the system categorizes incoming emails as legitimate or phishing endeavors. The outcomes indicate that the proposed methodology attains remarkable accuracy, surpassing existing methods, thus offering a valuable tool for organizations and individuals seeking to enhance their email security.

1 Introduction

In the Fourth Industrial Revolution, artificial intelligence (AI) plays an important role in improving cybersecurity, especially in identifying phishing emails. AI algorithms examine email patterns and accurately detect harmful intent by utilizing machine learning and natural language processing techniques [1]. In an era dominated by digital Communication, the ubiquity of email serves as both a facilitators of seamless information exchange and a potential vector for malicious activities. Phishing, a deceptive practice wherein adversaries craft fraudulent emails to trick recipients into divulging sensitive information, poses a significant threat to individuals and organizations alike. As phishing attacks become increasingly sophisticated, conventional rule-based and heuristic methods struggle to keep pace with the evolving tactics employed by malicious actors.

Phishing attacks are a major concern for individuals and organizations alike. These attacks can results in significant financial and reputational losses. Machine learning techniques have shown great potential in detecting phishing emails. However, the performance of these techniques can be improved by integrating multiple techniques and using features engineering. This research paper aims to explore the different machine learning techniques used for phishing email detection and investigate how feature engineering can improve their performance. The paper will also discuss the challenges involved in integrating multiple learning techniques for effective phishing email detection.

2 Literatue Review

In [2], the authors introduced a model that relies on extracted features present in both the header and HTML body of emails. These features are then subjected to classification using a feedforward neural network. The outcomes demonstrate a classification accuracy of 98.72%.

Wang and Zhang explored the use of ensemble learning techniques for phishing email detection. They combined multiple classifiers, including Decision Trees, Support Vector Machines, and Neural Networks, to create an ensemble model. The approach enhanced overall accuracy to 95% and improved the system's ability to adapt to evolving phishing tactics.

In [3], a dataset comprising over 7000 emails was utilized, incorporating various features. The model achieved an impressive overall accuracy of 99.5%.

Chen et al. investigated the combination of deep learning and behavioral analysis for phishing detection. They proposed a hybrid model that integrated a convolutional neural network (CNN) for image-based analysis of email components and a recurrent neural network (RNN) for sequential behavior analysis. The combined model demonstrated robust performance with a precision of 96%.

3 Methodology

Figure 1 shows the explanation that would aid in understanding the design methodology for phishing email detection comprises several functional modules tailored to enhance system effectiveness. The methodology includes feature-based analysis module, natural learning processing The Feature-Based Analysis Module serves the purpose of extracting pertinent features from email components, fostering distinctive patterns for genuine and phishing emails. This process bolsters the algorithm's capacity to distinguish between the two categories.

The Natural Language Processing (NLP) Module focuses on analyzing linguistic nuances within email content, adding a layer of sophistication to detection mechanisms. The Behavioral Analysis Module scrutinizes user interactions, identifying anomalies indicative of targeted phishing attacks and contributing to an adaptive detection system. Additionally, the Integration Module ensures seamless collaboration between diverse machine learning techniques, promoting a holistic approach to phishing detection.

NLP algorithms analyze linguistic nuances, while behavioral analysis considers user interactions to identify anomalies. The goal is to fortify email systems, empowering them to autonomously learn, adapt, and discern patterns indicative of phishing attempts. This innovative methodology seeks to revolutionize email security by

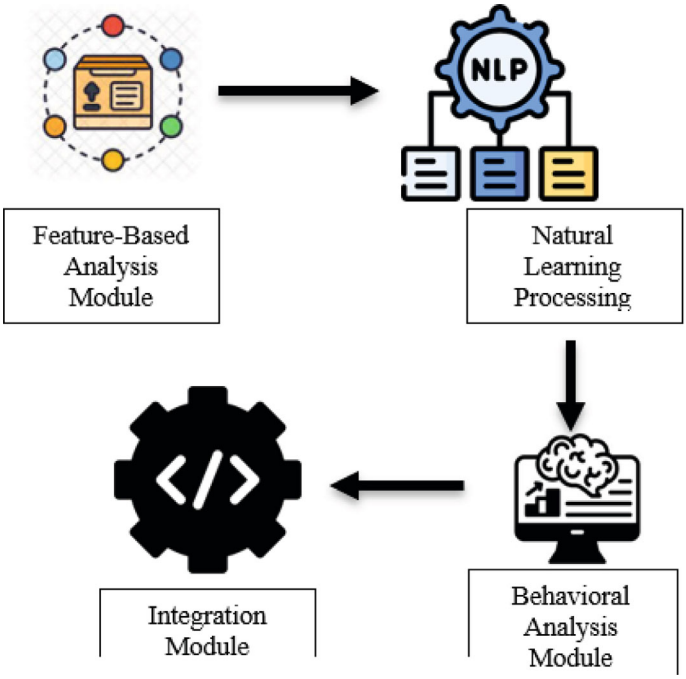

Fig. 1 Phishing email detection

creating a dynamic and resilient system capable of staying ahead of malicious actors in the ever-changing landscape of phishing strategies.

While deep learning models are commonly used in email phishing detection, feature engineering is another technique that can improve machine learning models' performance in identifying phishing emails. Feature engineering involves selecting the most important features to train a model, which can improve its accuracy in detecting phishing emails. For instance, data used for feature engineering should be representative of real-world phishing and benign emails [4]. One way to create a training dataset is through silent prediction emails, which can help identify spammy language and cancel the first prediction [5]. Additionally, a simple language model can be created for this second classification task [5]. Another approach is to use a second language model prediction of the email text to recognize spammy language and cancel the first prediction [5]. The Random Forest model can then make a prediction on an email and determine if the sender is phishing [5]. Furthermore, feature engineering can also use email body text to separate spam and phishing emails even from the same sender, leading to improved accuracy in phishing email detection [5]. Therefore, feature engineering is a powerful technique that can complement deep learning models and improve the overall performance of machine learning models in detecting phishing emails.

4 Feature Extraction

In this section we will discuss about the dataset. We have extracted a set of informative features from the email dataset containing 28,748 instances, each labeled with corresponding email text and email type (Phishing Email or Safe Email). We extracted this dataset from kaggle. The objective of feature extraction is to transform the raw email text into a structured and numerical representation that can be utilized by machine learning models for effective classification.

A. Text-Based Features

The email text is tokenized, and bag-of-words representation is created. This method captures the frequency of individual words within the text, disregarding the order. TI-IDF (Term Frequency-Inverse Document Frequency) is computed for each word in the email corpus. This technique assigns weights to words based on their frequency in a special email relative to their frequency across all emails, highlighting words that are discriminative for a particular instance.

B. Content Structure

Mostly phishing email have well-structured pattern and because of this it is hard to identify if the email is phishing or safe. Some identified email contain hyperlinks, as this is a common element in phishing emails. Phishing email sometimes contain

attachments, considering the potential risk associated with malicious file attachments. Attackers conduct stylometric analysis to identify deviations from normal communication patterns, including writing style, grammar, and sentences structure.

C. Linguistic Patterns

While checking the dataset we detected language inconsistencies or the use of multiple languages within the same email. Using NLP (Natural Learning Process) this include analyzing emotional tone of the email content to identify potentially manipulative or coercive language. The identified specific words or phrases commonly associated with phishing content, such as urgent requests, financial terms, or calls for immediate action.

By employing these features extraction techniques, we captured a comprehensive set of features that could effectively distinguish between phishing and safe emails within the large dataset. These features serve as input to the machine learning models employed in our study, facilitating the development of a robust and accurate phishing email detection system.

5 Experiment Setup

For the experimental setup the dataset was randomly spitted into training and testing sets to ensure an unbiased evaluation of model performance. We allocated 80% of the instances for training and the remaining 20% for testing. Prior to feature extraction and model training, we performed the preprocessing steps on the email text like breaking own the text into individual words, eliminating common and non-informative words and reducing words to their base or root form. These steps aimed to enhance the model's ability to capture relevant patterns within the email content. As described in Sect. 4, we employed a set of text-based, header information, content structure, and linguistic pattern features for each email instance. The feature extraction process resulted in a structured numerical representation suitable for machine learning.

We experimented with multiple machine learning algorithms, including SVM (Support Vector Machine), LSTM (Long Short-Term Memory), Word2Vec, Neural Network, Multinomial Naïve Bayes, Random Forest Classifier. For each algorithm, conducted hyperparameter tuning using techniques on the training set to identify optimal parameter configurations.

A. Support Vector Machine

We converted 'Email Text' into TF-IDF vectors using 'TfidfVectorizer'. This vectorizer is configured to consider a maximum of 1000 features and exclude English stop words. The model is used to make predictions on the set, and the results are evaluated using accuracy, confusion matrix, and classification report metrics. The overall accuracy of the model on the test set is reported as 95%, indicating strong performance. The model achieves a good balance between precision and recall, as

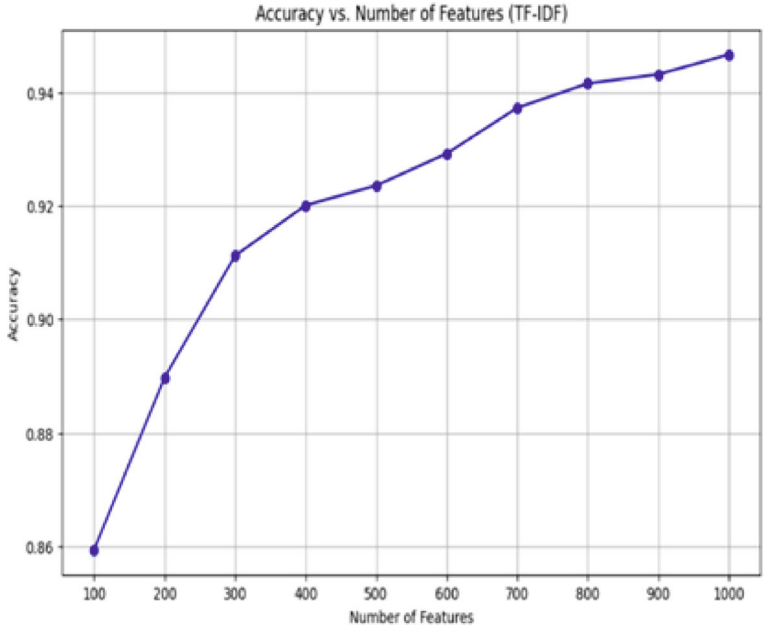

Fig. 2 Accuracy of the model versus number of features

evidenced by the F1-scores. The accuracy of 95% suggests that the SVM classifier effectively discriminative between phishing and safe emails in the dataset. We considered tuning hyperparameters for the SVM model to potentially improve performance further (Fig. 2).

B. Long Short-Term Memory

In Fig. 3 the process of refining the LSTM-based phishing email detection model, we iteratively adjusted key parameters such as the number of LSTM units, dropout rates, and learning rates. Through careful preprocessing and encoding, we trained the LSTM model. The model featuring an embedding layer and LSTM layer, achieved a notable accuracy of 96% on the test set after five epochs. This showcase the impactful role of LSTM-based methodologies advancing phishing email detection, contributing significantly to the cybersecurity landscape.

C. Random Forest Classifier

The overall accuracy of the model on the test set is 96%. This indicates that the model correctly predicted the email type for 96% of the instances. The model's predictions on the test set are evaluated using accuracy, confusion matrix, and a classification report, providing detailed metrics such as precision, recall, and F1-score for each email type. The confusion matrix and classification report offer insights into the model's ability to correctly classify Phishing and Safe mails, demonstrating the utility of the Random Forest approach in this text classification task (Fig. 4).

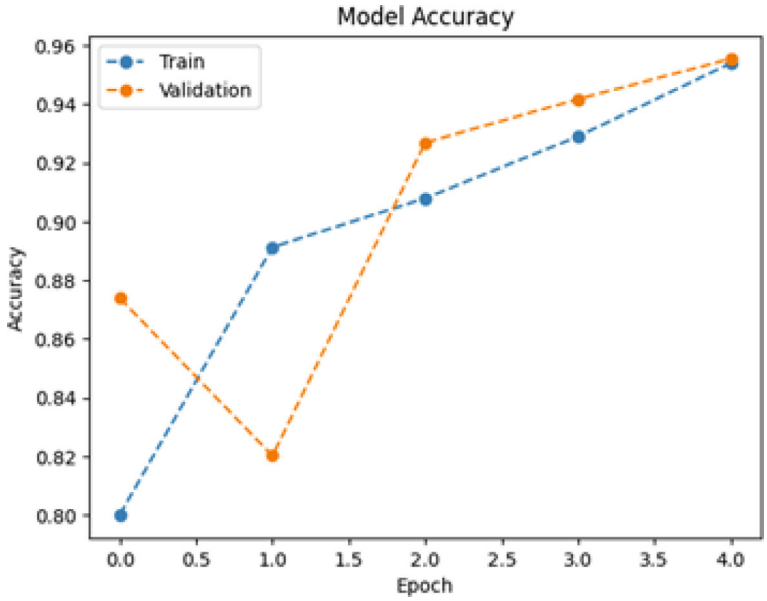

Fig. 3 Model accuracy of LSTM

Fig. 4 Random forest classifier

D. *Multinomial Naïve Bayes*

In Fig. 5 we imported necessary libraries for data manipulation, training, and evaluation. We created a Multinomial Naïve Bayes classifier and trains it on the bag-of-words representations of the training data. After using the trained classifier to predict the email types for the testing data. The model achieves an accuracy of 97%, demonstrating its effectiveness in classifying Phishing and Safe emails. The classification reports provides detailed metrics, indicating high precision, recall, and F1-score for both email types

E. Neural Network

For this section we used tokenizing and padding the text data for input to the neural network. After training Word2Vec embeddings on the training data we created an

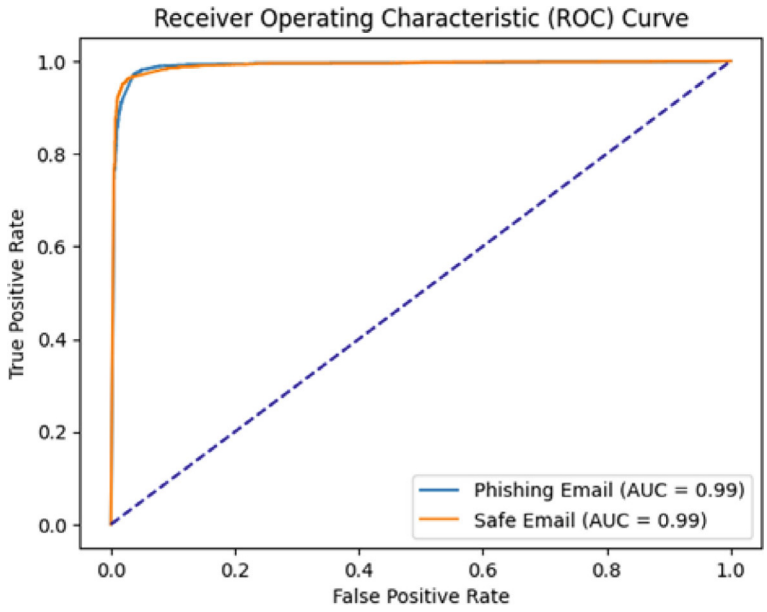

Fig. 5 ROC curve for multinomial Naïve Bayes

embedding matrix using the Word2Vec model. Following further we built a sequential neural network model with embedding layer, flattening, and dense layers. The model was compiled with Adam optimizer and binary cross-entropy loss. The model achieves an accuracy of 92%, demonstrating its effectiveness in classifying Phishing and Safe emails (Fig. 6).

6 Result

Table 1 illustrates the results of the algorithm. The Support Vector Machine (SVM) demonstrated robust performance, achieving a 95% accuracy with balanced precision and recall. On the other hand, the Long Short-Term Memory (LSTM) model excelled with an impressive 96% accuracy, leveraging its proficiency in capturing sequential patterns with email text. Word2Vec embeddings and Neural Network significantly enhanced the model's semantic understanding, contributing to a competitive accuracy of 92%. The random Forest Classifier Exhibited robust performance with a 94% accuracy, leveraging its ensemble nature to handle complex dataset effectively. Multinomial Naive Bayes, with its simplicity and efficiency, demonstrated a competitive accuracy of 97%. A comparative analysis revealed that each method has specific strengths—SVM in handling high-dimensional data, LSTM in capturing sequential patterns, Word2Vec in enhancing semantic understanding, Neural Network in deep

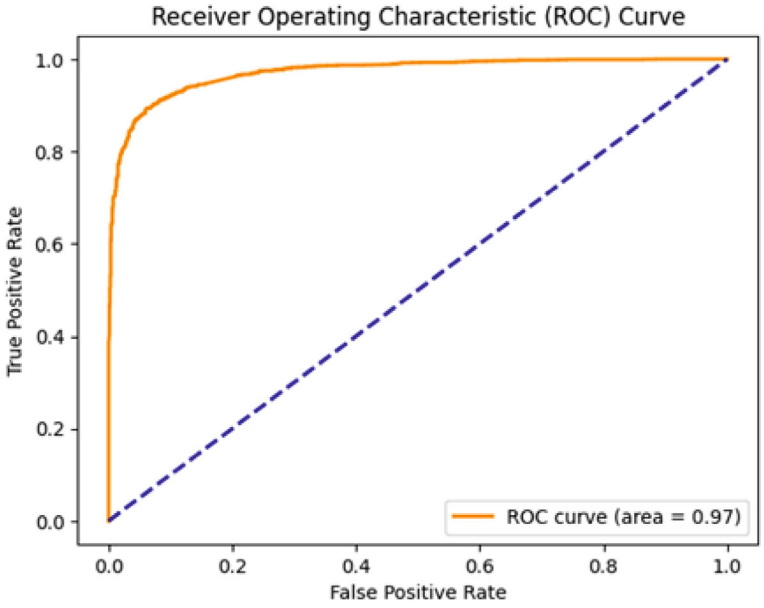

Fig. 6 ROC curve for neural network

Table 1 Result of the algorithms

Algorithm	Accuracy (%)	Precision	Recall	F1-score
Support vector machine	95	0.94	0.95	0.95
Long short-term memory	96	0.97	0.95	0.96
Neural network	92	0.92	0.91	0.91
Multinomial Naïve Bayes	97	0.97	0.97	0.97
Random forest classifier	96	0.96	0.96	0.96

learning, Multinomial Naïve Bayes in simplicity, and Random Forest in managing complex datasets.

7 Conclusion

In conclusion, email phishing attacks pose significant threats to individuals and businesses. By leveraging machine learning, organizations can enhance their email security and mitigate the risks associated with these attacks. The combination of feature extraction, natural language processing, and supervised learning algorithms provides a robust defense against phishing attempts.

As technology continues to advance, future advancements in email security may include the integration of advanced anomaly detection techniques, the use of unsupervised learning algorithms, and the incorporation of real-time threat intelligence. By staying vigilant, adopting best practices, and embracing the power of machine learning, we can unmask email phishing attacks and protect sensitive data from falling into the wrong hands.

8 Future Work

The future of cybersecurity lies in seamlessly integrating machine learning algorithms with human expertise to enhance the accuracy and efficiency of email threat detection. By combining the analytical capabilities of artificial intelligence with the intuition and experience of cybersecurity professionals, organizations can create a robust defense system against phishing attacks. This collaborative approach allows for real-time monitoring and adaptive responses to evolving threats, ensuring that malicious emails are swiftly identified and neutralized before they can cause any harm [5–7]. Through this fusion of technology and human intelligence, the future of email security is bright and promising [8].

Acknowledgements First and foremost I would like to thank the Lord Almighty for His presence and immense blessings throughout the project work. I wish to express my heartfelt gratitude, Head of the Department, School of Computer Science Engineering for much of his valuable support encouragement in carrying out this work. I would like to thank my internal guide, for continually guiding and actively participating in my project, giving valuable suggestions to complete the project work. I would like to thank all the technical and teaching staff of the School of Computer Science Engineering, who extended directly or indirectly all support. Last, but not least, I am deeply indebted to my parents who have been the greatest support while I worked day and night for the project to make it a success.

Legislation on Information Protection and Cybersecurity: Evaluating the Effectiveness of Policies in Addressing Cybercrime

Omar Al Makhzoumi and Abeer Zohair Said Saada

Abstract The objective of this research is to delve into the realm of cybercrime, with a particular focus on examining its concept through legislative, jurisprudential, and judicial lenses. It involves the classification of various forms of cybercrimes, such as attacks on information systems, financial offenses, sexual offenses, and crimes against public security. The research aims to grasp the distinctive attributes of cybercrime, including its ability to remain hidden and its rapid evolution, while also identifying the obstacles faced by security and judicial authorities in confronting these crimes. The findings shed light on the disparities in the definitions of cybercrime across different countries and legal frameworks, underscoring the necessity for a unified international definition. Moreover, the research highlights the wide array of cybercrime types and the challenges arising from their unique nature, such as the swift obliteration of evidence and the lack of technical expertise among authorities. Based on these outcomes, the research recommends the standardization of definitions and legislations pertaining to cybercrime, as well as the enhancement of international collaboration to combat these offenses. It also emphasizes the need to improve technical capabilities and provide technical training to security agencies, while regularly updating laws to keep pace with technological advancements. Lastly, the research underscores the significance of raising awareness and promoting education about the risks associated with cybercrime, along with preventive measures.

1 Introduction

With the rapid progression of technology and the prevalent use of the internet in our current era, the rise of cybercrime has become an ever-growing concern for the security of individuals, economies, and societies as a whole. The landscape of these criminal activities has expanded to encompass various forms, such as information system breaches, financial fraud, cyber blackmail, and invasions of privacy. This emphasizes the pressing necessity to comprehend the scope of these crimes and devise efficient approaches to counteract them [1].

The commission of criminal acts utilizing digital technologies and the internet, commonly known as cybercrime, has a direct impact on both individuals and organizations. These illicit activities possess distinct attributes, including the capacity to mask the identity of the offender, the constant evolution of techniques employed, and the arduousness in tracing relevant evidence. As a result of these distinctive qualities, law enforcement and security agencies encounter substantial obstacles when it comes to combating these offenses and minimizing their consequences.

With the information presented, the objective of this study is to delve into the realm of cybercrime, examining it from various angles such as its definitions, classifications, and challenges. The study aims to present a thorough examination of how different legal frameworks address these crimes, while also proposing suggestions for efficient management. By scrutinizing existing literature and analyzing real-life scenarios, the study aspires to offer fresh perspectives that can bolster endeavors to combat cybercrime and safeguard individuals and communities against its detrimental effects.

1.1 Study Objectives

This study aims to achieve the following objectives:

- Analyze the concept of cybercrime from a legislative, jurisprudential and judicial perspective in Jordan and other countries, focusing on the development and differences in these definitions.
- Classify types of cybercrime, including attacks on information systems, financial crimes, sexual crimes, and public security crimes, with illustrative examples of each type.
- Explore the distinctive features of cybercrime, such as stealth, rapid evolution, and the challenges of proving these crimes.
- Review the difficulties security and judicial authorities face in prosecuting cybercrime, including the rapid disposal of evidence, lack of expertise and insufficient regulation.

1.2 Methodology

By utilizing a comparative methodology, the study aimed to shed light on the distinctions and similarities in cybercrime legislation between Jordan and other nations. This approach allowed for a comprehensive understanding of how each legal system tackles these issues, enabling us to offer recommendations based on global best practices. To analyze various perspectives on cybercrime, the study employed an analytical approach, examining legal and research literature to identify the most influential and well-founded viewpoints. Additionally, a descriptive approach was taken to provide an intricate portrayal of the application of laws and judiciary practices in this domain. This comprehensive analysis not only supported theoretical concepts but also assessed the practical implementation of laws and their effectiveness in combating cybercrime.

2 Nature of Cybercrime

The internet's extensive utilization has given rise to a fresh breed of criminal activity, taking place in the thriving and advancing digital realm, employing innovative methods and strategies. Cybercrime is referred to by multiple labels and descriptions, encompassing computer offenses, computer misuse, digital criminality, information-based criminal acts, electronic misconduct, and internet-related crimes. Below is a detailed presentation of the concept of cybercrime:

Legislative Definition of Cybercrime

In the Cybercrime Law No. (27) of 2015, the Jordanian legislator chose not to provide a specific definition for cybercrime. Rather, the law focuses on the criminalization of specific actions that have an impact on information systems, websites, and electronic networks. It also addresses the use of electronic methods to commit certain offenses, as outlined in Articles (3–12). The responsibility of defining cybercrime is left to the interpretation of legal experts and the judicial system.

According to Article (8/1) of the Information Network System in Saudi Arabia, cybercrime is defined as any action that involves the utilization of a computer or information network in contravention of the regulations outlined in this system. Similarly, in Texas, the American legislature has defined computer crimes as the unauthorized utilization of computer systems or data files in Law No. (1213) of 1986 [2].

According to Article 1 of the Cybercrime Law No. (14) of 2014 in Qatar, the Qatari legislator provides a definition for cybercrime as any unlawful utilization of information technology, an information system, or an information network that contravenes the regulations outlined in the law.

The researchers assert that it would be unfair to fault the Jordanian legislator for the absence of a specific definition of cybercrime, as the responsibility for defining

such terms lies within the realm of legal doctrine rather than legislative action. Consequently, it would be unjust to deem the Jordanian legislator lacking in their failure to provide a definition for cybercrime.

Jurisprudential Definition of Cybercrime

The concept of cybercrime is defined differently in various legal systems. In one perspective, it is described as the unlawful utilization of a computer to accomplish illicit goals [3]. However, another viewpoint characterizes cybercrime as any offense that involves electronic means, such as information systems, networks, or websites, including crimes committed through these mediums [4].

One viewpoint characterizes cybercrime as the commission of illegal actions that necessitate substantial understanding and proficiency in computer technology to carry out and accomplish [5]. An alternative definition portrays cybercrime as the perpetration of unlawful acts with the intention of modifying, replicating, erasing, or gaining access to stored computer data [6].

According to the researchers conducting this study, the term 'cybercrime' serves as an umbrella term encompassing all crimes committed within the realm of computers and the internet. This inclusive term not only covers a wide range of criminal activities in the digital space but also adapts to incorporate advancements in information technology and the ever-evolving methods and tools used to perpetrate these crimes.

The researchers suggest that cybercrime can be described as engaging in activities that are deemed criminal under the law, wherein a computer system is utilized to execute said activities, with the intention of gaining unauthorized access to electronic information and data using various methods or techniques related to information technology."

Judicial Definition of Cybercrime

The Jordanian Court of Cassation emphasized the unique nature of cybercrime, which has evolved alongside scientific and technological advancements that enable the creation of manipulated images and videos. To ensure the pursuit of truth in the court's proceedings, it was crucial to carry out the necessary technical expertise through the cybercrime department. Unfortunately, the Public Prosecutor failed to conduct this essential analysis, resulting in a lack of conclusive legal evidence to establish the defendant's guilt in the charged crime of indecent assault as defined by Article (296/1) of the Penal Code. Consequently, the court was compelled to declare the defendant's acquittal due to the absence of proof [7].

Upon careful examination of the aforementioned decision made by the Court of Cassation, it becomes apparent that this particular text cannot be deemed as a conclusive legal definition of cybercrime. This is due to the fact that it lacks a precise delineation of the actual cybercrime, focusing solely on the evidential process. Consequently, it can be inferred that there is currently no established judicial definition for cybercrime.

2.1 Types of Cybercrime

Cybercrime, like other types of crime, encompasses a wide range of forms and objectives. Researchers and legal scholars have categorized cybercrimes into various types, all of which involve criminal activities carried out using electronic methods. These include:

First: Crimes Against Information Systems, Devices, and Networks

Acts of wrongdoing are perpetrated against the intangible aspects of computer systems, specifically information and data. Instances of such misconduct encompass activities like infiltrating computers or networks, developing viruses that propagate through computer networks and the internet, as well as offenses involving the sabotage or disturbance of systems and data [8].

Unauthorized access is a prevalent offense within this classification, encompassing acts that target computer data or services with the intention of compromising content, confidentiality, or disrupting system functionality and effectiveness. The commission of this crime entails physically entering the computer's logical components with the purpose of gaining access, while the perpetrator's criminal intent, demonstrated through their knowledge and will, constitutes the moral aspect of the offense, as it is an intentional act [9].

Cybercrimes encompass a range of malicious activities directed towards information systems. These activities involve targeting websites on the World Wide Web and manipulating them in various ways, such as deleting, adding, disclosing, destroying, blocking, altering, modifying, changing, transferring, or copying information or data. Additionally, cybercrimes include actions that disrupt the functioning of an information system, tamper with websites, destroy or cancel them, modify their content, or engage in impersonation of their owners. All of these acts have detrimental effects on others and are classified as cybercrimes [10].

The Trojan Horse virus, a highly infamous internet virus, wreaked havoc on numerous internet users, resulting in substantial damage. Its target was four countries: Norway, England, Denmark, and Sweden. This malicious virus infiltrates users' systems via electronic programs and coerces them into paying $378 to prevent the virus from spreading to other devices. Failure to comply will result in the destruction of their computer's files and data [11].

Second: Crimes Affecting Money and Communications

This category of crimes encompasses the unlawful acquisition of money, programs, data, and electronic services. The physical aspect of these offenses involves the act of taking someone else's movable property, while the mental aspect involves the intention to obtain and retain the stolen money, data, programs, or services [12].

Online gambling is a prevalent form of financial cybercrime, with countless websites offering dedicated platforms for users to partake in gambling activities. These virtual clubs provide individuals with the opportunity to gamble online.

Notably, the United States allocates a significant amount of money, around one billion dollars each year, towards this form of entertainment [13].

Money laundering online is a significant financial offense that frequently stems from illicit activities such as drug trafficking, gambling, and the sex trade. This particular crime encompasses various actions, including but not limited to stock market speculation, real estate transactions, and the acquisition of gifts and antiques. It is challenging to provide an exhaustive list of all the activities involved [14].

Crimes within the realm of communications can encompass the deliberate targeting of telephone and internet connections. These criminal activities may involve the falsification of telephone line cards or the illicit extraction of phone numbers and recharge cards belonging to telecommunications companies. Consequently, individuals unlawfully obtain these numbers without the knowledge or consent of the companies that rightfully possess them [15].

Third: Crimes Against Individuals and Sexual Crimes

Online sexual crimes involve two key elements: the material element and the moral element. The material element pertains to the publication of explicit content on a website, while the moral element focuses on the perpetrator's intention to distribute said material, fully aware of the consequences. The objective of this type of crime is to inflict harm on individuals and undermine their social standing. The material element encompasses observable conduct that occurs in public view.

The exploitation of children through online sexual crimes is an extremely perilous phenomenon. Specialized platforms actively seek to entice and ensnare children in traps involving sexual exploitation and prostitution. They accomplish this by utilizing various channels such as social media, chat platforms, and messaging services [18].

Articles 9 and 10 of Jordan's Electronic Crimes Law No. 27 of 2015 specifically tackle the issue of these offenses. These provisions encompass various actions related to pornographic content, such as its promotion, publication, and display. The Jordanian legislature has placed particular emphasis on the potential effects of pornographic material on individuals below the age of eighteen.

Fourth: Public Security Crimes and Human Trafficking

With the proliferation of computers and the advancement of the internet, a new form of warfare has emerged, commonly referred to as cyber warfare. This type of warfare entails one nation infiltrating another in order to acquire sensitive information pertaining to security, military operations, and economic affairs. It is worth noting that the internet, initially developed by military establishments, contains a wealth of military-related content, particularly in regards to state affairs and military affairs. Consequently, cyber espionage has become a prevalent form of electronic criminal activity, specifically targeting military and security-related information [19].

Cyber espionage, a prominent form of criminal activity that poses a significant threat to security, revolves around the perpetrator utilizing electronic systems to breach a digital repository of classified data. This unauthorized access enables them to not only view but also duplicate the information contained within. The ethical

aspect of this crime encompasses both a general intention to cause harm and a specific intention to inflict damage upon the state [20].

There has been a revelation concerning human trafficking, as it has come to light that organized criminal groups are involved in the despicable act of white slavery. These groups orchestrate transactions involving girls from developing nations and Eastern Europe, subjecting them to exploitation for the purposes of pleasure and sexual exploitation. They even go as far as distributing catalogs containing photographs, details, and prices of these girls, and once agreements are reached, meetings are arranged, resulting in the generation of millions of dollars from these illicit operations [21].

3 Special Nature of Cyber Crimes

The rise of cybercrime can be attributed to the progress made in technology, making it a distinct form of criminal activity. Unlike traditional crimes, cybercrime presents new and unique characteristics that were previously unfamiliar to society. In order to provide a comprehensive understanding of this phenomenon, the following section will be divided into two subsections.

3.1 Proving Cybercrime

The task of establishing the occurrence of cybercrime is fraught with difficulties due to its inherent characteristics. These challenges encompass its concealed nature, the rapidity with which it is carried out, its comparatively lesser degree of violence in execution, and its ability to transcend borders. All of these elements present formidable barriers when it comes to providing evidence for cybercrime.

The term "electronic evidence" refers to information that is obtained through lawful and scientific means by extracting stored computational data from computers and networks. This evidence, which is deemed credible and reliable, is utilized in investigations and court proceedings to establish an individual's culpability in the commission of a crime [22].

Digital evidence, in its various forms including images, written texts, sounds, and graphics, serves as a crucial element in establishing a legally admissible connection between the crime, the victim, and the perpetrator. The definition of digital evidence provided by the Egyptian Electronic Signature Law, specifically in Article 1(b), describes it as an electronic document comprising data messages that have been generated through electronic, digital, optical, or similar methods. In this regard, there are two points to address:

Concealment of the Crime

Cybercrime is marked by its ability to hide and blend in, making it difficult for victims to detect while they are online. The cybercriminals possess advanced technical abilities that allow them to execute their crimes with utmost accuracy. They can discreetly steal and erase data, covertly monitor information, and surreptitiously pilfer money and communications, all without the victim even realizing a crime has taken place. This illicit activity is carried out through the covert manipulation of electronic signals and pulses that store data, requiring the criminal to possess expertise and knowledge in this specialized field [23].

The rapid growth and progression of knowledge and technology in cyberspace have resulted in a noteworthy phenomenon: cybercrime is evolving and advancing at a rate that surpasses legislation. On one side, there is the swift development of technology, while on the other side, cybercriminals convene conferences where they devise intricate techniques and tools. This necessitates constant updates to legislation in order to effectively combat cybercrime [24].

The researchers assert that legislative reforms must align with the rapid progress of scientific advancements. As technology takes one step forward, legislation should take ten steps forward to keep up. It is imperative for lawmakers to stay informed about the latest advancements in communication and information technology, particularly those stemming from the internet. In today's world, it is crucial to have experts in modern software who can provide guidance and support to legislators as they introduce or modify laws. This ensures that legal authority remains effective and does not fall behind the ever-evolving landscape of cybercrimes [25].

Speed of Commission

The perpetration of cybercrime does not demand extensive exertion or the use of force; instead, it can be accomplished with minimal effort and without any physical strain, unlike conventional crimes like theft, assault, murder, or breaking into premises. This form of crime operates silently, avoiding any acts of violence, and necessitates only a decent understanding of computers and information technology to engage in unlawful activities. All that is required is access to the internet and a knowledgeable criminal who can effectively exploit it [26].

The boundaries of information transfer between nations have become intangible and imperceptible. Thanks to the advancements in computer technology and the internet, it is now possible to seamlessly exchange and transmit massive quantities of data and information across different systems in various countries. This occurrence can impact numerous individuals simultaneously [27]. The repercussions of cybercrime extend far beyond the immediate target, encompassing ethical, religious, educational, and economic ramifications for others. As a result, countries have implemented international agreements to counter this menace [28].

3.2 Difficulties in Prosecuting Cybercriminals

Individuals who possess extensive knowledge of computer systems and expertise in electronic matters are commonly referred to as cybercriminals. These individuals engage in cybercrime, which involves the manipulation of data and information using technical skills and techniques. This type of criminal activity is often referred to as "smart crime" due to its reliance on advanced technological know-how [29]. Cybercriminals can be categorized into two distinct groups based on their intentions and capabilities:

1. **User Cybercriminals**: Those who possess a solid comprehension of computers and software sometimes engage in cybercrimes for the purpose of demonstrating their abilities or for personal entertainment, with no intention of monetary gain.
2. **Programmer Cybercriminals**: Individuals with high expertise in breaching computer systems and networks with relative ease [30].

Firstly: Speed of Evidence Erasure and Technological Barriers to Access

The transmission and storage of information and data through the internet involve encoding and storing them in formats that are exclusively readable by computers. However, accessing this information poses a significant challenge and necessitates the expertise of specialized professionals who meticulously analyze extensive quantities of data, information, and stored records to track down evidence against the offender [31].

Specialized software allows for the swift eradication of cybercrime evidence from a computer system, as the perpetrator can rapidly issue commands. If detection is suspected, these commands can be easily canceled, posing a significant challenge in identifying and exposing the offender [32].

Secondly: Lack of Expertise Among Security and Judicial Authorities and Insufficient Existing Laws

Dealing with cybercrimes necessitates the utilization of specialized investigative techniques and strategies. Relevant authorities frequently lack the necessary technical expertise, highlighting the need to enhance security and judicial systems in order to effectively combat cybercrimes. Traditional legal frameworks often prove insufficient in addressing these offenses, underscoring the importance of regularly reviewing and revising laws to keep pace with the evolving tactics employed by cybercriminals [33].

Thirdly: Victims' Reluctance to Report

The act of not reporting cybercrime is a common occurrence, often resulting from either the difficulty in detecting such crimes or the fear experienced by victims who are reluctant to bring attention to themselves and risk damage to their reputation. This issue is especially prevalent within financial institutions, as they may be hesitant to report these crimes out of concern for the potential negative consequences it may have on their standing and the trust of their customers [34].

In criminal cases, both the French and Egyptian legislators have placed significant importance on the judge's personal conviction. This emphasis is evident in Articles 427 and 536 of the French Code of Criminal Procedure and Article 302 of the Egyptian Code of Criminal Procedure of 1950. Unlike civil judges, criminal judges are entrusted with the responsibility of carefully examining and assessing the credibility of evidence, free from any interference by the legislative branch [35].

Article 54 of the Jordanian Civil Code acknowledges the significance of cybercrime and its implications. It explicitly states that any entity or asset that can be legally owned and utilized, without violating any laws or regulations, falls within the realm of transactions. This encompasses financial rights associated with cybercrimes. The objective of this provision is to deter offenders from escaping accountability by asserting that data and information lack monetary worth or are not deemed economically valuable by the legislator [36].

4 Conclusion

To sum up, this research emphasizes the significance of addressing cybercrimes from a comprehensive legal standpoint. The study has effectively showcased the need for a well-rounded legal approach to tackle the challenges posed by cybercrimes, transcending national boundaries and requiring the establishment of local laws that align with global standards. Through the utilization of comparative, analytical, and descriptive methodologies, we have successfully identified the strengths and weaknesses of existing legal frameworks and put forth practical recommendations to enhance strategies in combating these crimes. Achieving effective outcomes in this domain necessitates collaboration between legal and legislative bodies, alongside heightened public awareness and the development of legal techniques to keep up with rapid technological advancements.

4.1 Findings

The study concluded with the following findings:

- Due to differences in countries and legal systems, the definition of cybercrime varies, highlighting the necessity for a comprehensive and universally accepted international definition.
- Cybercrime encompasses a diverse range of types, such as attacks on information systems, financial fraud, sexual offenses, and crimes against public security.
- Traditional methods often struggle to trace and prove cybercrime due to its unique traits of invisibility and rapid evolution, which pose significant challenges.

- The study brought attention to notable obstacles encountered when prosecuting cybercrimes, such as the swift deletion of evidence, insufficient technical knowledge within security agencies, and the insufficiency of existing legislation.

4.2 Recommendations

Based on the findings, the study recommends the following:

- Harmonize the definition of cybercrime and improve coordination between countries to develop standardized laws that effectively combat cybercrime.
- Improve technical training and qualifications of security and judicial authorities to deal with cybercrime and develop new techniques for tracking crimes and documenting evidence.
- Regularly review and update cybercrime laws to keep up with technological advances and new techniques used by criminals
- Increase awareness and education among individuals and organizations about the threats of cybercrime and how to protect and prevent yourself.
- Strengthen international cooperation between countries and institutions to combat cybercrime, including the exchange of information and expertise and the coordination of investigations.

Semantic Ambiguity in BBC and CNN News Papers Headline

Wafa Abu Hatab, Sarah Al-Refai, and Mohammed Al-Badawi

Abstract The purpose of this research was to examine the use of ambiguity in newspaper headlines, specifically focusing on the headlines of BBC and CNN. A qualitative and descriptive approach was employed to identify the different types of ambiguity present in the headlines. The data collection technique involved collecting news headlines from the online versions of BBC and CNN, resulting in a total of 13 headlines. To classify the ambiguity, the researcher utilized Kreidler's theory (1998). The findings revealed that lexical ambiguity was the most prevalent type of ambiguity in the news headlines, with 11 out of the 13 headlines containing this type. Additionally, 5 headlines exhibited homonymy, while 6 headlines demonstrated polysemy. The remaining 2 headlines displayed syntactic ambiguity, specifically surface structure ambiguity.

Keywords Lexical · Semantics · Words · Ambiguity · Polysemy · Homonymy

1 Introduction

Language serves as a means of everyday communication, allowing us to convey specific meanings to ensure mutual understanding. When engaging in conversation, it is crucial that we are able to comprehend and gather information from our interlocutors, thus avoiding any potential misunderstandings. Language functions as a

sign system based on sound, with each sign representing a concept, idea, thought, or understanding.

Just like telegrams, news headlines serve as a navigational tool, directing readers towards specific information. They not only provide a concise summary of the news article but also aid readers in understanding its underlying significance. Editors strategically choose certain headlines to emphasize particular aspects or highlight noteworthy situations.

The primary goal of a news headline is to captivate readers and encourage them to delve further into the article. Whether it's addressing a specific question, offering a resolution to a problem, or presenting a notable advantage to the reader, the words chosen by headline writers play a crucial role. It is essential for the headline to be self-contained, delivering its message effectively.

The utilization of ambiguity by news headline writers serves multiple purposes, including generating comedic effect, captivating readers' focus, and fostering intrigue.

The utilization of ambiguity can serve as a means to communicate information indirectly, thereby potentially impacting the reader in a positive manner. However, it is important to note that certain perplexing news headlines have the potential to be misleading, leading to confusion and hindering readers from fully comprehending the intended message. Consequently, this may result in the reader opting not to proceed with further reading [1].

In order to captivate readers and maintain their engagement with the content, it is crucial to identify and eliminate any forms of ambiguity that may confuse them. While individuals can easily seek clarification from a speaker when faced with difficulties in comprehending spoken or written sentences, incorrect wording can lead to misinterpretation by the reader. This issue is particularly evident in newspaper headlines, where the editor employs homophones, homographs, and specific sentence structures to create catchy titles that provide a glimpse into the article's content. However, headlines must be concise and composed primarily of lexical words such as nouns, verbs, and adjectives. Unfortunately, these factors contribute to the presence of ambiguity, causing readers to experience confusion [2].

The researcher's focus was on investigating the utilization of ambiguity within headlines.

1.1 Statement of the Problem

The headline of a news report holds immense significance, serving as a vital element in conveying information. Journalists employ ambiguity, whether intentional or unintentional, when crafting these headlines.

Ambiguity, a widespread issue in language, is particularly prevalent in English, one of the world's most influential languages, manifesting in both oral and written communication. The semantic complexities of ambiguity lie in the potential for

multiple understandings of specific linguistic expressions used by speakers or heard by listeners, encompassing words, phrases, and sentences [3].

Indicating the forms of ambiguity that captivate readers and compel them to continue reading is crucial, as uncertain headlines have the potential to deter readers from engaging further. This discouragement extends beyond just the initial news headline, but can also impact their willingness to peruse the entire newspaper.

The absence of any research exploring the specific types of ambiguity that can pose challenges to readers and deter them from engaging with the text is noteworthy. Understanding and categorizing these types of ambiguity is crucial as it can offer valuable insights and guidance to news headline writers.

1.2 Objective of Study

The ultimate goals of the present work are:

1. To identify the types of ambiguity
2. To find out the dominant types of ambiguity used in the headlines of CNN and BBC news.

1.3 Questions of the Study

1. What are the types of ambiguity?

What are the dominant types of ambiguity used in the headlines of CNN and BBC news?

1.4 Limits of the Study

This study conducted in Jordan-Zarqa during the second semester 2022.

2 Literature Review

2.1 Theoretical Framework

In this study, the principles of data analysis are guided by Kreidler's theory [4], which introduces the concept of ambiguity. This phenomenon provides clear classifications and terminology that facilitate the researcher's data processing efforts [5].

Semantics

Semantics, as defined by Crystal [6], is a significant field within linguistics that focuses on the examination of meaning in language (p. 428). Kreidler [4] further explains that linguistic semantics explores how languages structure and convey meaning, while semantics itself is the scientific investigation of meaning. Saeed [7] offers a slightly different perspective, defining semantics as the study of words within sentences. Riemer [8] adds to this understanding by describing semantics as the analysis of fundamental units of meaning that cannot be deconstructed conceptually.

According to the Longman Dictionary of Contemporary English, semantics is the field that focuses on understanding the meaning of words and phrases. Therefore, the primary objective of semantic research is to study and analyze meaning, as evident from various definitions provided earlier.

The study of semantics revolves around deciphering the significance conveyed by linguistic expressions. Moreover, semantics must possess the capacity to delineate the meaning of any given language expression, taking into account various factors such as context and the interplay of meaning attributes or relationships. Due to the intricate nature of meaning and its multifaceted dimensions, a comprehensive definition would prove unattainable.

Ambiguity

Upon encountering texts that incorporate the term "ambiguity," we possess the ability to discern its intended significance within that particular context. However, in the absence of contextual clues, the full spectrum of meanings associated with the word becomes apparent, leaving us unable to ascertain the appropriate interpretation. It is widely agreed upon that we should rely on words that adhere to established conversational norms, as they possess a certain allure. The utilization of specialized writing languages can give rise to confusion, as the conveyed meaning may not always align with the author's intended message. Consequently, this discrepancy fosters the emergence of ambiguous interpretations [9].

Ambiguity arises from the presence of both literal and figurative meanings within a linguistic form. The focus of this study is on the theory of ambiguity within the realm of language semantics. Consequently, it can be inferred that ambiguity is a linguistic phenomenon that can manifest in various forms. The usage of specific words in particular contexts or conditions gives rise to different interpretations [10].

From the preceding statements, it can be deduced that recognizing the significance of semantics holds great importance for researchers. The comprehension of phrases heavily relies on the establishment of meanings. Various concerns arise when it comes to understanding meaning, with the connection between words being a prominent aspect to consider.

According to Crystal [6], ambiguity is a term employed in the field of linguistics to describe a word or statement that possesses multiple meanings, making it unclear. However, there are different types of ambiguity to consider. The most extensively examined form is grammatical or structural ambiguity.

According to Hurford and Heasley [11], when a word or sentence is open to interpretation, it can be understood in various ways. Ambiguity, a concept related to the flexibility of translation, allows for multiple meanings. Language relies on grammar to convey this information. Ambiguity arises when a word or phrase has more than one meaning and is characterized by systematic pairs of meanings.

A word or phrase is considered ambiguous when it has multiple interpretations. If a sentence contains two or more meanings that are not mutually exclusive, it is deemed ambiguous. Certain scholars of semantics adhere to a definition of a "sentence" that prohibits ambiguity. According to these scholars, a sentence holds significant coherence.

There are two distinct categories of ambiguity, as outlined by Ovu [12]: lexical ambiguity and syntactical ambiguity. Similarly, Hurfod and Heasley [11] provide further clarification by identifying the two types of ambiguities: syntactical ambiguity and lexical ambiguity. Lexical ambiguity, which encompasses both homonymy (unrelated sense) and polysemy (related sense), is a key component.

2.2 Previous Studies

In a study conducted by Khalifa [13], the aim was to examine the various forms of ambiguity—lexical, syntactic, and pragmatic—that compel readers to engage with headline news stories. The methodology involved distributing a questionnaire to 100 readers, with the objective of determining their ability to identify different types of ambiguity within 25 news headlines [14]. Additionally, the researcher investigated the psycholinguistic impact of these ambiguity types. Through the questionnaire, insights were gained into the readers' inclination to continue reading despite encountering ambiguous headlines. It was discovered that pragmatic ambiguity was the most easily comprehensible type from the readers' perspective. Furthermore, readers exhibited a greater tendency to read headlines with lexical ambiguity compared to other types.

The researcher failed to address the procedures implemented in the methodology, leaving a gap in this research. Additionally, the validity of the questionnaire was not mentioned by the researcher. Lastly, there was a deficiency of prior studies in the literature reviewed by her.

The findings of previous studies indicated that lexical ambiguity is more prevalent compared to other types of ambiguity. This current research provides a more comprehensive analysis, utilizing Kreidler's [4] classification to categorize different forms of ambiguity. Furthermore, the researcher employed a descriptive qualitative design as the methodology for this study, following the approach used by Taufiqoh [15].

Ambiguity, according to Fitri [16], falls under the classification outlined by Saeed [7] and Kreidler [4]. The methodology employed in this research mirrors that of Taufiqoh's 2017 study. The results of this research indicate that lexical ambiguity

is predominantly utilized and evident in news headlines. However, a notable shortcoming of this research is the complete omission of addressing the research questions. Furthermore, the organization of information in this study is lacking, and the researcher failed to incorporate previous studies.

Certain studies have demonstrated a failure to include an abstract, neglecting to provide crucial information. The researcher omitted any mention of the data analysis method employed. Additionally, the research questions were not addressed by the researcher [17].

The purpose of this study was to examine how readers respond to the ambiguity of language in cosmetic advertisements. However, the results of the study were inconclusive as the researcher did not provide sufficient discussion or presentation of the findings [18].

In order to identify ambiguities in the headlines of the Indonesian news website Jakarta Post and the American news website New York Times, this study employed descriptive qualitative methods. By utilizing Ullmann's theoretical framework (1977:156), it was determined that a total of 30 ambiguities were present in the headlines of both publications. Specifically, the Jakarta Post had 18 ambiguities, with 11 lexically ambiguous headlines and 7 grammatically ambiguous headlines. On the other hand, the New York Times had 12 ambiguous news headlines, consisting of 10 lexically ambiguous headlines and 2 grammatically ambiguous headlines [19].

In a descriptive qualitative study conducted by IRAWAN [20], an analysis was performed on The Jakarta Post articles to identify instances of ambiguity, specifically in the form of ambiguous words, phrases, and sentences. The study revealed the presence of two distinct types of ambiguity within the articles: lexical ambiguity and grammatical ambiguity. Among the data collected, 8 instances of lexical ambiguity were identified. Additionally, out of a total of 23 instances, 15 cases of grammatical ambiguity were observed [21].

3 Methodology of the Study

This chapter includes the methodology and the technique the researcher used in the study. Also, it shows the steps taken to accomplish the study's objectives. In addition to the instrument used to address the three main research questions:

1. What are the types of ambiguity?
2. What are the dominant types of ambiguity used in the headlines of CNN and BBC news?

For this study, a descriptive qualitative approach was employed. In order to address the research inquiries, news headlines were gathered from the online editions of BBC and CNN news. The data collection technique utilized the documentation method, which was chosen due to the fact that the data consisted of written sources.

In the process of data collection, the researcher adhered to a series of steps. Initially, the researcher conducted a comprehensive search of news headlines across

various fields. Subsequently, a specific headline was selected for analysis. The third step involved thoroughly reading the chosen headlines. Finally, the researcher identified and highlighted any words within the headlines that exhibited ambiguity.

3.1 Research Instrument

The researcher used books to understand the types of ambiguity. In addition she used dictionary as an instrument to support the data which are needed from the BBC and CNN ambiguous news headlines.

4 Data Analyses and Findings

4.1 Data Analysis

The researcher followed a systematic approach to analyze and interpret the data in a qualitative and descriptive manner. Firstly, she categorized the words and phrases in news headlines that displayed ambiguity. To ensure accuracy, she consulted the Longman dictionary to determine their meanings. Secondly, the researcher organized the identified words and phrases according to Kreidler's [4] theory, which classifies ambiguity into three types: lexical, syntactical, and referential. Lastly, she conducted a thorough analysis and interpretation of the words and phrases that exhibited ambiguous meanings.

Various types of ambiguity used in news headlines include:

1. Lexical ambiguity

   (a) Homonyms are unrelated senses of the same phonological word. The example of homonym found in CNN headlines:

   1."Record numbers of women are **running**, but how many can win?"

   Here the word running is ambiguous under homonyms type, because it can be interpreted into two unrelated senses. Based on Longman dictionary running means "the action or sport of running", "the activity of managing or operating something". So here the word running could mean both of them.

   (b) "It's time revisit Donald Trump's **battery** theory of life force"

   The battery means "a device that produces the electricity that makes it works" but in this case it means or refer to the weapon that Trump having. It consider ambiguous under homonyms because based on the text the meaning completely different.

   (c) "Treasury secretary Janet Yellen's words of inflation will not end America's price **hikes**." Here the word hikes if we referred to the Longman dictionary we will find that it has two different meaning. The first meaning is "a long

walk in the country" the second one "a large or sudden increase in prices, costs". So depending on the context that the word hikes used on it will refer to the second meaning.

(d) "I have learned how to **survive** with a bow and arrow."

Here this word identified lexical ambiguity. Referring to Longman dictionary it classified as homonymy and it has more than one interpretation. It means, "To continue to live after an accident", "to continue to live normally in spite of many problems". So, this sentence considers ambiguity, homonymy because it can consider as survive to live with family and also survive after near the death. Differ in meaning the same in phonological.

(e) "The titles are Frankfurt Motor Show: **Love**, hate, and electric cars"

The meaning of the term "love" is ambiguous. Because the meaning is different yet the phonological is the same in sound, it is characterized as lexical ambiguity as a homonym. The homophone and homograph of the word love are similar, but the meaning is different. The meaning of this word in Longman dictionary, "to have a strong feeling of affection for someone", "to care very much about someone" "to have a strong feeling of loyalty to your country or institution". The meaning of love here is ambiguous but we can guess that it refers or related to like something.

2. Polysemy: used when a word has distinct but related meanings. Here are some examples of polysemy found in CNN headlines:

(a) "Why our **fight** in Ukraine is yours too."

Here the part of speech for the word fight is verb; in this case it means a disagreement with something and to keep fighting for something. So, this is the suitable meaning because they want all of people fight with them and it comes in a verb situation. Different meaning share the same senses.

(b) "Washington University in St. Louis basketball **star** passes away from stomach cancer aged 22"

Based on the context the word star has the basic meaning as Noun. Referring to Longman dictionary means "a large ball of burning gas in space that we see as a point of light in the sky at night." But in this sentence the word star has the nearly meaning but in different way, it refers to a famous and excellent sports player.

(c) George Russell 'on a level playing **field'** with Lewis Hamilton at Mercedes"

Based on this sentence the word field considered polysemy which has different meaning depending on the context. In this context showed a competition. Referring to Longman dictionary it means, "An area of land used for the purpose", "An area of land used for playing a sport on."

(d) Jeremy Corbyn urges stronger **ties** with all EU nations"

The word ties here showed the literal meaning string. But also has different meaning but same sense, means strong connection, relation between organizations.

(e) A growing number of Americans are now learning hunting"

The word growing classified as polysemy because it refer or has multiple meaning and used in different context. The word growing can be taken as an increase in the number of Americans who are learning to hunt. In other cases, the connotation is different yet connected.

(f) Then corona virus **hit** at the start of last year"

The highlighted word hit has an ambiguous meaning, and because it has several meanings, it is characterized as lexical ambiguity in polysemy. The verb hit means "to touch something," whereas the noun hit means "bad effect on a person or thing." As a result, "corona virus touches something at the start of last year" and "corona virus has a negative effect at the start of last year" might be understood as "corona virus touches something at the start of last year." The second meaning, 'corona virus causes a negative effect that began last year,' is appropriate for the sentence given the context. As a result, the term hit is polysemy since it has several meanings and is employed in various contexts.

3. Syntactic ambiguity:

Sentences have more than one structure. Based on Kreidler theory it consists of:

(a) Surface Structure Ambiguity: the words cluster together in more different ways.

A coordinate head with one modifier: A coordinate head is made up of two words that are linked together by the conjunction 'and.' because there were some additions that changed before or after it, it will be unclear.

"Stop and search order issued after stabbing"

This sentence was ambiguous since it contained multiple possible sentence forms. It

will be bracket into:

([Stop and search] [order])

([stop order] and [search])

The firs bracket meant "stop and search" as the coordinate head with one modifier 'order. It means that stop and search order has many ways to deal with the stabbing. The second bracket contained that only modifying stop industry it was only stop that was order nor for search, it means that the stop order and thing refer to search has many ways to deal with the stabbing.

(b) A head with a coordinate modifier:

"Drinking two or more diet beverages a day linked to high risk of stroke, heart attacks".

Here in this sentence we have two modifier of one head:

(c) ([2] or [more diets])

(d) ([2 or more] [diets])

The first bracket indicated that consuming two or more diet beverages per day increased the risk of stroke and heart attack significantly. Then, the second bracket explained that two or more than three diet beverages a day will be at high risk of stroke, heart attacks (Table 1).

Table 1 The frequencies of types of lexical and syntactical ambiguity in the headlines presented in the table

No.	Types of ambiguity	Types of Lexical and Syntactical Ambiguity	Frequencies
1	Lexical ambiguity	Homonymy	5
		Polysemy	6
	Total of lexical ambiguity		11
2	Syntactic ambiguity	Surface structure ambiguity	2
	Total of syntactic ambiguity		2

5 The Findings

6 Discussion

Within this chapter, the researcher will delve into the discoveries made regarding the News headlines. The objective is to thoroughly examine each question and present the primary findings derived from the researcher's chosen approach. Through the course of the research, a total of 13 perplexing data headlines were identified from the BBC and CNN News. The data analysis revealed 11 instances of lexical ambiguity and 2 instances of syntactic ambiguity. Consequently, it can be concluded that lexical ambiguity is more prevalent than syntactic ambiguity. Discussion of the finding of research question:

1. What are the types of ambiguity?

As what the researcher discussed in the previous chapter, the types of ambiguity or the classification of ambiguity differ from each other depending on the theory that divided. In this research the types of ambiguity depending on the Kreidler's theory, he classify ambiguity into three types, lexical, syntactic and referential. In addition, that each type consists of sub types.

Lexical ambiguity consists of two sub types, homonymy and polysemy. Syntactic ambiguity consists of two sub types, surface structure ambiguity and deep structure ambiguity. The last type is referential ambiguity.

2. What are the dominant types of ambiguity used in the headlines of CNN and BBC news?

Depending on the findings the dominant type of ambiguity was lexical and the polysemy sub type it was the most frequency in the news headlines that found in BBC and CNN news.

- Lexical ambiguity: The findings show that the majority of the BBC and CNN news is ambiguous. The reader's interpretations are influenced by the words chosen in the headlines. The BBC and CNN news headlines contain a lot of multi-meaning terminology. As a result, the reader's misinterpretation is influenced by the reader's past knowledge of the word. Some data is characterized as polysemy because it

contains terms with the same core meaning yet appears in different contexts. The homonymous words were also discovered by the researcher. Because the words have different meanings but the same phonetic in another context, these data are characterized as homonymy.

- Syntactic ambiguity: The presence of syntactic ambiguity in the surface structure of sentences was identified by the researcher. This ambiguity arises when two words are coordinated by the conjunction 'and,' with a head and a modifier, resulting in unclear meanings. To accurately interpret a statement and avoid grammatical ambiguity, readers must consider the surrounding context. This contextual analysis is crucial when examining headlines that exhibit syntactic ambiguity, as the absence of punctuation can make it difficult for readers to determine the intended meaning. The study also revealed that certain variables can affect the comprehension of words and phrases, further contributing to syntactic uncertainty. Notably, the findings of this study align with and differ from previous research conducted by Fitri (2019), who explored lexical and syntactic ambiguity in CNN titles using the theories proposed by Saeed and Kreidler. Fitri's research identified four types of linguistic ambiguity: polysemy, homonymy, antonymy, and synonymy. During her investigation, she came across two distinct forms of syntactic ambiguity: surface structure and deep structure. The examination solely relied on Kreidler's theory from 1998, where the researcher identified two variations of lexical ambiguity in news headlines featured on BBC and CNN—specifically, homonymy and polysemy. Additionally, she encountered a single instance of syntactic ambiguity in the form of surface structure, involving a head with a coordinating modifier and a coordinating head with one modifier connected by the conjunction "and".

7 Conclusion and Recommendations

In the realm of communication, ambiguity arises when a word, phrase, or sentence can be understood in multiple ways, leaving the reader unsure of the intended meaning. This predicament commonly occurs in both spoken and written discourse. The perplexing nature of such news can leave readers bewildered about its true significance. When a text offers various possible interpretations, it has the potential to generate confusion among its readers.

Kreidler's method categorizes ambiguity into two distinct forms: lexical ambiguity and syntactical ambiguity. Lexical ambiguity arises when a single word can be interpreted in multiple ways, while syntactical ambiguity occurs when a phrase or sentence can be structured in different manners.

This research shows that there were 13 news headlines on BBC and CNN that had ambiguous meanings. The researcher founds that 11 headlines were lexically ambiguous, while 2 were syntactically ambiguous. They consist of two types of lexical ambiguity, namely polysemy and homonymy. The number of data found is 5 data of homonymy and 6 data of polysemy. Where the other 2 data is were

syntactically ambiguous under surface structure. Which occurs in two words that are coordinated by conjunction ‘and”, and A head with a coordinate modifier.

Based on the findings and discussion, the researcher identified two forms of ambiguities: lexical ambiguity and syntactical ambiguity. The researcher discovered that linguistic ambiguity dominated polysemy.

This study attempted to address the various viewpoints on using the ambiguity in news headlines. The researcher suggests to linguistics students to study the news headlines from other newspapers, other countries and other languages. In addition, they can study the books headlines and found the ambiguity in writing the headline for books.

The Role of International Arbitration in Settling Disputes Involving Foreign Technology Companies

Yasar Alhiniti and Khalif Saleh Dhiab Amoush

Abstract The chapter at hand attempts to explore the function of international arbitration in the resolution of disputes related to foreign technology companies and host governments. The research takes into account a review of relevant legal and legislative literature concerning international arbitration and technology investment agreements to assess whether arbitration is effective as a preferred mechanism for resolving such disputes and whether it is efficient enough. It also looks into several cases filed under the International Centre for Settlement of Investment Disputes (ICSID) to help understand the different mechanisms through which arbitration can settle disputes but with speed and effectiveness, as well as confidentiality and neutrality. The results show that international arbitration is a fair and effective way to resolve conflicts between foreign technology companies and host countries, thus building trust and acting fairly. Moreover, the findings reflect that a considerable number of foreign investors in technology would choose arbitration rather than going through national courts because it is speedy, and confidential, plus it helps avoid the biases of national court.

Keywords International arbitration · Investment disputes · Foreign technology companies · Host countries · International Centre for settlement of investment disputes · Legal legislation · Investment agreements · Alternative dispute resolution methods · Confidentiality · Neutrality

1 Introduction

When foreign companies conduct business abroad, they typically opt for international dispute resolution mechanisms to handle any conflicts that may arise with the host state. This preference stems from the belief that these mechanisms offer greater impartiality and autonomy compared to internal methods, which may not offer the necessary safeguards. Consequently, foreign companies are hesitant to invest unless they have confidence in the existence of an unbiased and independent judicial system that can be relied upon in the event of a dispute with the host state. This ensures the protection of their investments and the preservation of their rights [1].

In the pursuit of economic development and attracting investment, countries, particularly those in the developing world, often adopt a strategy of granting foreign operating companies the autonomy to select the governing law in case of conflicts instead of subjecting them to domestic courts. This research will explore the involvement of international and regional judicial bodies, such as the International Court of Justice, the Permanent Court of Arbitration, the Arab Investment Court, and international arbitration, in resolving investment disputes that involve foreign operating companies.

1.1 Study Objectives

This study aims to achieve the following objectives:

- Assess the effectiveness of international arbitration as a means of resolving investment disputes between foreign companies and host countries.
- Understand the different types of arbitration and their impact on foreign investment disputes.
- Explore the importance of the International Center for the Settlement of Investment Disputes and its mechanism for resolving disputes between foreign investors and host countries.
- Specify the conditions and requirements necessary for the jurisdiction of the International Center for the Settlement of Investment Disputes in accordance with the World Bank Convention.
- Evaluate of the effectiveness of conciliation and arbitration procedures used by the International Center for the Settlement of Investment Disputes and their impact on improving the international investment climate.

1.2 Study Methodology

In order to examine the effectiveness of international arbitration in resolving investment disputes between foreign companies and host countries, this study employed the

descriptive-analytical approach. The analysis involved a thorough review of legal and legislative literature pertaining to international arbitration and investment treaties, with a specific emphasis on Jordanian law and Jordanian Arbitration Law No. (31) of (2001). Furthermore, practical cases were meticulously examined, including disputes involving Italian companies and the government of Jordan, to offer a comprehensive perspective on the various mechanisms and efficacy of international arbitration in the resolution of investment disputes.

2 The Role of the International Court of Justice in Resolving Disputes Related to Foreign Operating Companies

As the primary judicial body of the United Nations, the International Court of Justice (ICJ) operates in accordance with its Statute, which forms an essential part of its framework [2]. When it comes to resolving investment disputes, the Court's jurisdiction is restricted to disputes between states exclusively. Consequently, a foreign company engaged in business activities cannot directly approach the Court; instead, the only available option is to seek assistance from its home country through the principle of diplomatic protection. This principle is outlined in Article (34) of the Court's Statute, which specifies that "only states may participate in cases brought before the Court, provided they have accepted the Court's jurisdiction" [3].

Diplomatic protection encompasses the act of a state intervening to safeguard its citizens or their assets in another state, shielding them from potential harm caused by the actions taken by that state. This intervention is grounded in the legal principle that only entities recognized under international law have the authority to bring cases before international courts. The rationale behind this principle is that a foreign company conducting business in a host state may encounter violations of its rights and interests, yet lack the ability to seek protection and redress through the domestic legal avenues available in that state [3]. There are several essential conditions that must be met to bring a case before the International Court of Justice based on the principle of diplomatic protection:

1. In order for a foreign operating company to seek protection from a host state, there must be a legal connection between the two entities, often referred to as the nationality link. The state in which the foreign operating company holds nationality has the authority to bring a case before the International Court of Justice, exercising the right to safeguard the interests and rights of its nationals through a "diplomatic protection claim" [4].

The principle of the nationality link between a state and an individual as the sole basis for diplomatic protection was affirmed by the International Court of Justice in its judgment on February 28, 1939, in the case of "Panevezys-Saldutiskis" Railways, as stated: "In the absence of any treaty or agreement to the contrary, the state's

exercise of diplomatic protection is solely based on the nationality connection" [5]. The determination of corporate nationality varies depending on the criteria applied by states. Some states apply the control criterion, which considers the company to be under the control and direction of its founders and partners, aligned with their interests and objectives. Other states apply the incorporation or formation criterion, where the company acquires the nationality of the state in which its incorporation contract is signed. Lastly, there is the criterion of the actual principal place of management, where the company obtains the nationality of the state where its main management, legal, and operational center is located [6].

The International Court of Justice's position on determining corporate nationality for diplomatic protection purposes is clearly demonstrated in its February 5, 1970 judgment in the "Barcelona Traction" case between Spain and Belgium. In this case, the Court adopted the criteria of incorporation and place of management, affirming that a state has the right to provide diplomatic protection to a legal entity if it is established in accordance with the laws of that state and has its place of management within its territory [6].

1. In order to maintain amicable relations between nations and prevent conflicts, the foreign operating company is required to exhaust all available methods of resolving disputes within the host state's legal framework before seeking recourse from its own government and initiating a diplomatic protection claim at the International Court of Justice. It is necessary for the foreign operating company to make every effort to resolve the harm it has experienced in accordance with the laws of the host state before pursuing alternative avenues for resolution [7].
2. According to the ruling in the "Panevezys-Saldutiskis" Railways case on February 28, 1939, by the International Court of Justice, it is established that the foreign operating company seeking diplomatic protection cannot be held responsible for the harm it has suffered. Instead, the harm must be attributed to the host state. The company is obligated to adhere to the laws of the host state, including fulfilling tax obligations and accurately representing its nationality. The court affirmed this principle and rejected the Estonian government's claim, acknowledging Lithuania's valid objection regarding the failure to exhaust local remedies [8].

According to the researcher, there are challenges and barriers to the jurisdiction of the International Court of Justice. A foreign company operating internationally cannot directly seek its intervention, but instead must go through the state that provides its protection. However, this state may choose not to file a claim in order to preserve economic and political ties with the host country. Furthermore, the frequent exercise of this right may clash with a state's sovereignty over activities conducted within its borders, potentially resulting in political conflicts between the host country and the foreign company's home state.

3 The Role of the Permanent Court of Arbitration in Resolving Disputes Involving Foreign Operating Companies

Originally, the Permanent Court of Arbitration (PCA) was designated to settle investment disputes between contracting states. However, it was later allowed for individuals to directly resort to it under the following conditions:

1. For a foreign operating company to appear before this court, both the state of which the company is a national and the host state must be parties to the relevant agreement.
2. All disputing parties must agree to refer the dispute to the court, as it is a non-mandatory tribunal [9].

One of the investment disputes that has been resolved by the PCA is case No. 17/2011. This particular case involved American company Juar Akashi and UK company Ro Re Lak PLC, who filed a complaint against Bolivia regarding the expropriation of a power generation company. The dispute was brought before the PCA and conducted in accordance with the UNCITRAL Arbitration Rules 2010. The arbitration was based on the bilateral treaties between the United States and the Government of the Republic of Bolivia, as well as between the United Kingdom and Northern Ireland. The final decision, issued on January 31, 2014 [10], concluded the case.

The voluntary acceptance of the PCA by all parties involved is a notable aspect, as it ensures that the decisions made by the tribunal are obligatory and cannot be rejected. It is important to note, however, that there are no mechanisms in place to enforce these decisions. Nevertheless, the establishment of the PCA marks a significant leap forward in offering an international avenue for resolving conflicts between nations and foreign investment firms [11].

4 The Role of the Arab Investment Court in Resolving Disputes Involving Foreign Operating Companies

The jurisdiction of the court, as outlined in Articles (29, 30, 36) of the Unified Agreement for the Investment of Arab Capital, is divided into two categories: judicial and advisory. The court's judicial jurisdiction is defined in Articles (29, 30), which specify the subject matter and the parties who have the right to approach the court. In terms of subject matter, the court is competent to adjudicate the following disputes:

1. Disputes related to the application of the provisions of the agreement or arising from it.
2. Disputes involving foreign operating companies if the parties agree to refer them to the Arab Investment Court. Even if there is a prior agreement to submit these disputes to arbitration or international courts, if a case has been brought before one of these forums, it cannot be brought before the other [12].

In terms of the parties involved, the court possesses the necessary jurisdiction to resolve investment disputes between the host state and the foreign operating company if the host state is a party to the agreement. Similarly, the court has jurisdiction over disputes between the foreign operating company and the state of its nationality if that state is a party to the agreement. Additionally, Article (36) of the agreement outlines the court's advisory jurisdiction, stating that it may provide advisory opinions on any legal matter within its jurisdiction upon request from a contracting state, the Secretary-General of the Arab League, or the Council. This demonstrates that the court also serves in an advisory capacity, although these opinions are not binding and are only issued in response to requests from the involved parties, the Secretary-General of the Arab League, or the Economic and Social Council of the League [13].

The court's jurisdiction is defined by its obligatory essence, granting the ability to unilaterally bring a dispute before the court. Article (29/1) of the agreement explicitly outlines this: "The court has the authority to settle disputes referred to it by one party to the investment, pertaining to the implementation or arising from the provisions of the agreement." Consequently, an Arab investor has the freedom to directly approach the court individually, bypassing their home country, in order to resolve conflicts with the host nation. This sets the court apart from the International Court of Justice.

In addition, as per the agreement, Article (31) provides the foreign operating company with the liberty to initiate legal action either in the national court or the Arab Investment Court, but not both at the same time. The article explicitly states, "A Middle Eastern investor has the option to seek redress in the courts of the host country, in accordance with their jurisdictional regulations. However, once the investor files a claim in one forum, they are prohibited from pursuing the same claim in the other".

In a lawsuit brought by the President of the Contractors Union against the General Secretariat of the Arab League, seeking the liquidation of the company's rights in the project to establish the Arab League headquarters in Tunisia, the Arab Investment Court established its jurisdiction and set the rules in case No. 7/1 on 6/2/2010. However, the court ultimately dismissed the case on the grounds of lack of jurisdiction, as the Arab League Secretariat did not meet the criteria for being considered a state according to the unified agreement. Similarly, in case No. 4/2 (request) on 21/8/2007, the court ruled that each state party to the agreement has the right to take necessary measures to protect its security, as it is an internal matter not within the jurisdiction of the court [13].

Once the court has rendered its rulings, they become legally binding and cannot be appealed. The party that emerges victorious can enforce the judgment by seeking the court's assistance, just like they would with any other national judgment. However, there is a possibility for the court to reconsider its decision if it goes against a fundamental rule of the agreement or procedural rules, or if there is a crucial fact that was previously unknown to both the court and the party requesting reconsideration. It is important to note that this request for reconsideration will only be accepted if the lack of knowledge was not a result of negligence.

It is worth highlighting that Article (25) of the agreement specifically outlines the various methods for resolving disputes between foreign operating companies

and the host state, including conciliation, arbitration, or recourse to the Arab Investment Court. The researcher posits that the Arab Investment Court sets itself apart from the International Court of Justice and the Permanent Court of Arbitration by establishing an independent judicial body with its own legal framework. The court's decisions are not only binding and final, but also immediately enforceable within the state against which the judgment is rendered, akin to a ruling from its domestic judiciary. The legal provisions are unambiguous and precise, leaving no room for circumvention by the disputing parties. Moreover, the court offers multiple avenues for resolving investment disputes among member states, starting with conciliation, followed by arbitration, and ultimately resorting to the court. Unlike the International Court of Justice, the Arab Investment Court allows direct access for investors, thereby fostering and promoting investment within Arab nations, consequently bolstering the economy in the Arab world. However, it is important to note that the court's jurisdiction is currently limited to investment disputes solely involving Arab states, which necessitates a reevaluation to expand its jurisdiction to encompass disputes where one party is Arab, regardless of the nationality of the other party.

5 International Arbitration

In their quest for effective and impartial solutions to investment disputes, international corporations are actively exploring alternative avenues. Among the array of options available, arbitration stands out as a highly significant and pragmatic approach to resolving conflicts arising from foreign investment contracts. Foreign companies often favor arbitration over the national court system, which they regard with skepticism and doubt. This preference is further reinforced by the expeditious nature and confidential nature of arbitration, qualities that seamlessly align with the essence of investment agreements.

When disputes arise between foreign companies and the host state, national courts typically have primary jurisdiction. However, arbitration serves as a notable exception to this general principle. States recognize the importance of attracting foreign companies to bolster their economic growth and strengthen their resources. As a result, they actively create legislation that fosters a favorable environment, instilling confidence in these companies and helping them achieve their objectives.

To address the significance of arbitration in settling disputes that involve international companies, various jurisdictions have implemented legislation to govern arbitration proceedings. One such jurisdiction is Jordan, which has established regulations for arbitration through the enactment of the Jordanian Arbitration Law No. (31) of 2001.

Arbitration comes in various forms that a foreign company can utilize, including:

- **Institutional Arbitration:** This involves an agreement between the foreign company and the other disputing parties to refer their disputes to specialized institutions, bodies, and centers in the field of arbitration according to the rules

and regulations governing these entities, which outline the arbitration process and decision-making procedures [14].

- **Ad-hoc Arbitration:** This refers to an agreement between the foreign company and the other disputing parties to submit their disputes to arbitration based on the parties' free will.
- **Mandatory Arbitration:** This is arbitration that the disputing parties cannot choose but is mandated by law as a method for resolving disputes in specific matters, such as labor disputes [15].
- **Domestic Arbitration:** This type of arbitration is conducted according to the domestic law of the disputing parties, meaning all parties involved are from the same country.
- **International Arbitration:** This involves parties from different countries, each with its legal system, and arises from commercial relations or external interests [14].

Ad-hoc arbitration is regarded by the researcher as the optimal form of arbitration due to its foundation in the voluntary agreement of the involved parties. This voluntary nature ensures that the awards issued are willingly executed by all parties involved. The researcher has also delved into various forms of arbitration, with a particular focus on institutional arbitration. This type of arbitration is conducted through specialized organizations and bodies, such as the International Centre for Settlement of Investment Disputes (ICSID). The ICSID holds a prominent position in the resolution of disputes arising from investment contracts between foreign investors and host states. Through the processes of conciliation and arbitration, the ICSID aims to facilitate the attainment of an arbitral award. These discussions have sparked the researcher's curiosity to further explore the workings of the ICSID.

5.1 International Centre for Settlement of Investment Disputes

On July 14, 1972, Jordan became a member of the International Centre for Settlement of Investment Disputes (ICSID). In instances where foreign investors and Jordanian government institutions find themselves in conflict, Jordan has chosen to refer several cases to ICSID for resolution. One such case involved two Italian companies and the Jordanian government, with the companies seeking financial compensation for their involvement in the Unity Dam project. However, the tribunal of ICSID unanimously dismissed the claim made by the Italian companies [16].

According to Article (25/1) of the ICSID Convention, the establishment of the center's jurisdiction is contingent upon certain conditions. The article specifies that the center has jurisdiction over any legal dispute that directly stems from an investment between a Contracting State, its designated subdivisions or agencies, and a national of another Contracting State. However, for the center to have jurisdiction, both parties involved in the dispute must provide written consent to submit the dispute

to the center. It is important to note that once consent is given, it cannot be unilaterally withdrawn [17]. The conditions are as follows:

- **The Dispute Must Be Legal and Related to the Foreign Company and Host State**: The jurisdiction of the center is limited to disputes that fall within the scope of Article (25/1) of the Convention. These disputes must have a legal basis and be linked to a right or legal obligation outlined in the investment contract or an infringement upon a right established in an investment agreement between the foreign company and the host state [17]. It is important to note that political disputes are not within the purview of the center. Furthermore, for a dispute to be eligible, it must directly stem from the investment contract, indicating a clear connection between the dispute and a specific investment.
- **The Host State Must Be a Contracting State and the Other Party Must Be a Foreign Company from Another Contracting State**: In order for the jurisdiction of ICSID to be applicable, one of the parties involved in the dispute must be a contracting state or an administrative entity of a contracting state, while the other party must be a foreign company from another contracting state.
- **Consent of the Parties to the Dispute:** In order for the jurisdiction of the center to be established, both the host state and the foreign company must mutually agree. The ICSID Convention grants this jurisdiction on a voluntary basis, allowing states the freedom to either accept or decline the referral of their disputes with foreign companies to the center. Likewise, the foreign company also possesses complete autonomy in this matter, and the jurisdiction of ICSID is only secured when both parties provide written consent [18].

By agreeing to submit the disagreement to ICSID, all other methods of resolving the issue are automatically excluded, unless there is a separate agreement stating otherwise. Nevertheless, any party involved has the right to demand the completion of administrative and legal procedures as a prerequisite for consenting to arbitration at the center, as stated in Article (26) of the Convention [19].

Certain nations may seek to evade arbitration with international corporations by asserting their sovereignty and relying on diplomatic protection, potentially impacting the outcome of the arbitration. Nevertheless, the ICSID Convention addresses this issue by prohibiting states from invoking diplomatic protection in disputes that are submitted to ICSID arbitration, as stated in Article (27/1) of the Convention. However, there is a solitary exception that permits a state to invoke diplomatic protection if the opposing state fails to resolve the dispute or enforce the ICSID award [20].

The tasks of the Centre in regards to dispute resolution are outlined in Paragraph 2 of Article 1 of the ICSID Convention. According to this provision, the Centre's primary objective is to offer facilities for the conciliation and arbitration of investment disputes between Contracting States and nationals of other Contracting States. It is evident from this passage that the Centre's responsibilities are restricted to two main functions: conciliation and arbitration.

1. **Conciliation:** In an effort to find a peaceful resolution to investment conflicts between the host country and the foreign corporation, there is an international convention that focuses on conciliation. This convention is outlined in Chapter Three, Articles (28–35), which are further divided into three sections. The initial section covers the process of requesting conciliation, followed by the formation of the conciliation commission in the second section, and concludes with an explanation of the conciliation procedures in the third section [21, 22].

To initiate the process of conciliation, either the host state or the foreign company must submit a written request to the Secretary-General of the Centre. The Secretary-General then notifies the other party. Upon reviewing the request, the Secretary-General proceeds to register it if it meets the Centre's jurisdictional criteria [23–25].

Upon submission of the request, the formation of the conciliation commission takes place, which includes either a single conciliator or an uneven number of conciliators, as determined by the parties involved. In the event of disagreement, a three-member commission is established, with each party selecting one conciliator, while the third conciliator, who assumes the role of chairperson, is chosen through mutual consent. Failure to establish the commission within ninety days from the registration date prompts the President of the International Centre to appoint the remaining conciliator(s) [21].

In accordance with the Convention, the conciliation procedures operate under the principle of competence-competence as outlined in Article (32), Paragraph 1. This principle grants the Commission the authority to determine its own competence and address any objections raised by the parties regarding its jurisdiction or other grounds. Unless otherwise agreed upon, the conciliation procedures adhere to the rules in effect at the time of the agreement. Any procedural matters not covered by the Convention or the parties' agreement will be resolved by the Commission at its discretion. In the event that the Commission foresees a lack of agreement between the parties, it has the option to terminate the procedures and prepare a report detailing the reasons for the failure to reach an agreement [20].

1. **Arbitration:** Chapter Four of the Convention is exclusively devoted to the topic of arbitration, encompassing six sections and consisting of Articles (36–55). The initial section deals with the process of initiating arbitration, which entails the submission of a written request to the Secretary. Subsequently, the Secretary forwards a copy of the request to the opposing party. It is imperative that the request contains the consent of both parties to engage in the arbitration process. The Secretary is responsible for the registration of the claim, provided that it falls within the jurisdiction of the Centre. In the event that the claim falls outside the Centre's jurisdiction, the Secretary possesses the authority to either approve or reject the registration [20].

Upon the registration of a claim, the formation of an arbitration tribunal takes place. The tribunal is comprised of either a single arbitrator or an odd number of arbitrators, as determined by the parties involved. In the event that the parties are unable to reach an agreement regarding the number and appointment of arbitrators,

a tribunal of three arbitrators is established. Each party selects one arbitrator, while the third arbitrator, who also serves as the tribunal's chairperson, is chosen through mutual consent. If the tribunal is not constituted within ninety days of the claim's registration, the President of the Centre will appoint the arbitrator(s), ensuring that they are not citizens of the disputing countries or the foreign investor's home nation [21].

Article (41/1) of the Convention affirms the principle of competence-competence in relation to the powers and functions of the tribunal, stating that "The Tribunal determines its own competence. " Furthermore, paragraph 2 of this article specifically grants the tribunal the authority to address any objections raised by either party concerning the jurisdiction of the Centre or any other grounds [22, 26, 27].

In accordance with the Convention, the Tribunal is required to adhere to the arbitration procedures specified in the agreement, unless the parties have mutually agreed otherwise. It covers matters such as the non-participation of a party or failure to present claims, explicitly stating that such circumstances do not grant any rights to the other party. Additionally, if deemed necessary, the Tribunal has the authority to implement provisional measures to safeguard the rights of both parties [23].

The Convention's articles (48, 49) pertain to the awards rendered by the Tribunal. These articles specify that decisions are reached through a majority vote and must be documented in a written form, endorsed by all Tribunal members in favor of the decision. Additionally, the publication of the Tribunal's award necessitates the consent of both parties involved [24, 28–30].

In addition, the Convention addresses matters pertaining to the interpretation, review, and nullification of the award issued by the Tribunal, providing provisions for the establishment of a fresh tribunal to examine the dispute in case the initial tribunal is incapable of doing so [20]. In certain cases, the Convention permits the annulment of the Tribunal's award upon request from one of the parties if there was [31]:

- An error in the formation of the tribunal [32, 33].
- Exceeding the tribunal's jurisdiction [34, 35].
- The disqualification of a tribunal member [36, 37].
- Serious neglect of procedural requirements [38, 39].
- Failure to state the reasons for the award [40, 41].

When such situations arise, a dedicated committee consisting of three members and arbitrators is assigned to review the request. It is ensured that none of the original arbitrators are involved in this process, and none of the committee members belong to the nationality of the disputing parties. Additionally, the Tribunal holds the authority to postpone or suspend the implementation of the award until a final decision is reached, if deemed necessary [20].

Within the concluding portion, the Convention focuses on the acknowledgment and implementation of awards, deeming the Tribunal's decision binding for both parties and requiring them to carry out its execution as if it were a verdict issued by a domestic court [21].

6 Conclusion

To summarize, international arbitration serves as a successful and impartial means of settling conflicts between foreign corporations and host nations, ultimately promoting trust and equity in investment partnerships. The various arbitration options provide flexibility for foreign companies to select the most appropriate approach to efficiently and privately resolve disputes. The International Centre for Settlement of Investment Disputes (ICSID) plays a crucial role in maintaining stability and instilling confidence in the investment landscape, thereby increasing the appeal of countries to foreign investors and fostering the inflow of foreign investments.

6.1 Findings

1. International arbitration is an effective and neutral means of resolving investment disputes between foreign companies and host countries, building trust between the parties and ensuring fairness.
2. Many foreign investors choose arbitration as an alternative to domestic court procedures because of its speed and confidentiality, and to avoid potential bias by domestic courts.
3. Various forms of arbitration are available for foreign companies, including institutional, ad hoc, compulsory, domestic and international, offering flexibility in choosing the most appropriate method for each dispute.
4. The international centre for the settlement of investment disputes (ICSID) plays a key role in resolving disputes related to investment contracts between foreign investors and host countries, increasing the stability of the investment environment.
5. The jurisdiction of the ICSID is determined based on the conditions set out in Art. (25/1) of the International Banking Agreement, ensuring transparency of the rules governing the activities of the Centre.
6. ICSID's conciliation and arbitration procedures contribute to the effective resolution of disputes, thereby improving the international investment climate and providing legal safeguards for investors.

6.2 Recommendations

1. Raising awareness of the importance of international arbitration as an effective means of resolving investment disputes between foreign companies and host countries.
2. Encourage countries to develop their local legislation to ensure a favourable legal environment for attracting foreign investment.

3. Strengthen the role of the International Centre for the Settlement of Investment Disputes (ICSID) by clarifying and facilitating access to conciliation and arbitration procedures.
4. Ensure the availability of clear and transparent information on institutional and ad hoc arbitration procedures to support foreign companies in making informed decisions.
5. Encourage foreign companies to choose ad hoc arbitration to ensure disputes are resolved amicably and quickly.
6. Providing training programs for judges and arbitrators to increase their understanding of international arbitration procedures and improve their competence in resolving investment disputes.
7. Encouraging contracting states to engage in the implementation of ICSID arbitration awards to ensure the protection of the rights of foreign investors and strengthen confidence in the international judicial system.

Beyond Password's: Context Aware Behavioral Biometrics for Continuous Authentication

M. Pon Dinesh Kumar, Subhash Chandra Patel, Hemraj Shobharam Lamkuche, Jamil Itmazi, and Ala'a Al Sherideh

Abstract Amidst the rising tide of cyber threats, traditional static authentication methods, encompassing passwords and unvarying biometrics, lay bare their vulnerabilities. Their proneness to breaches and inability to ensure seamless user experiences illuminate the pressing demand for innovative strategies. Unlike static authentication, which verifies users solely at the outset of a session, continuous authentication operates in real time, actively monitoring users throughout their interactions. Unveiling a paradigm shift in authentication: "Beyond Passwords: Context-Aware Behavioral Biometrics for Continuous Authentication." This research introduces an innovative framework that intricately intertwines user behavioral patterns with dynamic contextual cues, propelling authentication to new frontiers. By seamlessly harmonizing behavioral biometrics within the fabric of real- time context, the framework not only fortifies security but also enriches seamless user experience. This study's contribution lies in its novel approach, bridging gaps in authentication paradigms and forging a comprehensive user verification model that redefines the synergy between behavior and context. The framework's adaptability to diverse user behaviors, its robustness in detecting anomalies, and its incorporation of privacy-preserving practices stand as pillars that solidify its role as the torchbearer of the future of authentication.

1 Introduction

Authentication is the process of verifying a user or device before allowing access to a system or resources. Authentication serves as the foundational layer, ensuring that only authorized entities gain access to valuable information and systems. It is the process through which the legitimacy of users or entities is verified, forming a crucial defense against unauthorized access. Traditional authentication methods/models encompass diverse models, each with distinct attributes and accompanying vulnerabilities (Fig. 1).

KBA uses passwords and security questions but is vulnerable to breaches and memory issues [2]. Possession-based methods involve physical tokens or devices, with risks of loss [2]. Biometric authentication offers accuracy but may face usability and spoofing issues [2]. Context-based authentication adapts to location and time but has limited scope [3]. Behavior-based authentication monitors patterns like keystrokes, requiring extensive data and risking false positives [4] (Table 1).

This research highlights the limitations of traditional authentication methods, such as password vulnerabilities, privacy concerns with biometrics, and the challenges of context and behavior-based approaches. These issues underscore the need for a more adaptive authentication model. The study proposes integrating context-aware and behavior-based authentication to create a more resilient and responsive security framework. By combining behavioral biometrics with real-time contextual cues, the framework aims to enhance security while maintaining a seamless user experience. The research seeks to answer how this integration can create a robust and continuous authentication model, ultimately reshaping digital identity verification.

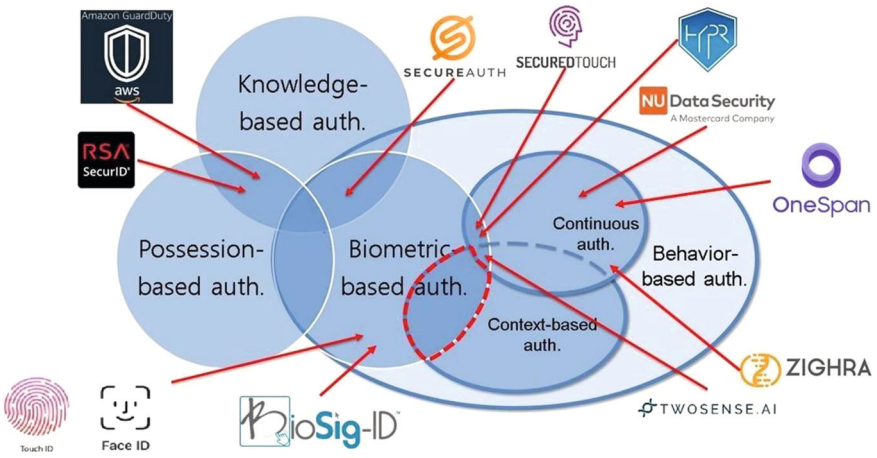

Fig. 1 Commercial authentication models [1]

Table 1 Comparison of commercially available authentication models

Solution	Authentication method	Used sensors	On-device solution	Behavioural profile- update	Used modalities	Transparent (passwordless) authentication	Context aware
RSA SecurID	Multifactor	N/A	No	No	PIN, hardware key	No	No
GuardDuty	Multifactor	GPS, wireless adapters	No	Yes	Apps usage, geolocation, wireless connections	No	No
SecureAuth	Multifactor	Motion sensor, touchscreen, wireless adapters	Yes	No	Apps usage, keystroke dynamics, wireless connections	Yes	Yes
SecuredTouch	Behaviour-based	Motion sensor, touchscreen, wireless adapters	Yes	Yes	Apps usage, keystroke dynamics, wireless connections	No	No
HYPR	Multifactor	Motion sensor, touchscreen, wireless adapters	Yes	No	Apps usage, keystroke dynamics, wireless connections	Yes	No
FaceID, TouchID	Biometric	Fingerprint sensor, frontal camera	Yes	No	Fingerprint, facial recognition	No	No
MasterCard NaData	Behaviour-based	Motion sensor, touchscreen, GPS, wireless adapters	No	No	Apps usage, geolocation, keystroke dynamics, device tilts, wireless connections	Yes	No
TwoSense.AI	Continuous and multifactor	Motion sensor, touchscreen, front-facing camera, GPS	No	No	Touchscreen, apps usage, keystroke dynamics, geolocation, gaits	Yes	No
Bio-Sig ID	Multifactor	Touchscreen	No	No	PIN or password, gestures on a touchscreen	No	No

(continued)

Table 1 (continued)

Solution	Authentication method	Used sensors	On-device solution	Behavioural profile- update	Used modalities	Transparent (passwordless) authentication	Context aware
OneSpan	Multifactor	Motion sensor, touchscreen, front-facing camera	Yes	No	Apps usage, keystroke dynamics, wireless connections	Yes	Yes
Zighra	Continous and multifactor	Motion sensor, touchscreen	Yes	No	Apps usage, keystroke dynamics, wireless connections	Yes	No

1.1 Problem Definition

In the intricate realm of the digital age, there exists a compelling need for authentication methods that surpass the vulnerabilities inherent in conventional means, notably passwords and static biometrics. This necessity is more critical than ever, given the evolving threat landscape. Despite the substantial potential offered by context-aware and behavioral biometrics authentication models, a prevailing issue persists—they frequently operate in isolation. This fragmentation introduces formidable challenges when endeavoring to establish a comprehensive and resilient user verification system.

1. Single Point of Failure: Passwords

Passwords, traditionally a cornerstone of authentication, stand as a significant technical vulnerability. Susceptible to brute force attacks, phishing, and social engineering, they represent a single point of failure. The technical inadequacy of passwords (Table 2) necessitates an advanced, multi-layered approach that moves beyond reliance on this insecure credential [5].

Traditional Password-Based Authentication (Fig. 2).

2. Context-Aware and Behavioral Biometrics Integration: A Technical Challenge

Table 2 Authentication methods comparison

Authentication method	Limitations	Possible attacks
Traditional password-based authentication	• Vulnerable to password guessing, phishing • Passwords can be forgotten or shared • Limited security against advanced attacks • Limited to session start, no continuous monitoring	• Brute force attacks • Phishing scams • Credential sharing • Dictionary attacks • Session hijacking • Replay attacks • Unauthorized access after initial authentication
Multifactor authentication (MFA)	• Potential user friction, devices needed • Complexity may introduce user experience challenges • Cost and Implementation Challenges • Limited to session start, no continuous monitoring	• Device theft or loss • Social engineering • Biometric spoofing (e.g., Fingerprints or face recognition) • Token Interception • Session hijacking • Replay attacks • Unauthorized access after initial authentication
Physical Biometrics	• Privacy concerns, potential for spoofing • Limited scalability, high implementation costs • Security risks if biometric data is compromised	• Biometric spoofing (e.g., Fingerprint replication) • Database breaches • Physical attacks on biometric sensors

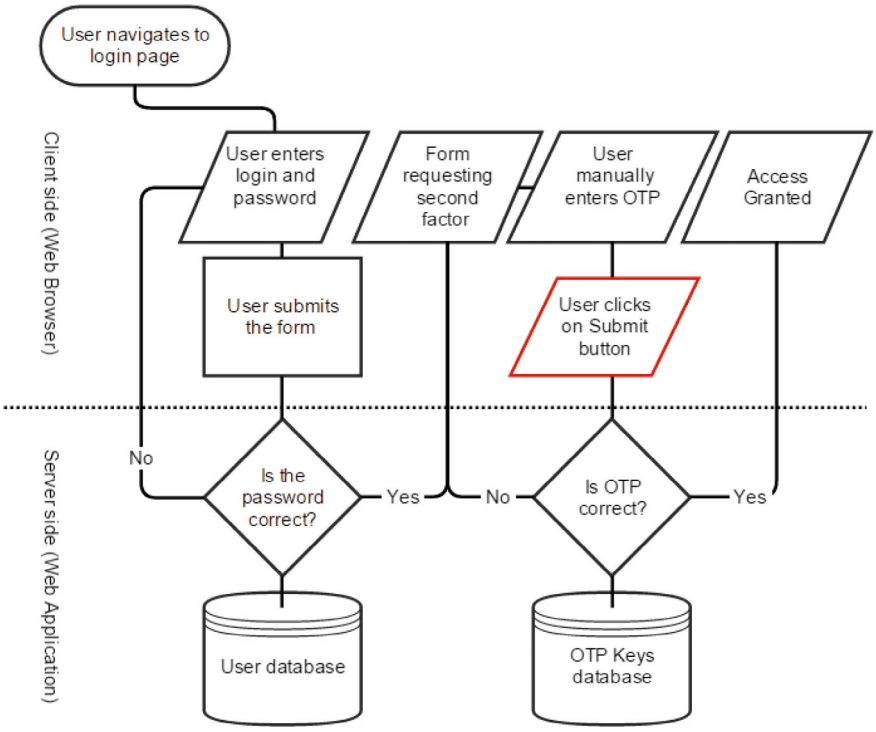

Fig. 2 Traditional password based authentication model [6]

While context-awareness (Fig. 3) and behavioral biometrics (Fig. 4) offer advancements, their standalone deployment presents formidable technical challenges. Context-awareness, considering factors like device type and location, and behavioral biometrics, encompassing keystroke dynamics, achieve optimal efficacy when seamlessly integrated. The technical challenge lies in harmonizing these components within a continuous authentication framework, creating a unified defense against evolving threats (Table 3).

3. Need for Change: A Real-Time Example

The evolving threat landscape demands a technical renaissance in authentication methods, underscored by a tangible example. The Equifax data breach in 2017 laid bare the technical vulnerabilities of traditional authentication. Exploiting the static nature of passwords, cybercriminals orchestrated a breach documented in the "Equifax Data Breach: A Technical Analysis" [9] paper. This breach serves as a stark illustration of how relying solely on passwords, a single point of failure, exposes vulnerabilities to sophisticated attacks. The exploitation of weak authentication measures resulted in unauthorized access to a treasure trove of personal data. This case study reinforces the urgency for an evolution in authentication, advocating for

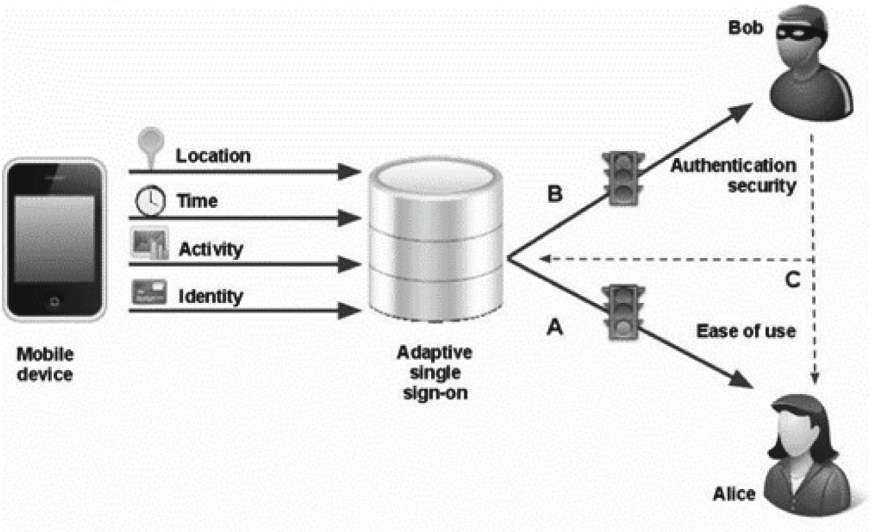

Fig. 3 Context aware authentication [7]

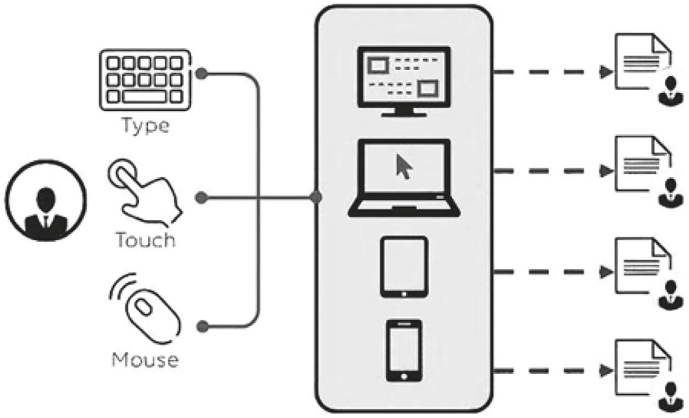

Fig. 4 Behavior based authentication [8]

a shift towards advanced, integrated Context-Aware Behavioral Biometrics methods that proactively respond to the dynamic cybersecurity landscape (Table 4).

Table 3 Context aware and behavioural biometrics

Authentication method	Limitations	Possible attacks
Behavioral biometrics	• Can be impersonated, limited accuracy • Sensitivity to environmental changes • Training challenges, varied user behaviors	• Mimicking user behavior • Environmental noise impact • Behavioral biometric spoofing (e.g., Keystroke mimicry)
Context-aware authentication	• Dependency on contextual factors, false positives • Inaccuracies in dynamic environments • Potential user privacy concerns	- False positives in unusual contexts • Exploiting dynamic environment changes • Context injection attacks

Table 4 Context aware behavioral biometrics

Authentication method	Limitations	Possible attacks
Context-aware behavioral biometrics	• Requires robust training • User privacy concerns • Battery drain	• Adversarial attacks on training data • Manipulating behavioral patterns • False positives due to rapid context changes

1.2 Aim/Objective

This research focuses on integrating context-aware and behavioral biometrics for user authentication to address vulnerabilities in traditional methods like passwords and static biometrics. The goal is to develop an adaptive authentication framework that enhances robustness, privacy, and energy efficiency. The study examines the integration of these models, explores limitations, privacy issues, and hardware constraints, and aims to provide insights into their combined effectiveness in strengthening user verification systems.

Main Research Question(s).
Why Change?
Why Combine Context and Behavior?
What Verification Layers?
Beyond Security?

2 Existing Work

Researchers such as Mondal et al. [10], Shaji et al. [11], and Bo et al. [12] have advanced touch-based behavioral biometrics for enhanced device security through unique touch patterns. Deutschmann et al. [13] improved authentication precision with multimodal behavioral biometrics, while Alshehri et al. [14, 15] expanded keyboard usage to continuous text authentication. Privacy-preserving strategies by Prakash and Singaravel [16] and Samangouei et al. [17] integrate hard and soft biometrics but face challenges with distinctiveness and permanence. Context-aware authentication by Hayashi et al. [18] and Witte et al. [19, 20] emphasizes contextual insights. Despite these advancements, integrating context-awareness and behavioral biometrics remains complex. This research aims to propose an innovative context-aware model that combines both domains for a comprehensive authentication solution [21–26, 31–33].

3 Methodology

See Fig. 5

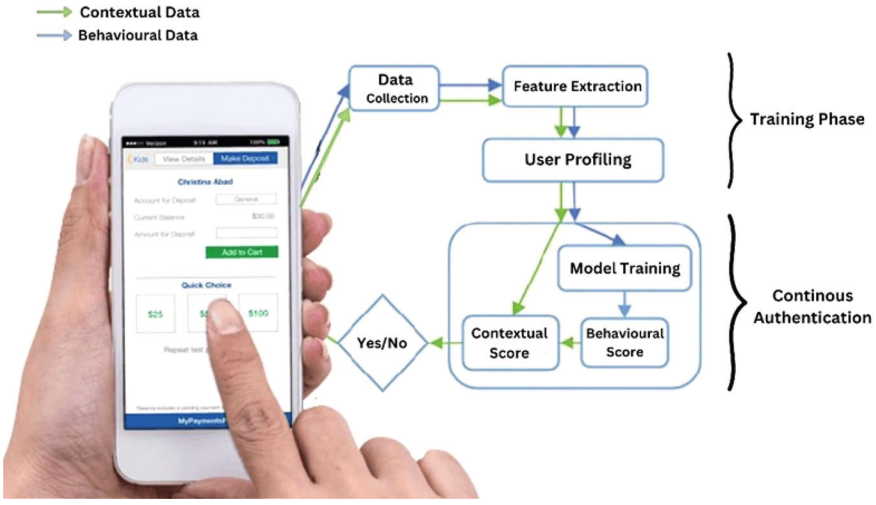

Fig. 5 Our context aware behavioural biometrics methodology

3.1 Training Phase

1. Contextual Data Extraction

Context-Awareness Authentication (CAA) enhances traditional security by integrating factors like user identity, resource requests, timing, location, and purpose into access control decisions. Unlike static methods that often disrupt user experience, CAA uses dynamic, context-driven assessments to balance security and usability. By leveraging machine learning and real-time risk analysis, CAA can better detect anomalies and mitigate risks, as demonstrated in the Edward Snowden case. CAA considers four types of contextual data:

- Computing Context: Device and network-related data.
- User Context: User-specific data such as preferences and location.
- Physical Context: Data about the physical environment.
- Time Context: Temporal factors like time of day and date.

Data gathering of these following attributes can be obtained via Table 5.

2. Behavioral Data Extraction

Behavioral Biometrics Authentication (BAA) enhances identity verification by analyzing unique behavioral patterns:

Gait Analysis: Uses motion sensors to capture walking patterns.

Gesture Recognition: Analyzes touch interactions on devices.

Motion Dynamics: Combines gait and gesture data.

Voice Biometrics: Examines voice characteristics.

Keystroke Dynamics: Monitors typing patterns.

Data is collected via sensors and stored in formats like CSV or JSON, with encryption and anonymization to ensure privacy (Table 6; Fig. 6).

3.2 User Profiling

User profiling is a critical process that systematically captures individual behaviors, preferences, and contextual attributes. By collecting and analyzing diverse data points, it helps identify customary user conduct and promptly detect anomalies to mitigate potential security threats. The attributes within user profiles vary widely depending on the organization or application, reflecting the specific scenarios and the importance assigned to certain features. For instance, a company might prioritize gait analysis in its user profiling, tailoring profiles to meet unique security and operational needs. The adaptability of user profiling is enhanced through the integration of various machine learning models, which, when combined effectively, create

Table 5 Contextual data

Context type	Captured contextual information	Available sensors and technologies
Location	Precise GPS coordinates, Wi-Fi network details, bluetooth proximity	GPS receivers, Wi-Fi positioning, bluetooth low energy (BLE)
Network environment	Network type, latency, bandwidth, IP address	Network API, ping latency measurement, bandwidth monitoring, IP tracking
Time of day	Accurate timestamp, day of the week, month, year	System clock, Real-time clock (RTC), NTP synchronization
User activity	Running applications, user agents, active processes, recent tasks	Activity recognition sensors, application programming interfaces (APIs)
Environmental conditions	Ambient light intensity, temperature, humidity, noise level	Light sensors, temperature sensors, humidity sensors, noise level sensors
Calendar events	Scheduled events, appointments, meeting details	Calendar API, Event scheduling API, Meeting room occupancy sensors
Weather conditions	Real-time weather information, forecast details	Weather APIs, atmospheric sensors, weather forecasting services
Social context	Nearby user interactions, social network connections	Bluetooth proximity, social media APIs, contact list analysis
Device orientation	3D spatial orientation of the device	Gyroscope, accelerometer, magnetometer

a customized user profile that aligns with the specific context of the application or organization.

1. Contextual Analysis

1.1 Computing Context

Computing context encompasses information related to device access, internetworking, and other computer-related assets. In user profiling, this involves understanding how users interact with devices, network resources, and applications. For instance, the simultaneous use of multiple devices, such as smartphones and personal digital assistants, contributes to the computing context.

Computing Context = {Device Usage Patterns,Network Interaction,Application Preferences}.

Table 6 Behavioural data

Behavioral biometric	Captured information	Technologies and sensors
Keystroke dynamics	Typing speed, key press duration, intervals	Keystroke dynamics sensors, Keyboard APIs, Pressure-sensitive keys
Gait analysis	Walking patterns, stride length, pace	Accelerometer, Gyroscope, Inertial measurement units (IMUs)
Signature dynamics	Speed, pressure, stroke order	Signature recognition systems, Pressure-sensitive touch screens
Mouse movement dynamics	Speed, acceleration, clicking patterns	Computer mouse sensors, Trackpads, Touch-sensitive surfaces
Finger movement dynamics	Speed, pressure, swipe patterns	Touchscreen sensors, Capacitive touch technology, Gesture recognition
Gesture dynamics	Movement patterns of hand or body gestures	Motion sensors (accelerometer, gyroscope), Cameras, Gesture recognition
Voice biometrics	Speech patterns, pitch, tone, accent	Microphones, Voice recognition algorithms
Typing pressure dynamics	Pressure applied while typing	Pressure-sensitive keyboards, Force sensors

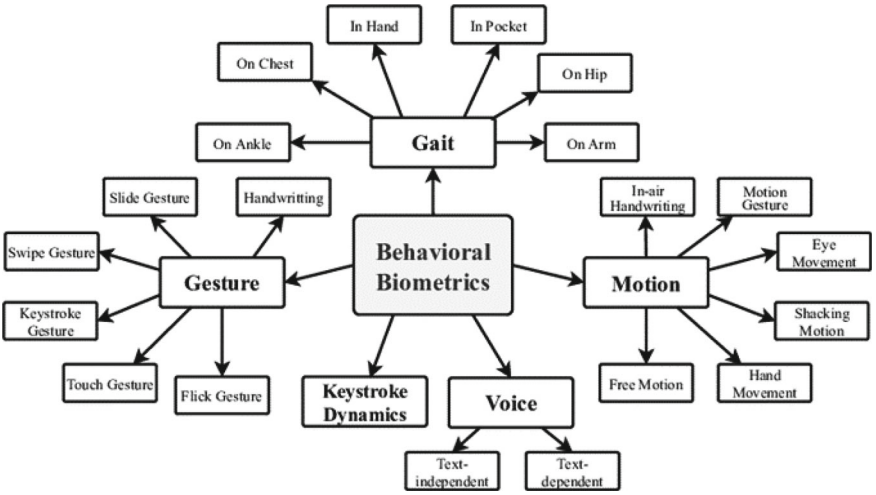

Fig. 6 Behavioral Biometrics [27]

1.2 User Context

User context involves information specific to the user's use of applications, including personal information, preferences, location, and potential activities. Profiling user preferences is crucial for identifying deviations from normal behavior. For instance, variations in transportation preferences, such as choosing between taxi or walking distance, contribute to the user context.

User Context = {Personal Information,Preferences,Location Data,Activity Patterns}.

1.3 Physical Context

Physical context covers information about location, weather, and environmental conditions. Profiling based on physical context helps in understanding typical user interactions influenced by external factors. For instance, access requests from specific geographic locations or during unusual weather conditions contribute to the physical context.

Physical Context = {Location History,Weather Preferences,Environmental Conditions}.

1.4 Time Context

Time context provides details and links to time and calendar details on a regular, weekly, or monthly basis. Profiling based on time context helps in identifying anomalies such as access requests outside regular working hours.

Time Context = {Access Patterns,Activity Schedules,Calendar Events}.

2 Behavioral Analysis

User profiling is an intricate and dynamic process that requires ongoing behavioral analysis to adapt dynamically to evolving user behaviors. Within the realm of user profiling, robust mathematical models facilitate effective quantification of behavioral patterns. Two key models employed for this purpose are [5, 28]:

2.1 Markov Chain Modeling

Markov Chain Modeling stands out as a powerful tool for representing the probabilistic transitions of user states over time. At a given time t, let Xt denote the user's state, and P(Xt + 1 = x|Xt = xt) represent the probability of transitioning to state x given the previous state xt. This model enables the calculation of transition likelihoods between states, offering valuable insights for the detection of anomalous behavior.

$$P(Xt + 1 = x \mid Xt = xt)$$

This model allows for the calculation of the likelihood of transitions between states, aiding in the detection of anomalous behavior.

2.2 Naïve Bayes Model

The Naïve Bayes model operates under the assumption of conditional independence between different features. In the context of user profiling, this implies assuming independence between various contextual and behavioral attributes. The probability of a user profile given a specific class (normal or anomalous) can be calculated using the formula:

$$\text{P(User Profile} \mid \text{Class)} = \prod \text{i} = 1\text{nP(Attributei} \mid \text{Class)}$$

This formulation enables a comprehensive assessment of user profiles, aiding in the classification of behaviors as either normal or anomalous based on the observed attributes.

Table 7 encapsulates a comprehensive survey of multi-modeled behavior-based user authentication survey, highlighting diverse approaches. Each study is delineated by the modalities addressed, sensors employed, datasets utilized, modeling algorithms applied, and the corresponding performance metrics. This tabulated format offers a succinct overview of the varied landscape within behavior-based authentication methodologies:

Ca: Camera, Mi: Microphone, To: Touch, Ac: Accelerometer, Gy: Gyroscope, Ma: Magnetometer, Li: Light sensor, Gr: Gravity sensor, El: ElevationHWS: Healthcare Wearable Sensors, LDA: Linear Discriminant Analysis, HMM: Hidden Markov Model, GMM: Gaussian Mixed Model,MLP: Multilayer Perceptron, RBF: Radial Basis Function, k-NN: k-Nearest Neighbor, PCA: Principal Component Analysis, SVM: Support Vector Machine,FA-NN: Fast Approximate Nearest Neighbor, CNN: Convolutional Neural Network, FPOS: Frequent Pattern Outlier Score, KRR: Kernel Ridge Regression.

Table 7 Survey of multi-modeled behaviour based user authentication

Study. No	Modalities	Sensors	Methods	#Users	EER	FAR	FRR	TPR	Accuracy	Auth. Time

4 Continuous Authentication

Continuous Authentication and Validation form the nucleus of this framework, ensuring perpetual verification of user identity based on their contextual and behavioral profiles. The weight assigned to each factor is dynamically adjustable, aligning with the specific security requirements of an organization.

1 Dynamic Weight Assignment

The dynamic profiling process seamlessly integrates contextual and behavioral profiles, allowing organizations to tailor the risk assessment model to their specific needs. The dynamic risk score (DRS) is intricately calculated based on the established user profiles, and its formulation is adaptable to organizational or application requirements:

$$DRS = w^{behavioral} \cdot Behavioral\ Score + w^{contextual} \cdot Contextual\ Score$$

Here, $w^{behavioral}$ and $w^{contextual}$ denote the weight factors assigned to behavioral and contextual analyses, respectively. This ratio enables organizations to fine-tune the emphasis on either aspect, providing a flexible and customizable approach to dynamic user profiling based on their unique security needs.

In a financial institution where detecting anomalous behavior is critical, assigning a higher weight to behavioral analysis (wbehavioral > wcontextual) prioritizes recognizing deviations in user behavior, such as atypical transaction patterns or unusual access times. This dynamic profiling approach enables a nuanced risk assessment aligned with the organization's specific security concerns.

2 Organization-Specific Configurations

Organizations can finely adjust the weight assignment and the parameters of the continuous authentication system based on their unique security needs. This adaptability ensures that the system remains effective in diverse operational contexts.

1 Example Configurations

- Scenario 1: Strict Access Times
- wbehavioral = 0.9,wcontextual = 0.1
- Prioritizes adherence to strict access times, giving less weight to behavioral deviations.
- Scenario 2: Emphasis on Behavioral Anomalies
- wbehavioral = 0.3,wcontextual = 0.7
- Detecting unusual behavior takes precedence over strict adherence to contextual patterns.
- Scenario 3: Balanced Approach
- wbehavioral = 0.5,wcontextual = 0.5
- A balanced configuration where both contextual and behavioral factors contribute equally to the risk score.

2 Explicit Conditions

Explicit conditions are strict criteria that trigger in-depth behavioral verification only when specific contextual parameters are met. The binary activation variable is set to 1 (true) if all conditions are satisfied, enabling behavioral analysis. If any condition is unmet, resulting in a 0 (false) value, the behavioral verification process remains inactive. These conditions act as precise gatekeepers, regulating the activation of behavioral analysis according to the organization's parameters.

4.1 Example Conditions

- Time-Bound Verification
- Condition: Current Time < 9:30 or Current Time > 17:30
- Rationale: Behavioral data verification may be emphasized during office hours, and deviations outside these hours may trigger increased scrutiny.
- Location-Based Verification (Fig. 7)
- Condition: Location = Office or Location = India
- Rationale: Behavioral validation may be contingent on the user being physically present in the office, ensuring a more controlled and secure environment.

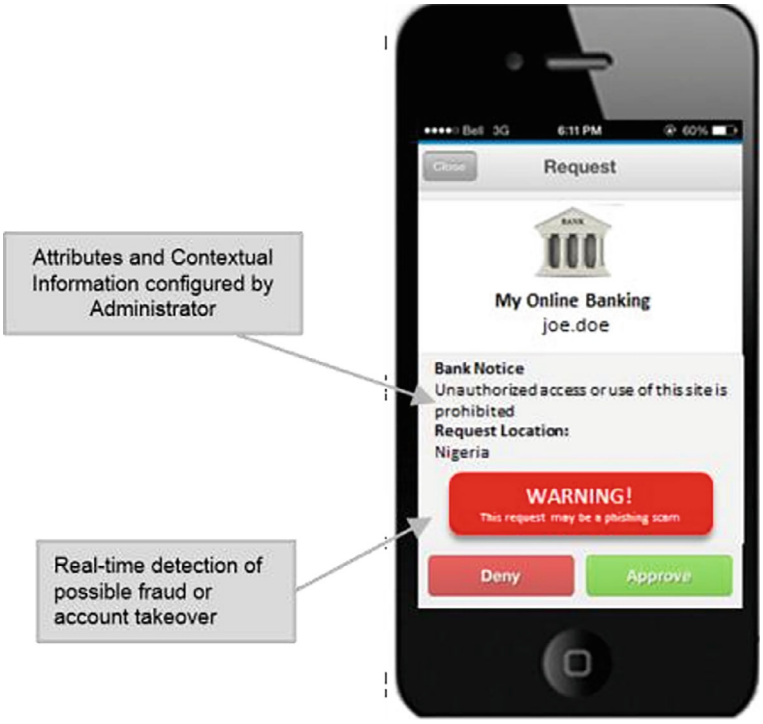

Fig. 7 Context Based Explicit Condition [29]

Explicit Conditions for Behavioral Verification:
Device-Specific Verification
Condition: Device = Android
Rationale: Enhances security with platform-specific measures for Android devices.
Browser/User Agent Verification
Condition: User Agent = Chrome
Rationale: Allows for browser-specific security considerations when using Chrome.
IP Range Validation
Condition: IP Address within designated range
Rationale: Ensures access from authorized network segments only.
System Role Verification
Condition: User Role = Administrator
Rationale: Applies stricter analysis for users with elevated access rights.
Network Protocol Verification
Condition: Network Protocol = HTTPS
Rationale: Ensures encrypted communication and intensifies scrutiny.
Geographical Anomaly Detection
Condition: Geolocation $\notin$ Expected Locations
Rationale: Flags potential risks if the user's location deviates from expected office locations.
Encryption Status
Condition: Device Encryption = Enabled
Rationale: Adds a layer of data protection by ensuring encryption is active.
Secure Connection Type
Condition: Connection Type = VPN
Rationale: Enhances security for users connecting through a secure VPN.
Session Termination and Alerts:
Anomalous behavior triggers immediate session termination and real-time alerts to administrators for swift response and mitigation.
Continuous Learning and Improvement:

The system adapts to evolving user behavior through machine learning, incorporating feedback and updates to maintain robustness against new security threats.

5 Conclusion

This research advocates for evolving user authentication methods due to vulnerabilities in traditional approaches. The Context-Aware Behavioral Biometrics Authentication (CABBA) model enhances security by combining contextual and behavioral biometrics to adapt continuously to user behavior. Further refinements and real-world testing are needed to validate its effectiveness.

MediBuddy: A Groundbreaking Approach to Patient-Centric Healthcare Through Decentralized Electronic Health Records and AI

Divij Katyal, Vishal Srivastava, Hemraj Shobharam Lamkuche, Ala'a Al Sherideh, and Muntaser S. Ahamd

Abstract Traditional centralized electronic health record (EHR) systems often limit patient control over their own data, raise security vulnerabilities, and hinder seamless information sharing between healthcare providers. This research presents MediBuddy, an innovative decentralized EHR system powered by blockchain technology, interoperable communication protocols, and artificial intelligence (AI). The platform aims to revolutionize healthcare data management by empowering patients with greater control over their records, enhancing security, promoting data accessibility, and enabling seamless direct communication between patients and doctors. MediBuddy's architecture prioritizes decentralized storage, user-friendly interfaces, AI-derived preliminary insights, and robust encryption measures. This article details the MediBuddy architecture, its potential impact, expands on insights gained from initial user testing, and discusses the challenges faced during its development.

1 Introduction

Traditional healthcare systems often rely on centralized Electronic Health Records (EHRs). While these systems offer some advantages, they also raise concerns regarding patient control over their own data, security vulnerabilities, and challenges in seamless information sharing between healthcare providers [1]. These limitations hinder the efficiency of care delivery, potentially leading to delays, redundancies, and a diminished sense of agency for patients [2–8].

To address these shortcomings, MediBuddy presents a groundbreaking decentralized EHR system built on the principles of blockchain technology, interoperable communication protocols, and artificial intelligence (AI). This transformative platform focuses on empowering patients by granting them greater ownership and control over their medical records. The use of secure blockchain technology promises to enhance data integrity and security, while a user-friendly interface aims to bridge the gap between patients and their health information [9].

MediBuddy's decentralized architecture introduces several key innovations. Firstly, the use of blockchain technology creates a distributed ledger for storing patient health records. This approach decentralizes control, reduces the risks associated with centralized servers, and increases data security [10]. Secondly, the platform incorporates AI-driven tools that analyze patient data, offering preliminary health insights, facilitating informed discussions with healthcare professionals, and encouraging greater patient engagement. Thirdly, MediBuddy emphasizes interoperability through the use of open standards, enabling seamless and secure data exchange between healthcare providers and fostering collaborative care [11].

Prior research demonstrates a growing interest in decentralized approaches to health data management. Studies have explored the potential of blockchain-based systems to enhance data security, promote patient ownership, and streamline healthcare processes [12]. The use of AI in healthcare settings has been explored as a means to improve diagnostic accuracy, streamline clinical workflows, and empower patients through data-derived insights [13]. MediBuddy builds upon this emerging field by integrating these innovative technologies and placing the patient firmly at the center of their healthcare journey. The primary goal of this research is to introduce the MediBuddy platform and examine its potential impact on healthcare delivery. Specifically, the study will evaluate the system's architecture, security measures, usability, and the perceived benefits and challenges from the perspectives of patients and healthcare providers [14].

This research aims to evaluate three primary hypotheses. First, it is hypothesized that MediBuddy's decentralized architecture and robust security protocols will significantly enhance patient trust in the security and privacy of their health data when compared to traditional electronic health record (EHR) systems. Second, it is proposed that patients will exhibit higher satisfaction levels with MediBuddy,

attributable to its improved accessibility, user control over health records, and intuitive interface. Finally, the third hypothesis suggests that MediBuddy's interoperability features and integrated communication channels will promote more efficient information exchange and collaboration among healthcare providers.

The potential impact of this research is significant. If successful, MediBuddy could exemplify a shift towards a more patient-centric and secure model of healthcare data management. This research seeks to inform future projects in the domain of decentralized healthcare and accelerate the evolution of how patients interact with their health information.

2 Methodology

2.1 System Architecture

MediBuddy is built upon a foundation of secure, decentralized technologies. The Ethereum blockchain forms its backbone, with smart contracts managing patient data access and permissions. IPFS provides distributed and efficient file storage. To ensure data confidentiality during transit and storage, MediBuddy implements robust encryption protocols (RSA/AES). User-friendly interfaces (HTML, CSS, Material UI) facilitate seamless engagement for both patients and doctors. The system incorporates AI models (TensorFlow, Keras), trained on extensive healthcare datasets, to provide patients with preliminary insights into their health conditions.

2.2 Security and Privacy

MediBuddy emphasizes superior data security and privacy. The immutable nature of blockchain's ledger prevents unauthorized modifications and provides a tamper-proof audit trail. Decentralized identity management using blockchain wallets provides secure authentication and reinforces patient consent for data access. All sensitive health data is encrypted before storage and transmission using industry-standard protocols, ensuring compliance with healthcare data regulations.

2.3 Communication and Interoperability

MediBuddy promotes direct communication between patients and doctors through messaging channels (Socket.IO, WebRTC), reducing the need for in-person visits for routine inquiries and follow-ups. To achieve interoperability with existing healthcare systems, MediBuddy adopts international standards for data exchange, such as

HL7 FHIR, ensuring seamless integration across healthcare providers and enabling smoother patient journeys.

2.4 Technical Architecture
